with Cowper, he brought out a volume of hymns which was long a household book. At one time it would have been superfluous to give an outline of this noted religious leader's strange career; but time dims such records, and many persons not unfamiliar with his name may yet not recognize him under his own favorite title of the African Bismarck. His autobiography certainly shows wonderful power of some sort. A sense of this power may have smoothed the task of confession—if we may call it such—as he conducts his readers from scene to scene of a dissolute course redeemed by a tinge of romance and strange adventure. His birth and childish training were those of a better class, his father being captain of a trading vessel. He went to sea at eleven years old. Presently we find him impressed into the navy, and there, through his father's influence, made midshipman. But to his temper of utter insubordination, aggravated by a fit of infidelity "into which he plunged with all his spirit," restraint was unendurable. At last, when at Plymouth, he went ashore without leave, was caught, led through the streets like a felon, carried back to the ship, put in irons, publicly stripped and whipped, and degraded from his office. From the navy he is presently changed to a merchant vessel which lands him on the Guinea coast, and he spends months as a sort of slave to a black woman, who fed him with the broken meat from her table. His misconduct gets him into these depths of degradation, and his cleverness gets him out of them. He describes himself as alternating fits of outrageous wickedness with short periods of religious conviction. He broke every Commandment, he tells us, but the Eighth, with a high hand. As for his oaths and blasphemies, all the stormy energy of his character spent itself on them. Two captains of slaving vessels charged him with being the Jonah who had brought the tempest upon them. But our space only allows us to seize a point here and there of this disgraceful course. Yet through it all there ran a thread of sentiment. At the age of seventeen he had seen a girl of fourteen, daughter of a family friend, who made an indelible impression upon him. Not a day passed in his wildest excesses that he did not think of her. Eventually she became his wife. The marriage took place in 1750, when he was twenty-five, and his conversion accomplished. After this event he took three voyages as captain of a slaving vessel, having, he says, never entertained a scruple as to the lawfulness of the traffic, and the trade being considered a "genteel" calling at once respectable and profitable. In these voyages he taught himself Latin, as on the Guinea Coast he had got up the six books of Euclid. In 1754 he settled down at Liverpool, and from that time became known as a distinguished convert. In 1764 he was ordained to the curacy of Olney. We see in him, under this charge, certain high qualities—sincerity, zeal, and consistency of life and conduct, strong sense, humour, and the qualities that make a friend. He must have had in a fair degree the manners of a gentleman to be the chosen companion of Cowper, Hannah More, and other noted names. The self-complacency with which he dwells on the favour of heaven to so great a sinner is scarcely tempered by as much shame and contrition as the reader desires; but the high Calvinism of his creed did not require this. Besides his autobiography, he wrote books which had great success. He was a light of his party; but as a curate he failed. Probably he would not have thought much of those tokens of a successful ministry which followed on Mr. Bold's teaching; but at any rate they were decidedly wanting at Olney. He had entered on the curacy under the auspices of Mr. Thornton, who supplied him with means for all necessary expenses. "Be hospitable," were his words, "and keep open house for such as are worthy of entertainment. Help the poor and needy. I will stately allow you 200*l.* a year, and readily send whenever you have occasion to draw more." And he was as good as his word. Mr. Newton was a zealous preacher, but his doctrine did not suit his flock; more especially as it was no doubt illustrated by confessions such as we have hinted at. In fact, his devoted biographer has to admit utter failure, and confesses that the Gospel he preached was to the people of Olney a savour of death unto death. His successor, Thomas Scott (the commentator), while recognizing the fact, does not throw all the blame on the hearers:—

Many pious and even eminent ministers have so humoured and indulged their people as to render them captious, self-conceited, and ready to take offence at every faithful and needful reproof and exhortation. Good Mr. Newton, than whom few stand higher on many grounds, had erred in this respect at Olney to that degree that he could not preach a plain and practical sermon without exciting inquiries through the town, "What has been the matter? who has been telling something that led to this subject?" By this and other concurring circumstances, though exemplary, meek, and loving in the highest degree, he became an Eli at Olney, and really could not keep his station, having lost almost all his authority and influence. And when it was known he was about to go, it seemed the determination to thwart and oppose him in all his plans for their benefit. Olney, when Mr. Newton left it, swarmed with Antinomians; and when I a year after became curate of the parish, most of the professors of the Gospel were Dissenters, and I had to attempt raising a new congregation in opposition to Antinomianism and anti-Churchism which prevailed. In a population of 2,500 people, often not one hundred got together on a Sunday morning till nearly the end of the service, and half of these from other places.

Probably Mr. Newton was better placed at St. Mary Woolnoth, where he ended his days at a great age. His hearers might not make such practical application of his doctrine. Rustic and agricultural congregations require a less varied experience in their pastor; a steady course of well-doing fits their ideas best. Quite another class of curate is also characteristic of the latter part of the eighteenth century—the elegant dilettante scholar who, either from something in himself or his circumstances, stands out of the way of preferment, but still possesses gifts to cast a mild illumination

on the remote spot in which destiny fixes him. There was a vast deal of literary activity in that day which had no field for its display such as our time furnishes. Yet an accomplished man was not without a sphere wherever he was placed. It was a sociable age; a scholar well read in modern literature—especially, let us say, in the Italian poets—was an acquisition at every table within his reach. There were more literary circles in out-of-the-way places then than there are now; people had more patience with each other's effusions in verse and prose. Letter-writing was cultivated as a pursuit; and, where roads were bad, and the post weekly instead of daily, letters were tolerated of a length which could not now be borne. We find of this class a memoir of the Rev. P. Cunningham, curate of Eyam, in the Peak of Derbyshire, a living held by the Rev. Thomas Seward, father of the authoress. He wrote to his rector letters of a portentous length, which were so far appreciated that they have found their way into print; letters of five and a half closely-printed pages, in which are collected thoughts, criticism, quotation, and narrative which in these days would all have found their way to the magazines. Nothing can exceed the harmony of feeling and universal appreciation that pervades the record. Mr. Seward preaches to the people of Eyam a splendid eulogium on their newly-appointed curate; and the curate sends the passage which contains this notice to his relations at Deal, and to the Archbishop of York, who had recently ordained him. He lavishes on his flock an effusion of feeling in return for "continually receiving from the parishioners the most affecting and expressive demonstrations that my continuance in my present station is essential to their happiness and contentment. One grasps my hands so vehemently, as a mark of cordiality, that it is a mercy for me neither the gout nor the rheumatism are lodged there; another takes them *con amore religioso alle labbra*; a third prays for blessings on my head as I go along the street," &c. We do not quite understand the action conveyed in the Italian quotation—a Peak rustic actually kissing hands. Possibly the borrowed phrase gives the *intention* only. Elsewhere, in expressing his feeling for the starry sphere to which the Derbyshire hills raise him nearer, he declares himself an *amateur* of the great works of nature. He tells the church, "I have the inexpressible satisfaction to observe your church more crowded than I am assured it has ever been remembered during this season of the year. No more Methodist teachers appear at the chapel at Eyam." These transports so early in his career led us to anticipate a collapse of some sort; but ten years seem to have produced no coldness. In spite of little affectations, he had a strong sense of duty. He was evidently in his right place, and an example of contentment, as was many an elegant scholar of the time, under circumstances which would not in duller men have excited the feeling.

Local history gives us glimpses of life in the Church which by no means justify the complacent notion now prevalent of universal apathy and deadness. It is a mere accident when good work in remote scenes of labour outlives the memory of the witnesses of it.

MR. HAWEIS ON LIBERALISM IN THE CHURCH.

WE have heard a good deal of late about claims for greater freedom in the Church of England. Only the other day two petitions were presented to Convocation by the Archbishop of Canterbury from different parties in the Church, the one—far the most numerously signed—praying for a policy of toleration and forbearance in ritual matters, the other deprecating it. It is due indeed to the signatories of the latter or Evangelical petition to say that they disclaimed any desire "to narrow the comprehensiveness of the National Church, or to abridge reasonable liberty," and they in fact proceed at once to vindicate this liberty for their own rubrical irregularities; but they were careful to explain that it must not be extended to any ceremonies expressive of "doctrines which we believe to be unscriptural." But there is unfortunately so much diversity of sentiment, both within and without the Church of England, as to what is scriptural teaching, that those at whom the document is aimed will hardly derive much comfort from the explanation that it only denounces rites which their opponents think unscriptural. It might indeed fairly be urged by Dean Church and his co-signatories that the doctrines symbolized by the incriminated ritual, whether scriptural or not, have at least been ruled by the Supreme Court of Appeal—and this in an undefended suit—to be consistent with the Anglican formularies, and that they are therefore only claiming liberty for the clergyman to give ceremonial expression at the altar to beliefs he has confessedly full liberty to teach from the pulpit. It is a very different kind of liberty which is claimed by Mr. Haweis in an article he has contributed to the *Contemporary Review* on "Freedom of Thought in the Church of England; its Limits, what they are, and what they ought to be." A foot-note informs us that this paper was "originally read before the Clergy of the Diocese of London at St. John's College," and we cannot help suspecting that it must have pretty well taken away the breath of that grave and reverend assembly as they listened to it. Mr. Haweis, as everybody knows, is a high authority on "music and morals," and he has drawn around his pulpit a circle of curious or admiring hearers who can enjoy a style of eloquence, more educated perhaps, but no less sensational, than that which has made the City Temple and the Surrey Tabernacle famous. But we had yet to learn that he aspired to be also an authority on Christian doctrine. He has

something however to tell us about it which is not exactly new—for the same sort of thing has been said before by Dean Stanley and others in more cautious language—but which possesses a certain novelty, if not exactly a charm, from its manner of utterance. Certainly, if Mr. Stopford Brooke had sat at the feet of Mr. Haweis, he would have had no temptation to leave the Church of England; he would have been taught first to claim a liberty far beyond what he needed as already "belonging" to him, as an Anglican minister, and secondly to "ask for more." It is difficult indeed to know whether to be most amazed at what Mr. Haweis "claims," or at his thinking it necessary, after his modest claim is established, to "ask" for anything further. One is reminded, to be sure, of a familiar example in the old Latin Grammar—*Quo plus habent eo plus cupiunt*. And it is possible in this case that some lingering doubt about the security of the *habent* may have helped to stimulate the cupidity for further acquisitions. Mr. Haweis is perhaps after all not quite so sure as he would fain persuade himself that the limits of his present liberty "are" what he says they are, as he is of what "they ought to be." But it is time to let him speak for himself.

The paper opens with the modest formula already referred to. "First, let us claim what belongs to us. Secondly, let us ask for more." The only remaining restriction on the liberty which "belongs to us" is "that rag and tatter of subscription, the Act 28 and 29 Vict. c. 122":—

This is the rag:—

"I, A. B., do solemnly make the following declaration:

"I assent to the Thirty-Nine Articles of Religion and to the Book of Common Prayer and of the Ordering of Bishops, Priests, and Deacons; I believe the Doctrine of the United Church of England and Ireland, as therein set forth, to be agreeable to the Word of God; and in Public Prayer and Administration of the Sacraments I will use the form in the said book prescribed and none other, except so far as shall be ordered by lawful authority."

Some, it is observed, "think this only a degree less binding than the old form," and Mr. Haweis must of course remember how confidently that argument was pressed on objectors when the change was made only fifteen years ago. "But"—the argument has done its work and may be discarded now—"that is a mistake. The old was a good round confession of belief, but this rag and tatter binds us to believe neither [the italics are his own] the *Articles* nor the *Doctrine of the United Church of England and Ireland*." Does it then mean nothing at all? Not, perhaps, quite that—to assent to anything is to acquiesce in the fact of its existence, just as "several M.P.'s who are avowed Republicans assent to the monarchy, but do not believe in it." It is obvious that in this sense an avowed atheist might "assent" to the 39 Articles and the Book of Common Prayer quite as fully as the strictest Anglican. And as for believing the doctrine of the Church to be "agreeable to the Word of God"—well, let us assume for the moment that the Word of God means the Bible, though Mr. Haweis is "not personally fond of confounding" the two; but what then?

After seeing what the "vigour and rigour" of a professional theologian can do for the Thirty-Nine Articles out of the Bible and what rival sects have habitually done for their own tenets, there is evidently no quantity or quality of doctrine which cannot be shown, with a little judicious severity in the handling of texts, to be agreeable to the Word of God.

The declaration of belief therefore merely amounts to a statement that the Bible, which has been interpreted in a thousand different ways by as many jarring sects or individual readers, may be so interpreted as not to clash with the 39 Articles. Clearly any one who scrupled to make this declaration must be scrupulous almost to monomania. If indeed it meant that the Articles supplied the only natural and proper interpretation of the Bible—a view which might quite conceivably be held by Mr. Bradlaugh—that would not at all prove their teaching to be true, for we may fairly claim that, when a clergyman is required at his ordination to profess his unfeigned belief in all the canonical Scriptures, it is only in the same sense as a man "unfeignedly believes in the British Museum," that is to say "he masters the contents as well as he can, and believes all that the best and wisest authorities can tell him about them." That is precisely the process the author of the *Age of Reason* tells us that he applied to the Bible, by which he arrived at the conclusion that it was all "fabulous," and in that sense, which on Mr. Haweis's showing is a sufficient one, he "unfeignedly believed it." There remain, it is allowed—for Mr. Haweis is resolved to do full justice to the force of the adverse argument—besides "the rag and tatter of subscription" certain "rubrics which have the force of statute law." They deal chiefly however with ritual, and "where they bind ritual they are systematically broken, and where they bind doctrine they are commonly ignored."

So far then the case appears simple enough, and the liberty already existing so complete that nobody need be excluded from the Anglican ministry by the existing subscriptions who would not equally be excluded by being asked to subscribe the first axiom of Euclid. But still the writer does not somehow feel quite at his ease. There is a sort of current prejudice that, after all, subscription to formularies must mean something, and "doctrines will resolve itself into doctrines, and these doctrines are contained in creeds and formularies." And so we are brought back to the old question, "Do you believe them or do you not?"

Abolish subscription, relax the rubrics, yet, as long as the Prayer Book is assented to and used, this is the question which every clergyman has to face—Do you, or do you not, believe the creeds and formularies of the Church of England?

Opposed—That no forms can be devised to which any large number of persons can agree without reservations. Still Conscience asks, *What reservations?*

That some expressions become obsolete in time. Conscience asks, *What expressions?*

That different interpretations can be put upon the same words, and that non-natural interpretations may be allowed to the Broad Church, as they have been granted wholesale to the High Church party. Still Conscience asks, *What interpretations?*

That great latitude is admissible in accepting the Bible and the Prayer Book, which is founded upon the Bible. Still Conscience asks, *What latitude?*

That doctrine is different from doctrines. Conscience asks, *What is the difference?*

Here then at last we seem to touch on firm ground. "*What freedom in doctrine do we claim?*" But if the question is a plain and downright one enough, the answer is not a little bewildering. "*Freedom to separate in each doctrine the substance from the form*"—the italics are still the writer's—"or, in other words, freedom to re-state the substance." Since the magical "*dis-tinguendum*" which made such havoc of the first principles of morality in the Jesuit casuistry so mercilessly exposed in the *Provinciales*, no more potent instrument for making a silk purse out of a sow's ear—or the reverse—has ever been devised. What is form and what is substance? Mr. Haweis proceeds to illustrate the distinction by examples. "*Do you believe in the miraculous?*" Yes, certainly, "*the miraculous underlies the whole Bible, the whole Church, the whole of history sacred and profane*"—the italics here are ours—but the writer personally would "have great sympathy with those who resolved all physical miracle into misconception, or inspired vision, or even hallucination"—that is, the substance of the doctrine. At the same time he does himself believe in miracles both in and out of the Bible, but not in all of either class. A more searching question follows, "*Do you believe in the Incarnation?*" Once more the magician waves his wondrous wand. What is the "substance" of the doctrine? Only that "the human side of God—moral sympathy and love—always was, that it did not begin to be when Jesus was born, or at any other time." We need hardly observe that in this "substance of the doctrine" Tom Paine was a firm, and even enthusiastic believer, though he tells us he "revolted" at Christianity. In the same way belief in the "Day of Judgment" merely means that "we shall be tried on principles intelligible, humane, and just"; belief in eternal punishment means belief "in penalty proportioned to guilt"; and the resurrection of the body means "the immortality of the soul." The same powerful solvent of distinction is to be applied to all other creeds and doctrines, and notably to "the Trinity, the Atonement, the authority of the Bible, justification by faith, and the Sacraments." Happily want of space, or perhaps some latent instinct of reverence or good taste, has withheld the magician in this case from repeating the transformation scene before our eyes. He adds however, before quitting this part of the subject, one very important rider—namely, that each successive age must rediscover for itself what is form and what is substance, and thus even the meagre doctrinal residuum left for this generation may evaporate in the next. The "substance" e.g. of the immortality of the soul may be discovered by our children to be simply the perpetuity of the race, and "a stream of tendency" may be the residuary substance of theism. There is indeed a geographical as well as a chronological variation here; "a form of doctrine, outgrown in London and requiring re-statement may still be current coin in Wales." The bodily resurrection may for the present remain true for Welsh miners, though it requires substantial "re-statement" for the denizens of Belgravian drawing-rooms.

Once again we thought the magician's task was done. He has provided a dissolving medium by which creeds and doctrines may be transmuted into their opposites as readily as ever the old alchemists hoped to transmute all things into gold. But yet he is not quite satisfied. Facts are stubborn things, and from the midst of these pleasant theories *surgit amari aliquid* in the shape of the Prayer-book, with its obsolete dogmas not yet "re-stated," and the clergyman has to read it. And thus the old difficulty crops up again, "*How shall we face in the reading desk the old wording?*" The late Bishop Hinds, if we recollect rightly, published a pamphlet in his old age—as did Lord Amberley in his youth—arguing that if a benighted clergyman became a convinced atheist, he not only was not bound to resign his preferment, but was bound to keep it and preach his new convictions from the pulpit. Whether Mr. Haweis would go quite that length we cannot say. What he tells us is that the Broad Churchman should inform his bishop, at ordination, and his congregation afterwards, that by the resurrection of the body he means the immortality of the soul, and that he unfeignedly believes all the canonical Scriptures in the same sense as he unfeignedly believes in all the British Museum. Nor will they have any reason to be surprised at the explanation:—

Let us compare small things with great. In daily life every one makes reservations which most people understand. A man was never so surprised in his life, when he has been as much surprised scores of times. Another signs himself your most obedient servant, whilst refusing everything you ask. Another is not at home, and nods to you out of the window. Reservations which your servant can understand you can understand; and reservations which a clergyman can understand a congregation can understand, if they are properly explained. The illustration is trivial, but the principle is important.

It is important enough certainly, if it means that the most fundamental doctrines of Christianity need only be considered true by those who are solemnly pledged to teach them in the same sense as a

man may be truly said to be "not at home" when he is too busy to receive visitors. With this almost unlimited freedom already secured to him one hardly sees why our ideal Broad Churchman should ask for more. And it must be allowed that, compared with what he already claims, the writer's fresh demands are insignificant, with the exception of the last, and that he had a few pages before claimed to possess now. He desires "no alteration in the Prayer-book, merely additional rubrics, optional forms, and optional omissions," to spare him, we presume, the trivial but gratuitous inconvenience of "facing in the reading-desk" what he is about to contradict—we mean "re-state"—in the pulpit. The new demands are thus tabulated:—

Repeal of the Act of Uniformity (which only dates from 1562, and is already widely neglected).

Abolition of subscription (unknown to the early Church, and which, under the Act of 1865, is almost a dead letter).

Religation of certain creeds which do not stimulate devotion to manuals of instruction.

Optional use of alternative forms in both sacramental services.

Optional omissions in other services.

Optional selection of prescribed lessons.

Additional qualifying and liberating rubrics.

And lastly, that freedom of re-statement in the pulpit which would naturally follow from these concessions.

Let it not however for a moment be imagined that these claims and demands are propounded in the interests of a party, though it be, as the writer intimates with that exquisite modesty characteristic of his school, the party which has an unquestioned monopoly of enlightenment and love of truth. "Spiritual edification" is the keynote of Evangelicals, and "Sacramental order" of High Churchmen; "the Liberal keynote is neither; it is Truth." But the interests, if not the survival, of the Church herself are at stake. "She can ill bear the strain of these prosecutions for ritual, popular with the emotional; and heresy, dear to the enlightened." She must become so "wide and simple in general affirmations," so "elastic in ritual," so "fearless and honest" in teaching that besides "her noble breadth and sympathy" the narrowness and bigotry of sects shall wither away, and the whole nation be embraced once more in "the National Fold." It is truly a charming vision, but there is one little hitch about its realization which the writer's ardour of Liberal enthusiasm has led him to overlook. Granted that he and his friends have, as he repeatedly assures us, all the "Truth"—with a big T—to themselves; still there are a large number, probably a large majority, of believers in the Church of England, and in most other Christian Communions, who cherish a warm attachment—bigoted and narrow, if you please—to the "form" as well as the "substance" of the particular truths they have been taught to prize, and are not yet "enlightened" enough to be willing to see them thrown into the smelting pot of the Broad Church alchemist. They are apt to be suspicious of "re-statement," as old-fashioned moralists were suspicious of the Jesuit *distinguendum*, and are rather offended than edified at the novel spectacle of Agnosticism masquerading in a surplice. No doubt they are behind the age. But, as Mr. Haweis himself reminds us, in italics, "*we must be left free to grapple with facts*," and these retrograde religionists are a palpable and obtrusive fact. We are afraid they would not quite appreciate the Church of the Future which is to embrace every one in its comprehensive arms, and while all the generalities and elasticities and sympathies were flying in freely at the open windows of the great National Pantheon, the vulgar and inelastic multitude of national believers would be tramping out of the door. "The past policy of exclusion and excision is suicidal." Be it so, but suppose the result of the modern policy of universal comprehension should be to create a solitude and call it peace.

VALENTINES.

PERHAPS the old manner of choosing valentines is not less worthy of restoration than a good many other things for the restoration of which a passion seems to exist. Our modern valentines are dull and mechanical, purchased articles, little better than Christmas cards. The expensive valentines are gaudy chromolithographic objects, fluttering in a fuzz of paper-lace. The humorous valentines, as a rule, carry personal satire up to Pescennine limits. By careful investigations in the back streets and slums, a collector will learn much of the popular taste in airy banter. He will find that the charge of monstrous ugliness is quite compatible with that of moral obliquity and conjugal infidelity. In short, there is not much, either of sentiment or of sport, to be got out of the modern manufactured valentine. Some amusement has, indeed, been derived, on an historical occasion, by the despatch of two hundred valentines at once to a Cabinet Minister. This is not a joke to be played twice. Besides, we learn from the papers that Mr. Gladstone's letters are now opened by his private secretary. This is discouraging, both to malignants who would like to send explosive epistles, and to admirers who find their best expression in "hamatory song." The old custom of valentines was much more diverting, and offered occasions for flirtation, and for the display of a generous disposition. Ladies and gentlemen would sup together; their names were then written out on scraps of paper, and were placed in two bags. The ladies drew at random out of the men's bag, and the men obtained the valentine that fate allotted from the bag of the women. Then the papers, as in Papal

elections, were thrown into the fire. On this topic the author of *The Rescue* (1672) wrote appropriate verses "To Mrs. D. O.," whose name being left after drawing valentines, and cast into the fire, was snatched out—

I, like the Angel, did aspire
Your Name to rescue from the fire.
My zeal succeeded for your name,
But I, alas, caught all the flame!
A meager offering thus sufficed,
And Isaac was not sacrificed.

This was a good beginning, and the interchange of verses and gallantries went on through the year. From a passage in *Pepys's Diary*, it seems that another custom was sometimes followed. The lady who first saluted a man in the morning of St. Valentine's Day was his Valentine. This appears to have been the manner in Scotland, if Sir Walter is right in his description of the wooing of the Fair Maid of Perth and of Hal of the Wynd. A more notable example is Ophelia's song, especially if we read,

Good-morrow, 'tis St. Valentine's day,
All in the morn betime,
And I a maid at your window,
To be your Valentine.

An early meeting between Valentines seems to have been an essential part of the arrangement. Thus Pepys writes (February 14, 1665):—"This morning comes betimes Dicke Pen to be my wife's Valentine, and came to our bedside. By the same token I had him brought to my side, thinking to have made him kiss me; but he perceived me and would not; so went up to his Valentine; a notable, stout, witty boy." Pepys seems to have preferred small boys as Valentines for that lovely toast, Mrs. Pepys. Perhaps fortune favoured him in the drawing. On Valentine's Day, 1666, he writes:—"This morning came up to my wife's bedside, I being up dressing myself, little Will Mercer to be her Valentine, and brought her name writ upon blue paper in gold letters, done by himself, very pretty; and we were both well pleased with it. But," adds careful Pepys, "I am also this year my wife's Valentine, and it will cost me 5*l.*; but that I must have laid out if we had not been Valentines." Thus the money's worth was kept in the family. It seems, from an entry in 1667, that Pepys was to be his wife's Valentine every year, with no prejudice to other Valentines on both sides. In 1667 he found this favour "likely to cost 4*l.* or 5*l.* in a ring for her, which she desires." Gay says that among country people the first acquaintance of the opposite sex met on St. Valentine's Day was the destined swain or nymph:—

There first I spied, and the first swain we see,
In spite of Fortune, shall our true love be.

Speaking of presents, the learned Moresinus avers that the women receive them from the men. But in canny Scotland the presents were reciprocal. Brand quotes from the *Connoisseur* an odd piece of folk-lore. A lady is the speaker, and she describes how, on Valentine's eve, she pinned four bay leaves to the corners of her pillow, and one to the middle, and all that she might dream of her lover. Nor was this her only sleight of magic. She boiled an egg hard, took out the yolk, filled the hollow with salt, and devoured the egg, shell and all. She then went to bed in solemn silence, dreamed of Mr. Blossom, and, sure enough, drew that favoured swain for her Valentine. Herrick, not usually a purist, seems, very unreasonably, to have limited the privileges of Valentines to unmarried girls. Thus he writes of a bride:—

She must no more a-maying,
Nor by Rose-buds divine
Who'll be her Valentine.

What pretty poetical customs, and how merry an England that was in which they flourished! Now we divine not by rose-buds, but, at most, buy flimsy cards or French sweetmeats. Now we never go a-maying; and, indeed, only the most hardy would be capable of such exercises, and they must needs be dressed in ulsters and sealskin raiment.

Valentines seem to be pre-eminently an English custom. We have never observed the usual decorative love-letters in the stationers' windows in France at this season of the year. The "love-divinations" which used to be practised on the Continent at Advent had nothing to do with St. Valentine, and rather corresponded to our practices at Candlemas. Miason, when he described our old habit of drawing Valentines, seems to have regarded it as a custom peculiar to England and Scotland. "Les Valentins donnent Balas et Cadeaux, portent pendant plusieurs jours sur le cœur ou sur la manche les billets de leur Valentines, et asez souvent l'amour s'y boute."

The origin of the custom of St. Valentine's Day would be more easy to discover if we had means of tracing the rites over a wider area. As a rule, it may be said that popular festivals are older than the rise of the great mythological religions, those of Greece and Rome. They were adopted by the Olympian rituals, and, once more, were adopted by the Catholic Church. Christmas, and the Summer Solstice, and All Souls' Day are honoured among savages, and were honoured by the civilized ancients with rites which still survive. But we have no such guides to the significance of St. Valentine's feast. Wheatley observes, and we have no reason to dispute his evidence, that "St. Valentine was a man of most admirable parts." He was also famed for his "love and chastity"; but these qualities have no obvious connexion with an old English custom. Bishop Hall attributes to St. Valentine singular chastity; "Valentine's self, or some as chaste as he." Thus it is rather odd that St. Valentine's feast should almost coin-

cide with that of Faunus in the Roman Calendar. Faunus, according to Ovid, was a rather licentious god. The poet, however, in the *Fasts*, mentions no Roman observances on the feast of Faunus which even distantly resemble the innocent mirth of the day of St. Valentine. Perhaps the Folk Lore Society may be able to throw some light on a somewhat difficult subject, which, to the best of our knowledge, has never been properly investigated. The author of some verses prefixed to a little pamphlet, "Ye Old Style Valentines" (Falkner and Son, Manchester), says that

The custom rules, which had its birth
In Roman times.—They cast by lot,
That each might know the maid he'd got.

But this is not evidence, and we do not know where the evidence is to be found. Probably the Fathers, who generally rail at all pleasant old "heathen" customs, have something to say on the subject. But the Fathers were rather copious writers, and we have not time to investigate their many and meritorious productions.

The publication of Messrs. Falkner contains some pretty lines from our old writers, which might be adopted by lusty Valentines whom the gods have not made poetical, even in the measure of Sam Weller. Thus Drayton writes (and who is to better Drayton?):—

Each little bird this tide
Doth choose her loved peer,
Which constantly abide
In wedlock all the year;
As Nature is their guide,
So may we two be true
This year, nor change for new,
As turtles coupled were.

Drayton also

Laughs at them that choose
Their Valentines by lot.

But we hardly believe that the lots were fairly dealt. Too much was at stake, and love goes so often by cross purposes, that the old wooers, if it was at all in their power to correct fortune, would not have given him this chance. The prettiest, we think, of all valentines is that by Donne, which rivals the bird's own music:—

Hail, Bishop Valentine! whose day this is;
All the air is thy diocese,
And all the chirping choirsters
And other birds are thy parishioners:
Thou marryest every year
The lyric lark, and the grave whispering dove;
The sparrow that neglects his life for love,
The household bird with the red stomacher;
Thou mak'st the blackbird speed as soon
As doth the goldfinch or the halycon—
This day, more cheerfully than ever shine,
This day, which might inflame thyself, old Valentine!

Were the old springs warmer than ours, or is it only that the hearts of the people were less easily chilled, and they foresaw the summer before the daffodils come, and while the snow is still at war with the snowdrop? February seems cold weather for wooing, and the ingenious novelist is right who holds that August is the dangerous month, and that love "waxes cold" with October, and dies when the hunting-season has fairly begun. Are there no maids and bachelors to revive the old custom, with the old furniture and faded colours, and to reverse, with verses and posies, that "saint of admirable parts, and singular love and charity, St. Valentine"? Probably the custom in its right form is obsolete now; but some thought it obsolete in 1660, yet it long survived that year of grace.

GREEK WIT.

IN whatever terms we frame the definition of wit, it must, we think, be accepted that in no nation has the possession of the quality of wit enjoyed such just fame as in ancient Greece, and our opinion is supported by reference to a small brochure of one hundred and twenty pages, comprising some four hundred sayings, *bons mots*, and *ana*, put forth by one of our most eminent Greek scholars, Mr. Paley. These have been collected by him, put together with as much abbreviation as was practicable in the course of reading, and accommodated to the perusal of general readers with some taste for scholarship, so as to introduce them to a field little traversed in school reading.

A good many of the best anecdotes are referable to *Ælian's Varia Historia*, in fourteen books, the work of a Roman of Hadrian's date who was, however, keenly fond of the Greeks and Greek literature and oratory. To him we owe a saying of Themistocles, that "if some one were to show me two roads, the one leading to the devil and the other to Parliament, I would choose the former." Comparing the English of this repartee with the original, we find it nearly literal, and it affords us an opportunity of noting the discrepancy between modern and ancient taste on the appreciation of the pleasantest of clubs. Another gives a saying of Anaxarchus, who ridiculed Alexander the Great's fancy for calling himself a god. The King was ill, and his physician ordered him a pudding. "All the hopes of our god," said Anaxarchus, "lie in this pudding." Another saying is ascribed to the name of Plato by the same anecdotist, *Ælian*, concerning the people of Agrigentum. He observed that they had costly houses and gave costly banquets, and thereupon remarked that they built

as if they were to live for ever, and dined as if they would be dead for ever. According to another version of the same saying we find that one interpretation of the last part of it supposes the Agrigentines to dine as if they were to die next day. A truly didactic saying is attributed by Ælian to the Spartan magistrates. "When certain persons from Olazomenæ had come to Sparta and smeared with soot the seats on which the Spartan magistrates sat discharging public duties; on discovering what had been done and by whom, they expressed no indignation, but merely ordered a public proclamation to be made, 'Let it be lawful for the people of Olazomenæ to make blackguards of themselves.'" A very large number of apothegms, proverbs, or sayings of more or less wit, occur up and down the collected works of Plutarch, although Schneidewin does not hesitate to attribute these to some impostor usurping his name. At any rate, they are handily classified, and form a bulky addition to Mr. Paley's translated specimens. Here is a brief and bright saying which this writer attaches to King Archelaus, when a talkative barber, trimming his beard, asked him "How shall I cut it?" "In silence," replied the King. The anecdote recalls one of Charles II.'s bragging barbers, who boasted to him he could cut His Majesty's throat when he would—a boast for which he was only dismissed, though for a like rash vaunt, according to Peter Cunningham, the barber of Dionysius was crucified. To return to Plutarch, he tells the following stories, both good in their way, of Philip of Macedon. In passing sentence on two rogues, he ordered one to leave Macedonia with all speed, and the other to try to catch him. No less astute was his query as to a strong position he wished to occupy, which was reported by the scouts to be almost impregnable. "Is there not," he asked, "even a pathway to it wide enough for an ass laden with gold?" Philip, too, according to Plutarch, is entitled to the fatherhood of an adage which retains its ancient fame about "calling a spade a spade." When some Olynthians denounced Philip's courtiers to him as traitors, they were, he said, "rude and illiterate, τὴν σκάρην σκάρην λέγοντας." Another sample of a witty saying from Plutarch's mint is that attributed to Themistocles, that his son was the most powerful man in Greece. "For, said he, 'the Athenians rule the Hellenes, I rule the Athenians, your mother rules me, and you rule your mother.'" We must cite one or two other of the many examples from Plutarch. This is attributed by him to Leotychnidas, son of Aristo. "A snake having twined itself round a key, which was declared by the seers to be a portent, Leotychnidas remarked, 'It would have been more of a portent if the key had twined itself round a snake.'" Others are connected with ornithology, like the apothegm of one who plucked the feathers from a nightingale, and finding it a very small bird, exclaimed, "You little wretch, you're nothing but voice" (φωναί τις ἐσσι καὶ οὐδὲν ἄλλο); and again, the repartee of a Lacedæmonian to a man of Sparta, who twitted him with being unable to stand as long as himself on one leg. "No!" replied the other; "but any goose can." This *bon mot*, as it is called by Urban Chovreau in his *Ana* (vol. vii., p. 8), is told with reference to persons who set great store on very frivolous accomplishments; but neither in the Greek nor in the translation have we lit upon a reference to evidence of the fact which the repartee seems to assume. "When Demades the orator remarked, that the swords of the Spartans were so short that they could be swallowed by conjurors, Agis the younger king of that name replied, 'We find them quite long enough to reach the enemy.'" Here the wit exerted is of a truly Spartan tenor, but the anecdote of Cleomenes's oath to give the Argives a truce for seven days, and excusing his perfidious slaughter of them in their sleep on the third night—"It was a truce for seven days"—is surely not wit, but subterfuge. Elsewhere, as for example, in some extracts from Lucian (we except the extracts from his tract on Demonax), it is not very easy to see the point so clearly as to justify their admission into the area of Greek wit. The story of Hippocleides, the devil-may-care son of Tisandrus, with the remark of Agariste's father, "O son of Tisandrus, you have danced away your bride"; and the undignified dancer's reckless reply, "Hippocleides don't care," perhaps belong rather to humour than to wit. Others of Mr. Paley's drafts on Herodotus come more easily into the prescribed area. An anecdote of Strabo gives a vivid picture of the clashing of a harper's performances with the sounding of a bell for opening of the fish market. All the audience vanished at once save a little deaf man. The harper expressed himself unutterably flattered at his having resisted the importunity of the bell. "What!" cried the deaf man, "has the fish bell rung? Then I'm off too. Good-by!" One excellent saying from Plutarch has been as yet overlooked. It is tacked on to Pelsistratus, one of the most genial figures among the ancients. "When minded to marry again he was dissuaded by his sons, who asked whether 'he was dissatisfied with them.'" "Certainly not, my dear fellows," he replied, "I wish to have more like you." In the rare hoard of anecdotes preserved in Athenæus occur many admirable *mots* and witty sayings which have been culled once and again; many also doubtless which have hitherto escaped translation. No Greek scholar needs to be told that a great Aristophanic exercise of wit consists in the figure *παρὰ προσδοκίαν*, the surprise of some ludicrous substitution for the idea naturally expected. The lively fish tattle enshrined in the pages of Athenæus abounds in instances of this. Here is one attributed to Theocritus of Chios (another than the Syracusan or Alexandrian idyllist), and addressed by him "to one Diocles, a fish-glutton who had lost his wife and was cramming-in fish at her funeral feast,

whilst at the same time he shed tears." Theocritus said to him—"Weep not, you can do no good by—fish-eating" (Ath. 344 p. B.) Another story occurs to us, which we may quote in illustration, of a wit who, when told that the "ray" was a good fish, said, "Yes; about as good as if a man were to eat a boiled cloak." The name of Stobæus recalls to us another famous collector of valuable and instructive sayings, whose date is uncertain, but probably later than that of Hierocles; it is also pretty certain that he was a heathen. Of his two works, the *Eclogæ* and the *Florilegium*, the latter has been of great service to modern anecdotists. From the tenor of many of the stories we are led to accept the account that he compiled them for the guidance of his son. A thief excused himself to Demosthenes by saying, "I did not know it was yours." "But you did know," said the other, "that it was not yours." Another records that Simonides used to say "he never once regretted having held his tongue, but very often he had felt sorry for having spoken." According to the same collector, Zeno held the same teaching from experience when he said to a talkative youth, "Young man, nature gave us one tongue, but two ears, that we may hear just twice as much as we speak."

Since we have expressed, under some reserve, an opinion that much that is preserved in Lucian is hardly to be classed as Greek wit, it is but fitting to cite one or two exceptions. Here is one from his treatise "De Saltatu," ii. p. 309, which presents two witty apologues. The people of Antioch were in the habit of criticizing the personal appearance of the actors on the stage. When a short man came on to act the part of Hector, the audience called out, "Where's Hector? You are only the boy Astyanax!" When a very tall one was to play the part of Capaneus scaling the wall of Thebes, they exclaimed, "Step in! Never mind the ladder." In his *Life of Demonax* the same famous satirist and humourist tells succinctly how Demonax, when a sorcerer boasted that he could, by his potent charms, make people give him just what he liked, said, "Follow me; I have one simple charm that will do as much as any of yours." Going to a baker's shop, he produced a penny, and said, "Give me a loaf." Ridiculing the pedantry of such as affect archaic words, Lucian makes this same Demonax say to one who was guilty of so doing, "I asked you, my friend, a question in the language of the day, and you answer it as Agamemnon would have done." But a mine of wit still lies in divers other collections, hardly yet unearthed so as to be *publici juris*.

THE REVOLVER AGE.

IT has always pleased historians of the picturesque kind to divide the periods of history in some more striking manner than by humdrum numerals. We beg to suggest to the next historian of this kidney the title of this article as a neat and appropriate designation for the last quarter of the nineteenth century. There are mysteries in it of the most profitable kind to the devout explorer; the mechanical perfection and practical inefficiency of the revolver, its capacity of "making all men alike tall," or rather short, its unheroic character, &c. &c., all offering texts for improvement by the expositor. But at present we do not speak tropically, but literally. In *Tiberim deflavit Orontes*; the Ohio and the Mississippi have made a junction with the Thames, and the shops and pockets of London overflow with revolvers. A peaceable Londoner of thirty years ago would have been aghast at the stacks of little boxes containing Deringers, the artlessly strewn piles of "bulldogs" which offer themselves to him now in the public streets. There was a time when a single "Colt" in a gunsmith's window was something for a loungee with nothing to do to stop and gaze at; now the weapons of this kind lie heaped, like currants or a new importation of the finest Tullat dates, in every twentieth shop or so. Neither can it be said that it is a mere idle display. The mild Londoner of ancient days who has just been described walks down a secluded street in St. John's Wood, and he learns that a young person "foolin' around" with a plaything of this sort has shot herself. To settle his nerves, he enters what a French traveller once described, with politeness and truth, as "those *cafés* of London, whose decorations are violent, whose accommodation is insufficient, and whose consummations afflict the throat with a singular thirst"; and, as he enters, a salvo of revolver bullets greets him. He seeks the western quarters of the town, and a still more interesting sight is to be seen. From a stately mansion there bounds a burglar, pursued by a fair damsel in the garb of servitude. Several policemen and a postman chase the burglar, even as Thompson of Angel's was chased by the Bald-headed Snipe of the Valley. But the parts on this occasion are reversed. The Bald-headed Snipe "ran and occasionally shot"; the policeman and the postman run, and occasionally are shot at. Two revolvers grace the person of the burglar, and, having disabled his pursuers, he seeks the shelter of the unfinished house so dear to burglars, and is seen no more, except dimly, and in a legendary manner, buying hats in Portland Road, and demanding to be driven to finish the day at the Grecian Theatre. If the frightened spectator flies from the capital of England to that of Scotland, a remarkable variation of the same scene meets him between Edinburgh and Leith; while, as for the third metropolis of the United Kingdom, it need hardly be said that in Dublin the revolver is the usual accompaniment of the breakfast-table and the bedroom to sleeping and waking man and woman. The revolver *pernoctat* with the Irish gentleman, *peregrinatur, rusticatur*,

especially *rusticator*. If he is wise, he is followed by a servant with a double-barrelled gun; Winchester repeaters lie on his table, and for carriage company a carbine smooth-bored and loaded with buck-shot is believed to be a superior protection. But the revolver is, as it were, additional to all these. What with Land Leaguers in Ireland, footpads in Scotland, and burglars in England, the gun-makers of Her Majesty's dominions ought to be driving a roaring trade.

The Cromwell Road burglary is perhaps chiefly remarkable because of the number of the weapons which the evasive burglar carried. Its circumstances *qua* burglary were familiar to the attentive student of the burglarious art. A neighbourhood where inhabited and uninhabited houses are arranged after the fashion of streaky bacon, and where yet other houses in an unfinished state occur, is the burglar's paradise. The uninhabited house is for him not merely a place of rest and meditation, but the easiest and safest mode of entrance to the inhabited house. The unfinished dwelling is a refuge, a kind of Malepartus in which Reynard defies his enemies. The unfinished house or carcass is a delight to burglars and to boys, but a fearful place of traps to the hasty pursuer. Its rooms, floorless or furnished only with some narrow strip of floor with a yawning precipice beside it; its stairs, non-existent or unramparted, and all its other mysteries, are puerile to the expert, but likely to bring the rash intruder to complete grief. The valour of Lady Harborton's housemaid—for it seems that it was a housemaid, and not the more experienced and generally elder cook—is pleasant, but not wholly novel. That several unarmed policemen—on the principle of an aged but noble-minded constable in the Channel Islands, who once remarked, "Oe n'est pas la force, monsieur; c'est l'autorité"—should be set to catch a very well-armed burglar, is also an old story, and as for the postman, his probable fate is nothing new. In the ordinary course of British officialism that postman, having obeyed the immemorial duty imposed on all Her Majesty's subjects, of assisting in thief-catching at the risk of his life and the loss of his blood, will have his pay stopped while he is in hospital, will be reprimanded for absence, and perhaps fined for not having completed his delivery. We say in the ordinary course, for it is possible that Mr. Fawcett may prevent things taking this turn. But what is really new is the apparition of the two-revolvered burglar. Samurai with two swords all men know, and there was a period when the British sailor, out of the spoils of Frenchmen and Spaniards, invariably carried two watches, which in a frolic he occasionally fried because of their likeness to eggs. But two revolvers are something new; even one is a comparatively recent addition to the equipment of the complete burglar. It is not known whether before the days of the late Mr. Pence any one had thought of attaching the weapon by a strap to the wrist that so the hands might be free, and the pistol always available. Perhaps Pence invented the strap. But even that departed hero is not recorded to have armed himself with the Circassian luxury of two revolvers. Probably some rival of the hatless theatre-goer of the Grecian will now perform his works, his daily tasks of burglary, with three, and so by degrees we shall return to the days when, on the authority of *The Pirate*, gentlemen of another branch of the profession suspended pistols by pairs, and almost dozens, about their manly frames, in sashes and scarves of elegant pattern. As there must be many burglars in London, this will be a great set-off to the present dull uniformity of masculine habit, and will improve the appearance of the streets not a little.

The first impulse of the householder is, of course, to go and do likewise, and he has been known in the last few days to take counsel with his friends on the best method of arming. A cursory allusion has already been made to differences of opinion as to the best armament for a threatened man of peace. Some authorities recommend the old-fashioned duelling-pistol, single or double, loaded also on the old-fashioned principle, with loose powder, a wad-pierced and plugged with more powder say the very cunning ones—and plenty of rather large shot, or one leaden bolus of the old ounces-of-lead pattern. For the mere purposes of annihilating the burglar, there can be no doubt that this would be most effective, while for the purpose of disabling him at a distance, the Irish plan of double-barrelled carbines or shot-guns is commendable. But those whose nerves are not heroically strung see more safety in the multiplied resources supplied by the revolver, as well as more merit in its handiness, cheapness, and so forth. Perhaps they are not wholly wise. Most revolvers from their extreme shortness of barrel and want of equipoise are very difficult to shoot straight with; the copper cartridges usually supplied for them have but little range and less penetration, and the very number of reserve shots is, as expert students of military history and human nature know, likely to encourage wild firing. Besides, there are revolvers and revolvers, and many of those commonly sold are instruments probably useless and certainly dangerous. Belgian and American gunmakers have for many years turned out these things at a surprisingly low price, and probably Birmingham has not been far behind. Now a cheap revolver can by no means be a good one. The mechanism requires to be carefully made and of good material, while most of the best movements and actions are protected by patent. It was said by an expert in a recent trial—when, as it was thought, murder, but, as it appeared, probably unintentional suicide, had resulted from the before-mentioned "foolin' around" with these awkward toys—that some revolvers are so flimsily adjusted and so badly poised that, in the mere holding of them by an unskilled person, the drag on the

hand might set the trigger free. Besides this, cheap revolvers are always jamming, while, weak as the charges usually are, the breech-piece not unfrequently proves insufficient to resist it. If, therefore, any one determines to procure a revolver for the use of himself or his housemaid—this could not be regarded as a badge of slavery like the once-hated cap, because toy revolvers appended to châtelines are by no means unknown ornaments, though very ugly ones—it is suggested to him that he should get a good one, that he should have himself moderately instructed in the use of it, and that, above all, he should keep it well out of the way of others.

After all, however, the simultaneous girding of revolvers to all sides is a thing by no means to be wished. It is clear that, if burglars take to them—as in all seriousness they seem to have done—the police must be armed with some weapon more effective than the truncheon. This might be the heavily-shod staff which has been suggested, and has been actually tried with good effect in Liverpool. In some cases it would almost certainly have to be the revolver. To make a fuss about an "armed police" is nonsense. If a policeman can be trusted with a truncheon, he can be trusted with a revolver, and the dangerous part of him to the public is not his pistol or his truncheon, but his tongue. But Sir William Harcourt's answer in the House of Commons the other night seems to show that the Government are seriously thinking of taking some steps to put down the revolver in the case of "civilians." As everybody knows, a good many suggestions have been made, such as a stamp duty on revolvers, a licence duty for carrying them, or even a positive prohibition of them in public places without good cause shown. These and other suggestions are excellent in intention, but a little difficult to carry out. The revolver is in its nature a pocket instrument; and a compulsory searching of all pockets, say at 12 o'clock every day, would be costly and difficult in the first place, and might be unpopular in the second. Probably the imposition of penal servitude for life on every burglar found armed with firearms, whether he used them or not, and of a heavy penalty on any one using revolvers in a public place, whether harm came of it or not, might have some effect. Meanwhile, there is somewhere about a Ørested—though at one time hatless—Jay Hawk of the Mountains, who has two revolvers, and is a very good shot while he runs. With a view to him Sir Edmund Henderson repeats the plaintive cry, "Look to your fastenings." He does not say "Look to your revolvers"; nor, on the whole, do we feel inclined to say so, though it may be admitted to be scarcely fair that a policeman with a truncheon, or a householder with a hair-brush, should be expected to meet on an equal terms a burglar with a Colt's double-action, self-extracting .380, or an Irish Constabulary "bulldog."

LA PRINCESSE DE BAGDAD AT THE COMÉDIE FRANÇAISE.

SINCE the production of *Daniel Rochat* last spring, the Comédie Française has been content with one novelty and one revival—exclusive of the brilliant performances of *Le Bourgeois Gentilhomme* and *L'imromptu de Versailles*, on the occasion of the two hundredth anniversary of the foundation of the theatre. The novelty was an ambitious one—a five-act play in verse, called *Garin*, by an untried author, M. Paul Delair. We have no space for a detailed account of this production, which had only a limited success. The revival was the play by M. Vacquerie mentioned above, *Jean Baudry*, originally acted in 1863. Had the title been "A Spoilt Child," the object of the four acts of this tiresome piece would have been exactly described; for the author has set himself to portray the humours of a certain Olivier, one of the most disagreeable persons that can be imagined, whom Jean Baudry, out of pure benevolence, has taken into his house and educated. The ill-tempered, self-conscious youth is played with extraordinary skill by M. Worms; and M. Got throws all his usual ability into the character of the mistaken philanthropist, Jean Baudry. No talent, however, could make such a piece interesting; and we wonder that it was thought worthy of reproduction while hundreds of far better plays, old and new, remain unperformed. There was at one time some thought of playing *La Moabite*, a biblical drama, by M. Paul Deroulède, whose fine play *L'Hermann* was successful at the Odéon a short time ago; but, after the piece had been accepted, the author received an intimation that he would do well to withdraw it. M. Deroulède prides himself on being at once a Liberal and a Christian, and would have us believe that his opinions were distasteful to some who hold high political offices. It has been whispered—and we have reason to believe with absolute truth—that it was rejected in favour of *Jean Baudry* in order to please the most advanced section of Republicans. From what we have already said, it will have been seen that this miserable piece of time-serving has met with its just reward. *Jean Baudry* has been unsuccessful; and the theatre has lost the credit of producing a piece which had sterling merit, though it might not have pleased everybody.

At last, however, a novelty has made its appearance. M. Alexandre Dumas has produced what we may term, in the language of science, a pathological, or even a teratological, drama; for it deals with the morbid mental condition of three persons, who are all utterly abnormal. The piece, which is in three short acts, is called *La Princesse de Bagdad*, in reference to a name which has been given to the heroine in a certain

est, in order to indicate discreetly the fact that she is of royal descent. Scandal, in the person of an old, and for once well-informed and accurate, *roué*, called Godler, admirably acted by M. Thiron, records that her father came to Paris in 1853, when he was Crown Prince; that there he fell in love with the pretty and not too scrupulous daughter of a shopkeeper, who was hastily married to a complaisant nobleman, the Marquis de Quansas, to conceal the royal indiscretion. The scene in which these secrets are communicated by Godler to a young friend, M. Trévalé, is one of the most brilliant that M. Dumas has ever written. The dialogue, sparkling with wit, and barbed with malice, derives additional point from being spoken in the house of the Princess herself, where there is thunder in the air; and the interlocutors, though they affect to be intimate friends of herself and her husband, are really exulting over the impending catastrophe, and pause every now and then to rally each other on personal peculiarities and piquant details, like medical students at a post-mortem examination. For the Princess, Mlle. Lionnette de Quansas, had made a love-match with the Count Jean de Hun, seven years before the piece begins. They have one child, a boy. Her extravagance has ruined them, and the curtain rises on an explanation of the pecuniary situation given to the Count by his man of business. They owe, or rather she owes, 1,107,127 francs 52 centimes, to defray which the only visible asset is the value of their house, some 800,000 francs. There is, however, one way of obtaining a sum which, if added to this, would pay everybody. Her father had promised her 1,500,000 francs, which were to be remitted to her after his death by a certain Baroness Spadetta. Two millions were left to this lady by will, with the following note:—"I am certain that Mme. de Spadetta will make good use of this money." Her own view of the bequest was that she should keep the whole herself; in consequence of which resolution Lionnette and she had quarrelled. After a while, however, she proposed to Lionnette to accept 500,000 francs, on condition of returning all her father's letters. Lionnette, with characteristic vehemence, had scornfully declined the bargain. The lawyer, M. Richard, asks why she attaches such importance to these letters:—

LIONNETTE.

Vous le demandez, Monsieur Richard? Pourquoi tient-on aux lettres d'un père qu'on aimait, qui vous aimait, qui était l'homme qu'était mon père et qui est mort?

RICHARD.

Qu'est-ce que vous comptez en faire?

LIONNETTE.

Les garder, les relire, comme cela m'arrive de temps en temps, lorsque les vivants m'ennuient ou me dégoûtent; et quand je mourrai, les emporter avec moi pour les lui rendre, à lui, s'il est vrai qu'on se retrouve dans la mort quand on s'est aimé dans la vie. Qui sait? après avoir été si paisant sur la terre, il n'aura peut-être que moi au ciel; il faut bien que je garde quelque chose pour me faire reconnaître—là haut—puisqu'il n'a pas pu me reconnaître ici-bas.

JEAN à Richard.

Comment ne pas adorer cette femme-là. (Il lui prend la tête dans les mains et lui baise les cheveux.) Tiens... tiens.

RICHARD, prenant le main de Lionnette.

Le fait est qu'elle a de la race, et qu'on vous a bien nommée en vous nommant Lionnette—petite lionne—mais malheureusement ce n'est pas avec ça qu'on paie les créanciers, et je vous ai offert le seul moyen qui vous reste.

LIONNETTE.

Dieu a donné, Dieu donnera; s'il n'y pense pas, au petit bonheur.

In the lawyer's last speech the clue is given to the complex nature of the Countess; she has inherited a royal nobility from her father; reckless extravagance from her mother. After the scene of which we have quoted a passage the Count and Countess are joined by their guests, Godler, Trévalé, and Nourvady, all somewhat disconcerted by the introduction of business into a social gathering. Nourvady, a man of boundless wealth, takes an opportunity when the Countess is alone for a moment to walk up to her, and calmly and quietly to inform her that she is ruined; that he loves her; and that he has bought and furnished for her a certain house in the Champs Elysees, which she can take possession of at any moment. In a cabinet there she will find the title-deeds; and on a table a casket containing a million in gold—"frappé exprès pour vous; c'est de l'or vierge, tel que doit être l'or que vos petites mains daigneraient toucher." This inventory of the advantages of the proposed residence being terminated, he hands the lady the key of the back door, with the further assurance that he will pass the whole of the following day there. Her only reply is to throw the key contemptuously out of window, and she passes Nourvady to join her other guests. Her husband, however, has learnt from the lawyer that all her debts have been paid by the mysterious millionaire, whose attentions to his wife he had already noticed, and in a scene of the utmost violence of language and gesture he accuses her of being Nourvady's mistress. "Imbécile!" she exclaims as the curtain falls. The next act takes place in the house that Nourvady has purchased for Lionnette. The stage is empty when the curtain rises; but presently Lionnette enters, closely veiled. She has come to ask Nourvady, whom she dares not invite to her own house, his reasons for thus dishonouring her—an innocent woman—in her husband's eyes; at least, this seems to be the only possible explanation of a step that, on the conditions laid down by the dramatist, appears to us almost inexplicable. The scene that follows is one of those strange exhibitions of abnormal passion that are so characteristic of M. Dumas's later plays. Nourvady admits that his course of action has been deliberately adopted, as much from hatred of the husband

as from love of the lady. He is a skilful duellist, and hopes to kill the Count in the meeting which he knows to be inevitable; but, in the event of a contrary result, he has made a will, by which he leaves his millions to the son of the Count and Countess, whom he protests that he hates nearly as much as his father, because he is the living proof of the love that the Count had felt for his wife. Can any refinements of hatred be imagined more cruel or more diabolical? Lionnette walks to the casket that contains the gold, opens it, and, as she turns over the glittering hoard with which it is brimming over, speaks a very curious and characteristic tirade which is too long for quotation. While she is still speaking a loud knocking at the door is heard, with a demand to open in the name of the law. Lionnette, looking out of the window, sees her husband, accompanied by the police. She at once comprehends the situation. Nourvady bids her conceal herself. Indignant at the odious interpretation which she knows will be put upon her presence in that house with him, she not only refuses to move, but tears off her veil, lets her hair fall over her shoulders, and standing thus in an attitude in which her husband had declared she was most beautiful, demands of Nourvady, in her desperation, if he really loves her. He, with passion equal to hers, protests the sincerity of his love, while the blows, directed by her husband's orders, whose voice is heard without, redouble on the door. To her lover's appeal "Dites moi quo vous m'aimez," she answers despairingly. "Hé! ouï! Je vous aime, puisqu'il le veut," as the door gives way and Jean enters, attended by the Commissaire de Police, whom he has brought with him to prove the fact of his dishonour. The scene that ensues is easy to imagine, though the brutal frankness of the language may never before have been equalled on the stage. Lionnette, seated on the couch in the centre of the room, in an attitude of defiance, first declares that she is in her own house, and that therefore no one has the right to find fault with her—in proof of which statement she signs the title-deeds which the officer finds in the cabinet; and, secondly, that her husband's worst suspicions are true, witness the gold on the table, some of which she suggests that he had better appropriate.

The end of this act is cleverly managed. The officer dismisses first Nourvady, then Lionnette, and lastly Jean, advising the latter not to be seen leaving the house in his company, because "Les Français n'aiment pas les maris qui font surprendre leurs femmes par le commissaire de police." The third act takes place in the afternoon of the same day, in the house of the Count. In the opening scene we find him explaining his conduct of the morning to Godler and Trévalé; or rather trying to do so, for we find his reasoning the reverse of conclusive. It was possibly the author's intention to show that his conduct did not admit of defence. To him enters his lawyer, M. Richard, who explains that the Countess has returned home, and that the whole affair remains secret—a statement surprising enough to an audience who had been informed in the preceding act that a great crowd had gathered round Nourvady's house, attracted by the spectacle of a forcible entry on the part of the police. The lawyer, intent on setting matters right, has next an interview with Lionnette, who is preparing in her despair to fling herself helplessly and hopelessly into the arms of a man whom she despises, only to get away from another whom she despises equally, if not more. He tries to induce her to see her child, but she refuses; and, though he can see that she is disguising her real feelings, he cannot shake her resolution. While they are still speaking, Nourvady comes to fetch her, as coolly as though he were paying an innocent morning call. Lionnette, resolved to carry out her destiny, puts on her bonnet, and is about to go away with Nourvady, when little Raoul comes in. A pretty scene ensues of fondness on his part, and affected indifference on hers, which Nourvady contemplates with growing excitement. At last, when the child has placed himself in front of his mother, and tells her that she shall not go away from him, Nourvady loses all patience, and pushes the child aside so roughly that he is thrown violently to the ground. Lionnette—the one good passion in her heart aroused at last—hurls herself upon Nourvady, whom she seizes by the throat, as though she would strangle him, exclaiming, "Miserable! miserable! partez! partez!" Leaving him, she flings herself down beside her child, in a passion of repentance, as M. Richard enters. The astute and kindly lawyer, seeing that his introduction of Raoul at the critical moment has had the desired effect, bids Nourvady take himself off, a bidding which that worthless person obeys with much precipitation, leaving Lionnette still weeping over her child, who is more frightened than hurt. Reassured as to his condition, she sends M. Richard for her husband, of whom she begs forgiveness, and the lawyer sums up the whole situation in a sentence:—"Un cri d'enfant! cela suffit. Quand tout est bien désespéré, Dieu a de ces moyens-là." And so the curtain falls, leaving the audience to ask various questions. How did the Comte and Comtesse de Hun get on afterwards? did the Count call on M. Nourvady? what was the result of the duel? what became of the "million en or vierge," and of the remaining thirty-nine of the forty that he was said to possess? what did "society" say of the Count, who got his wife's debts paid by a stranger? These and various other problems equally perplexing remain unsolved.

The position of M. Dumas in the world of letters has made us analyse at length his latest production, for which, however, we find it difficult to say one word of commendation, or even of excuse. Immoral it is not; vice, in the person of M. Nourvady, is the reverse of attractive; no one can sympathize with Lionnette in her excursion to the brink of a moral precipice, and the husband is so

colourless that he is hardly worth notice; but as a picture of contemporary society (which it professes to be) it is a coarse and vulgar daub. No doubt the author will presently publish an elaborate preface or pamphlet, in which he will demonstrate that *La Princesse de Bagdad* is animated by a high moral purpose, which the public are too blind or too wicked to discover for themselves. Meanwhile, we are of the opinion of the distinguished audience who received it on the first night with a storm of disapprobation the like of which has not been heard within the walls of the Comédie Française for many a long year.

The performance is throughout excellent. Mlle. Croizette has seldom had a part that suited her so exactly. She is a very lioness, or more justly a very tigress, in the scenes with her husband and her lover, and she is intensely pathetic in those with her child. M. Worms invests the repulsiveness of Nourvady with a sort of mystery and fatality that raises him above the ordinary stage-lover of a married lady; and M. Febvre does all that art can do for the husband. We have already spoken of M. Thiron, and he is well seconded by M. Baillet as Tréville. Great praise is due also to M. Sylvain for the way in which he impersonates the Commissaire de Police. Two scenes have been provided sufficiently rich and elaborate to save almost any piece. There is a transparent ceiling of coloured glass, wonderful furniture, and a view of the Champs Elysées, representing the exact houses that would be seen from a villa in the position of that in which the action is supposed to take place. But even with these advantages we shall think more meanly of French taste than we wish to do if the piece has more than a *succès d'estime et de curiosité*.

THE STOCK MARKETS.

SINCE the beginning of the year the Stock Markets have been somewhat depressed. There has been no great fall in prices, though the movement has been steadily downwards; but speculation has been dormant; the public have abstained from buying, and what transactions there have been have generally been sales. A reaction of the kind was inevitable after the long and extraordinary rise that has proceeded, almost without interruption, for the past eighteen months. Up to a certain point that rise was legitimate. The extreme discredit that followed the City of Glasgow Bank failure caused an exaggerated fall in all kinds of securities, and when it gave place to a more sanguine spirit, an upward movement was a necessary consequence. Furthermore, when it became clear that the improvement in trade continued, and promised to go on for a considerable time longer, an additional rise was seen to be justified. An improvement in trade means, of course, a greater number of transactions of all kinds; a larger amount of goods conveyed from point to point, more money changing hands, larger profits realized, more people travelling, whether for business or for enjoyment, and, consequently, it means increased receipts for the railways, and therefore better dividends. But better dividends naturally justify higher prices for the stocks. So, again, with regard to the banks. If they do a larger business, and realize handsomer profits, their shares are worth more money. A general rise accordingly in the shares of commercial and industrial Companies of all kinds was manifestly justified. So, also, was a rise in the bonds of those countries which had suffered during the trade depression, and now share in the revived prosperity. Better times would bring larger revenues to the Governments, and consequently more means for paying interest on their debts. But this justifiable rise was exaggerated by the awakening of the speculative spirit, and it was still further stimulated by the excessive cheapness of money. When the improvement in trade began, a year and a half ago, the interest of money in the short loan market in London scarcely exceeded $\frac{1}{2}$ per cent. per annum. In other words, the banks were unable to use profitably the immense funds which they had collected, and they welcomed eagerly the speculators on the Stock Exchange who applied to them for loans with which to operate. As long as the rise continued, speculators were not only able to borrow cheaply and easily, but, as the value of the securities they offered to the banks was steadily increasing, the security itself seemed better and better. In this way the cheapness of money, which always exists at the beginning of a trade revival, stimulates and exaggerates the rise in the prices of Stock Exchange securities, which is the most notable circumstance of the revival. But of course a rise cannot go on for ever. At a certain point it is seen that railway bonds and shares and other securities of the kind are as high as the circumstances warrant, if not higher; and then the speculators look about them for some new stocks on which to operate. They found what they were seeking in the bonds of defaulting foreign States, such as Turkey, Mexico, and some of the South American Republics. It was plausibly argued that the European Powers could not allow Turkey to fall to pieces; and that, if Turkey is to be kept alive, it is necessary to put her finances in some kind of order; which would mean, of course, the recommencement, at some time or other, of the payment of interest to the bondholders. The bonds being exceedingly cheap, and there being thus, in Stock Exchange slang, "something to go for"—that is to say, a sufficiently plausible argument that the bonds by and by would be worth more than they are at present—speculation took them up actively. In the case of Mexico, again, it was pointed out that the country is naturally very rich, that the Americans are interesting themselves in its material development, and that, if

once railway communication is established between the two Republics, the United States would be in a position to impose their will upon Mexico, and thus to compel greater honesty towards the bondholders. In this way a speculation was got up in these and the bonds of other States of a similar kind.

In the meantime the more far-seeing and cautious capitalists, who had eagerly joined in the speculative movement as long as it remained within reasonable limits, began to see that prices had now attained a point at which a fall was much more probable than a further rise; and they prudently began to realize the profits made. Constant and heavy selling thus checked the rise which had been so rapid and continuous hitherto. In some cases, the object was simply to employ the money thus obtained in loans upon the Stock Exchange. The magnitude of the speculation naturally produced a great demand for loans, and, as many of the speculators were themselves without the means of paying for what they had bought, and were also in but very mediocre credit, they were naturally obliged to pay very heavy rates of interest for the advances made to them. In this way capitalists were able to obtain 5, 8, 10, and even 15 per cent. in some cases, for loans, whereas the investments in which the money had been previously sunk probably had not yielded them anything like the lowest of the figures named. A new influence now began to make itself felt in the increasing value of money. We have recently referred on two occasions to the effect of the trade improvement in enhancing the value of money, and we need not now go over the ground which we have there travelled. It will be sufficient to say that, as trade expanded and those engaged in it found it necessary to extend their business and enlarge their plant and premises, they deemed it expedient to sell out of the securities in which they had invested their surplus funds during the trade depression. This was a further check to the rise in prices, both by diminishing the monied holders of stocks, and by withdrawing the funds previously employed upon the Stock Exchange. The steadily increasing demand for money for trade purposes, by drawing away the idle money employed in the shape of deposits and bankers' balances in London, further tended to increase the rates charged to speculators to enable them to carry on their operations. In all times of slack trade it is usual for the country banks to keep large balances in London which they are unable to employ in their own districts. When trade is active, and merchants' and manufacturers' demands for money are consequently incessant, the banks in the trade centres find it easy to employ at remunerative rates all their funds; but when trade becomes depressed, they find the local demand falling off, and consequently send up the balances they are unable to employ at home to be used in London on the best terms they can obtain. One of the effects of a trade revival is to lead to the withdrawal of these balances, and thus diminish the funds which the London banks lend out to speculators. In these three ways, then, the rise in prices on the Stock Exchange itself and the improvement in trade tended to check a further rise. Firstly, the magnitude of the rise tempted many holders of securities to sell, and thus realize in time the great profits offered them; secondly, business men, needing further funds for the extension of their business, sold out of the securities in which they had invested when the trade depression compelled them to contract their business; and, thirdly, the country bankers, finding the demands for loans and discounts increasing at home, withdrew, and are still withdrawing, balances which they had kept during the slack times here in London.

The effect was to leave inflated stocks in the hands of persons without large capitals of their own and without very great credit. The monied men, as we have just seen, had hastened to realize as soon as they considered prices had nearly reached the highest point at which they could be maintained; and the gradually diminishing funds in the hands of the bankers compelled these latter to charge increasingly higher rates for the loans they made to the speculators just at the very time when the stocks were going into the hands of what are called "weak holders"—that is, persons without much capital and without very great credit. That credit itself was being somewhat severely tested by the fact that money itself was steadily rising in value. Bankers, finding a steady outflow of currency to the provinces, began to grow alarmed at the magnitude of the speculation, and they decided about Christmas last that it was time to do something to check it. Accordingly there was a combination amongst the great London bankers to raise their rates for Stock Exchange advances to such a height as would give a warning to speculators that they must contract their operations; and towards the end of the year rates were charged in some cases to the speculators varying from 10 to 20 per cent., and even upwards. At such rates as these of course the chance of profit speedily began to disappear, and the speculators found it necessary to sell out. Accordingly, sales have been going on ever since, not in very large amounts, it is true, but still continuously, and sufficiently to depress the markets and to give them the appearance of want of life and animation. The investing classes, too, have preferred to lend their money rather than to buy themselves, hearing that such enormous rates were being charged upon the Stock Exchange. Still, in spite of all that is said of the weakness of speculators and the magnitude of speculation, it is remarkable how very little has been the fall in prices. The bad weather of January was most unfavourable to them, for the stoppage of almost all out-of-door occupations, and the loss of traffic by the railways, were most discouraging, and would have been almost sufficient of themselves to cause the

drop in prices; yet the fall in home railways has scarcely reached 5 per cent. What might have happened, indeed, if there had been the appearance of sudden and imminent war upon the Continent we will not undertake, to say; but certain it is that, with bad weather at home, a formidable agitation in Ireland, an unpleasant state of affairs in South-Eastern Europe, renewed disturbances at the Cape, and dissatisfaction with the Afghan policy of the Government, the course of the Stock Markets has been extraordinarily steady. We are inclined to think, therefore, that the alarm of the banks was exaggerated, if not premature; that the speculation in itself, though large no doubt, was not at all so great as was generally reported; and that the trade improvement is so steady, and promises to last so long, that a further and considerable rise in prices may yet be looked for. In confirmation of this opinion we may point to the greater ease in money during the last week or two, when the Bank of England has been unable to employ its funds at the very moderate rate of 3½ per cent. It has been obliged, therefore, instead of sending and discounting, as is its proper business, to invest its surplus funds in securities, and only last week it bought up a million and a half of Treasury Bills, yielding it no more than 3 per cent. per annum. Moreover, at the Stock Exchange settlement, which has taken place this week, the rates charged for advances on the Stock Exchange have been very much lower than those at the previous two or three settlements, varying from about 4 to 5 per cent.; showing again that the joint-stock banks and the private banks have been unable to maintain the rates they had been charging. No doubt, as we have said, there have been very many sales, and speculation has been effectually checked; but it has not been so diminished in volume as in itself to account for the greater cheapness in money.

THE THEATRES.

THE success of *The Colonel* at the Prince of Wales's Theatre would seem to indicate a reviving taste for farcical entertainment. The three-act farce has long been familiar to the French stage, but the appetite of the English playgoer for this kind of work has usually been satisfied within narrower limits. It is possibly out of a feeling of respect for this tradition of our theatre that Mr. Burnand has bestowed the dignified title of comedy upon his diverting performance. Or it may be that he has thought it due to the author of the French piece from whom he has borrowed the lines of his plot that the original description should be religiously preserved. But, although Mr. Burnand has confessedly adopted the framework of a comedy, he has completed the structure in the spirit of the broadest farce. In so far as he ventured at all into the region of comedy, he rather endangers the success of his work. The third act of the *Colonel* is felt to be dull because there, for the first time, the author attempts to be serious. The rollicking burlesque of the earlier scenes is suddenly exchanged for a display of misplaced and ineffective sentiment. The æsthetic wife, instead of joining in a breakdown with her quaintly-attired companions, in order to celebrate her recent emancipation from high-art dogmas, begins to murmur some nonsense about repentance and regret to her ridiculous husband. The audience is quite gravely asked to believe that this outraged Mr. Forrester has been driven to the verge of conjugal infidelity by the contemplation of a sage-green wall-paper; and poor Mr. Burnand, whose boyish high spirits have served him so well in the two first acts, is driven, by the plan of his work to abandon pun-making, and assume the inappropriate pose of the moralist. The effect is much as though the clown in the pantomime were suddenly to lay aside his hot poker, and discourse pathetically of the moral delinquencies of the pantaloon. It suggests, indeed, the awful suspicion that Mr. Burnand has been for once the dupe of his own humour, and that he seriously believes in the existence of the grotesquely amusing creatures with whom he has peopled the earlier scenes of the play. In this respect *The Colonel*, as a comic presentation of the extravagances of æstheticism, must be pronounced inferior to *Where's the Cat?* in which the spirit of boisterous laughter is successfully maintained to the close of the piece. They are both, indeed, deeply indebted to an authority that is in neither case explicitly acknowledged. Mr. Albery admits that he has borrowed from the German, and Mr. Burnand confesses his obligations to the French; but what really arrests the attention of the audience in these amusing performances is bodily appropriated from the work of Mr. Du Maurier. The types of character, the ludicrous situations, and even the exaggerated vocabulary of æstheticism, are all derived from Mr. Du Maurier's admirable caricatures in *Punch*. It is in virtue of his skilful designs that the personages of the drama appeal to the audience with the force of familiarity, and that their idiotic proceedings produce a certain sense of illusion. On the occasion when we witnessed the performance of *The Colonel* there was a young gentleman in the stalls who inquired incredulously of his elder sister whether such grotesque creatures existed in real life? "Oh, of course not," was the reply, but "haven't you seen them in Mr. Du Maurier's drawings?" It must be admitted, however, that the artist's invention somewhat suffers in the process of translation to the stage. The fun loses much of the fineness of its flavour from the fact that it has to be taken at second hand. Mr. Burnand's high animal spirits do not induce much subtlety or discrimination in the method of his satire; and, although

he lays about him lustily, the blows are not always very skilfully directed. Mr. Du Maurier had, as an artist, the advantage of thoroughly understanding the phase of life that he chose to ridicule. But the rougher quality of Mr. Burnand's humour is perhaps a certain advantage in appealing to the mixed audience of a theatre; and, it must be added, in justice to the dramatist, that the unflinching wit of his dialogue serves to attract a large number of his hearers who take no particular interest in the Maudsles or Postlethwaites of the artistic world, and have no intimate knowledge of their eccentricities. Even the occupants of the stalls are not always quite sure of their ground. When, in the last act, Miss Amy Roselle appears in a somewhat remarkable ball-costume, intended, as we may suppose, to illustrate the healthy laws of fashion, as opposed to the foolish extravagances of art, an audible titter might be heard, which was, however, speedily checked when the audience realized that this was not what they were intended to laugh at. The contrast designed by Mr. Burnand might indeed have been more effectively expressed by those who have had charge of the decorations of the piece. What is meant to be a bright and cheerful apartment inhabited by the gay widow Mrs. Blyth is but a sorry specimen of the fashionable decorator's handiwork, and it surely argues a strange ignorance on the part of all concerned that the scene-painter should have been allowed to introduce upon the walls the hated features of dado and frieze. But, if the piece is imperfectly mounted, it is in many respects admirably played. The Colonel of Mr. Coghlan is a highly-finished and most artistic performance. It is the only rational character in the play, and it is impersonated with a strength and reticence of style which suggest a regret that it is not placed amid more serious surroundings. The American accent has not often been given on the stage with such entire freedom from exaggeration. Miss Myra Holme, as the æsthetic wife, enters with becoming gravity into the wild extravagance of Mr. Burnand's creation, and her invention of sentimental pose and gesture is often highly humorous. Mr. Buckstone, who plays the sickly painter, has evidently less knowledge of the abnormal artistic development which he has to present, and the same comment may be made upon the Lambert Strejko of Mr. Fernandez. Even the most praiseworthy attempts at the grotesque are of little avail without some perception of the particular form which they should take. Mr. Buckstone suggests with fidelity his previous career as a chemist's assistant, but of the artistic life to which he is supposed to aspire he has evidently no perception. In this respect his performance compares unfavourably with that of Mr. Beer-bohm Tree at the Criterion, who very successfully interprets the afflictions of Mr. Du Maurier's Postlethwaites.

The production of *Masks and Faces* at the Haymarket Theatre can scarcely be regarded as a novelty. It is, in truth, a revival of a revival, for before Mr. and Mrs. Bancroft quitted the little house in Tottenham Street they had already made the work of Messrs. Reade and Taylor familiar to the public. We have to note, however, some important changes in the cast, accompanied by greatly increased luxury of costume and decoration. The drama is now put upon the stage in a manner that leaves absolutely nothing to be desired. Mr. Lewis Wingfield, who has designed the costumes, has brought to his task full archaeological knowledge and a fine artistic taste, and the scene in the second act where Vane entertains his guests in Queen Square stands out as a brilliant picture of *genre*, complete in every detail.

Upon the merits and defects of the play itself there is now no need to enter. The strength and interest of the situations which it contains have always been held by the public to outweigh whatever shortcomings may be found in the presentation of individual character. But these imperfections of portraiture must always be taken into account if we are to judge fairly of the actor's share in the performance. It is difficult, for example, to conceive of any rendering of the part of Peg Woffington which would be entirely satisfactory. The sudden changes of feeling from careless gaiety to serious and almost tragic passion afford effective material for the display of an actress's varied capabilities, but the keen interest that is awakened by her sufferings is arrested by the incomplete development which the authors have given to their theme. If we allowed ourselves to follow the fortunes of Peg Woffington, we should quickly lose all concern for the trials of Mabel Vane. The conflict between these two characters is so conducted as to leave the play without a real centre. Our sympathies are distracted just when they are most deeply aroused, and the ultimate reconciliation between husband and wife is felt to be a somewhat hollow and unreal conclusion to a serious struggle. Mrs. Bancroft's rendering of the principal part is familiar to all playgoers, and it has lost nothing of its acknowledged charm. We must confess, however, that the defects of the play receive additional emphasis from the greater strength of emotion which she now strives to impart to the character. The fragile structure will hardly bear the very serious method which Mrs. Bancroft now imports into her interpretation, nor do the essential excellences of the actress's art show to such advantage under the more severe strain that is put upon them. Mr. Conway now takes the part that was formerly entrusted to Mr. Coghlan. His performance is eminently graceful, and it is perhaps no great matter for regret that the heartless villany of the character is less prominently expressed. Among the less important rôles we may particularly notice the Snarl of Mr. Kemble and the Soaper of Mr. Brookfield, while the character of Colley Cibber, supported alternately by Mr. Bancroft and Mr. Cecil, is in either case in safe hands. The Triplet of Mr. Cecil is another of the novelties of the production. It is admirably made up

and very carefully elaborated; but it misses, to our thinking, that element of hopeful vanity which gives the keynote to the character. Triplet, as Mr. Cecil plays it, seems as melancholy an object to himself as he appears to the spectator. He is buoyed up by no illusions; from his first entrance on the scene he presents a broken and dejected appearance; and it is almost impossible to realize that he has any sort of belief in his own intellectual powers. In short, Mr. Cecil, while he presses too heavily upon the pathetic side of the character, deprives it of all its humour. Mr. Bancroft, on the other hand, while he succeeds even in a more marked degree than he did a few years ago with the pathetic side of the character, by no means neglects the humour which is closely allied with the pathos. He renders with fine insight and skill the self-deception of the poor struggling creature, and he enlists sympathy for Triplet throughout, in spite of his absurdities.

At the Gaiety Miss Litton has withdrawn the *Country Wife* in favour of Goldsmith's comedy of the *Good-natured Man*. The play, in spite of some excellent acting, proves less attractive in representation than in the reading. The action is desultory, and the characters assume an air of exaggeration. We may particularly mention as special features of the representation the Croaker of Mr. Lionel Brough and the Lofly of Mr. Everill.

REVIEWS.

PROVINCIAL LETTERS OF PASCAL.*

MR. DE SOYRES deserves the thanks of English scholars for giving us what is curiously enough not only the first critical edition, but the first edition at all, of the French text of the *Provincial Letters* published in this country. Of English translations there has been an abundance, the first of which appeared within six months of the issue of the eighteenth Letter, and was rapidly followed by a translation of the replies by Father Annat, the King's confessor, and Nouet. But translations of a work whose chief abiding interest is due to the style, which made its author "the first to establish the French language as it now is," are a poor substitute for the original. The Letters began to be published in January 1656 without any name, but Pascal afterwards adopted the sobriquet of Louis de Montalte. The fourth and last edition published during his lifetime appeared in 1659, with numerous corrections, which Mr. De Soyres—for what seem sufficient reasons—judges to be authentic, and he has therefore adopted the text of this fourth edition, appending the various readings of the earlier ones in footnotes. He tells us in his Preface that he had a twofold object in bringing out the present edition, to supply students of French literature with an accurate text, and students of theology with materials for investigating one of the most important pages in ecclesiastical history. With the latter aim he has prefixed an Introduction of much interest and value, though theological accuracy is not its strongest point. The notes appended to the Letters are for the most part useful and unpretending, but it is a pity that the controversy has been allowed to blend with the critical and historical element in them. When Mr. De Soyres speaks of the *Provinciales* in his preface as the author's "masterpiece" he is referring, we presume, to the style, for he has on the previous page designated the *Pensées* "his greater work," as it certainly was. In this matter indeed the verdict of posterity has remarkably, though very intelligibly, reversed the judgment of contemporaries. It was for their substance rather than their form that the Letters were devoured by readers of all classes on their first appearance, though it was even then the inimitable style which constituted the secret of success. To quote from the admirable sketch of the Port Royalist affair in Mr. Jervis's *Gallican Church*, "A dry ecclesiastical controversy, hitherto confined to the cloister, the school, and the Sorbonne, suddenly converted into a theme for plaisanterie and badinage, was a spectacle inexpressibly diverting to the Parisian mind," and accordingly the immediate success of the Letters was almost unexampled. The first three of them as well as the seventeenth and eighteenth on the Jansenist theory of predestination are addressed, so to speak, *ad clerum*, and roused but a comparatively languid interest beyond purely theological circles, though the two last cost the author so much time and trouble that he is said to have rewritten the eighteenth Letter no less than thirteen times; and they contain, to say the truth, a great deal of special pleading, more ingenious perhaps, but hardly more ingenious, than that which he charges with such terrible force on his opponents. But the remaining Letters, from the fourth to the sixteenth inclusive, are addressed *ad populum*, and written in a language very plainly "understanded of the people." The fourth Letter, which opened the attack on the Jesuit casuists, transferred the discussion at once from the study or the cloister to an arena open to the general public. It is true that Pascal had little really new to tell—the materials had been already collected and published in Arnauld's *Théologie Morale* and elsewhere—but he had an entirely new way of telling it. He made for the first time "a popular appeal, written in the language of society to the educated public," and it was rather to his advantage for his immediate purpose that he was himself no theologian. He hit the

Jesuits and hit them hard, and Parisian society, which half feared, half detested, and was compelled to tolerate them, cheered to the echo. Even those who could appreciate little of the piquancy of his satire and the refined graces of his style, were equally scandalized and amused as it was shown by extract upon extract from the fashionable manuals of casuistry how priests might say mass immediately after committing a crime, and how monks expelled from their convents were *ipso facto* relieved from their vow of obedience; how valets, by properly "directing the intention" might hold ladders for their masters and carry their love letters, and, if they thought their wages insufficient, recoup themselves by judicious theft; how a judge might take bribes and give sentence against his conscience, and a bankrupt might fraudulently reserve money enough to live at ease; how the rich might be robbed by the poor, if they considered their necessity serious, and how somehow or other restitution never need be made. The *Pensées* would appear tame reading indeed after such an exposure; yet the *Pensées* retain their permanent value, while the *Provinciales* have become the property of linguistic critics or Exoter Hall divines. Why is this?

Many good reasons might be given. In the first place the interest and excitement of the Jansenist controversy—which really involved questions of deep social and political, no less than religious, interest for France—has long since passed away. And in the next place the Jesuits, if no less keenly hated in some quarters still, are no longer an object of terror except to a few fanatical visionaries here and there; nor—it must in fairness be added—could the same charges be plausibly alleged against their current teaching now. And there are two further considerations, one of general application, the other applying specially to Protestant readers, which must be allowed to deduct seriously from the weight of the indictment brought against them by Pascal at the time. We have hinted already that he was too hasty or too prejudiced to be always trustworthy in his treatment of the Jansenist controversy. He made a telling point against his Thomist assailants in his exquisite raillery at the *pouvoir prochain* which was never used, and the *grâce suffisante qui ne suffit pas*, but he failed entirely to establish any distinction intelligible either to the theological or to ordinary apprehension between the Jansenist theory of predestination and the Calvinist. And so too the accuracy, and indeed the good faith, of his criticisms on the Casuists were not always unimpeachable. Several cases of misquotation and mistranslation, and more of deliberate perversion of the meaning of his authorities, were urged, and some were proved against him. The Protestant Schoell calls the *Provinciales* "a partisan work, where opinions are attributed to the Jesuits which they have long since disowned, and certain extravagances of some Spanish and Flemish fathers are charged on the whole Society." It is moreover notorious that the science of casuistry was not the invention of the Jesuits, and had been accounted a special branch of study for the Roman Catholic priesthood long before the birth of Ignatius Loyola; it was, in fact, in some shape or other, inseparable from the use of the confessional, which had been for centuries a recognized institution, and which Pascal, who loudly and no doubt sincerely insisted on the Catholic orthodoxy of his clients as well as his own, never dreamt of calling in question. It is fair indeed to remember that many of the writers and opinions he most severely lashes were eventually condemned at Rome; yet Protestants at least can hardly help feeling—though Mr. De Soyres tells us that De Moulin was the only Protestant divine engaged in the controversy who took this line at the time—that Pascal's attack, whatever becomes of particular details, was an impeachment of the entire system of casuistry or moral theology, and therefore virtually of the confessional. And this necessarily weakens the force of his argument as addressed to the Jesuits. It has the fatal flaw of proving too much for its purpose.

Mr. De Soyres has divided his Introduction into five sections, dealing respectively with the Catholic Reaction of the seventeenth century, the Free-will controversy, the Casuists, the publication and the text of the *Provinciales*. He tells us he had originally contemplated prefixing a complete biographical sketch of Pascal, but this was rendered superfluous by the recent publication of Principal Tulloch's monograph. But it does not at all follow that all readers of the present volume are in possession of Principal Tulloch's works, and a similar method of reasoning would have made the remaining portions of the Introduction equally superfluous. Ranke has composed an "admirable monograph" on the Catholic Reaction, far more widely known than Principal Tulloch's book, and there are plenty of excellent works to be found on the Free-will controversy and the Casuists. However we are rather disposed to thank Mr. De Soyres for what he has given us than to quarrel with him for what he has omitted, though we could wish he had confined himself more exclusively to the historical, and meddled less with the theological aspect of the Jansenist controversy, of which he has a very imperfect comprehension. We will not criticize his sweeping identification of St. Augustine's teaching with that of Calvin, Jansen, and Edwards; he has no doubt a right to plead the high authority of the late Professor Mosley for that view of the case. But he seems wholly unaware that there is by no means a universal agreement among competent judges in his interpretation of the meaning of that most voluminous and not always consistent of the early Fathers. Both here and in his account of what he designates "the Primitive doctrine, afterwards called Semi-pelagian," a little more reserve, not to say diffidence, of tone

* The *Provincial Letters of Pascal*. Edited by John De Soyres. Cambridge: Deighton, Bell, & Co. 1880.

would at least have been appropriate. It is a graver error, and one which betrays a complete misapprehension of the theological bearings of the controversy, to speak of "the doctrine of *opus operatum*, or, in other words, that the duly administered rite acts as a charm," in contrast to "the necessity of subjective fitness in communion," as the main-point in dispute between the Jansenists and their assailants. In the first place his definition of "the doctrine of *opus operatum*" is quite a wrong one, and in the next place there were no doctrinal differences whatever on that point between the rival schools. Both were alike agreed in the Tridentine doctrine that the sacraments work *ex opere operato*—that is by virtue of their divine institution, and not by virtue of the subjective dispositions of the recipient—and both would alike have admitted in theory, whatever laxity may be charged on Jesuit practice, that right dispositions are an indispensable condition of their beneficial operation on adults. Mr. De Soyres has fallen into the common mistake of supposing that, because the Jansenists were disaffected towards Rome, or at least towards those who represented Roman authority in France, they were at bottom Protestants. They were nothing of the kind, as neither are their descendants, the Old Catholics of Utrecht, now.

It would be out of place to dwell here at length on the general history and principles of the Port Royalists, or the interminable, and to modern notions unprofitable, discussion of *le droit* and *le fait*. That "the Five Propositions" are contained in substance, if not in actual terms, in the *Augustinus* no impartial critic at the present day would think of disputing, and as little will any reasonable man, of whatever creed, maintain the justice of extorting an acknowledgment of the fact by the extremest ecclesiastical and civil penalties from those—many of them ignorant women—who were, however, unreasonably, convinced of the contrary. The appearance of the *Provincials* coincided, happily for the Port Royalists, with the famous miracle of "the Holy Thorn," which occurred March 24, 1656, just two months after the publication of the first Letter, and contributed not a little to their practical success. For a time all further attacks on the doomed community were checked. And Ultramontanes would do well to remember—what Sir James Stephen justly points out in his attractive essay on the Port Royalists—that of all the alleged miracles of ecclesiastical history there is scarcely one for which such apparently conclusive evidence can be produced as the prodigy of *la Sainte Epine*. "The greatest genius, the most profound scholar, and the most eminent advocate of that age (Pascal, Arnauld, and Le Maître) all possessing the most ample means of knowledge, all carefully investigated, all admitted, and all defended it with their pens." The storm of indignation already raised against the Casuists was sensibly increased; Father Pirot's reply to the *Provincials*—a feeble and vulgar tissue of abuse—was condemned by the Sorbonne and by most of the French bishops, and denounced by the Jesuit Society itself; it was eventually censured by the Roman Inquisition. But meanwhile the *Provincial Letters* also had been placed on the Roman Index, and on October 14, 1660, were publicly burnt in Paris by order of the Council of State. Two years afterwards Pascal died, not long after his sister, the noble-minded Jacqueline, whose mental anguish, after she had been induced to sign the obnoxious "Formula" in July 1661, brought her prematurely to the grave. From that time forward to its close the history of Port Royal is the history of a persecution as ruthless as it was iniquitous. The short respite lasted only till the death of Cardinal Mazarin, when Louis XIV. began to act, or to profess to act, for himself, which meant practically that the Jesuits and the royal mistresses, through whom they ruled, governed France. Thenceforth the whole machinery of Church and State was put in motion to exterminate the hated sect, and no mercy was shown them. One of their Jesuit assailants, in his reply to Pascal, had called them "vermin," and as such they were treated. Madame de Maintenon did her best to egg on their persecutors while she derided the sufferings of her victims. Years afterwards, when all was over, and the aged monarch was tormented on his deathbed by a late remorse, he bitterly warned his Jesuit guides that on them must rest the whole responsibility of the inhuman policy they had induced him to pursue. But Jansenism did not expire with the fall of Port Royal, and Jansenists, alienated by over a century of cruel wrongs, took a prominent part in the earlier scenes of the French Revolution. They were avenged at last on the monarchy and Church which had proscribed them.

It is obvious and common enough to compare the *Provincials* with the *Letters of Junius*, but the comparison can only be admitted with many grains of salt. Both works have enjoyed a vast and lasting popularity, and have exercised a powerful influence on the subsequent literature of their respective countries, and both were largely indebted for their popularity at the time, and almost exclusively for its survival, to their brilliancy of style. But there the similarity ends. In temper, tone, and object no two works could well be more unlike each other. The style of Junius, telling and biting as it is, is laboured and vicious, while that of Pascal is the transparent and elastic medium of his thought. The *Letters of Junius* manifest no spark of generous feeling, no evidence of lofty principle or nobleness of aim, no sign of superior knowledge or desire to communicate it, while the invective throughout is as extravagant and unscrupulous as the vanity and egotism of the writer are inordinate. The character of the *Provincials* is in all these respects just the reverse. We may or may not sympathize with Pascal's views, and may think that his zeal not unfrequently outran his discretion and sometimes overpowered his candour, but of his honesty of purpose and un-

selfish loftiness of aim there cannot be two opinions. If his work is chiefly valued now, and justly valued, for its unique position among the classics of the French language, that would in his eyes have seemed the least worth considering of its merits. He wrote, not for fame or popularity, but to expose with the genuine irony of passionate conviction what to him was a sacrilegious abuse of all he held holiest and most dear, and to vindicate the just claims of an oppressed minority, whom he knew to be cruelly outraged and believed to be the solitary witnesses of divine truth. And we may safely add, without pronouncing any judgment on the theological questions at stake between the Port Royalists and their consors—in which probably few religionists of the present day will be able to sympathize entirely with the former—that, if in that last age of the old Gallican Church the salt did not wholly lose its savour, it was mainly the influence of the despised and persecuted Jansenists that preserved it.

SYLVESTRA.*

MRS. ELLIS—for once we are spared the perplexity in which lady authors are apt to involve us, since she either is rightly so styled now, or would so have been at the period to which she carries us back—has a great deal to say of a time concerning which the present generation has a great deal to learn. The form in which she could best say it was a question for her own decision, and we doubt whether she could have decided it better than she has done. "The golden threads of true tradition were to shine among the subdued colours of my fiction." The metaphor may be more prosaically varied, and the story regarded as the string upon which the beads of true tradition are strung. The string may be somewhat too long, and may show gaps here and there; or the new beads "made to match" the old ones may recall the blue and brown novelty of the outside; but these are points which need no more than a passing notice. "I aimed at putting on paper some things which had been said and done, among many more which might have been said and done by people who might have lived in the latter half of the last century." To do this in any effective way a writer must have some real insight into the spirit and character of the time; and such an insight, though it may be quickened by books, is not to be gained from them. Lord Nelson's telescope was no doubt an excellent instrument; but he did not see the signal. True tradition requires the living voice, and Mrs. Ellis's "good fortune of time of birth brought her, when very young, among some who could remember" the quiet days of the earlier, the hazy signals of the later, portions of the period which she describes. A similar good fortune may, in her judgment, be held as some qualification for a critic.

It may reasonably be maintained as a thesis, subject of course to the test of argument, that this century knows less by tradition of the last than any former century in English experience has known of its predecessor. The decay of local tradition is a fact as manifest as its causes are obvious. We have other things to talk and think about; and while the elaborate exactness of Eastern orthodoxy forbids the hypothetical "Peter" to marry "Theodora, seeing that she is the great-granddaughter of Maria," his first wife, and even extends the prohibition to "Helena," who is Theodora's daughter, the more practical English Table of Degrees is content with the initial rule that "A man may not marry his grandmother." For, "*salvo semper jura Regine*," it is not usually given to English folk to be on very intimate terms with their descendants or ancestors of the third generation; and it is not now common, as it was formerly, for the older members of a family to talk much to the younger of the days before their own. Perhaps the more correct way of stating this proposition is that the younger sort would not be much disposed to listen. As a consequence, the time separated from our own by eighty or a hundred years becomes too far off for memory, while it is too near—save where marked by some towering events—for history, and the lessening twilight of that which "our fathers have told us" appears to be gradually consigning to utter darkness everything that lies outside the range of personal memory. Mrs. Ellis was a good listener to some "who had felt the fervour of their times," where the times were fervent, and the quiet of the preceding times, which had been tranquil, and "against which some of them declaimed as torpid." Those whom the now middle-aged remember as old, and who were born "when there was nothing new under the sun, or under the grandson"—in the later days of George II. or the earlier of George III.—began life in a time of strange calm. From "forty-five" to "eighty-nine" there was no change, except the change of style, at home. America was a long way off. Even dress, if we may trust to history as sung to us by young ladies in ringlets whose granddaughters are now "thatching" their foreheads by way of added grace, was stationary:—

Fashion then was so dull, you could scarcely discern
The minute flow and ebb of her tides;
And a dowager's dress, though unturned, served in turn
Three or four generations of brides.
Like the family jewels, the family gown
Was reserved for their gala displays;
And a ruffled old lady looked placidly down
On a ruffled young girl, in the days
Of my great grandmother.

* *Sylvestra: Studies of Manners in England from 1770 to 1880.* By Annie Ralph Ellis, Author of "Marie," "Marianne," &c. London: Bell & Sons. 1880.

More than once Mrs. Ellis quotes a saying of Talleyrand, "They who did not live before 1789 knew not the sweetness of life." In England, sentiment died down with the fallen fortunes of the Young Pretender, and did not revive—we do not speak of religious feeling—till it burst out in trembling horror when the execution of the French King and Queen seemed to realize the prophetic vision of a sun darkened and a moon not giving her light.

"Sylvestra"—scarcely, we think, "the mate of Sylvanus," since "Old Moore" of the year following, to whom we have appealed, duly places "Silvester" in the Calendar—was born in 1776. But her biographer sets out from a date some twenty years earlier, when the Tenth of June, which was not the Eleventh, although near enough to drink the King's health upon, till both days in their turn gave place to the Fourth, afforded occasion to the Oxford undergraduate to deck his Colia or his Molly with a white rose. We think that the basis of true tradition upon which Mrs. Ellis has founded her narrative may be approximately recognized. Her home and "mother-city" is Durham, and it is in her pictures of the life of the "Bishopric" and ecclesiastical principality in its central city and church that the historical value of the volumes consists. Traditions of Oxford are necessarily associated with the cathedral body of greater and minor dignitaries; and we may assume a subsidiary personal association with Gloucester. The Abbey-Cathedral which watches by the Severn is known to her as homes are known where we have made long visits to relations; the Church which "huge and vast looks down upon the Wear," as our own. Diaries, pocket-books, and old letters may be taken as having supplied much of the genuine matter, and "Aunt Delicia's" memory may have been trusted over her knitting as lately as 1860, when it would still be clear for long-past events, though little tenacious of recent experience. Among the genuine facts of the later pages we are afraid that we must include the misdoings "of young folks of her own blood," who varied "the titles of her favourite tracts" at their own indiscretion, and exorcised her soul with "Mouldy Ornaments from Dark Cupboards," or "Proposals for the Stamp-out of Sunday Schools." There is a savour of true confession here which suggests as a date, let us say 1845, when "a novel-reading niece" of sixteen may have seen something of Mr. Paget's stories. But Aunt Delicias are forgiving, and as to such misdoings forgetful, at eighty. We think that Delicia Ashmead may have been drawn from actual life. She is Sylvestra's twin sister, who does not marry, and whose character is moulded by the movement which developed out of the early "Methodist" into the subsequent "Evangelical" form. Without such a type, which was to be found in most educated families of the middle class, a picture of the life of a century since would not have been complete; and such a type must almost certainly have been exhibited, or evoked, in contrast to the dignified ecclesiastical "worldliness" of the wealthy "Close" of Durham. Mrs. Ellis presents the reflection of this pontifical society with a sort of tender underlying regret. She does not justify guinea-points at prebendary whist, or the blank lines which may occur in decanal conversation; but it was all very pleasant, very stately, and very calm. The disuse of the Durham copes bore witness to no Protestant scruples in Chapter, but simply to the intrusion of an ill-tempered though mitred prebendary, who "roughly refused to wear his at the Sunday's service, because its stiff gold thread fretted his irritable neck and set his testy fingers scratching." This was Warburton, who held the first stall at Durham, together with the see of Gloucester. But, on the whole, Prince-Bishops, Deans, and Prebendaries were as gods condescending to and protecting the modest yet well-furnished homes of Minor Canons, who managed in various ways to look after the interest of their relations, and who, with a fair share of hard work in outlying vicarages, found very comfortable provision in the distribution of Chapter patronage. Dr. Blaise, "a learned and accomplished man and a skilled musician," whom we have rhymed, if not reason, for supposing to have been the Professor of Music at the time, was a favourite of Oxford society, where he brought up a large family, including several pretty daughters. A Whig Dean had taken favourable notice of a young Blaise, and given him a minor canonry. Dick Ashmead, when he came up as a freshman from Dr. Blaise's shire, found "one friendly house open to him" for the sake of his father and mother, and nothing was more natural than that, after a twelve years' engagement, and when Molly Blaise was thirty-six, James Blaise should write that "Dick must come to Durham. The Dean will find him enough to live on until a minor canonry falls vacant." Accordingly, "in 1770 Mr. Ashmead went to Durham," "where Oxford held the greater share of the twelve stalls":—

Why [he writes] 'tis but meeting Christ Church and Balliol, Corpus and Pembroke, in a city set on a hill that it cannot be hid. Our old King's Greek Professor is no less testy here than in Oxford, but they who suffer the most are his partners at whist. The Dean has again been but indifferent. His physician came from Newcastle to see him. Saith the Doctor to the Dean, "Now you've been to that—Cathedral again!" . . . Tell my brother, and those of my friends who would still have me try my own diocese, that the smile of the Bishop of Durham is worth the whole patronage of Gloucester.

At Durham, in 1771, while keeping good company, Mr. Ashmead could still "be boarded and lodged for six pounds ten shillings by the quarter"; and the 100*l.* a year upon which he married on St. Mark's Day, 1771, bringing his bride from Oxford to Durham after spending 20*l.* on his wedding expenses, more than a mere pittance where coal was cheap, although

the stipend was at first only "earned as a curate serving so many churches as the hours of the day and the pace of his horse would permit." Molly carried her quiet charms and her popularity from Oxford ecclesiastical circles to those of Durham, and prudently left off "wearing her white cockade on Charles Edward's birthday." "Men she had known as fellows of colleges, who were now bishops or deans as well as prebendaries of Durham, brought their headaches and heartaches to the tender beauty, sitting in her 'armed' chair by a fire that was always clear and crackling."

The picture of Mrs. Betty Brackenfield, the old attached family servant, half nurse, half housekeeper, half cook, and all friend, is probably drawn from tradition of the reality. Beginning as "Ashmead's Betty," and then passing through "Betty Ashmead" to "Mrs. Betty"—the fact that she has a surname being less evident than the fact that she has a "property" of her own and a "solicitor," and that she will not part with the first, though flirting decorously with the butlers of the Close, or lose control over the second till it passes by her will to the adopted "childer" of her love—she is a type of a real class now, we imagine, dying out. Her recipes are probably genuine; her letters, with variations, possibly so. But when in the later portion of the story the Gloucestershire cousin, Jem Rundell, has married a comfortable wife who cossets him in his gouty troubles, and who turns out to be a great authority on cookery, we believe in the coincidence little, and like it less.

Mrs. Ellis has no particular love for Professor Huxley, Professor Tyndall, or Mr. Joseph Chamberlain, but we do not exactly see what these gentlemen have to do with "studies of manners in England from 1770 to 1800." Padding of such a kind is apt, even in a pleasant book, to try the patience of the reader, and still more that of the conscientious reviewer who will not skip; and we commend to Mrs. Ellis's attention the wisdom shown by the authorities of the reign of James I. in relation to Mr. Townsend of Bow Street:—

But as he wasn't living then,
They nothing knew about him,
And so they did the best they could;
That is, they did without him.

Sylvestra was thirteen when the world was created again in 1789, and the Year One of a new era was proclaimed. By the time she was seventeen she had embraced, not to say formulated, opinions which, if she had lived long enough, she might have developed into those of some of the modern philosophers or politicians whom her biographer does or does not name. But, like a sensible girl as she was at the bottom, she did nothing of the kind, but merely married the new love—a Blaise, as it need scarcely be explained—as soon after being off with the old one as her feelings could permit. The old love was one Mr. Nathaniel Ashmead, a character for which, though it is life-like enough, the author may have costumed a younger model. Yet even her disguises are careful; and *Sylvestra* has the merit, in which so-called historical novels are often lamentably deficient, of faithfully representing the life, conversation, and thought of the people of its time. The author has not sought to translate her own ideas into sham archaisms, but has successfully carried out her "wish to record the impression left on her mind by what she saw of their century in her friends."

PALMER'S KORAN.*

OF all the Sacred Books of the East which are being translated under Professor Max Müller's direction, not one has been awaited with more curiosity than Professor Palmer's new version of the Koran. The Mohammedan Scripture bears a more close and personal relation to us than most of the Sacred Books; it enters perplexingly into our schemes of Oriental reformation, and meets us alike in the prejudices and in the virtues of our fellow-subjects in India. It possesses, moreover, the attraction of unity of authorship. Whatever attraction belongs to the character of Mohammed is transferred in some degree to the book of which he alone is the author. The Koran is not merely the collection of what is best in the thoughts of a people; it is the record of what was best and what was worst—of passing emotions as well as deep-rooted convictions—in one man; and in this lies its peculiar fascination.

But the interest which a new translation of the Koran would in any case excite is considerably increased when Professor Palmer is the translator. There was not, it may be said, an imperative call for a fresh rendering. Sale's version, if clumsy, is fairly accurate; and Mr. Rodwell's, though less known, is both accurate and eloquent; whilst Lane's Selections leave little to be desired for a popular edition of the best part of the Koran. Mr. Palmer, however, is so well known for his remarkable power of adapting a forcible English style to the requirements of literal translation from the Arabic that great things were expected of his work upon the Koran. It was felt that he, of all English Orientalists, was the one man for the task of setting the Sacred Book of the Moslems worthily before the eyes of the unlearned; that his version would probably make the Koran an English as well as an Arabic classic. The circumstance that he was known to entertain peculiar views on many points of Koranic interpretation induced a hope among scholars that Professor

* *The Qur'ân*. Translated by E. H. Palmer. (Vols. VI. and IX. of the Sacred Books of the East. Edited by F. Max Müller.) Oxford: Clarendon Press. 1880.

Palmer's translation might throw a new light on some of the difficulties of the text, and prove a suggestive model of the true manner of representing the ancient Arabian classics in English. The expectations excited by the announcement that Professor Palmer was engaged to translate the Koran were, in fact, so high that it is not surprising that they are not completely realized. He has certainly produced a remarkable version, one that the dullest reader could not fail to find impressive and striking; but it is not altogether equal to the standard which Mr. Palmer's own reputation has set up. Far more literal than Sale and Rodwell, closely retentive of the Oriental tone and colour of the original, this new translation must henceforth be regarded as the standard version of the Koran in English—but only until a better rendering is made. The present cannot be taken as a final work which need never be done again; it is an advance on previous translations, but it does not attain to that degree of perfection which discourages subsequent attempts to better it. It is a work which will be highly prized by the Arabic scholar for the valuable suggestions it throws out on the interpretation of difficult constructions. It will be invaluable to the beginner in the language as a literal translation of the whole of the greatest Arabic classic. It will teach Orientalists the merits of simplicity in translation, the forcible effect of using primary in preference to tropical meanings of a root, and expressing them in homely, rugged English with as few Latin derivatives as may be; and it may also teach them the danger of carrying these principles too far.

In the matter of scholarship Mr. Palmer need fear little criticism. He has no rivals in England and few abroad in his intimate knowledge of Arabic as a living tongue, and probably there is no one who can enter so fully into the genius of the language and the spirit of its speakers as he can. Commentators and lexicographers have too long insisted on treating the language of the Koran as an extinct species, and reasoning about it as though it died immediately after the production of its chief ornament. It is true enough that Arabic did, indeed, suffer considerable corruption in the course of Muslim conquest; but its spirit survived, and after allowing for certain additions in meaning and vocabulary and losses in inflexion, the language of the Koran may be heard in tolerable purity spoken in the present day by the descendants of those who first heard the Koran recited by their prophet. The speech varies considerably, no doubt; there are numerous dialectal varieties; the pronunciation is often different; some tribes speak bad Arabic and some good; but, on the whole, the old language is still living, and the same kind of man speaks the same character of language in modern Arabia as in the Arabia of Mohammed's time. It is Professor Palmer's high merit to have perceived and emphasized this fact; and it is his application of modern uses of the language to the interpretation of the Koran that gives him an undoubted advantage over rival translators. His intimate acquaintance with the spoken language enables him to understand colloquial phrases and desert idioms in the Koran which perplex those interpreters whose knowledge of Arabic is purely grammatical, and who have learned from books rather than from men. Such may perhaps find fault with some of Professor Palmer's renderings; but for ourselves, we are content to believe that he is perfectly competent to judge of the few really important points in which he is at issue with other translators, and that his judgment is generally just. In some cases, however, it seems possible that he has scarcely given sufficient consideration to the rendering of a passage, and in a few instances we fail to understand his reasons for deviating from the usual interpretation. In chap. ii., verse 16, for example, he renders three plural epithets by the words, "Deafness, dumbness, blindness"; instead of "[they are] deaf, dumb, blind," which is the grammatical and more intelligible translation. Again (in ii. 172), the rendering, "gives wealth for His love"—i.e. for the sake of God, although it gives an excellent sense, seems questionable in accuracy; we doubt whether "*alā hubbihi*" can be rendered "for His love," since "*alā*" has not usually the sense of "for." The usual translation is "in spite of his love of it"—i.e. in spite of his avarice. There are not, however, many instances in which Professor Palmer's rendering is open to such criticisms as these. It is only to be wished that he had given his fine scholarship fair play, and had not allowed so many traces of haste, and even carelessness, to deface his pages. It is not difficult to discover many instances of a want of due deliberation and efficient collation. In chapter iii., v. 15, the words "and the charitable" are omitted; in v. 25, the words "and dost bring forth the dead from the living," are omitted. Similarly, in xxv. 65, the word generally rendered "prostrate" is left out. The total omission of a word by a revision translator of the Bible would astonish every one; and may we not demand equal care and accuracy in a translation of the Koran?

But our main disagreement with Mr. Palmer is on the score of a theory of translation which he explains and defends in his introduction. In p. lxxviii. it is stated:—

I have translated each sentence as literally as the difference in structure between the two languages would allow, and when possible I have rendered a word for word. Where a rugged or commonplace expression occurs in the Arabic I have not hesitated to render it by a similar English one, even where a literal rendering may perhaps shock the reader. To preserve this closeness of rendering, I have had in several instances to make use of English constructions which, if not incorrect from a strictly grammatical point of view, are, I am aware, often inelegant. Thus a peculiarity of the Arabic is to use the same preposition with a passive verb as the active and transitive verb required; for instance, *ghazaba 'halāhi*, "he was angered against him;" in the passive *ghuziba 'halāhi*, "he was angered-against;" and the preservation of this construction is often absolutely necessary to retain the force of the original.

It is not unlikely that some may be found to deny this necessity; and to show how such a denial can be supported we will only call Mr. Palmer's own book in testimony against him. We presume that his aim as translator is to produce on the modern reader as nearly as possible the impression which the Koran produced on its original audience. That audience was composed chiefly (at first) of low-class Arabs and negroes—in any case uneducated and semi-barbarous people. Mohammed naturally expressed himself in language they could understand; and the Koran abounds in rough and ready words and phrases, which, if they occurred anywhere else, would be called slang. Such phrases produced no feeling of surprise or amusement among the original audience; it was their own tongue they heard, and they could understand no other. But because Mohammed sometimes talked Arabic slang to Arabs who spoke Arabic slang, is Professor Palmer justified in writing what is very like English slang for English readers who do not speak, and would rather not read, English slang? The following are a few instances of Mr. Palmer's literal method, omitting those very striking, but less presentable, examples which illustrate his views as to needless prudery in translation. A famous parallel between the unbelievers and those who have lighted a fire in an unknown country, and are left in perplexity by the sudden extinguishing of their fire, is rendered by such phrases as "God goes off with their light" and "would go off with their hearing," and "the lightning snatches off their sight." We are told that "God will not catch you up for a casual word," that some "swear off from" pleasures, and others "knock about in the earth"; that God may "leave you in the lurch"; and that there are some "who bog off" from punishment on the last day. "Those who were before them were crafty too, but God's is the craft altogether," in xiii. 42, reads like Irish. "Come on, then, with your witnesses," in vi. 151, is only less inelegant than a similar expression employed by Zuleikha. Mr. Palmer's theory of verbally literal translation leads to the frequent employment of phrases of this sort; whilst the number of merely inelegant sentences produced by the rule of retaining as far as possible the order of the Arabic is very great. "Verily God on what ye do doth look," "Verily God of what ye do is well aware," and many like phrases occurring throughout the work, are intended to show that the verbal noun in the original comes at the end of the sentence. Do we insist on translations from the German retaining the German arrangement of the sentence? And if not, why should Arabic literature be subjected to this disadvantage? Yet, if it must be so, let it be done always. Why do we find "Thou art mighty over all," and "God is powerful over all," when the adjectives come at the end of the sentences, which should be "Thou art over all mighty," and "God is over all powerful." Again, if literalness be the prime object, why is the verb so often substituted for the verbal substantive or epithet? Why is "Thou hearest prayer" substituted for "Thou art the Hearer of prayer," which is the literal version? Why "He o'er everything keeps guard" instead of "He over everything [is] guardian"? Why, in the parable of the two gardens, is one man made to say "I am more wealthy than thee" (*ac. thou*) for *aktharu minka mdan*, when a few lines further on a precisely parallel sentence is rendered "I am less than thee [thou] in wealth"? Such inconsistencies, which might be multiplied indefinitely, would be trifling matters if Mr. Palmer did not insist so strenuously on the necessity of a literal translation. His inconstant but prevailing affection for word-for-word rendering diminishes the force and eloquence of page after page of really admirable translation. The passion for literalness seems sometimes to be alloyed with the desire for novelty which few translators are able to withstand. Thus the fine passage in chap. vi., "The eyes see Him not, but He seeth the eyes," is arbitrarily changed into "Sight perceives him not, but he perceives men's sights," although "men's" is not found in the original, and the strict rendering of the word *al-abshār* is not countenanced by the later translation of it as "eyes" in xxiv. 38. In the same way the celebrated Throne-verse (ii. 256) loses its effect when it is expressed in such phrases as "Slumber takes Him not," "It tires Him not to guard them both, for He is high and grand." The very happy indication of the termination in the phrase "In that ye have a sign" (instead of "In that is a sign") appears unfortunate when it occurs again in *Dhālikum ulāh*, "There is God for you!" Throughout Mr. Palmer's Koran there is a constant endeavour to translate words by their primary rather than secondary meanings. As we have said, the principle is excellent so long as it is kept within bounds; but Mr. Palmer does not so keep it. In many cases the retention of the original meaning is very happy; for example, in the phrase, "take their stand between the two" extremes of extravagance and miserliness (*beyna dhālika kawāman*). At times, however, the principle results in obscurity; and as Mr. Palmer very seldom gives explanatory notes, or supplies the words necessary to make the sense clear, it is often difficult for the uninitiated to gather the meaning of a sentence. In iii. 39, the want of a note or supplied word renders it doubtful whether "thee" refers to Mary or Mohammed; and in ii. 34, "one of you the enemy of the other" seems to refer to Adam and Eve, whereas it clearly foreshadows the strife between Cain and Abel. But whilst often refusing to explain ambiguous and obscure passages, Mr. Palmer frequently inserts words of his own which are not in the text of Flügel, but hardly ever indicates by brackets or otherwise that such words are the translator's. He might also with advantage have taken more pains in the division of sentences, verses, and paragraphs, and in the rendering of conjunc-

tions. *Wa* is translated "and" and "but" almost at random, and the point of chap. xciii. is lost by substituting "but" for "then" or "therefore." It would also have been satisfactory if he had maintained some more fixed principle in rendering the Arabic tenses. It is true they present difficulties to the English translator which have never yet been thoroughly overcome, but it is perplexing to find the Arabic past tense rendered by the English present, preterite, and perfect, in one page. A little more care, too, would have prevented such a sentence as "men whom neither merchandise nor selling divert from the remembrance of God" (xxiv. 33), and such words as "*ginna*" in Arabic and "*angelism*" in English.

The first half of chapter lvi. will serve as a fair example of Professor Palmer's translation, its merits and its faults:—

In the name of the merciful and compassionate God.
When the inevitable * happens; none shall call its happening a lie!—
abasing—exalting!
When the earth shall quake, quaking! and the mountains shall crumble,
crumbling, and become like motes dispersed!
And ye shall be three sorts;
And the fellows of the right hand—what right lucky fellows!
And the fellows of the left hand—what unlucky fellows!
And the foremost foremost! †
These are they who are brought nigh.
In the gardens of pleasure!
A crowd of those of yore,
And a few of those of the latter day!
And gold-wreath couches, reclining on them face to face.
Around them shall go eternal youths, with goblets and ewers and a cup of
flowing wine; no headache shall they feel therefrom, nor shall their
wits be dimmed!
And fruits such as they deem the best;
And flesh of fowl as they desire;
And bright and large-eyed maids like hidden pearls;
A reward for that which they have done!
They shall hear no folly there and no sin;
Only the speech, "Peace, Peace!"
And the fellows of the right—what right lucky fellows!
Amid thornless lote-trees.
And tall trees with piles of fruit;
And outspread shade
And water outpoured;
And fruit in abundance, neither failing nor forbidden;
And beds upraised!
Verily we have produced them ‡ a production.
And made them virgins, darlings of equal age (with their spouses) for the
fellows of the right!
A crowd of those of yore, and a crowd of those of the latter day!
And the fellows of the left—what unlucky fellows!
In hot blasts and boiling water;
And a shade of pitchy smoke,
Neither cool nor generous!
Verily they were affluent ere this, and did persist in mighty crime; and
used to say, "What, when we die and have become dust and bones,
shall we then indeed be raised? or our fathers of yore?"
Say, "Verily, those of yore and those of the latter day shall surely be
gathered together unto the trust of the well-known day."
Then ye, O ye who err! who say it is a lie! shall eat of the Zakkûm
tree! and fill your bellies with it! and drink thereon boiling water!
and drink as drinks the thirsty camel.
This is their entertainment on the judgment day!
* *I.e.* The day of judgment.
† *I.e.* The foremost in professing the faith on earth shall be the foremost
then.
‡ The celestial damsels.

Two points deserve more notice than can now be given to them. Mr. Palmer has preferred the orthodox and unscientific arrangement of the chapters of the Koran to Nöldeke's chronological order. In the present uncertainty as to the exact place of most of the chapters, and the difference of opinion about the position of many of them, he was perhaps justified in evading the difficulty. Yet it must be admitted that in the common arrangement the Koran loses half its personal interest as the record of Mohammed's life, and also much of its intelligibility. Professor Palmer might at least have arranged it in those chronological groups about which there can be little doubt.

The other matter which calls for notice is Mr. Palmer's Introduction. As a collection of facts about the Arabs of Mohammed's time, the life of the Arabian Prophet, and the character of his religion, it will be found a serviceable preparation for the study of the Koran. It lacks, however, that charm of style which is usually conspicuous in Professor Palmer's writings. It is, moreover, in the Introduction that the system of transliteration, arranged by Professor Max Müller for the Sacred Books of the East, is most glaring. The adoption of this system is not Professor Palmer's fault, and it is easy to see that it does not come readily to his pen. His introduction is full of inconsistencies of orthography, and when he comes to Omar he fairly refuses to write him 'Humar. Who would recognize Ali under the guise of 'Haliy, or Khalid as 'Hâlid, or Othman as 'HuTHimân, or Koreysh as Qurâis? It is no wonder that the same name is seldom spelt twice in the same way in Professor Palmer's introduction. If he had reduced his prolegomena and compressed his work into one volume he would have made a more serviceable book of it. As it is, these two handsomely printed volumes are placed at a certain disadvantage in comparison with other translations of the Koran. The new version, if less clear than Sale's, less eloquent as a whole than Rodwell's, less suitable for general reading than Lane's, yet possesses a freshness and originality, a true savour of the East, and a certain rude air of the desert, which are difficult to describe, and which we seek in vain in other translations. It needs an Arabic scholar to appreciate Professor Palmer's version, and Arabic

scholars will undoubtedly study it closely and learn much from it. But we doubt whether those for whom this series of the Sacred Books of the East is designed—people of ordinary education, interested in comparative religion, and desirous of gaining a clear idea of the nature and contents of the Koran—will understand a large part of the new translation of "the Excellent Book."

ENGLISH MEN OF LETTERS.—WORDSWORTH.*

OF the authors of this series it may be said, with somewhat unusual truth, that *quisque suos patitur moros*. They are supposed, according to the terms of their contract, to give such an account, both of the lives and works of their subjects, as will enable persons who have not the time or inclination to read the works or elaborate biographies for themselves to attain some not absolutely false conception of the truth about both. The possibility of this is sometimes doubted; the desirableness of it is doubted still oftener. These previous questions, however, may be supposed not to trouble the man who has actually undertaken the office. But, as is indeed unavoidable, a curious difference of estimate of the task proposed is visible in the actual performances of that task. Some of Mr. Morley's authors have devoted themselves almost wholly to the life of their heroes, giving very little attention to literary criticism. Some of them have written critical essays of varying merit, abandoning the life with a very speedy treatment. In some cases it may be said that unequal attention to the two parts of the programme was absolutely inevitable, and Wordsworth's was certainly one of these. His life was extremely uneventful; and, unless Mr. Myers had chosen to sweep *ana* and gossip out of the numerous biographies of persons who have had to do with his hero, he could not have hoped to fill his hundred and eighty pages with personal details. On the other hand, of purely literary criticism of Wordsworth the world has, at any rate for this generation, had almost enough. The Wordsworthians may take one view, the anti-Wordsworthians another; and between these two extremes there is room for a vast number of middle terms, from the estimate of Mr. Matthew Arnold, who, professing himself not a Wordsworthian, nevertheless places Wordsworth above every European poet except Goethe since the third quarter of the seventeenth century, to the estimate of those who, seeing grievous faults in him, and too frequent descents to a level of tiresome prose, nevertheless acknowledge that at his best he has reached one of the solitary peaks on which at different elevations perhaps, but all above the snow-line, the great poets sit each apart and by himself.

Mr. Myers has hit upon a kind of middle course which is in a way not unhappy. He has rather made a *conférence* about Wordsworth than a regular biography of him with critical interludes. He is obviously himself almost, if not altogether, a Wordsworthian of the straitest sect, and the essence of a Wordsworthian of the straitest sect is a tendency to preaching. Mr. Myers has preached, and let us hasten to say that we should be very well satisfied if we never heard worse sermons. He has, to his credit be it spoken, moderated his sometimes exuberant style not a little. Every now and then it bursts its bonds, and we come upon passages in which he is precious rather than praiseworthy. For instance, let us take the following upon Wordsworth's London stay:—"He never made the attempt to trace the passion and the anguish which whirl along some lurid vista toward a sun that sets in storm, or gaze across silent squares by summer moonlight amid a smell of dust and flowers." This is elegant writing certainly, but we are half inclined to think that Wordsworth himself would have been immensely puzzled by it, and we confess frankly that we are. We have tried it by the most approved rules of criticism, as proposed by a master of the art for such things. We have changed about the clauses as Thackeray did with a passage in the late Lord Lytton's *Sea Captain*, and one variation "to gaze across dust and flowers by summer moonlight amid a smell of silent squares" seems to us rather nice. But, considered as a sentence intended to enlighten the ordinary man on the subject of Wordsworth in London, it still appears to us a little vague. The same must be said of an extremely eloquent passage which closes the sixth chapter:—

And if it be answered that, however truly philosophic, however sacredly pure his happiness may have been, yet its wisdom and its holiness were without an effort, and that it is effort which makes the philosopher and the saint; then we must use in answer his own Platonic scheme of things to express a thought which we can but dimly apprehend; and we must say that, though progress be inevitably linked in our minds with struggle, yet neither do we conceive of struggle as without a pause; there must be prospect-places in the long ascent of souls; and the whole of this earthly life—this one existence, standing we know not where, among the myriad that have been for us and shall be—may not be too much to occupy with one of those outlooks of vision and of prophecy which

In a season of calm weather, &c.

In one sense we may say that in this sentence Mr. Myers equalled in the length of Wordsworth's life by his style, *μακρόν γὰρ ἐγένετο*. In another a plain man may perhaps complain that he is left floundering among the Prospect Places—a name unhappy, suggestive of Ramegate, where also the mighty waters roll ever more—and that he would on the whole prefer that even a person so sure of myriad past and present existences as Mr. Myers would

* *English Men of Letters*. Edited by John Morley. Wordsworth. By F. W. H. Myers. London: Macmillan & Co.

confine himself to the expression of thoughts which he apprehends otherwise than dimly.

Although, however, we can by no means pass by without comment these indulgences in a style which is one of the worst curses of the literature of the present day, and which will probably make much of that literature unreadable before half a century has passed, we should be very sorry to be understood to speak evil of Mr. Myers's book on the whole. A great affection for his subject, a familiarity with other literature, and a considerable faculty of writing could not possibly produce a bad book on such a matter, and when the reader has got over his inevitable *chair de poule* at its occasional preciousness, he will probably be inclined to pronounce the book which Mr. Myers has written a very good one of its kind. He is by no means unmitigatedly laudatory; indeed, he seems to us to be rather hard on some poems, which at any rate in their own style deserve not a little commendation. In not a few of his digressions, when he lays his gown aside and speaks naturally on subjects of practical interest, the vigour and force of his remarks are worthy of all praise. A very notable passage of this kind is to be found towards the close of the book, *à propos* of the letters on the projected railway into the Lake District. We do not remember to have seen the plea for national places of rest and refreshment, bodily and spiritual, as distinguished from national tea gardens, better put. Nor again would it be easy to expound Wordsworth's political views better or more appreciatively than Mr. Myers has done, though we should imagine that he himself is very far from taking anything like the standpoint of the poet. In short, by a curious and at first sight paradoxical process, Mr. Myers is best when he deals with the things in which he apparently has least interest. When he touches Wordsworth's literary achievements, he is alternately gushing and unsympathetic; when he attempts his attitude towards the things of everyday life, he writes with equal force and appreciation. After all, perhaps the thing is not so surprising as it seems. Enthusiasm is an excellent means of influencing one's fellow-creatures *vis à vis*; it is a very doubtful means of reaching them by the "cold spurt of the pen."

Mr. Myers, assisted by some valuable unpublished documents, submitted to him by friends of his own and of Wordsworth's, has given an excellent account of the poet's life, such as it was, and a running commentary on his principal works. He has not, and it may be freely acknowledged that it was quite within his discretion to comply with or to disregard an old and half-obsolete, though rather convenient, custom, given any regular peroration or summary expression of his view of Wordsworth's poetical or literary position. We have, as has been said, plenty of such summaries, yet perhaps it is not easy to appreciate the attitude of a critic unless he chooses to pose for us quietly and deliberately. As on the one hand there has been of late a recrudescence of Wordsworthianism, and as on the other much of the prevailing practice in poetical composition is singularly opposed to the Wordsworthian tradition, it might perhaps have been instructive if Mr. Myers had added his mite to the list of regular judgments. There can be little doubt that the popular judgment, favourable and unfavourable alike, is right in considering the author of the *Excursion* as exclusively the "poet of nature." But how far this is a limitation and an objection, how far it is a panegyric, these are questions upon which every critic who deserves a hearing at all ought to have his say. Mr. Myers evidently thinks that Wordsworth's abstinence from the display of purely human passions was the result of choice, not of necessity. He quotes, not without approval, the curious reported speech of the poet to the effect that, had he been a writer of love-poetry, "it would have been natural to him to write it with a degree of warmth which could hardly have been approved by his principles, and which might have been undesirable for the reader." It is difficult to repress a smile at the idea of Wordsworth incarnadining the cheek of the young person, nor can we avoid joining this odd fancy with the belief of certain great writers that they ought to have been great painters, and of Wordsworth himself that he ought to have been a Wellington or a swayer of the fierce democracy of France. In truth, he was not given to think meanly of himself in any capacity, and was as likely as another to have taken command of the Channel fleet with a complete self-confidence. But that his silence on not a few of the themes which have been in the case of others most fertile of poetry was the result of a want, not of deliberate abstinence, is hardly to be doubted. The criticism of Hazlitt—a criticism often random and ill-aimed, but which, when it does strike home, always pierces to the joints and marrow—is heavy upon him here. "In Wordsworth there is a total disunion and divorce of the faculties of the mind from those of the body." This is very strong, but it is hardly too strong. No doubt this spiritual celibacy and asceticism has produced a kind of prophetic strain of contemplation and meditative rapture. But, somehow or other, some of the strings of the lyre seem to have been cut away, and one hand of the combatant seems to be tied behind him. The defect is not one of simple negation, but in the strict logical sense of privation. It is illegitimate doubtless to find fault with a poet merely for not being something other than what he is. But here the question is whether he is or is not destitute of something which he ought to have. Mr. Myers has occasionally approached this curious and interesting subject, but he has never fully dealt with it, and it is, indeed, generally shirked by all panegyrists of Wordsworth, from De Quincey downwards. But no criticism which does not face it can be said to face the whole subject fully; and we have a right to demand that criticism shall do this. Of the famous triad of

epithets, "simple" is the only one that suits the poetry of Wordsworth as a whole. It is sometimes passionate, but only with the passion of contemplative rapture. That this is a possible means of attaining the poetical temperature is certain, but it is an arduous one to employ; and the comparative rarity with which Wordsworth himself uses it successfully is the best proof of this.

MARRIAGE LAWS OF THE AUSTRALIAN BLACKS.*

HERE is a book on an extremely difficult and complicated subject, which has the misfortune to interest but few readers. The nature of marriage laws, and of what we may call here, for the sake of clearness, "prohibited degrees," among the backward races, is a topic of equal importance and perplexity. We fear that it is impossible within the limits of a review to make the matter clear to readers who have not already given it their attention. The details with which we have to deal are only familiar to specialists. At the same time, Messrs. Fison and Howitt's book contains plenty of information which will interest all readers of folk-lore. We are obliged to differ from Mr. Fison on many points, but we have to thank him for a spirited, though, we think, unsuccessful, attempt to elucidate the marriage customs of the Murri, or Australian black fellows.

In the first place, we must regret that Mr. Fison wrote his book with certain confessed prepossessions. "The chief object of this memoir," he says, "is to trace the formation of the exogamous intermarrying divisions which have been found among so many savage and barbaric tribes of the present day, and to show that what the Hon. Lewis H. Morgan calls the Punaluan family, with the Turanian system of kinship, logically results from them." It seems a pity that Mr. Fison has intended to make his book the support of Mr. Morgan's theories, which are neither very logical, very consistent, nor very satisfactory in their terminology. However, it is as a disciple of Mr. Morgan that he writes; and we must briefly explain the doctrines of the master. In 1871 Mr. Morgan published a book called *The Systems of Consanguinity and Affinity of the Human Race*. This volume contained a large mass of facts concerning the modes in which the various backward races count their relationships. Mr. Morgan did not adhere closely to his explanations of these singular customs in his later work, *Ancient Society* (1877); so it will be better to accept what we conceive to be his most recent views, those published in that volume. There he distinguishes "five different and successive forms [of the family], each having an institution of marriage peculiar to itself." Those which concern us are:—1. The Consanguine family, founded upon the intermarriage of brothers and sisters, own and collateral, in a group (*A. S.* p. 384). Mr. Morgan says that this kind of family is no longer found in existence. He infers its existence in the past from what he calls the "Malayan" system of counting kindred. In that system, for example, "my mother's sister is my mother." In the "Consanguine family" Mr. Morgan supposes that this nomenclature would have an obvious explanation—my mother's sisters are my mothers, because they are, along with my mother, the wives of their brothers. But how weak is this argument! *Ex hypothesi*, the members of the "Consanguine family" are acquainted with the nature of "blood-ties," and have even built upon them a regular "institution of marriage," not wedding out of the circle of brothers and sisters, own and collateral. Could they then be so dull as not to perceive the fact of the maternal relation? could they actually confuse mothers and aunts? Mr. Morgan reasoned (*A. S.* p. 409), "It is impossible to explain the [Malayan] system as a natural growth upon any other hypothesis than the one named, since this form of marriage [the Consanguine] alone can furnish a key to its interpretation." But this circular logic is not justified, nor is this necessity of thought established, for Mr. McLennan (*Studies in Ancient History*, pp. 372-407) has furnished another explanation of the "Malayan" system of counting kindred.

According to Mr. Morgan, the Consanguine marriage was reformed out of existence. "In course of time the evils of the first form of marriage [Consanguine] came to be perceived. . . . Among the Australians it was permanently abolished by the organization into classes, and more widely among the Turanian tribes by the organization into gentes" (*A. S.* p. 409). The organization that followed was "the Punaluan family," "produced by the gradual exclusion of own brothers and sisters from the marriage relation, the evils of which could not forever [']tis a single word, our rude forefathers thought it two['] escape observation" (*A. S.* p. 424). The Punaluan family, again, was formed by excluding own brothers and sisters from marriage; this reformation changed the Consanguine into the Punaluan family. The chief reason for believing in the Punaluan family is like the reason for believing in the Consanguine family. As the historical existence of the latter would (Mr. Morgan thinks) explain the Malayan system of counting kin, so the historical existence of the Punaluan family would partly explain the "Turanian" system of counting kin. The word Turanian is here used quite at random, and includes Hindoos. But, through the "Punaluan" family, we reach Mr. Fison. His master, Mr. Morgan, after examining the "Australian class system" came to the conclusion that "its

* *Kamilaroi and Kurnai: Group-Marriage and Relationship, and Marriage by Elopement*. Drawn chiefly from the Usage of the Australian Aborigines. Also the Kurnai Tribes; their Customs in Peace and War. By Lormier Fison, M.A., and A. W. Howitt, F.R.S. With an Introduction by Lewis H. Morgan, LL.D. Melbourne: George Robertson, 1880.

primary object was to exclude own brothers and sisters from the marriage relation, while the collateral brothers and sisters were retained in that relation." That is to say, the Australian class system was instituted to reform the Consanguine into the Punaluan family. And here we are where we started—namely, at Mr. Fison's "chief object," to show that Mr. Morgan's Punaluan family and Turanian system of kinship result logically from the Australian class-system. To prove this would be to do Mr. Morgan's theory great service; for students in this country are disinclined to accept his account of the development of the family. We must now explain, as far as explanation is possible, the nature of the "Australian class-system" dealt with by Mr. Fison.

It had long been known, from the researches of Sir George Grey and Mr. Gideon Scott Lang, that marriage laws like those of the Red Indians, the people of Ashanti, and many other backward races, prevailed among many tribes of the Australian blacks. They were divided into stocks, each of which was named after some animal or plant. No man might marry a woman who bore the same stock-name and the same cognizance. A man of the Kangaroo stock might not marry a woman of the Kangaroo stock, but he might marry an Emu woman, or a Wombat woman, and so forth. Children took the stock-name and cognizance of the mother. These cognizances are now usually called "Totems," from their Red Indian name. In 1853 the Rev. Mr. Ridley, a missionary among the Kamilaroi (a numerous tribe residing north-west of Sydney), gave a lecture in that town on what he called the "castes" of the Kamilaroi. I from that hour to this Mr. Ridley (who received some of his information from Mr. Lance) has been the chief authority on what he now, after Mr. Morgan, calls the "classes" of the Kamilaroi. These classes, according to Mr. Morgan and Mr. Fison, are the more or less modified results of the reforming movement which originally excluded own brothers and sisters from marriage. Mr. Fison's book contains plenty of information from other observers about other tribes. But we venture to think that, after his interest has for thirty years been directed to the subject, Mr. Ridley should have not the worst acquaintance with the topic. Now we must ask the reader to attend to this question of evidence. Mr. Fison, for his own part, is "hopelessly puzzled" on various points, and finds the terms used by natives "exasperatingly puzzling to an inquirer who is ignorant of the language" (p. 59). We propose to show that Mr. Ridley, Mr. Fison's authority, has also been "hopelessly puzzled," and that his statements cannot be accepted as conclusive evidence. The arrangement of "classes" is, therefore, still a mystery, and, so far, is of no service to the theories of Mr. Morgan or of any one else. Mr. Ridley's original statement was:—

There are four names of men—Ippai, Murri, Kubbi, and Kumbo—and four of women—Ippata, Mata, Kapota, Buta. Every black has one of these names by birth. . . . In one family all the sons are called ippai, the daughters ippata; so that if you find a black man's name is ippai, you may be sure all his brothers are ippai, and his sisters ippata.

And so on. As to marriage rules, Mr. Ridley said:—

Ippai may marry an Ippata (of any other family), or any Kapota. Murri may only marry Buta. Kubbi may only marry Ippata. Kumbo may only marry Mata.

Mr. Ridley then showed how the names alternated among the children of these marriages. Here the Ippai are obviously the privileged clan. Here, too, there is no sign of "totems," and of the usual prohibitions to marry within the totem name. Mr. Ridley altered some of these statements in 1871. He had now discovered the existence of "totems" among the Kamilaroi. For example, all Ippais, and all Ippatas, were of the Emu, Blacksnake, or Bandicoot totem. All Kubbis, and all Kapotas, were of the Opossum, Kangaroo, or Iguana totem. But, oddly enough, Mr. Ridley found only two totems among the Kumbos and Butas—namely, Emus and Blacksnakes—and only two among the Murris or Matas—namely, Iguanas and Kangaroos. This statement Mr. Ridley adhered to in his book (*Kamilaroi*. London: Triibner, 1875). At first sight this seems impossible. All children of an Ippata (they follow the mother's totem) are called Kumbo and Buta. Now the mother Ippata may be either an Emu, a Blacksnake, or a Bandicoot. Therefore her children Kumbos and Butas should be either Emus, Blacksnakes, or Bandicoots. But, in one table, the Bandicoot, according to Mr. Ridley, is not represented among Ippata's children. From Table D it appears, however, that there may be Ippata Bandicoots, when a Kubi marries an Ippata. Were it not so, when the Buta children in their turn became Ippais and Ippatas, the Bandicoot would have vanished from the class, and all Ippais and Ippatas would be Emus and Blacksnakes only. What is more remarkable, in Table D (also given by Mr. Ridley) we find a new totem among the Kumbu and Buta—namely, Bandicoot, which has no place in the list of 1875; and among the Murri and Matas we find Opossum, which in 1875 was apparently not recognized. In a contribution to *Nature* (October 29, 1879) Mr. Ridley wrote, Ippai-Emu may marry Kubbotha-Emu. Now, on his own showing, there is no Kubbotha-Emu. He added, "a Murri may marry a Buta of the same totem." On his own showing, there is no Buta of the same totem. Perhaps it will now be conceded that Mr. Ridley's evidence is not consistent enough to form the basis of a theory. We do not dream of blaming him; the difficulties of the subject are his sufficient excuse.

We have not done with the question of evidence. In the case of the Kamilaroi, according to Mr. Ridley's most recent

statements the "classes" do not exclude men from marrying women of the same class-name. For example, Ippai Blacksnake may marry Ippata Emu, and Ippai Emu may marry Ippata Blacksnake, as may Ippai Bandicoot. Except that no Ippai may marry Ippata or Bandicoot, any Ippai may marry an Ippata not of his own totem. Here, in fact, the totem prohibition is the rule, the "class" prohibition the singular exception. This is the case, though Mr. Fison, who admits it on page 45, denies it on page 44. Well, all this is very inconvenient for Mr. Morgan. Here is the "reformatory movement" not preventing a man from marrying a woman of the same class name as his sister. Mr. Fison gets out of this difficulty by saying that the Kamilaroi are an exception to the general rule which, among other native tribes, makes it impossible for a man to marry a woman of the same name as his sister. He declares that the simplest, and probably the earliest, form of the class division among the Australian aborigines, is the separation of a community into two intermarrying classes, each having a distinct title, which is taken by every one of its members. As an example, he gives the Mount Gambier tribe, divided into two classes, called Kumite (female Kumitegor), and Kroki (female Krokigor). And these are the names used by Mr. Fison in an elaborate attempt to prove that the "Turanian system" of counting kin would result from this organization. Now, we ask, how do the totems work here? Mr. Fison says on Mr. Stewart's information, that they do not work at all. But he adds that Mr. Stewart's words are not conclusive. The Mount Gambier tribe, with its Kumites and Krokis, has been reduced in thirty years from nine hundred to seventeen members, and is "compelled to make such matrimonial arrangements as it can." Now Mr. Stewart's evidence (p. 30) is only of yesterday. He regrets that his attention was not directed to the matter ten years ago! But what is his evidence about the classes worth? If in thirty years Mr. Ridley, a scholar and student, knows so little, how can we rely on the most well-meant endeavours of Australian country gentlemen to collect information from decayed tribes?

We have one or two other remarks to make at present. On pp. 40, 41 Mr. Fison states his opinion that what he calls the "primary divisions"—that is, Ippai, Kumbu, and the like—were originally totemistic. "In some places the primary divisions are distinguished by totems at the present day. Probably they were so distinguished everywhere in ancient times." Mr. Fison does not see that here he has thrown up the ethnological sponge. His contention, and that of Mr. Morgan, is that the "primary divisions," the "classes," are the result of a moral reformatory movement. For example, Mr. Morgan believes in the "truthfulness" of a so-called legend that brothers and sisters intermarried promiscuously "until the evil effects of these alliances" (what language for a native legend!) "became manifest, and a council of chiefs" (Mr. Brough Smyth says the natives have no chiefs) "was assembled to consider in what way they might be averted." On the next page Mr. Morgan, with his usual logic, contradicts himself, and says:—"It is not supposable that savages design consciously reformatory measures in the strict sense of the term." However, *Ancient Society* is all builded on the hypothesis of conscious reform. Very well, supposing this view to be correct, why were the "primary divisions," as Mr. Fison says they were, totemistic? The totemistic divisions, wherever we know them, do all, and more than the "primary divisions" could effect. Further, how is the origin of totemism itself to be explained? This lies behind the primary divisions; and, if we are right in believing that the origin of totemism had no connexion with morality or reform at all, why should we suppose that "primary divisions," confessedly of a totemistic character, were moral? In short, Mr. Fison says the primary divisions were moral, and reformatory, and totemistic. Why were they totemistic? This is what he has to explain. We might select an hypothesis advanced by him on p. 70 as a singular example of inability to deal with historical evidence, in this case the evidence of Herodotus.

Once more, we must assert our objection to the loose employment of words like *gens*, *curia*, *phratry*. The primary organizations are possibly "phratrics" with Mr. Morgan (Preface, p. 9). Again, "the Gens of the Greek and Roman peoples, the Gens of the Iroquois, the Scotch clan, the Divisions of Kin in Australia named after animals, are unquestionably the same organization." Mr. Fison throws in the *curia*. In point of fact, all these associations, whatever they may have of common origin, vary in detail and in stages of evolution. One might as well say, "The Fishmongers' Company, the 54th Regiment, and the Carlton Club are unquestionably the same organization."

We may recur on another occasion to Mr. Fison's book, of which we have not nearly exhausted the interest. In the meantime, we think we have shaken Mr. Fison's evidence.

FROM POVERTY TO WEALTH.*

THIS novel is an extreme instance of its class, and suggests some curious reflections. The historian of the future might, by a freak of fortune, come across it, and treat it as another *Lady Rabelia*; as the superlative expression of the realistic, as that was

* *From Poverty to Wealth. A Novel. By William Theodore Hickman. 3 vols. London: Chapman & Hall, Limited.*

of the fashionable and romantic, school of fiction. Of that great work, it will be remembered, only one or two priceless sentences have been preserved, by the courtesy of Mrs. Wittitery; but we have no need to complain, since the student of literature can restore it from those traces as completely as the geologist reconstructs the megatherium from the joints of a great toe. In like manner, if *From Poverty to Wealth* were lost, a cunning hand could easily restore it from almost any one of its pages. Throughout them meanders the same gentle stream of sentiment, scarcely swaying the blades of grass that hang over into it from the rich and featureless meadows of domestic life; from the first leaf to the last nothing occurs to break the monotony of uprising and down-sitting, of digging in the garden and of walking in the lane, and of all the pleasant conjugal insipidities that make up life in an English novel of the latest realistic school. We should despair of finding one passage more or less trivial, conscientious, and exact than another, so we give the very first at which we open one of the volumes:—

Perhaps it was the constant handling of the pencil and the brush, which gave the omelette-maker such accurate constructive power, for it requires an artist's touch almost to make a good sweet omelette, or perhaps it was the power that comes from practice; but as Arthur Westdale placed the jam within the omelette and gently covered it, it might be truly said that few could have excelled him in results.

A bright little cover is placed upon the dish, and then it is taken to the parlour.

The tea is made, and the salad and the bread and butter all look tempting and fresh. The little one sits upon her mother's lap, and drinks her milk with that loud sucking noise which is so attractive to the parent's ears; but she will have her portion of the omelette or know the reason why. "Dere, dere!" she cries, with the tiny forefinger pointing to the tempting dish. "Wait a minute, Molly; just let me eat this hunch of bread-and-butter," says the father; and thus the meal progresses, more liked and beneficial than though it had consisted of rich viands, with old and costly wines to wash them down.

If the reader has the patience to run his eye over these few, but tiresome, sentences he will get a very good idea of the style and intention of a whole class of novels with which our circulating libraries are just now being flooded. If he will be so complaisant as to read them twice they will give him as much insight into the mode of composition and the fallacy of taste which they display as the study of a dozen volumes. It is not more easy to conjure by the staff of Jan Steen than by that of Salvator Rosa, and perhaps it is rather less easy. Talent and training are wanted even to describe a family group seated at the tea-table, and these qualities are not to be dispensed with by the trick of copying slavishly a scene that passes daily before the writer's eyes. In M. Gustave Droz's delightful story in *Entre Nous*, no other incident is described than just this over which Mr. Hickman has expended several pages—namely, the making of an omelette, but M. Droz has contrived to serve up his fragrant dish with so much humour and picturesque detail and tender pathos that the story remains with the reader in spite of the triviality of the theme. This, indeed, is the only, while it is a perfectly sufficient, reason for chronicling small beer. The intrinsic flatness of the draught must be conduced by the sparkling way in which it is presented and by the momentous occasion on which it is produced. The beverage is of no importance in itself, but it forms a salient point round which emotions and events can cluster. But Mr. Hickman's omelette leads to nothing. It is made, it is eaten, it is forgotten in favour of some fine spring onions, which are slowly collected, washed, eaten, and forgotten, and these in their turn give place to other viands, consumed as deliberately and leading to no result whatever, not even to an indigestion. "Better the savage in his dance," better the Minerva Press in its wildest hysterics, than this tame and colourless record of nothing in particular.

The realists, however, may turn upon us and reply, "We, and the class of readers for whom we cater, disapprove of the exciting, disbelieve in the supernatural, and disdain the importunities of romantic youth. We desire truth and truth alone, the facts of life, the agreeable and bloodless struggle of commonplace people after wealth." To this we reply that their method is only duller, not more exact; that their characters do not behave more credibly, but only more stupidly, than those in old-fashioned stories of the types of Kotzebue and G. P. R. James. If we are to be realistic, let us be realistic; let us bend our minds to some of the trifling habits of men of business. Now, in the very outset of *From Poverty to Riches*, we have a person presented to us who had a mania for constructing bricks by an absurd process, the details of which are given again and again, but which need not detain us here. This person possesses no income at all, but starts in life with a capital of eight hundred pounds. The novelist wishes to point out that if he had been a prudent man, as he was married, he would have placed this generous fortune in the Funds or have otherwise invested it, and have lived upon the proceeds, which would have amounted to something less than forty pounds a year. Instead of taking this wise step, he squanders his money, as the soldier in *Punch* was afraid of doing with his fourpence, and it is the particulars of his prodigality which we desire to lay before our readers as an instance of the new realistic method. He possesses, as we have said, 800*l.*; he buys and pays for a plot of ground in the immediate neighbourhood of London, namely, at Turnham Green; on this plot of ground he builds a house and a kiln, and fits up the latter with all the necessary machinery. As he is a scrupulously honest man, he pays his way all along, with no other means than the capital above named. His kiln is an absolute failure, he makes no bricks at all; he lives for some years in the house, and one or two children are born to him. As he has earned

nothing since he arrived at Turnham Green, his wife begins to get anxious about their future, as well she may, and it is discovered that when all their debts are paid there remains of their capital exactly half—that is, 400*l.* No sordid details, no minute pretension in little things, can possibly blind us to this central absurdity, on which the whole evolution of the plot depends. When the action of a romance takes place in an enchanted forest the heroine may turn into a winged porcupine if she chooses; our faith in the narrative may survive the shock. But when we read of a gentleman of our own day who buys a plot of ground at Turnham Green, builds a house and kiln upon it, and supports a family for a year or two on four hundred pounds, all expenses included, no amount of omelettes will carry us through the narrative. As the French princess said of one of Crébillon's stories, all the guimauve in the universe will not persuade us to swallow it.

Of course the whole book is not made up of solecisms of this kind; there is proof in it of a certain limited habit of observation, some slight flashes of humour, a scarcely articulate vein of feeling. But these qualities, possessed, if they are possessed at all, merely in embryo, are by no means sufficient to justify the existence of the book. Sound views on the relation of eggs to district-visiting, and the power of commenting flippantly on the partiality of a curate for hons and pigs, even if the former gives occasion for some agreeable painting in the Dutch manner, and the latter to a scene that is genuinely amusing, are insufficient equipment for the production of a novel. Such writing as is aimed at by the new realistic school in England, even when it displays far more talent and skill than are expended by the author of *From Poverty to Wealth*, is in itself essentially needless, unless it make triviality of circumstance a platform on which to bring before us some of the large and weighty problems of human life. We are far from denying that for certain purposes in fiction the careful study of domestic detail is desirable. The French understood the art of chronicling small beer to perfection, before they went too far the other way, and repelled us by the cold brutality of their inventories. But when the worst has been said of contemporary French novels, they cannot be placed so low, as mere compositions, as those English novels which try to dance the same mad waltz, with their foot-steps carefully fettered by ignorance, decency, and a healthier national instinct. The one deserve the same consideration which we give to a clever and unscrupulous enemy; the others are simply dull and blank. That they should respond to any want in our reading class, and it is to be feared that they do, is an unfortunate proof of a very general taste, existing somewhere, for mere insipidity. We can only hope that *From Poverty to Wealth*, which is the poorest example we have come across, may mark the low-water level to be reached by the wave of domestic realism.

WALLACE'S EPICUREANISM.*

OF this sketch of the Epicurean philosophy, issued by the Society for Promoting Christian Knowledge, we can speak as highly as we spoke of Mr. Douglas's volume on Confucianism and Taoism (*Saturday Review*, March 13, 1880). The latter belongs to the series which deals with non-Christian religious systems; the former to a series treating of the chief ancient philosophies. But these ancient philosophies were to a large extent religious as well as intellectual systems; and Epicureanism is almost as strictly a religion as the system of Pythagoras. It takes away, indeed, all that in the general belief of mankind can serve as the foundation of any real belief in a divine ordering of the world; but, along with an ethical code thrown into a dogmatic form, it provides a cultus not unlike that of modern Positivism, and professes to furnish an outlet for the religious emotions as well as for the social instincts of humanity. Nothing but good can come from the careful and impartial examination of these systems, whether of philosophy or of religion; and in Mr. Wallace's volume the reader who comes to it with little or no previous knowledge of the subject will find, not merely a clear exposition of Epicurean teaching in all its aspects, but an excellent sketch of the social and political conditions which marked its origin and fostered its growth, of the documentary sources which furnish such information about it as we possess, and of the influence which it has exercised on the thought and practice of more recent ages.

Perfect fairness and a judicial impartiality, it need scarcely be said, are the first qualifications for such a task; but we are guilty of no unfairness to Epicurus, or to any one else, as a teacher whether of religion or philosophy, if we bring out clearly and sharply the radical differences between his system and any other which we may be comparing. If it be the case that Epicurus leaves absolutely no room for the conception of a single conscious mind as the source and the preserver of all being, and if, shutting out any such belief, he goes on to speak of certain beings, of indescribably attenuated matter, who have nothing whatever to do with human affairs for either good or harm, and to whom he chooses to give the name of gods, then it seems useless, and perhaps mischievous, to represent Epicurus as speaking at all about God. The introduction of the noun in the singular number can be legitimate only when we are addressing those for whom the existence of a creator and ruler who knows

* *Epicureanism*. By William Wallace, M.A., Fellow and Tutor of Merton College, Oxford. London: Society for Promoting Christian Knowledge. 1880.

that he is creating and ruling is a reality. It matters not whether such a man believes further in the existence of a multitude of beings to whom he gives the name of gods; for these fade away into distance when the worshipper rises into the serener region in which Sophocles (*Œd. Tyr.* 862) saw only the eternal purity and holiness of the everlasting God. But to a man who utterly shuts out this belief we cannot ascribe any opinions about God without introducing confusion of thought into the mind of the general modern reader. In truth, it is not easy to see what is gained by the use of such language for any class of readers whatever. Mr. Wallace is perfectly well aware that Epicurus would have nothing to say for the idea of a divine father and judge of all mankind, and he states this plainly; but, having done so, he speaks elsewhere of the sense of divinity which pressed even Epicurus to express some sort of belief in God, and by so speaking he weakens, as we believe, the impression which he would otherwise have left on the student's mind. If, then, the reference be to the term with its modern connotation, Epicurus was beyond doubt an atheist, and we cannot suppose that he would have had a moment's hesitation in so declaring himself. Hence those who describe him as such are not necessarily, as Mr. Wallace (p. 202) styles them, careless; and he does but confuse a tolerably clear matter when he adds that "the existence of the Gods is what Epicurus never denies; but what he, on the contrary, asserts as a fundamental truth." It is hard to see how any truth can be fundamental on which no other truth is made to stand, and no one could show better than Mr. Wallace that the ideas which it pleased Epicurus to put forth about his so-called gods were simply worthless fancies. Their abode is in the vacant spaces between the worlds; they have nothing to do with men, with their thoughts, their words, or their deeds; they are material and corporeal. They are, as Mr. Wallace puts it, "neither weak enough to be biassed by human offers nor malicious enough to seek to injure man." But the important point in this belief or fancy of Epicurus was, that whatever the malice might be, they would be impotent to carry it out. "Man need have no fear of the gods. They are powerless equally for hurt or help." In short, they might at the worst be compared to Edward the Confessor, who could tell an offender that he would hurt him if he could. But to say of such a fancy as this that it still leaves "the godhead worthy of all worship" (p. 207) is to use words almost without meaning. We have here, in truth, no godhead at all; and the best excuse for Epicurus is to be found in the fact that the popular traditional dogmas were so oppressive and so degrading as fairly to justify his unbelief.

In thus unduly toning down his language Mr. Wallace somewhat weakens both the vigour of his sketch and his hold on the attention and interest of his readers. Visions of the night and dreams of the waking hours are caused by wandering atoms, infinitely attenuated husks of material bodies, whose complete form these poor fragments have the power of presenting to the mind. But, while Epicurus insisted that these were to be generally distrusted, as resting solely on the deliverance of the senses, he yet maintained that they were the only possible means by which men became acquainted with the existence of the gods. The philosopher is treated with more than equity when Mr. Wallace speaks of him as "recognizing this avenue of ideas solely on account of its theological bearings without intimately discussing or weighing its evidential worth" (p. 226). On the whole, his way of dealing with the weak points, or rather, it might be said, the glaring follies and absurdities, into which Epicurus allows himself to wander, is too indulgent; and this is the more to be regretted because he is dealing with a system which has been misunderstood to a degree beyond most other systems. In Mr. Wallace's words, "misconstruction and misrepresentation have made it their victim"; but the victim is one which deserves no great compassion. The misconceptions of its opponents have scarcely ascribed to it errors much more mischievous than those into which it actually ran. The causes which favoured its growth also shaped the opposition which it encountered. Mr. Wallace cites the sharp comments of Lactantius, who speaks of it as flourishing because it tells the ignorant that they need study no literature, and releases the niggardly from the duties of public beneficence, forbidding the loungers to serve the State, the sluggard to work, and the coward to fight, telling the godless that the gods are indifferent, and assuring the selfish and malcontent that they need give nothing to any one, because the wise man does everything for his own sake. We can scarcely deny that Lactantius is describing what in a certain sense is a gospel for many classes of mankind, if not for all, when he goes on to tell us that, from Epicurus,

The recluse hears the praises of solitude; and the miser learns that life can be supported on water and pottage. The man who hates his wife is presented with a list of the blessings of celibacy; the parent of a worthless offspring hears how good a thing is childlessness; the children of impious parents are told that there is no natural obligation upon them. The weak and luxurious are reminded that pain is the worst of all evils; and the brave man, that the sage is happy even in tortures. Those who are ambitious are bidden to court the sovereign; and those who shrink from worry are directed to avoid the palace.

This clever summary of Lactantius is rather an exaggeration than a misrepresentation, nor is even the exaggeration great. It describes fairly enough the isolation which is perhaps the chief characteristic, as it certainly is the groundwork, of the system of Epicurus. It is not true to say that the philosopher attracted disciples by the bait of sensual self-indulgence; and probably no one ever believed that he did, for the fancies of those who know nothing about the matter cannot be taken into account. For a long series

of generations the impression which the system left on outsiders was that of a somewhat repulsive severity. If we may take as genuine one of the letters given by Diogenes Laertius, the Epicurean Pleasure may be defined as the absence of pain in the body and trouble in the soul (the second condition corresponding to the *quietude*, or *Ataraxia*, of the Stoic), or as "sober reasoning, searching out the reasons for every choice and avoidance, and banishing those beliefs through which greatest tumults take possession of the soul." The system thus involves a very troublesome introspection, which is perhaps made the more disagreeable because it has no necessary reference to the condition of any one but the thinker. The condition of the thinker, if sound and healthy, will or may promote indirectly the good of others; but it is on his own good exclusively that his mind is to be fixed. It is, therefore, no exaggeration if we speak of Epicurus's teaching as reducing the life of man in theory to an absolute solitude, and as limiting the period of dreary exile strictly to the present life. On this point there is no room for doubt. Plato may use language which at one time upholds and at another discountenances the belief that man has more before him than some threescore years and ten; but Epicurus takes care to nip all such fancies in the bud. "Death," he says in the same letter, "is nothing to us, seeing that when we are, death is not yet; and when death comes, then we are not. It is nothing, then, either to the living or the dead, for it is not found with the living, and the dead exist no longer." It is only when we take this dogmatic denial of continued existence along with his fancies as to the existence of life-enjoying gods in some chinks and crevices of the universe, and his certainty as to the absence of any supreme controlling mind and will, that we appreciate fully the absolute atheism of the man. For the mystic there may be an attraction in even those aspects of the Buddhist Nirvana which approach most nearly to the common idea of annihilation; for Nirvana is at its worst (if the term may be used) a state which the soul has attained as the consummation of life-long effort, and in which it is absorbed into the infinite thought of the universe. But, according to Epicurus, there is no thought into which it may be absorbed, no mind to which it may return as a child to its parent.

It might have been well if Mr. Wallace had brought these two features of the Epicurean system more closely together, and thus have shown with greater clearness to how large an extent it was dependent for its growth and power on particular political and social circumstances. It might have been better also if he had made more prominent the plethora of assumptions in the Epicurean philosophy, which, when the attention is fixed exclusively upon them, may not only satiate, but disgust, the inquirer. The habit of assuming facts, and especially facts which are fundamental to the theory, belongs to all ancient and to not a few modern systems of thought; but, as compared with the practice of Socrates or of Plato, that of Epicurus is absolutely reckless, and in no other part of his system has he assumed a wilder licence of assumption than in his theory of atoms. This theory, Mr. Wallace urges, has had many hard things said of it. It has been styled, he says, "a conception which destroys the beauty and grandeur of the universe, which substitutes mere chance for a cosmical plan, and mechanism for organic life." These charges, he adds, are chiefly due to a misunderstanding. "They express what is largely a grievance of the sentiments and the higher emotions, and under-estimate the necessities of scientific explanation. All science in its abstract processes of investigation must take up a position at times antagonistic to the poetic and religious tendencies of our nature. The analyst must break up the unity into its ingredients, split the whole into its fractions." This is scarcely so clear as it should be. There is no repulsion in the minds of any who may fairly be called thinkers at all for the splitting up of a whole into fractions, however small, which are yet cognizable by some method of human observation. The infinitely little in the universe is as amazing as the infinitely great, and perhaps even more overwhelming. It is only when the smallest cognizable fragments are used as a basis for inferring the existence of fragments infinitely more minute, and lying confessedly beyond the reach of human ken, that some who do not care to submit to arbitrary dictation raise a protest against a method which seems to travel beyond the bounds of legitimate scientific process. There is nothing to frighten those who believe that the Cosmos is upheld by Mind in the many-shaped atoms of Epicurus, some catching others with their hooks and claws, others repelling them from their rounded and impenetrable sides, so long as these atoms can be scientifically made known to us. It is only when the philosopher bids us follow him across a border beyond which all scientific instruments known to man are wholly useless, that such thinkers demur to the demands made on their powers of belief or credulity; and their objection may take, and fairly take, the form of strong protest when this speculation has for its goal a conclusion which banishes the Creator from His universe altogether. The atoms of Epicurus may be left to their movements in the wide domain of the Cosmos until the modern analyst endows certain ultimate atoms among them, more dead and dull and impenetrable than the rest, with the promise and the potency of all life. The demand for an explanation of the source of this power or potency is perfectly legitimate; and not less legitimate in the absence of such explanation is the inference that the extension of an analytic process beyond the bounds of the known and the ponderable is not legitimate. Mr. Wallace's comments on the changes which the Epicurean theory of atoms has undergone in the hands of modern philosophers are excellent and

instructive. But he certainly falls into no sin of excess when he tells us that

The real advance of modern atomism, as seen in the speculations of Kant or of Bosovich, is in the substitution of forces for hard points. Matter is looked upon as constituted by centres of forces, in a complex set of relations, dependent one upon another and yet resisting each other's influence. The appearance of extension and solidity is pronounced to rest upon the reciprocal attractions and repulsions of their active centres. But, after all, when forces have been substituted for extended atoms, the ultimate difficulty still remains. Why are these forces so located, and these atoms so arranged in the world? And the only possible answer to this question, other than a re-assertion that such is the given fact, is to refer to an underlying power which divides its energies in their diverse seats of force.

When the modern analyst speaks of certain ultimate atoms as endowed with a potency of life, he is, in fact, referring to an underlying power, the difference between himself and Bosovich being that he asks us virtually to admit that the power which bestowed this potency has vanished away, while Bosovich holds that it is nothing less than the will of the ever-present God. But, like many other philosophers, Epicurus was far better than his system and his supposed beliefs; and of Epicurus as a teacher and a friend Mr. Wallace has given a picture as genial and attractive as it is vivid and true.

MINOR NOTICES.

MR. SUTHERLAND EDWARDS has written a very lively and interesting account of Rossini for the series of "Great Musicians" (1) published by Messrs. Sampson Low and Co. There is perhaps something too much current of this kind of biography; but we are not disposed to quarrel with the system so long as it leads to our getting such pleasant and interesting writing as Mr. Sutherland Edwards has given us in his "Rossini." The writer starts with a modest introduction, which to those who did not know how capable he was of dealing with his subject—of making his study at once sound and attractive—might give little hint of the pleasure and instruction which are to be got from his work. Mr. Sutherland Edwards is a musician, and a musician of a judiciously catholic taste. It is not his way to assume that because A. writes good, B. writes bad, music; and this is apparent in spite of his wise avoidance of controversial writing. His appreciation of Rossini is especially welcome at a time when one cannot but note the existence of a class of literary and artistic dabbles who think to show their "consummate" understanding of music by senseless sneers, expressed either in writing or conversation as chance may serve them, at what they are pleased to call the old-fashioned Italian school. Mr. Edwards's book is full of instruction for such as these, if they would but take it. He has, apart from his keen and unassuming critical remarks, given a capital sketch of the growth and final development of Rossini's character; and his volume is skilfully sprinkled with anecdote. We do not wish to pick out the plums of this kind, and therefore quote only one story. On a certain occasion Rossini was compelled by his contract to write music for a hopelessly absurd libretto. "The task he now set himself was to compose to his ridiculous libretto music more ridiculous even than the words. Tenor music was given to the bass, who, to execute it, had to shout at the top of his voice. The soprano, on the other hand, had been furnished with a contralto part, which made demands only upon the lowest notes of her voice. A singer of notorious incompetence was provided with a most difficult air, accompanied pianissimo, so that his faults might at least not be concealed. Another singer, whose burlesque appearance never failed to throw the house into convulsions, had to sing a sentimental melody of the most lackadaisical kind. The orchestration was quite as remarkable as the writing for the voices. One of Rossini's great merits consists in his having introduced new instruments into the operatic orchestra of his time; and in scoring *Il Figlio per Azzardo* he wrote parts for instruments of percussion never before and probably never afterwards employed. These were the tin shades of the candles with which the desks of the players were furnished, and which, in one movement, had to be struck at the beginning of each bar." The joke was apparently unperceived or tolerated for some time by the audience, but in the end Rossini had to make his escape from the theatre.

Of a widely different kind is the editor's first contribution to the series (2). Apparently Mr. Hueffer has not troubled himself to read Mr. Edwards's volume. He was of course safe in trusting to Mr. Edwards's knowledge and literary skill, but he should have read "Rossini" if only to save himself from the monstrous and utterly unfounded statement that "it requires, indeed, all the patience of an English audience to endure nowadays the performance of *Semiramide*, or any of Rossini's serious operas, except *Guillaume Tell*." It would not be too much to call this sentence absolutely unimportant nonsense, but for the reflection that the writer has the advantage of describing facts without being prejudiced in any direction by intimate knowledge of them. A judgment formed in this way has, no doubt, its own value, which readers may be left to estimate as they will. As to Herr Wagner Mr. Hueffer has

many commonplaces to utter, and he finds or makes an opportunity for descending through several pages upon the metaphysics of Schopenhauer. We now pass on to give a few specimens of Mr. Hueffer's style. "The Titan was again progressing in enormous strides towards Utopia." "Europe by this time had got tired of the pompous seriousness of French declamation. It lent but too willing an ear to the new gospel, and eagerly quaffed the intoxicating potion which Rossini poured forth." "The recitativo secco is treated by him (Rossini) with all the dryness which that ominous name implies, and the melodious structure, founded mostly on dance-like rhythms, verges often on the trivial. Only rarely does the swan of Pesaro rise with the dramatic power of the situation to a commensurable height of passionate impulse." If anything could set people against Herr Wagner, who at present admires him without thinking him the only possible composer, it would be such stuff as Mr. Hueffer has written. It is to be hoped that Mr. Hueffer will be as judicious in future cases with regard to non-interference as he has been in the case of Mr. Edwards; and it may be hoped at the same time that he will in future confine himself to purely editorial duties.

Mr. Copinger's work on the law of Copyright (3) has reached a second edition, in which it has received considerable additions and improvements. It is a diligent and useful treatise, though somewhat old-fashioned in style; Mr. Copinger quotes more or less hackneyed lines of Horace, for instance, on very slight provocation. The book establishes a certain claim to literary as well as legal interest by giving a sketch of the history of the subject in England prior to the statute of Anne which has been the groundwork of our modern legislation. The facts are clearly enough given; but the discussion—where discussion comes in—is not quite satisfactory; possibly because it is handled in a rather summary way, as a digression from the author's more practical objects. Mr. Copinger seems to us to argue a little too confidently from the monopoly and privileges of the Stationers' Company to the general existence of copyright at common law, which, if it existed at all, must have been perpetual. On the other hand, he is quite right in calling attention to the curious fluctuation of judicial opinion on the point. In the last century the weight of authority was certainly in favour of the common law right, on grounds not so much of legal authority as of policy and abstract justice; and on these grounds the question of principle is still much debated, and perpetuity of copyright is not without strenuous advocates. Almost every possible argument on either side may be found in the evidence taken before the recent Copyright Commission. We cannot say that Mr. Copinger throws much new light on the controversy. At the outset he seems to adopt the language of those who take the high view that copyright is property in the fullest sense, and ought to be as absolute as any other property. But in a later chapter he cites with approval the first Napoleon's objections to perpetuity, as recorded by the framers of the French codes. In dealing with the rule that courts of justice will recognize no copyright in libellous or immoral books, Mr. Copinger misses, we think, its real ground and criterion; it was equally misused, however, by Story, from whom he cites a more than usually nebulous paragraph. The true reason for protection being refused in these cases is not merely that the book is considered immoral or the like, but that the publication is, or is supposed to be, an actual offence punishable by the criminal law. Mr. Copinger cites (without reference, and we must say that he is not unfrequently loose in the matter of references) a recent Scottish case, in which it was decided that a certain book was not blasphemous for being Unitarian. If the account given is correct, the Sheriff-substitute overlooked the circumstance that Unitarianism is no longer proscribed by statute, the statute of William III. "for the more effectual suppressing of blasphemy and profaneness," having long since been repealed as regards persons denying the Trinity. The collection of foreign laws at the end of the book will be found convenient for reference, and the design of adding a chapter on the relations between authors and publishers is in itself a good one. The treatment of this topic, however, falls rather short of the mark of present practice. Nothing is said of the agreement on the footing of a fixed royalty on every copy sold, or on every copy beyond a certain number, which is rapidly superseding agreements involving an account of profits, such as the common "half-profits" form. The same observation applies to the collection of precedents for agreements with publishers which is given in the appendix. Most of these appear to be copies of actual agreements printed in reported cases, which, of course, is no security for their value as models. Indeed, the better a document of any kind is drawn, the less likely is it to come into court. And in fact these are with few exceptions clumsily drafted, redundant in trifles and obscure in essentials, and, on the whole, fitter for warning than for example. Several of the leading publishers now use printed forms adapted to the most usual types of agreement, and copies of these, one would think, might have been obtained with moderate trouble. In one precedent we find the obsolete verbiage "lawful money of Great Britain," which for many years has been without the shadow of excuse, and in a new book ought to have been struck out. We may add that any one who delights in curious specimens of the French of Stratford-at-Bow may find one in Mr. Copinger's Appendix E, being the form used at Stationers'

Hall for the registration of foreign works under the International Copyright Act.

There is a good old game of "Lights" at which everybody ought to have played. So if our readers have not done so, we will not help them to its laws. "Lights" have their great, because undeterminate, value in the long game of the world's progress, and in particular in the pursuit of technical arts and sciences. We may give emphasis to this postulate in reference to that historical development of European and Christian architecture which the Gothic school first placed upon its true basis, and with which the wooers of Anna Regina have in much later times so prettily toyed. Mr. Bernard Smith's dashing *Sketches Abroad* (4)—namely, in more precise language, in Germany and in Switzerland, but in no region of the Latin race—range from public buildings and churches in Nuremberg and Lübeck down to drinking-vessels and prickets in the Berlin Museum, and cast some decidedly sparkling lights upon the art which they are intended to benefit. The author has the humorous prudence to launch his bark upon the world without a word of explanatory letterpress beyond a short preface and a prominent table of contents. The bent of his mind, however, is sufficiently evident without the necessity of any explanatory label. Varied outline and aspiring skyline arrest his pencil, and in his collection such specimens of the Renaissance as he exhibits range themselves as caprices founded on mediæval precedent, and not as retrocessions to the simpler lines of classical architecture.

Mr. James Parker, who is confessedly author as well as publisher of this brochure, has reprinted in a portable form his articles upon *The Ornaments Rubric: its History and Meaning* (5), which originally appeared as a series of papers in the *Penny Post*. In these he has, with much logic, research, and acuteness, and, at the same time, in popular phraseology, discussed a question which ought to be (as it usually is not) handled, like any other problem of history, with a simple passionless intention of arriving at the truth. The absolute meaning of the Ornaments Rubric found in the Prayer Book of 1662 is one question. Its present legal value is another one. The moral and social desirableness of ornate ceremonial is a third and very distinct consideration, and the policy regarded under the lights of worldly wisdom, tact, and towardness of modern Ritualism and of its opponents is a fourth matter of legitimate debate. These are all different controversies, and yet they are all of them too frequently jumbled together. Mr. Parker's business is primarily with the first of them, although he deals with it in reference to the second; and we must confess that the conviction to which he induces us to lean is that, whether the chasuble be a wise or a foolish, a graceful or an unsightly, garment, it is, at all events, a legal one within the Reformed Church of England, so far as it may not have been repressed by the "superior force" of the Judicial Committee.

The Kasidah of Hâjî Abdû el Yezdi: a Lay of the Higher Law (6), is a fanciful attempt to evolve a new system of philosophy out of a heterogeneous mass of materials, consisting chiefly of scraps of learning picked out from translations of works in the various Oriental languages. It is written in somewhat prosy couplets, and is attributed to a native of Yezd, in Persia. It is a pity that the learned author should have committed an unpardonable solecism in the Oriental title, which he has ostentatiously printed in Arabic characters on the cover of his work and repeated on the title-page. We would call the Hâjî's attention to the fact that *Al Kasidah Hâjî Abdû* is not Persian, and is still less Arabic. But perhaps he has a language as well as a philosophy of his own.

Mr. Wace has written a "prefatory note" to his life of the Laureate (7). In this he writes that "care has been taken to exclude whatever would offend good taste." It is not improbable that many people will agree with us that, if the good intention thus expressed had been adequately carried out, there would have been nothing issued of Mr. Wace's book except the two covers.

We are perhaps somewhat surfeited with books which tell us what to do in order to be perfectly healthy; or, in other words, to avoid the inevitable (8). Books of this kind have appeared of late like the Three Bears—in big size, in middle size, and in little size. Mr. Corfield's belongs to the Little-Bear class, and has the merit of being thoroughly clear and thoroughly practical. It is hardly necessary to say that there is no one better qualified than Mr. Corfield to discourse on this subject. He is neither utopian nor pedantic. All that he has to say is well founded and worth attention, and when he feels it necessary to put his case strongly he does it with a moderation which is in pleasing contrast to the repellent dogmatism of some writers, who would like, or who affect that they would like, to see everybody living according to hard and fast rules. Mr. Corfield suggests rather than commands; and his suggestions are founded on practical experience and knowledge.

For an instance of his skill and method we may refer readers to his paragraph on "Times for Meals," in p. 73 of a volume the size of which is in inverse proportion to its value.

Messrs. Bentley have issued an edition of *Ingoldsby Lyrics* (9), several of which make their appearance for the first time in print, and all of which will no doubt be gladly welcomed by the admirers of the "Legends."

Mr. Taylor's *First Principles of Euclid* (10) seems to us an excellent little work. The author's scholastic experience taught him the existence of certain serious difficulties in the way of beginners at Euclid. Euclid "constructed his work on a plan which is logically consistent, but altogether wanting in that gradation which is so essential to beginners. . . . The various editions of Euclid do not help the learner to apply any power of geometrical reasoning he may attain. True, they generally contain deductions to be worked out; but these are given at the end of Euclid's text, and need some intermediate exercises to give the pupil power over them." These difficulties Mr. Taylor has met and combated most successfully, and boys who are allowed to learn Euclid after Mr. Taylor's fashion will be a great deal better off than their predecessors.

Four thin volumes of unique interest have been issued by Mr. Batsford (11). Their nature will be best explained by a few brief quotations from the preface of Mr. Dickens, who has done his work admirably, both as introducer and translator. "In these hundred sketches," Mr. Dickens begins, "of Fujisan, the Master has sought to portray the Peerless Mountain, with the varying aspect and environment under which the grandest object of surrounding Nature was familiar to his fellow-dwellers in the capital of the Eastern Provinces. . . . Of the Master himself but little is known." Hickusai, who was born, it is supposed, in 1756, "was, undoubtedly, even according to a Western standard, a man of true genius. He belonged to the 'ukiyo-ye' (passing-world picture)—that is, realistic genre school, and founded a division or offshoot of it, known among the writers of his time as the Katsushika school." Mr. Dickens goes on to make some very interesting and valuable remarks on Japanese art in general. "The young student rarely, if ever, draws from nature; he merely copies from the flat until his hand attains the requisite flexuous dexterity, and he becomes thoroughly imbued with the traditions of his foregoers. He learns, indeed, to write rather than to draw his sketches." The method adopted prevents any effacement or retouching; if a slip is made, the whole thing has to be begun again. The art is based entirely upon conventionalism, but it is conventionalism "of a high and unforced type, sincerely natural, and devoid of all rigidity."

The reader who is already acquainted with Mr. Dickens's curious and interesting volumes will the more readily appreciate the rare beauty of the designs (12) which appear in Mr. Outler's work on Japanese Ornament and Design, an admirably got-up book, which is full of interest in every page, and of which we may have more to say upon a future occasion.

The admirable essay (13) which Mr. Comyns Carr wrote as an introduction to the Catalogue of the Old Masters' Exhibition held at the Grosvenor Gallery some time since, and with which many of our readers are doubtless familiar, is now republished separately in a handsome volume, with illustrations taken from the best examples in the Exhibition.

THE SPEAKER'S NEWEST RULES.

THE issue of a supplementary code of restrictive rules by the SPEAKER has justly occasioned a feeling, not only of surprise, but of irritation, which will last long beyond the present period of "urgency." The House of Commons had already submitted to very considerable restrictions, not merely on its own liberty, but on the action necessary for safeguarding the public welfare. It submitted to these because a certain temporary pressure was intolerable, and on the faith of the advice of its responsible chiefs. If, however, these restrictions are to be constantly drawn tighter by new and ever-new strains, it will become—indeed, it has already become—a question whether the remedy is not worse than the disease. The latest innovation tended not merely to prevent lengthened debate on amendments in Committee, but to prevent the introduction of amendments at all. Sir STAFFORD NORTHCOTE only did his duty as a leader of the Opposition in raising this objection, and the SPEAKER's official immunity aggravates the difficulty. It is obvious that, under the new rule, it is possible for suggestions of great value to be not merely rejected or insufficiently discussed, but to be refused a hearing altogether, for very much the same extinguisher as that which had been put on them in Committee can easily be reapplied on the report or on the motion for recommitment. This rule, it must be remembered, is an actual edict, and it can only be reversed by the SPEAKER's will or by the House freeing itself from its state of urgency altogether, as, thanks to Sir STAFFORD NORTHCOTE, it can do. This extreme course is not likely to be resorted to, but it must be a matter for very serious consideration with the Opposition and with independent supporters of the Government what course they will pursue, not only now and during the progress of the present Bill, but at a later period also. The discussion in Committee has indeed been unduly prolonged; but it is unfortunately the fact that much of this prolongation might have been avoided had the conduct of affairs in the Chair been surer and more decided. It was irresolution and want of leadership which necessitated the original *coup d'état*; want of leadership and irresolution are now requiring continual additions to the arbitrary powers granted after that *coup*. When it is remembered that not merely is the effect of some of the new rules most problematical, but that every encroachment of the kind weakens the chance of orderly and regular management, out of urgency, in the future, the situation becomes exceedingly grave. Upon the conduct of the Opposition in reference to this question there depends more than has for many years depended on the conduct of a minority.

IRELAND.

TIME will show whether a partial payment of rent, voluntarily or under compulsion, indicates any real change in the condition of Ireland. The tenants of the Duke of LEINSTER were some time ago encouraged or induced by the Land League to withhold payment of rent, except with an arbitrary deduction assessed by themselves. They have on reconsideration, and probably in anticipation of the collapse of the Land League, come to the conclusion that it is for their interest to satisfy the condition on which alone they have a right to their holdings. The delusion

that they could set law as well as honesty at defiance has probably been shaken by the introduction of the Protection Bill. In several other cases a similar result has been produced by causes which are in some degree still uncertain. It is still more satisfactory to find that through the exertions of an Association for the defence of property the law has been enforced against contumacious defaulters by the seizure and sale of their goods. It is possible that the landlords as well as the Government were unduly panic-stricken by the violence of the Land League agitation; but the danger of asserting legal rights has been perceptibly diminished since the beginning of the Parliamentary Session. It is only by comparison that the present state of Ireland can be regarded with even the faintest satisfaction. The recovery of debt by the process of distraint and sale has only been rendered possible by the presence of a large force of police, and by the exertions of a voluntary Association. The comparative lull of agrarian crime furnishes no argument against exceptional legislation. It is still impossible either to procure necessary evidence or to obtain honest verdicts from juries. If it is true that some of the most criminal agents of the Land League are already escaping to America, they would remain, or immediately return, if the Government were weak enough to withdraw the Protection Bill. The threats of the MILLONS and DAVITTS that the League will organize a general refusal of rent as soon as the Bill is passed are probably idle bluster; and, if the attempt is likely to be made, it will of itself abundantly justify measures of coercion. The conspirators are strangely inconsistent in their accounts of the character and nature of the Land League; for some Parliamentary purposes it is but the machinery of legal agitation, while at other times its malignant influence is exaggerated for purposes of intimidation.

The device of providing feminine substitutes for the absent managers of the League is not felicitous. Revolutionary jargon in the mouths of women degenerates into unbecoming but harmless prattle. It is not a little surprising that even unscrupulous demagogues should encourage the female members of their families to make themselves ridiculous. They are well assured of immunity from punishment, even if they should be tempted to indulge in seditious language; but the notorious fact that they expose themselves to no danger will render their harangues less exciting. For a few weeks the novelty of the performance may perhaps produce some additional contributions to the treasury of the League; but, on the whole, the collections are becoming less productive, and every tenant who pays his rent will be lost to the organization as a subscriber. The lady who first addressed a meeting of the League made liberal offers of assistance to claimants on the bounty of the League; but it would seem that the bulk of the funds is retained for some unknown purpose, and that it is in the meantime invested in foreign securities. Occupiers who have been persuaded by the demagogues to apply to their own purposes the money with which they ought to have paid their debts will scarcely be able to establish a claim to additional benefactions. They are indeed told that they have the best right to the money because it was contributed by themselves; but if the donors are also recipients of the bounty of the League, they might more conveniently have kept the money in their pockets. The labourers who have been deprived of employment by the deliberate action of the League have a much better claim to a share of its funds:

but the farmers have never been by the agitation of the League orators that they should provide work for the victims of agitation.

LORD GRANVILLE would perhaps have declined to answer an injudicious question as to the declaration of one of the Roman Catholic Bishops, if he had not thought himself bound in courtesy to read to the House of Lords a letter which he had received from the incriminated prelate. The gloss was less intelligible than the text; and neither document could properly attract the notice of Parliament. The authority of the law in no way depends on the sanction or disapproval of the POPE. It is for the interest or credit of the Church, and not as an ally of England, that the POPE has formally warned the Irish hierarchy against connivance with disorder and crime. It is not surprising that, at a time when the Church affects throughout the Continent to be the champion of law and established right, the chief representative of Catholicism should earnestly deprecate an alliance of any section of the priesthood with revolution. His counsels are wise; but they are not destined to prevail. LEO XIII. has already had experience in Belgium of the limits which an Ultramontane clergy imposes on canonical obedience. PITS IX was apparently obeyed by the most fanatical bishops and priests because he invariably supported their extreme pretensions. A statesman and man of the world finds that local Churches are capable of preferring their own passions or supposed interests to the commands of the POPE. The answer of the Irish prelates to the POPE's letter addressed to the Roman Catholic Archbishop of DUBLIN, is an undisguised warning that he must mind his own business. The common forms of submission and deference are scarcely intended to disguise their determination to throw in their lot with the seditious Land League. They of course declare that they have always deprecated crime, but they avow complete sympathy with the agitation from which the outrages proceed. MR. PARNELL's recent alliance with a notorious and inveterate enemy of the Catholic Church in France will not alienate his priestly supporters. They would probably prefer a devout demagogue of the type of O'CONNELL; but they cannot afford to offend the malcontent peasantry; and an improving landlord, such as MR. BENCE JONES, is much more obnoxious to them than a member of the Paris Commune. No further remonstrance which the POPE may think fit to issue will practically affect the conduct of the hierarchy.

The debate in Committee on the Protection Bill has almost ceased to command attention. The Irish members consume much time in discussing amendments which are for the most part inconsistent with the principle of the Bill; but of late they have conformed for the most part to the rules of the House. Perhaps they may consider it a triumph to have caused the SPEAKER to assume a power of peremptorily closing a debate. It was fortunate that under the new regulations they were not at liberty to declaim at length on the law which allows the Secretary of State to open letters sent by post. SIR W. HARCOURT rightly declined to give them any information as to his exercise or non-exercise of his powers. No Minister is likely in the present day to commit the gross error of SIR JAMES GRAHAM, who placed his authority at the disposal of a foreign Government. Before his time, the power was most largely used by Mr. Fox during the short tenure of office which preceded his death. It is, indeed, not impossible that some of his predecessors may have violated the secrecy of the Post Office without leaving their proceedings on record. The indignation of some English Radicals on the sudden discovery that a well-known law is still in force forms an odd illustration of the force of prejudice. Modern Liberalism almost always sides with the opponents of lawful authority, and insists that rulers shall bear the sword in vain. There is no reason why crime should be protected because it is committed by means of letters sent through the Post Office. The formalities which are required by law, including signature of a warrant by the Secretary of State, furnish abundant security against the risk of the indulgence by Government functionaries of officious curiosity. It is possible that SIR JAMES GRAHAM's successors may, like himself, misapply their constitutional powers; but it is necessary to repose confidence in public servants, and especially in those of the highest rank. Those who declaim against Protection Bills as exceptional and anomalous might be expected to acquiesce for the moment in the enforcement of ordinary law. It is perhaps improbable that any important mystery

will be disclosed through the examination of suspicious letters. Conspirators will be on their guard against a danger to which their attention has been directed. Many questions addressed to Ministers about the Post Office and other matters are evidently suggested by a wish to ascertain how much is known of the operations of the Land League. A wholesome alarm has been created by hints and fragmentary statements of the secret information in the hands of the Government.

THE GOVERNMENT AND THE BOERS.

IT is stated, apparently on sufficient authority, that the Cabinet at its last meeting took into consideration certain proposals which had been made by the leaders of the insurgent Boers to the Government through SIR G. COLLEY. The communication probably resulted from the letter which the President of the ORANGE FREE STATE lately addressed to MR. PRILIOUS and his colleagues. That some negotiations were in progress was announced or admitted by LORD KIMBERLEY, and LORD BEACONSFIELD justly described the transaction as suspicious or anomalous; but the Government, whether or not its policy is justifiable, incurs no additional blame through its refusal to communicate its proceedings to Parliament and to the world in general. An impression unfortunately prevails that, among the many virtues of which the Ministers and their friends constantly boast, a delicate and scrupulous regard for the national honour is not included. If their overtures are confined to a repetition of the proposals already made to the Government of the Orange Free State, there is reason to hope that the negotiation may prove abortive. It seems absurd to offer peace to victorious rebels on condition that they should desist from armed resistance. The Boers could have preserved the peace at their pleasure on the same terms; and they had been repeatedly assured that they might have representative institutions as soon as they recognized the authority of the English Crown. It is not improbable that the Government has now gone further. According to a credible report the Transvaal is promised local independence on condition of making peace. The phrase of local independence may not be the less acceptable because it is ambiguous. The Boers will not fail to consider with some reason that they have asserted their military superiority; and that the concessions of the English Government may be interpreted liberally because they will seem to have been extorted by defeat. Nothing is easier than for the population of a remote province to disregard the qualifying epithet, and to exercise complete political independence. The result need not have been greatly regretted if it had been effected by amicable means; but until the misfortunes of Laing's Nek and Ingogo have been retrieved the conclusion of peace would be a doubtful advantage.

The confusion which necessarily attends a combination of diplomacy with war will perhaps be avoided by the refusal of the Boers to negotiate. It is not to be supposed that the Government has conceded their full demands; and it has not yet proved its ability to impose harder terms. It is said that a good effect had been produced at the Cape by MR. GLADSTONE's declaration that the sovereignty of the Transvaal would not be renounced. It is generally expedient to discourage opponents and to inspire friends with confidence. A Government which announces its determination to succeed has rendered victory easier. On the other hand, a provisional surrender of disputed claims diminishes the value of the stake for which the belligerents are contending. If local independence has been offered, it will be difficult even after a successful war to re-establish Imperial authority. The Boers may argue with some show of justice that, if such an arrangement was admissible in negotiation, it ought for the general benefit to be confirmed. The supposed offer implies an abandonment of the ground which has been taken by the apologists of the Government, if not by itself. Local independence would, as in the Southern States of the American Union before the civil war, include an absolute control by the Boers of their domestic institutions. It is true that SIR WILFRID LAWSON is in no danger of losing the 10% which he has offered for a proof that the English Government has since the annexation interfered with slavery in the Transvaal. Its representatives have been so anxious to conciliate the Boers

that they have perhaps winked at social abuses; yet the natives are well aware that the English authorities are their natural protectors; and under the new Government it would have been impossible for adventurers to make private war on native tribes for the purpose of taking children as captives. Any grant of local independence which failed to provide for the safety of the English minority in the Transvaal would be utterly unjustifiable; yet the dominant party would almost certainly use irresponsible power for purposes of persecution. A German writer, well acquainted with South Africa, has undertaken the defence of the annexation and of the refusal of the English Government to restore independence. He has perhaps laid too much stress on aversion to slavery as a motive which is supposed to have determined the policy of the English Government; but it is not a little remarkable that the Society for the Protection of Natives urges the Government to prosecute the war.

Conjectures as to the results of military movements are always unprofitable; but it is comparatively easy to form a judgment of the inferences which are to be drawn from past events. It would seem that both the serious misadventures which have occurred might have been avoided if Sir G. COLLEY could have disposed of a larger force. At Laing's Nek he had no reserve to support his first attack; and in the unfortunate attempt to escort the convoy from Newcastle to the camp, he was compelled to sustain a fire to which he could not effectually reply. As might be expected, the insurgents are from their want of artillery powerless against a defensive position. The garrisons in different parts of the Transvaal are secure, as long as they are supplied with provisions. In some instances they attacked the enemy's posts at some distance from their own fortifications, not without success. Sir G. COLLEY appears not to have been molested since his repulse at Ingogo. It is not yet certain that his communications are completely reopened; but the successful advance of Sir EVELYN WOOD to Newcastle will relieve the camp from blockade. It is difficult to understand the state of circumstances in which a commanding officer, surrounded or blockaded, and concerned only to maintain his position till reinforcements arrive, can be at the same time engaged, with the sanction of his Government, in a negotiation for peace. It has lately been observed that Sir G. COLLEY has the advantage of political experience. Military prudence is a still more valuable accomplishment. Soldiers have often been skilful diplomatists; but the Romans proffered leaders who confined themselves in the field to their special business:

Non caponantes bellum, sed belligerantes.

It would of course be unjust to blame Sir G. COLLEY for transmitting to the Government at home any proposals which the enemy may make, or for executing the orders which he may receive in answer. The most effective mode of securing a just and reasonable peace would be a successful passage of the defile at Laing's Nek after the junction with Sir EVELYN WOOD, which has probably been by this time effected.

One of the two sects into which the philanthropists are at present oddly divided will probably admire the curious document composed by the Boer leaders soon after the outbreak of the war. Their sentimental sympathy with the English soldiers who have fallen, "victims of "tyranny and cruelty," may be passed over without notice. The material part of the narrative is the statement that Sir OWEN LANYON is responsible for the first resort to force. Any uninformed reader would suppose that the English ADMINISTRATOR is accused of having ordered the troops to fire on the Boers before they had assumed the character of insurgents; but the authors of the paper proceed to explain their meaning by recounting the attack of the Boers on the detachment of the 94th Regiment. They could not, as they allege, allow the English garrison to be largely reinforced, and they were consequently compelled to require the commanding officer to halt or retire. On his refusal, his men were killed or taken prisoners by the gentle and harmless sufferers who now complain of having been driven into revolt. As the collision had become inevitable, it matters little whether the first blow was struck in vindication of the law or as an act of deliberate rebellion; but the transparent sophistry which the insurgents think it worth while to employ suggests a doubt whether they believe their cause to be absolutely just. It cannot at present be known whether their offers of negotiation imply a genuine desire for a settlement.

They can scarcely hope that the most pliable of Governments will concede to force the terms which were formally refused immediately before the beginning of the revolt; but they will naturally interpret the language of the Ministers in Parliament as an encouragement of all but their extreme pretensions. The leaders may perhaps apprehend the collapse of resistance if the English troops, on a second attempt, force their way into the open country beyond the passes. Mr. BRAND is apparently determined to the best of his power to maintain strict neutrality; and, if he should be overruled by the Volksraad, the Boers of the Transvaal might perhaps not derive unmixed advantage from an alliance which would entitle the English generals to use at their discretion the territory of the Free State.

SIR FREDERICK ROBERTS ON THE ARMY.

IT is not often that the much-abused and religiously observed practice of after-dinner oratory produces such a speech as that which General Sir FREDERICK ROBERTS delivered the other night at the Mansion House. The usual tendency of a popular favourite upon whom it rains gold boxes is to express the most effusive gratitude and to praise everything and everybody. General ROBERTS's gratitude was no doubt great, but perhaps he could not have better expressed it than by the speech, disquieting as it was in some respects, which he made. That speech was neither more nor less than a most spirited attack on the whole system which at present governs the British army. Short service and the shifting of men from regiment to regiment are the JACHIN and the BOAZ of that system, and it is these two pillars which Sir FREDERICK ROBERTS has set himself to pull down. Considering that his speech was delivered before an audience which included the COMMANDER-IN-CHIEF and the SECRETARY for WAR, such an utterance from a general in Sir FREDERICK ROBERTS's position was in the highest degree remarkable. It is true that the former of these authorities in a way led up to the speech of the guest of the evening. The Duke of CAMBRIDGE's pointed reference to "seasoned troops—seasoned troops, gentlemen"—gave, in a way, the text upon which Sir FREDERICK ROBERTS proceeded to preach such a remarkable sermon.

The speech was perhaps all the more effective because it contained very little rhetoric and a great deal of solid fact. What Sir FREDERICK ROBERTS said, put briefly, amounts to this—that what he did at the Peiwar, at Charasiab, and at Candahar, will be, if we go on as we are going on now, impossible to repeat a very few years hence. The regiments with which, if he did not exactly win Plassey and Assaye, he went everywhere that he had to go, and did everything that he had to do, were almost entirely regiments of long-service men. In the 92nd the sergeants averaged fifteen years' service, the corporals eleven, and the privates nine. These men, and others like them, Sir FREDERICK ROBERTS found equal to any work that he could put upon them. The regiments recently arrived from England, and exhibiting the full results of the short-service system, were, if not exactly good for nothing, at any rate rather a burden than an assistance; and the GENERAL says flatly that, if he had had to attack the Peiwar Kotul with only such troops as were some of those supplied to him, he should have been annihilated. His estimate is that it takes three years in India to make the raw recruits we send out there fit for duty—that is to say, that fifteen battalions of infantry out of one garrison of India are fit even for garrison duty in time of peace only. Even the seasoned troops which, luckily for England, were available in the Afghan war could not have been kept without a violation of the existing regulations. When the war broke out a second time the 92nd had one hundred and fifty time-expired men. They offered to re-enlist if they were allowed to remain in their own corps without being transferred to other regiments, and the authorities winking at this infraction of the regulations, a body of men who would have been cheaply bought in exchange for a whole regiment of youngsters were saved to the service. The 92nd has now gone to the Transvaal to be stalked by the Boer rifles, and every man we lose of it will be, under present arrangements, simply irreplaceable. Sir FREDERICK ROBERTS naturally did not draw this unpleasant moral; but the facts which he mentioned exhibit in the strongest possible light the two points of which he wished to bring out

the importance—namely, long service and the necessity of attaching men to their corps in order to obtain long service. It is not surprising that the out-and-out upholders of short service should have been aghast at the speech. They try to point out that there was a Zulu as well as an Afghan war, and that Sir GARNET WOLSELEY spoke as well of his recruits as Sir FREDERICK ROBERTS of his veterans. Sir GARNET WOLSELEY, it might have been remembered, saw but little of the Zulu war, and those who did see it have for the most part had a very different tale to tell. We should have thought that the very wisest thing short-service fanatics could do would be not to mention the Zulu war at all, for in that war all the defects of their favourite system were brought out most glaringly. Scarcely, inability to resist climate and exertion, discontent with the ordinary hardships of war, want of cohesion of regiments, want of discipline, want of dash, are things which, whether on the whole justly or not, have certainly been charged against the raw and miscellaneous drafts sent to fight the Zulus. There has not been a whisper of such things as regards the seasoned veterans who luckily were still at hand to fight the Afghans.

Sir FREDERICK ROBERTS's words are made more weighty by his full recognition of the merit which, along with its defects, short service has—that of providing, without exorbitant expense, a considerable force for home defence. It is true that the Reserve has woefully failed to answer the expectations formed of it, but it exists. What Sir FREDERICK ROBERTS advocates is a combination of short and long service—short for the home army, long for the troops appointed to the trying task of garrisoning our scattered possessions, and fighting our endless little wars. The proposal may not be an absolutely new one, but it has not before been put with so much force or by so well qualified a proposer. There would be difficulties in it, no doubt; there are difficulties in everything. But it is not difficult to see that, besides obviating the special dangers of which General ROBERTS complains, and of which the Zulu war gave such an unpleasant foretaste, the plan, could it be carried into operation, would have many other advantages. The home army term of service might be still further shortened, say to five years, or even three, which would be ample for the special purpose. If the present senseless social disqualifications on private soldiers were done away with, a passage through the army might at length become what it has been the despairing hope of successive army reformers to make it—a not unpopular interlude in the life of the working classes. There would always be plenty of men who would in this time of service contract a sufficient love of the profession to volunteer for the foreign army, in which, of course, long service would be obligatory. Nor, we suppose, would Sir FREDERICK ROBERTS object to the foreign service regiments taking their turn now and then at home. Indeed, as he himself said, the change would practically amount to the institution of a kind of perpetually embodied militia at home, with a somewhat diminished, but thoroughly seasoned, regular army abroad. Perhaps not the least merit of the plan is that the greatest curse of the short-service system, the impossibility of finding non-commissioned officers fit for their work, and of sufficient age and authority, would at once cease. The foreign army would be able to supply the home forces with any number of such men. Indeed the scheme, at least on paper, has few, if any, features which are not attractive. Of course it is difficult, or rather impossible, to tell how it would work in a country where demands upon the army are so trying, and social and political conditions so unfavourable to recruiting, as in Great Britain. Short service, with the condition of Ireland and the intentions of Russia, may be said to be the three points on which—between partisans—argument is hopeless. Those who quote the Zulu war as an instance of the value of young soldiers may, for aught we know, believe that the Reserve is an entire success, and that the quality of the non-commissioned officers throughout the army leaves at the present moment absolutely nothing to be desired. Even they, however, must be staggered when the most successful English General of recent years, a General who has won his laurels, not by entering upon other men's labours at a lucky moment, nor by the employment of relatively overpowering forces, but by carefully trying the quality of his troops, and then putting that quality to the final proof with a mixture of coolness and daring, tells them

plainly that their favourite plan means “failure, disaster, and disgrace.” That is the deliberate opinion of Sir FREDERICK ROBERTS, who can be as little suspected of croaking as any man alive. For it does his own reputation no good to point out how superior was the material he had at his command to that which was at the disposal of other generals; and the opinions he has expressed, despite the faltering approval which Mr. CHILDERS managed to give to some of them, are by no means likely to make his fortune with the present governors of England or with Englishmen generally. For England, like other masters, prefers cooks who promise to do wonders without *beaucoup d'argent*. In the literal sense, General ROBERTS's proposed arrangement of the army would probably be no more expensive than the present, perhaps less expensive. But his demand amounts to a statement that bricks cannot be made without straw, and this is always irritating to some persons. It is difficult, however, to see how any one can get over his arguments; impossible to see how any one can deny the significance of his facts and figures. The report of Lord AIREY's Committee and Mr. CHILDERS's detailed statement of his proposed alterations must be seen before we can say how far the dangers which Sir FREDERICK ROBERTS fears are likely to be obviated by either.

THE EASTERN NEGOTIATION.

THE most hopeful circumstance connected with the Eastern negotiation is the assumption by Germany of the leading part. No other Government at present exercises so great an influence at Constantinople; and it is not impossible that Prince BISMARCK may have already ascertained the extent of the concessions to which Turkey may be prepared to submit. It may be added that he is unlikely to have exposed himself to the risk of probable failure. Except as far as Austrian interests may be affected, the German Government is but remotely concerned in the controversy between Greece and Turkey. Although a war might perhaps eventually reopen the whole Eastern question, none of the Great Powers would in the first instance intervene. Only two or three weeks ago Prince BISMARCK, with full knowledge of the risks of local collision, publicly declared that there was no probability of any war in which Germany would be engaged. His wishes are believed to be on the side of Greece; but he at the same time desires to avert or postpone the disruption of the Turkish Empire. Some minute political observers have discerned a covert encouragement to Greece in the publication by a Berlin journal of the returns of the scanty number of Turkish troops now occupying Thessaly and Epirus; but even semi-official papers are allowed a certain latitude in collecting and circulating information. Count HATZFELD will not fail to remind the Turkish Ministers of the possible insufficiency of their forces; but his colleagues at Athens will be instructed to rely on other facts and arguments. It is understood that Mr. GOSCHEN failed both at Berlin and Vienna to elicit any concurrence in the English proposal that, in default of a satisfactory diplomatic settlement, the Powers should revert to the decision of the Berlin Conference. The point is for the moment of secondary importance, because several of the Powers decline to enforce any decision on the litigants. Some dealers in political mystery maintain that Prince BISMARCK is only ostensibly recommending peace, while he has secretly arranged with Russia and Austria the partition of the Turkish Empire. Of such speculations it can only be said that they are not demonstrably erroneous. Political surprises would lose their distinguished character if they could be discerned beforehand.

The position of the English Government is consistent and intelligible. Disappointed in their hope that the Great Powers would agree in coercing the Porte, Mr. GLADSTONE and Lord GRANVILLE have acquiesced in the expediency of negotiation which involves the possibility of compromise. They reserve to themselves the right of falling back on the decision of the Berlin Conference, not now as a peremptory demand to be made on Turkey, but as the basis of a future arrangement. If hereafter all the Powers by any chance revert to the opinion that the Berlin award conferred on Greece an irrefragable title, England will have had the credit of maintaining from first to last one uniform contention. The official policy of France is less favourable to Greece than that of any other

Government; but a doubt still exists as to the true centre of French political power. The organs of M. GAMBETTA in the press constantly repeat their attacks on M. BARTHÉLEMY ST.-HILAIRE for having, as his critics assert, abdicated the French protectorate or advocacy of Greek interests in the East. The certainty that the charges against the Minister are not disapproved by M. GAMBETTA is combined with a well-founded belief that he will exert himself to give effect to his own opinions. It is true that the Chamber unanimously sanctioned M. ST.-HILAIRE's policy; but the leaders of the majority had perhaps not then received their final instructions. Jealousy of the initiative, now by common consent assigned to Germany, may perhaps have increased M. GAMBETTA's irritation. The exponents of his policy fail to explain how it would have been possible to apply coercion to Turkey without the concurrence or consent of Germany or Austria. For the present the antagonism between the Minister and the chief of the Republican party tends to diminish the diplomatic influence of France.

The Greek Government has not modified its warlike tone; but it will certainly not precipitate a conflict as long as the negotiations at Constantinople continue. The failure of the final attempt at a settlement would immediately be followed by a declaration of war. If, on the other hand, the Powers effect an arrangement with the Porte, it will still be open to Greece to reject the terms, at the risk of forfeiting all claim to the aid and even to the good will of Europe. The Greeks believe that in case of a rupture they can despatch 60,000 or 70,000 men to the seat of war, where they hope to be welcomed and assisted by a friendly population. There is no doubt that their countrymen in Thessaly and in part of Epirus will rejoice in the opportunity of shaking off the Turkish yoke. The possible relations of the more warlike Albanians to the Greeks are but imperfectly understood. It is not even known whether the League, which partially resists the authority of the Porte, extends to Janina and the neighbouring district. The inhabitants would be troublesome subjects of the Greek Crown if they are either well affected to the SULTAN or prepared to assert their independence. The report that the Albanian League has offered on certain conditions to bring twenty thousand men to assist the SULTAN against the Greeks is not in itself improbable. Some of the malcontent tribes are Catholics, and therefore probably more hostile to Orthodox Greeks than to Mahometans. All speculations of this kind are uncertain as long as the facts of the case are not fully known. It is possible that Greek agents may have formed an understanding with the Albanians which would be extremely dangerous to Turkey. If the inhabitants of Janina and the neighbourhood approve of the proposed transfer, it may be confidently assumed that the Greek Government will pertinaciously insist on its entire claims. The question whether the demand for a cession of territory had sufficient moral justification may be dismissed as irrelevant or obsolete. No petty State eager for aggrandizement would doubt the validity of a title which had been formally recognized by all the Great Powers of Europe. It is satisfactory to learn that the audacious denial of Turkish rights which was attributed to Mr. COUMOUNDOUROS has been officially repudiated as spurious.

The SULTAN is said to be more peaceably inclined than at any former time. His treasury is empty, and his army is consequently but ill provided for an immediate campaign. His Government may perhaps also have received information of intended movements in other parts of its dominions or in neighbouring States. The numerous Greek community in Roumania is agitating in favour of the national claims; and probably the enemies of Turkey in Bulgaria and Servia are not idle. There are also symptoms of disturbance in a quarter which has of late attracted little attention. It is admitted that the Greek part of the Cretan population has no longer any practical grievances to complain of; and, indeed, the Mahometan minority has greater reason to fear oppression. Some late conflicts with the authorities may probably be attributed to sympathy with the Greeks of the kingdom; and, in the event of war, it is not improbable that an insurrection would take place for the attainment of independence, with an ulterior view to annexation. At a greater distance from Constantinople the turbulence of the Kurdish chiefs is not unlikely to involve the Turkish Government in a war with Persia. To reserve any part of the territory

which the European Powers supposed themselves a few months ago to have awarded to Greece would be a not inconsiderable triumph to Turkish diplomacy.

Whatever may be the state of feeling at Athens, the friends of Greece in England have lately become moderate in their demands. It is admitted that Janina and Metzovo may be left to Turkey on condition that the rest of the territory in dispute is unconditionally surrendered. If such an arrangement is effected, the obstinacy of the Porte will have been so far justified; but the experiment has been hazardous, and it will not bear repeating. The Sibyl has for once deviated from her traditional character by consenting to abate her terms. If the bargain is now rejected the next offer may be far less moderate. Although the Ambassadors have not been instructed to use identical language, they will all recommend the same policy by arguments which are only not threats because they are indications of danger which already exists. Germany, Austria, and probably France, will warn the Porte that the effort which they make to save the Empire from destruction will almost necessarily be the last. Italy is prepared to act in concert with England, which has not yet acknowledged the invalidity of the decree of the Conference. Finally Russia has, perhaps only for the purpose of diplomatic pressure, directed the Bulgarian Government to take the opportunity of demanding redress for supposed grievances. It would be rash to assume that the Turkish Government will yield to reason, even when it approaches to demonstration; but, according to some accounts, the SULTAN is thoroughly frightened. If the Powers induce the Porte to accept a reasonable arrangement, there will probably be but little difficulty in procuring the adhesion of Greece. As one of M. GAMBETTA's organs suggests, a territorial compromise will not be final; but the acceptance by Greece of a frontier recommended by the Great Powers would postpone a collision with Turkey for several years. By the end of that term circumstances will have changed, and some existing arrangements will have become obsolete.

OBSTRUCTION IN THE LONDON SCHOOL BOARD.

PUBLIC attention has had such severe demands made on it by the defeat of obstruction in the House of Commons, that there has been none to spare for the parallel events which have been going on in the London School Board. Apparently, however, the modest red-brick building which adorns the centre of the Thames Embankment has been an arena for passions not less furious than those which have raged in the palace of Westminster. The School Board has had its PARNELL in Miss HELEN TAYLOR, and more than its BIGGAR in Mr. BONNEWELL. The history of obstruction down to the moment when the CHAIRMAN declared that, unless he were armed with additional powers, he could not carry on the business of the Board, has escaped us. But the action of the obstructives in opposing the rules designed to limit their opportunities of preventing the Board from doing business gives an idea of their action in provoking these rules. When the Board spends seven hours in debating regulations so entirely reasonable as those proposed by Mr. BUXTON, it is clear that the minority have lost all sense of the end for which discussion exists. Mr. BONNEWELL's instinct is apparently to oppose anything that is proposed for the Board's acceptance except by one of the small minority of which he himself is the glory, and we should be inclined to say that his instinct is his sole guide. He began his resistance to the proposed rules by contending that he was a law to himself. He had looked through the Act of Parliament, and "had been unable to find any authority which could fetter him in what he chose to say, so long as he conducted himself as one gentleman should conduct himself in presence of another." As it is certain that there is no Act of Parliament prescribing how Mr. BONNEWELL should conduct himself in presence of a gentleman, this is tantamount to a claim to be above the statute law; and if, as we are inclined to think, the common law does not contemplate the situation, this is again tantamount to a claim to be above all law whatsoever.

It is quite in unison with this theory of his position that he did not object to the resolutions being put on the paper, or even seemingly to their being passed.

At the very outset of the debate his imagination treated the end as come and the rules as adopted. "How," he asked darkly, "were they going to be put in force? Was it to be supposed for a moment"—mark the Miltonic grandeur of this inquiry—"that he should submit to them and not continue to speak? They could not chuck him out of the room." The idea of any one attempting to go this length seems to have overpowered the CHAIRMAN; for, instead of answering Mr. BONNEWELL's question, he feebly implored him to change the subject. The Board, he said, was not discussing its powers in relation to the "chucking out" of Mr. BONNEWELL, but the conditions "under which motions could be rescinded." To a man of Mr. BONNEWELL's mental and bodily vigour, it really did not matter what the question was. He was equally willing to take objections to the contents of the resolutions, or to the opportuneness of their introduction, or to anything else that presented itself to be objected to. He continued to talk, says the report of the meeting, "with the manifest intention of making time"—making time being perhaps a pleasant way which the Board has of describing the process of losing it. By and by, after many divisions, the first rule, forbidding the introduction of motions to rescind any resolution passed within the last six months, unless nine names besides that of the mover are attached to the notice, was carried by 25 votes to 13. It seems probable, therefore, that there may be thirteen members of the School Board who admire Mr. BONNEWELL's peculiar and persistent eloquence. The only explanation that we can suggest for this singular taste is that these thirteen members think education a dull subject, and find more amusement in the scenes of which Mr. BONNEWELL's speeches are the occasion. In that case it is in their power to make the new rule of no practical account. Mr. BONNEWELL, immediately upon the passing of the rule, gave notice of a motion to rescind it, and since the adhesion of nine members makes it incumbent on the CHAIRMAN to receive the motion, the thirteen have only to act together to secure a continuance of their favourite intellectual luxury.

The second rule, regulating motions for the adjournment of the Board, met with less opposition. Mr. BONNEWELL seemingly only making one long speech in support of the previous question. But on the third, which limits the right to move the adjournment of the debate, Miss HELEN TAYLOR rose to protest against the unequal measure dealt out—whether by nature, fortune, or the CHAIRMAN does not appear—to the two sections of the Board. Upon this the CHAIRMAN asked Miss TAYLOR to withdraw "such imputations," and Miss TAYLOR bluntly, but adroitly, replied, "If they are out of order, I do; if not, I don't." It is clear that the CHAIRMAN was not quite sure whether they were in order or not, for he began a sentence which, though destined never to be finished, seems to have been meant to lead up to a motion that Miss TAYLOR's words be taken down. What the CHAIRMAN would have done with the precious record, had he obtained it, it is impossible to say, for Mr. LYULPH STANLEY interposed with an expression of his conviction that the Board would receive Miss TAYLOR's remark "with silent contempt." A little later in the day Mr. STANLEY got involved in an altercation with another lady, so that altogether it is borne in upon us that the principal result of the admission of women to the Board is that men behave to them with no more restraint than they behave to one another. Whether they have done any service to the cause of education which can be set against this evident deterioration of manners we will not presume to say. Miss TAYLOR, it must be admitted, has a somewhat irritating way of saying things. Probably the CHAIRMAN felt this when, upon calling her to order upon some point, he received for answer, "You are not the Speaker of the House of Commons, sir." Suppressed rage seldom makes a man epigrammatic; but the CHAIRMAN got fairly enough out of the situation with the reply: "It is true that I am not the Speaker of the House of Commons, but I am Chairman of this Board, and I don't profess to be more."

While the fourth rule—giving the CHAIRMAN power to silence a member obstructing business or disregarding the authority of the Chair—was under discussion, the third rule was called into action. Mr. BONNEWELL seconded a motion for adjourning the debate, and after his wont went on to make a speech. On being warned that under the new rule he had no right to do this, he raised an objection which recalls the objection taken by the Old Catholics to the promulgation

of the Vatican decree. The resolution, he contended, "could not be put in force until the minutes recording it had been signed." A division was then taken amidst what, to the minority, must have been a scene of delightful confusion, Mr. BONNEWELL continuing to protest, "in high tones," that he would not be bound by any one of the resolutions passed that day; Miss TAYLOR "also rising," doubtless to express her concurrence with Mr. BONNEWELL; and the Clerk taking the division as well as he could "amidst the utmost confusion." Finally, after seven hours of this delightful occupation, the Board adjourned with the equally delightful prospect before them of seeing Mr. BONNEWELL return to the charge a week later.

SPAIN.

WHEN a Ministry long established in office suddenly falls, rumour is sure to be busy in disclosing the secret reasons of its loss of power. All accounts concur in attributing the resignation of the Ministry of Señor CANOVAS DEL CASTILLO to the personal intervention of the KING. The Ministry proposed to the KING an elaborate scheme for funding at a lower interest the special debt which has been created in late years to meet the deficiencies of the budget. Every Spanish financier is agreed that when the general credit is improved, that debt must be dealt with. The creditors who hold this special debt have made a large profit by taking it, and the Bank of Spain especially has worked the machinery of recent loans with a cleverness which is reflected in the largely increased price of its shares. But to pay off a debt which has special securities is never an easy operation, and provisions of some intricacy had to be framed so as to get money gradually and on the most favourable terms, and to apply it wisely in the relief of the nation from charges unnecessarily high. It was calculated that eighteen months must elapse before the operation could be completed. It seems to have been urged by the KING on the Ministers, or by the Ministers on the KING, that a change of Ministry while the operation was still in progress would greatly discourage its progress, and that, therefore, to sanction the beginning of the operation was to accept the position of the Ministry as unassailable for a year and a half. This the KING would not consent to. He declined to be bound for so long a time, and on his declining the Ministry resigned. Señor SAGASTA, the chief of the dynastic Liberals, was asked, in conjunction with Marshal MARTINEZ CAMPOS, to form a new Ministry, and he undertook the task. The new Ministers presented themselves to the Cortes; and informed their hearers in a general way that they held to the opinions they had professed in opposition, but that they must have a little leisure to see what practical shape they would give to their convictions. The Cortes was adjourned indefinitely, and will be dissolved in the summer. New elections will be held in the autumn, and then the Ministers hope to have a Cortes that will support them, and Parliamentary government will be resumed. Meanwhile, Spain will go on without Parliamentary government. Such is the curious way in which a constitutional system is worked in Spain. It is calculated that any Ministry can manage Parliamentary elections so as to secure a majority, if only it has time enough allowed it for the process. The new Ministry wants from now to the autumn to prepare everything for a successful electioneering campaign, and it has got the time it needs. The KING makes the Ministry, and the Ministry makes the Parliament, while the KING has in his turn from time to time to make such a Ministry as will, in his opinion, best secure him against a revolution which would sweep him away and place the power of making Ministries in other hands.

For reasons, therefore, which must have seemed to him peculiarly weighty, the KING determined to separate himself from the statesman who has been his counsellor and stay since he came to the throne. It is now just six years since the KING landed to take possession of his inheritance, and, with one or two short breaks, Señor CANOVAS DEL CASTILLO has been for these six years, not only at the head of affairs, but the KING's friend and guide. His first efforts were directed to bring about a coalition between the Conservatives and Liberals; but he found that the personal or party divergencies that separated them were too great, and, in order to detach the Church from the Carlists, he

placed himself on the side of the Conservatives, and sent Señor ZORRILLA, the leader of the Radicals, into exile. But he had pledged himself, or had allowed it to seem that he had pledged himself, more deeply to the Clerical party than on further reflection he considered wise. It was assumed that he had undertaken that the Concordat of 1851 should again be put in force, whereas, on a further consideration of what was permanently possible, he came to the conclusion that something like toleration of rival creeds must be at least nominally established. He went out of office, while his colleagues, who were more free to act, made it clear to the ecclesiastical authorities that in this respect the son of ISABELLA could not be so far separated from modern ideas as his mother had been. He then resumed office. In the February of 1876 he had the satisfaction of seeing the Carlist war brought to a close; but during the greater part of that year he had to sustain a fierce combat with the Clerical party, who anathematized him as if he had been the worst of Radicals, simply because he insisted, and successfully insisted, on the Cortes placing the toleration of heretical creeds in the new Constitution. The QUEEN-MOTHER backed up her old ecclesiastical friends, and came to Spain partly in their interest, and partly to get payment of a sum of money which she said was due to her. She met with a very cold reception from the public; and the KING, under the guidance of his Prime Minister, made it plain that, however dutiful a son, he would in the last resort think for himself. General MARTINEZ CAMPOS was sent to Cuba to put down the insurrection, which had given much trouble to Spain, and threatened to give more, as the Government of the United States had intimated that it could not regard with indifference the further continuance of an unsettled state of things. At last the home Government was successful, and by the beginning of 1878 the rebellion was altogether suppressed. About the same time the KING was married to the daughter of the Duke of MONTPENSIER, and if he did not do anything more to promote the marriage, Señor CANOVAS DEL CASTILLO announced to the Cortes that he regarded it with great satisfaction as binding together the two branches of the BOURBON family. The early death of the QUEEN, and the attempt on the KING's life by MONCASI, only increased the general sentiments of loyalty; and two years ago the Prime Minister might congratulate himself on having seen the Carlists and the Cuban insurgents suppressed, on having resisted the extreme demands of the Clericals, and yet established in office the party in alliance with the Clericals, and of having seated a popular KING firmly on the throne. But at the end of February 1879 General MARTINEZ CAMPOS suddenly appeared on the scene, having left Cuba without any authorization from the Ministry, but not impossibly on the secret invitation of the KING. He no sooner reached Madrid than Señor CANOVAS resigned, and the newcomer was appointed to succeed him. On this occasion, however, the elections for the new Cortes were held almost immediately. Sufficient time for manipulation had not been taken, and the result was that the CAMPOS Ministry was dependent on the support of Señor CANOVAS for its existence. Before the end of the year, accordingly, a new crisis brought Señor CANOVAS once more into power; but he began his new Ministry with an open quarrel with the Opposition, who said that he had insulted them, and walked out of the House.

Since then Señor CANOVAS has been supported by a staunch majority, but the Opposition has increased in strength, which shows itself in repeated and determined attacks, and there have been signs of a growing feeling for Liberalism in the country. The simplest and most probable explanation of the step now taken by the KING is to be found in the study of the career of Señor CANOVAS and in the situation created by the fall of the CAMPOS Ministry. Señor CANOVAS has served the KING faithfully, and has shown great tact and much firmness, but he has been in office long enough to permit the growth of a serious Opposition. This Opposition consists of the dynastic Liberals of the generals as they are called, who may or may not have the army behind them, and of democratic outsiders, with whom dynastic Liberals and the generals are in a state of fitful alliance. Since the change of Ministry democratic banquets have been held not only at Barcelona, which is always democratic, but at Burgos, which has been hitherto regarded as a centre of Conservatism. It is said that Señor ZORRILLA is to be recalled from his exile in Paris, and

if his influence at the coming election is thought worth purchasing, he may not improbably have a place found for him in the Ministry. It may have seemed to the KING that he had to choose between letting this Liberal Opposition take its turn in the conduct of affairs under him and facing a revolution. To have bound himself to keep his late Ministers in office for eighteen months more would have seemed as if he himself had determined to stand or fall with the Conservative party. If the Liberals have as much time as they want for managing the elections, and have ample opportunity for showing what they can do in the practical management of affairs, they will at least feel that the KING has treated them fairly, and that they have as good a chance of power under him as they could have if they overthrew him. Foreign politics may have had something to do with the change of Ministry. The disinclination of the country to throw in its lot with Germany, and to give signs of hostility to the French Republic, may have had some influence with the KING. But in all probability considerations of domestic policy have mainly determined his action. He has wished to absorb an element of possible revolution into the sphere of his own Government; and to attain an end of this primary importance, he has been willing to sacrifice a Minister who has safely guided him through great difficulties, who has rallied the country round his throne, and to whose policy and measures he personally has no kind of objection.

RESIPISCENT PRELATES.

OFTEN as we have criticized the policy of the Episcopate, we have never imagined that our Bishops during the last eight or ten years were actuated by any destructive intention. Their behaviour has been that of men untrained to statecraft, divided in their own opinions, and destitute of the administrative instinct by which sympathetic leaders of parties combine to form strong Cabinets. They may have shown themselves unduly sensitive to the difficulties of acting alone, helpless as to acting in concert, and very inaccurate in their appreciation of friend or foe. Still it would be prejudiced misrepresentation to assert that they had not really persuaded themselves that they were working for the welfare of the Church with which their own welfare is bound up. Even when they patted a Church Association on the back while clamouring its loudest, or framed a Public Worship Bill, they can hardly be credited with any wish to pull their own house down about their ears. Only they forgot that, whatever may be the sturdy virtues of Puritanism, it is no friend to those things which ought to be dear to Bishops. There was, indeed, much to lap them in their perilous security. The Parliament which had during its salad days passed the Public Worship Act in heat and haste and ignorance in deference to the pious counsels of Sir WILLIAM HARBOUR had lived on for nearly six more years, during which long spell it had retrieved theological blunders by political prescience. So a large number of the Episcopate no doubt fancied they were still in the summer of 1874. Chaos, in the meanwhile, was approaching, till at last portents—such as clergymen going to prison, Scotchmen shouting Disestablishment, Chief Justices vituperating Deans of Arches, and Deans of Arches nagging at Chief Justices, judges not knowing where to sit, nor lawyers' clerks where to open writs—proclaimed the state of things intolerable.

The first note of conciliation was struck in the Archbishop of CANTERBURY's speech to the clergy of Thanet at the beginning of December, and it was not long before the Dean of ST. PAULS' memorial for toleration capped the Metropolitan's promises. Low Churchmen under the lead of Bishop PERRY attempted a counterblast, and could only compass a feeble demeror. The die was for once to be cast in the right place, the Convocation of Canterbury. The task to which the venerable assembly was called was that of mediating in a session of only four days between sharply accentuated differences both about the ecclesiastical judicature and ritual. Failure in so difficult a work would have been almost venial, but very mischievous, and yet it would probably have dogged the enterprise if the drift of events had not precipitated the conclusion. As it was, the two Houses of Convocation reached consistent conclusions, and sketched out a programme of immediate action of which reconciliation was the prominent feature. More could not have been

expected in so brief a period and from men not altogether free agents.

The great obstacle to any heroic remedy was the palpable folly of turning the House of Commons loose upon Church troubles. Acutely as this peril was felt, the danger on the other side of exasperating aggrieved clergymen by persistent inaction was equally manifest. The scheme which commended itself to the prelates happily avoided either risk. The grievance which had been pressed upon them was the shortcomings of the actual Church judicature, both as a faultily contrived machinery and as one which had been manipulated with a contempt both ignorant and reckless for any decent ecclesiastical sanction collateral to that of Parliament. There, however, the recognized tribunals stood in possession of the field, and no process, except the risky one of legislation, could formally correct their defects. But yet before attempting correction it is always well to be quite sure as to what is to be corrected. No jurist has yet scheduled the merits any more than the deficiencies of the existing Church Courts, no one has drawn out of his pocket a Church Courts Reform Bill. Clearly an inquiry capped by recommendations (unless the recommendations finally spoil the whole thing) must be healthful by calming the impatient, cheering the desponding, and sustaining the hopeful. A Royal Commission has peculiar advantages as a remedy for the actual discontent, as it can be moved for in the House of Lords, expressly in compliance with the conclusions of Convocation. This procedure would sufficiently provide the required ecclesiastical initiative without provoking the delicate susceptibilities of statesmen. If it sits two or three years, no one need repine, for that will be a period of calming down, and the Commission would much misuse its opportunities if the information which it collected were not to leave the question rather less obscure than even Lord PENZANCE can now pretend that it is. After all, the chief value of many a Commission resides in its blue-book.

The Bishops are entitled to the credit of incubating the Commission, but both Houses have been busy over some device for healing the internal fever of ceremonial strife. The Lower one wisely fell back upon a respectful appeal to the Upper House to do something, and the body so addressed forestalled it in taking the object of this recommendation into serious consideration. We shall not attempt to summarize the two debates. The knowledge no less than the desire for harmony with which the speakers approached the discussion, compared with what could have been expected some years since, was noticeable. It was a trifle that, as we need hardly observe, the Dean of WESTMINSTER found an opportunity of again letting off his pet sneer about a dispute over clergymen's clothes. This substitute for argument seemed to amuse him, so no one grudged to so popular a man the pleasure, and when he asserted that the chasuble which had stared him in the face as he gazed at JUSTINIAN's mosaics at Ravenna came into Church in the ninth century, after having served as a primitive substitute for our ulster, his auditors kindly recollected that they were not in session at the Society of Antiquaries. The grand result of the double deliberation was a virtual promise from the Bishops that, so long as the Commission should continue sitting, they would discourage ritual suits from one side or from the other in regard to churches which should not take advantage of the truce to innovate upon the ceremonial actually in use in them. Those which went on as they were now doing were as far as possible to remain unmolested, and suits promoted by outside conspiracies were to be snubbed.

We have little to add. No man with any appreciation of the magnitude and difficulty of the undertaking would have attempted a permanent settlement; and, in the way of a temporary measure of conciliation, reaching equally to the grievance of jurisdiction and to that of ceremonial, we think that no better result could, under all the conditions, have been reached. But the Commission will still have to be appointed, and the Bishops will certainly be persecuted by the Church Association for adhering to their peaceable resolution. We trust that no defect of wisdom or of courage in working out the conclusions may spoil so hopeful a promise.

GERMANY.

THE Imperial Speech addressed to the German Parliament at the opening of the Session recommended the adoption of the two Bills which Prince BISMARCK has devised as an antidote to the poison of Socialist Democracy. He has consistently contended for years that the Socialist movement, so far as it takes the form of a lawless opposition to the State, is a mischief which ought to be sternly repressed; but that, so far as it is an exposition of new views as to the proper relations between the State and the poor, it offers many valuable suggestions which the State ought to accept. He himself is quite willing to adopt the main Socialist theory—that the State ought to be so organized, and so to organize society, that it shall be the effectual guardian of the poor. It will undertake to look after every one, and see that he is reasonably comfortable. As the foundations of the establishment of a Socialist State he first introduced a system of rigid Protection, and then invented a new Economic Council, which is to be outside both Parliament and the bureaucracy, and keep him informed as to the real wishes of the people. Protection is obviously an indispensable preliminary to the erection of a kind of government which undertakes to care for every one. The basis of Free-trade is that every one will thrive best if he is compelled to look out for himself, and the economic doctrines which are the exact opposites of those of Free-trade must prevail when, not the individual, but the central authority, is charged with seeing that the maximum of well-being is attained. Prince BISMARCK has quite sufficient grasp of any subject which he takes in hand to know that he must be consistent throughout, and he is not at all likely to be frightened by any of the immediate consequences which attend the changes he is bringing into operation. Public attention has lately been attracted to the curious fact that the greatest of German iron-masters has been supplying rails abroad at a price which, if carriage is taken into account, is about fifty shillings less per ton than the price at which he supplies the same rails at Berlin. Prince BISMARCK, it was thought, would soon have to confess that he was ruining Germany by subjecting the German consumer to the payment of an enormous price. But there is nothing in this circumstance to startle a thoroughgoing protectionist. If the iron-master loses on his foreign transaction, he recoups himself out of his home transactions. He virtually gets a bounty which enables him to underbid competition in the foreign market, and German labourers are thus employed at good wages in making rails for foreigners as well as for Germans. The general body of German consumers really pays the wages of those who are thus employed in making what it will not pay to make; but this is just what is wanted. The State, that is the authority which gets contributions from every one, keeps out of these contributions labourers employed at good wages, and this is, according to Socialists and Prince BISMARCK, and all protectionists who follow out their principles, the first duty and primary business of the State. In the same way, if the State desires guidance in the performance of its task, it is very natural that it should seek this guidance, not from Parliament, which is apt to be led astray by political feelings, or from trained officials who think of the larger questions of finance, or who may be daunted by the prospect of a gradual decay of the national wealth, but from humble practical people, whose experience can show what classes of the poor would like to be provided with lucrative employment, and what bounties must be contrived in order that the State intermediaries who are to replace the old order of capitalists may give employment without losing by the process.

One of the Bills now brought forward by Prince BISMARCK deals with insurance against accidents in mines; and the other revives the mediæval institution of guilds. Workmen in mines are to be protected against accidents by an insurance which provides, not only for themselves when they are crippled, but also for their widows and children after their death. In the case of workmen who receive very high wages, the workmen are to be compelled to pay half the annual premiums, and the employers are to pay the other half. In the case of humbler labourers the employers are to pay two-thirds of the premiums, and the remaining third is to be paid out of the poor rates. From the Socialist and Protectionist point of view this is an excellent measure. It establishes the great principle that

very poor people are not to be troubled with the exercise of any kind of thrift; while richer people, like employers and highly-paid workmen, are to get their contributions recouped out of the bounties which the State gives them at the cost of the general body of taxpayers. In short, the scheme is so good that it seems a pity that it should stop where it does, and some of Prince BISMARCK's practical friends suggested that agriculture was a field to which it might be very conveniently extended. The revival of guilds seems, at first sight, a little more startling, but a slight amount of reflection will show how admirably it is in keeping with the new form of Socialism. A guild is merely a piece of machinery for determining how many persons shall devote themselves to any one kind of employment. It is extremely convenient that the State, which is occupied with giving some kind of employment to every one, should have a means of regulating how many persons are to be provided for when any one form of employment is under consideration. In a State constructed after Prince BISMARCK's pattern every one may be said to be in a regiment, and the success of army administration depends on the size of each regiment being kept at a fixed standard. Then, again, if these regiments are to get much from the State, they are to do something for the State. They have to behave well, and, having had everything done to content them, are bound to show themselves contented. The guilds will look after their members, and the leaders of the guild will be expected to be on the watch against every sign of political disaffection. Lawless Socialists will then be brought under the law, or, if they are excluded from guilds, will be avowed pariahs, and will be driven to take the punishment due to them under the compulsion, not only of the State, but also of the well-conducted guildsmen. The theoretical objections to Prince BISMARCK's proposals are not very strong if once the theory of a Socialist State is accepted. But practically there is a very stout resistance to some of his plans on the part of those who object to this wholesale maintenance of the poor at the cost of those who are somewhat better off. Even in a place where he might have hoped to have it all his own way—the Prussian Upper Chamber—he has had to encounter opposition so determined that he has thought it necessary to attend twice in person for the purpose of giving assurances that he has made up his mind, and that therefore all resistance is useless. The point the Chamber has to consider is the proposed abolition of direct taxes, which touch persons who are so far poor that they would rather not pay them; and Prince BISMARCK has on this head had to meet the opposition of no less a person than his own former Minister of Finance. Prussian finance, which used to be a model of prudence, is now so disordered that the Budget is only set straight by borrowing, and this therefore might seem not to be a fit time for abolishing taxes. The objection cannot be without weight to old-fashioned financiers, but it is entirely out of the range of Prince BISMARCK's present ideas, and may therefore be dismissed as irrelevant.

Germany has in the last few days been celebrating the centenary of LESSING's death, and it is not astonishing that Germans should wish to do all possible honour to LESSING's memory. He first showed that German prose could be so written as to be simple, nervous, and intelligible. He powerfully contributed to that revival of the national literature which was the precursor of the political liberty of the country. Further, he preached toleration, and inculcated it by embodying its precepts in the effective form of a popular drama. But his centenary has come at an unlucky moment. A hundred years after his death he would, if he could see what was going on, find Germans writing prose of which he would have to correct nearly every sentence, a Prince and some humble practical people superseding Parliament and trained administrators, and the majority of his countrymen yelping and howling at the miserable Jews. Bad style, the supersession of political liberty by the establishment of a communistic State, and the triumph of a petty, blatant persecution, are for the moment the practical results of LESSING's work and life. There is, therefore, much that would disappoint LESSING if he could now see it, and which must disappoint his admirers who are alive, and see what is going on. But in a wider sense it may be said that great men never die and good men never fail. Beneath the perturbed surface of German life there is a peaceful region in which the

spirit of LESSING lives. The love of culture lives on in Germany, ardent, resolute, and unmoved. All the best men of Germany, from the CROWN PRINCE down to many a humble professor who has dared to confront a popular frenzy and to cry shame on the Jew-baiters, believe in the beauty, the wisdom, and the necessity of toleration as heartily as LESSING himself could wish. There are still men who have given their lives to the study of sound finance, and who are not afraid to say openly that a system of bounties, and guilds, and State-found employment must sooner or later lead to terrible embarrassment. They have in the present day to work as LESSING himself had to work. They are under a cloud; the world is not with them. They must work for the future, and possibly for a distant future. But they have as much reason as LESSING had to derive patience from the hope that the future will be theirs, and that, if they persevere, Germany will again listen some day to the voices of grace, forbearance, and thrifty good sense.

THE MORALITY OF CABINETS NOIRS.

THE hubbub which during the last week the Irish disturbers and certain English sympathisers with them have made about the power possessed by the Ministers of the Crown to open letters is a very curious instance of the tendency of modern Radicalism to make government impossible. No one—at least no Englishman—supposes that the opening of letters is other than a very unpleasant business to those who are bound by their duty to do it. The whole safeguard of the proceeding lies in the fact that the power is only confided to those who are likely to feel this unpleasantness. It is also a very unpleasant thing to consign by word of mouth or stroke of pen a fellow-creature who has never injured you to be hanged by the neck until he be dead; and Mr. BRIGHT thinks that it must be specially unpleasant to be Ordinary of Newgate. Except the CHANCELLOR of the DUCHY of LANCASTER, however, no one of importance has yet sought in the moral jar experienced by Ordinaries, or judges, or Home Secretaries, a reason for the abolition of capital punishment, and in the same way it seems sensible to regard the natural repugnance of high officials to violate the sanctity of private correspondence chiefly as a guarantee that that sanctity will not be violated except in cases where it is their duty first of all to see *ne quid respublica detrimenti capiat*. It was indeed natural that the Irish members, catching at any opportunity for occupying time and exciting odium, should endeavour to make a fuss about the matter, but it could hardly have been anticipated that English opinion, even in its uninfluential sections would have followed them. The ill-luck, however, which seems to accompany extreme Radicalism pursued it here also. The same well-informed and far-seeing persons who had just told us that the dates of the Cabul correspondence would completely exonerate Russia, told us now that the story was monstrous, that Mr. SULLIVAN's question would enable the Government to clear themselves from a degrading suspicion, and that no English Minister, with any regard for his official existence, would dare to set up a *cabinet noir*.

Other people were, of course, perfectly well prepared for what actually did happen, and, to do them justice, the less impulsive organs of Radical opinion did not commit themselves quite so far as the *Pall Mall Gazette*. A cynical person of some experience is reported once to have said that it was, on the whole, for the good of the nation that the Liberal party should be in power. As this remark was known to be somewhat inconsistent with his general political opinions, explanations were asked. "The Liberals," he answered, "will always condone any necessary stretches of Ministerial authority on the part of their own men, and the Tories will not object; whereas, when the Liberals are out of office, they will raise heaven and earth at the same proceedings which in office they would approve." We express neither agreement nor disagreement with this dictum, but it certainly was exemplified in the matter of the letters this week. Sir WILLIAM HARCOURT's answer to the original question was well worded, and put the matter as completely as it can be put. The power, he said, to the exercise of which objection was taken, was expressly reserved and sanctioned by Parliament forty years ago and more, and has been continued ever since. A Home Secretary—for it is with that functionary, and not with the Postmaster—

General, that the responsibility rests—must of course satisfy himself that due and grave cause exists for its exercise. Sir WILLIAM's definite reference to the Fenian conspiracy, as a fact which would justify the use of the power, may be taken to imply pretty clearly that the power itself has been used probably more than once since the famous occasion of Sir JAMES GRAHAM and MAZZINI, which ignorant people regard as the last case known in England. Indeed, we should think it most likely that few Home Secretaries, whose tenure of office has extended over any considerable length of time, have escaped the disagreeable necessity of doing their duty in this respect. Finally, Sir WILLIAM's refusal to give any precise information on the subject was thoroughly justifiable. In the essence of it the power is one connected with individual responsibility, and to be exercised only on that responsibility, while publicity would entirely destroy its reasons for existence. There is no need to envy the HOME SECRETARY his opportunities of espionage; indeed, they would be to most people of the class from which hitherto Home Secretaries have been drawn the most unpleasant incidents of their duty. That the utmost vigilance ought to be exercised in selecting the occasions for exercising the right, every one will agree. Indeed, it is probable that people would allow that nothing short of actual conspiracy against the Sovereign of England justifies such a proceeding, and that it is outside of the functions of an English Government to allow its good offices to be so strained in regard to any foreign Power. The thing is a kind of heroic—or, if anybody pleases, very unheroic—remedy, to be used in the last resort and in cases only of imminent danger. But where that imminent danger exists—and of this only the Government of the day can be a fair judge—it is to be used without hesitation or scruple. The contrary contention can only come of that absurd individualism and exaltation of personal rights which leads in the long run to mere Nihilism and chaos. It is a very awkward thing to open a man's letters; that may be granted without the slightest hesitation. It is also a very awkward thing to suspend a man by the neck, to put a bullet into him, and to hold the shooter scot-free, even to insist on his paying so many pounds or shillings as Income-tax, or to provide that he shall not drink a glass of beer without paying secondly for the beer and first of all for the permission to drink it. All these things as between man and man are utterly indefensible, as between man and the State they are accepted conventions with a definite end, the attainment of which end is all that has to be looked to. To maintain the secrecy of letters when that secrecy is made an arm against the public welfare is simply an illogical absurdity.

The spirit in which the objection was originally raised could not have been shown better than by the subsidiary questions which were put on Thursday. Here the objectors confessedly took merely technical ground. Supposing that Mr. FAWCETT by a casual informality had exposed himself to fine and imprisonment, the practice of opening letters on great emergencies would not have suffered thereby, and supposing that he had not, it would not have been strengthened by any additional argument. It is, as we have said, desirable that the exercise of so invidious a stretch of authority should rest with as responsible an official as may be; and, as the Home Secretary is always in theory, and generally in practice, somewhat higher in rank than the Postmaster-General, besides being definitely responsible for the internal peace of the kingdom, the power is no doubt best lodged with him. But the difference between the issue of a series of separate mandates and the issue of one continuous mandate from one official to another is administrative detail of the very smallest importance. To try to catch Sir WILLIAM HARCOURT or Mr. FORSTER tripping on this side issue when they had held their ground on the main point was perhaps worthy of Mr. LABOUCHERE in his character of protagonist of the fierce democracy of Northampton; but it was somewhat out of character with the once business-like and moderate reputation of Mr. GRAY. However, the stratagem failed completely, succeeding neither in convicting the officials of any breach of the law nor in extracting incidentally any further information on the matter. It seems that the provisions of the Act requiring an express warrant for the opening of each suspected letter have been, and will be, as far as HER MAJESTY'S present advisers are concerned, scrupulously observed, and Mr.

FAWCETT very properly returned a blunt "No" to the request that he would produce these warrants within a short time after their issue. In short, the attempt to make capital out of this disagreeable necessity of State may be said to have already collapsed. In so far as it is sincere and honest, it arises partly out of the confused feeling as to personal liberty already alluded to, partly out of a still greater confusion between private and public morality. The business of governors is the safety and welfare of the governed, and if a Manchester murder or a Clerkenwell explosion can be prevented by a basin of hot water and an electrotyped facsimile of a seal, these uncomfortable but useful assistants must be secured. Secret conspirators, after all, have not such clean hands that they can demand to be treated in accordance with the finest feelings of delicacy and morality. *Qu'il se commencent!* is the natural expression of feeling which rises to the lips of a sensible man when the suggestion is made. Even in open war no general would think it other than his duty to open captured despatches, no matter how they might be captured, and why secret assassins should have privileges conceded to them which are not allowed to fair and lawful belligerents, we profess ourselves wholly unable to understand.

THE SCRUTIN DE LISTE.

THE substitution of the *Scrutin de liste* for the *Scrutin d'arrondissement* is at last before the Chamber of Deputies. The aspect of the question has a good deal changed since it was first determined to raise it in the present Session. The dislike which was then so generally entertained to it may be as strong as ever, but it is not nearly so outspoken. M. GAMBETTA's attitude has exercised considerable influence upon the Republican opposition to the Bill. That the President of the Chamber is less omnipotent than he was thought to be has been shown by the general approval given to M. ST.-HILAIRE's management of the Greek negotiations. It is possible, however, that the disposition of the French people to prefer peace to M. GAMBETTA may for the time make them all the more anxious not to quarrel with him on any other point. As between peace and war, every Frenchman may hold himself to be as good a judge of what the country wants as M. GAMBETTA himself. It is not likely that this independence extends to a question like the *Scrutin de liste*. Assuming Republicans to be of opinion that the victory of their party in the polls is the one thing needful to the perfection of an electoral system, they may naturally think that M. GAMBETTA is likely to be better informed than themselves upon this essential point. He has long had at his command a singularly complete machinery for ascertaining the temper of the voters in all parts of France. At the last general election he showed that he had far better means of forecasting the result of the contest than were possessed by the Government. When it is remembered how complete and devoted a staff of subordinates the Minister of the Interior can command, this is a fact of some significance; and it is one which the deputies may be trusted to bear in mind when they have to determine which way they shall vote. Strongly as the maintenance of the *Scrutin d'arrondissement* may commend itself to their interests, they may feel too doubtful alike of their colleagues and their constituents to take any steps to insure it. M. BARDOUX's Bill may be carried in the teeth of their opposition, and then they will have lost their chance of seeing their names included in M. GAMBETTA's list of candidates, and gained nothing in return. Even if M. BARDOUX's Bill is lost, they may feel doubtful whether M. GAMBETTA's influence may not prove strong enough to insure their defeat at the hands of their own neighbours. The probability that the Bill will pass is consequently very much greater than it was at its first introduction. The motives which led the Committee to which the question whether the Bill should be considered was referred to vote in the negative one day and in the affirmative the next have been operative during the whole of the interval, and a speech from M. GAMBETTA will be likely to give them increased force.

The minority itself will contribute a contingent to M. GAMBETTA's army. There are members of it who are sanguine enough to believe that the results of the adoption of the *Scrutin d'arrondissement* have been misconceived, and that the Conservatives will really have a

better chance in the departments than they now have in the arrondissements. This opinion is shared, it seems, by some of the majority. According to the *Temps*, M. GAMBETTA was warned at a Parliamentary breakfast which he gave last Monday that sixteen departments which now return a mixed representation will return a wholly reactionary one if M. BARDOUX's Bill passes. M. GAMBETTA, according to the same authority, is convinced that this will only be the case in five departments. If he is right in so thinking, the prospects of the Monarchy under the *Scrutin de liste* are sufficiently discouraging. Nothing, of course, but a general election can settle which of these calculations is the true one, but outsiders will probably incline to back M. GAMBETTA's. It by no means follows, however, that the ultimate interests of the Opposition will not be served by a reduction in their numbers. Helpless as the Conservatives seem to be at this moment, they need seemingly to be more helpless still before they will consent to profit by the lesson which events are continually reading them. The *République Française* has lately been saying that the majority must present itself to the country with an explicitly Republican programme. The conclusion which the Conservatives might have been expected to draw from this announcement is that they too ought to come forward with an explicitly Republican programme, and so draw away the attention of the electors from different forms of government in order to fix it upon different methods of administering the same form. We are all Republicans, the Conservatives should say to the electors; the only distinction between us is that we wish to see the Republic administered in a moderate and rational manner, whereas our opponents wish to see it administered in a violent and foolish manner. Instead of this, one important section of the Conservatives declares that the publication of a frankly Republican programme must be met by the publication of a frankly monarchial programme. Nothing can save France from ruin but a restoration, and it is of no use to deceive her any longer by proposing superficial remedies. A party which reads the signs of the times in this fashion plainly needs to have its real impotence brought home to it. That the adoption of the *Scrutin de liste* will have this result it would be exceedingly rash to say; since, if the existing Legitimists did not return one single deputy, they would somehow make out that this was exactly the evidence they wanted to prove that the country was thoroughly with them. But a younger generation may be less obstinately deaf to the plainest teaching of facts, and may learn by degrees that, if Conservative ideas are to regain their natural weight in the country, they must condescend to wear the dress of the present day. A party which insists upon borrowing its ancestors' wardrobe degrades politics to the level of a fancy-ball.

There is another aspect of the question which suggests a doubt whether the *Scrutin de liste* will have precisely the effect which M. GAMBETTA anticipates. It has been justly observed that under a highly centralized Government, such as that which existed in France, the influence of local interests upon Parliamentary elections is very much greater than it is in a country like England. The Government have it in their power to give or withhold pretty nearly everything that a commune wants, and the smaller the constituencies are, the more the wants of the communes will come home to the electors when they are considering for whom they shall vote. In some cases probably this tendency tells in favour of the Conservatives. A candidate gets in by virtue of his sound opinions upon the necessity of a branch railroad who would not have got in by virtue of his politics. But it may also have an opposite result. The more the attention of the electors is diverted from politics, the more completely it becomes a matter of chance what the precise politics of their representative are. He is a Republican—that in most cases the electors insist on—but as to the particular shade of his Republicanism, that is lost sight of in the far more important question whether he takes the right side in a controversy upon the necessity of a new road or of an additional post office. If the *Scrutin de liste* is adopted, these local interests must go to the wall, and the electors will then have leisure to inquire more minutely into the political creed of the candidates. Of course, if extreme views command a majority, even if it be only a majority of one, in the department, all the representatives of that department will be extreme. But, then, if moderate views command a majority, all the

representatives of the department will be moderate; and, putting aside the departments which contain a great city, the latter contingency ought to be at least as likely as the former. Against the probability that minorities will be less represented under the *Scrutin de liste* than under the *Scrutin d'arrondissement* must therefore be set the possibility that the political views of the majority are more correctly represented under the *Scrutin d'arrondissement* than they would be under the *Scrutin de liste*.

SALINS.

IT is an ill wind that blows nobody any good, and the great tornado of war that desolated France in 1870 brought prosperity to one little town in Franche-Comté. The Prussians, who understand the art of wasting time at a watering-place better than any other nation of Europe, while spreading themselves over the department of the Jura after the capture of Dôle, took note of Salins as a place to be remembered, and when the labours of conquest were over, they proceeded to refresh themselves in this warm and salubrious gorge. They were delighted to find there a limitless supply of mineral water stronger and more efficacious than their own springs at Kreuznach, and to be able to sip an unexpectedly thrilling solution of bromide of potassium. In consequence Salins has become one of the favourite haunts of the Germans in France, and presents almost the unique spectacle of a French town owing its main prosperity to Prussian patronage. We do not know whether a light touch of satire is concealed in the medical recommendation of Salins as particularly grateful to persons of a lymphatic temperament; it is certain that a stout and not too sensitive constitution is required to imbibe the waters freely. As with the Pierian spring of familiar quotation, it is best to drink deeply or else not taste the tonic salts of Salins. Patients are recommended to undertake a *cours*, and to do this satisfactorily it is necessary to settle down and make one's health the principal object of attention.

Salins is unusually well situated as a resort for tolerably robust invalids. The position and character of the town are almost Swiss. It is protected on the north by the lowest and most westerly of the seven parallel chains of the Jura, a range which makes up for its relative want of altitude by the picturesqueness of its forms, and which, instead of fading gradually into the plain, reaches its highest point at its extremity. This highest point, about 2,700 feet above the sea, is the famous Mont Poupet, a peak which fills in popular legend the place always given to an isolated mountain of striking form. The town of Salins looks up at the Poupet at all times, except where its sharp grey top is hidden by the rocky sides of the valley of the Furieuse, a rapid mountain stream on the southern bank of which the houses are closely packed together. Above the river, and crowning cliffs so steep that they seem to nod at each other, are the opposite forts of St. André and Haut Belin, occupying the position of those older fortresses which successfully defied the army of Richelieu when he invaded Franche-Comté in 1635. In Fort St. André there yet remain some traces of Vauban's work, dismantled by the Allies in 1814, and it is still possible to read over the gate the motto of Louis XIV.—*nec pluribus impar*. The towns of Franche-Comté have suffered so much by war and fire that their architecture presents little that is of much historical interest. The antiquary will find more in Salins than perhaps anywhere else in the province. The isolated position of the town, hemmed in as it is by the mountains, and the fortunate accident that it has escaped all political prominence, have permitted it to preserve much that is ancient and interesting. The modern passion for restoration, however, has penetrated to the gorges of the Jura, and the great church of St. Anatole, which a very little while ago possessed curious traces of eleventh-century work, has now been swept and garnished out of any other interest than is to be found in the simplicity and grandeur of its three great naves. But it is in the smaller churches that the interesting remains of former ages must be sought, and most of all among the secular buildings of the Mutchin, the poor quarter of Salins. This district, which takes its name from the kennel of hounds, *meute à chiens*, kept there by a grand seigneur in old times, is chiefly occupied by one narrow street, hilly and dirty, full of ancient doorways, blind alleys, and picturesque arches, which leads from the Lower Gate up to the centre of the town. This street, one of the most extraordinary relics of the middle ages to be found in the Jura, is named Rue d'Olivet, after the Abbé d'Olivet of the French Academy, whom Voltaire called his master in grammar, and who was born in it, as the inscription below a bronze bust of him, by Max Claudet, clearly sets forth. In the Town Library—a collection of books and pictures which is more than respectable—there is a very curious painting representing Salins in the time of Louis XIV., and giving the impression that it has altered in the course of two centuries as little as may be. What is recent in the town is concentrated in the Place d'Armes, where a graceful hôtel de ville, dating from 1750, forms a pleasing exception to the customary badness of eighteenth-century architecture in the East of France. In front of this building stands a fine bronze statue of General Cler, a native of Salins, who was killed at the battle of Magenta. This striking figure is by Joseph Perraud, of whose collected works, as to be seen in the Museum of Lons-le-Saulnier, we gave an

account a few weeks since. Unfortunately the statuary in the streets of Salins, though profuse enough, is not so refined as that which adorns Ions-le-Saulnier. The ruling genius of the place seems to be M. Max Olaudet, a Franc-Comtois sculptor who has achieved a certain celebrity, but whose masterpieces at Salins scarcely make good his claim to such a reputation. His "Vendangeur," a huge figure in bronze of a vintager staggering under a vast load of grapes, is raised opposite the salt springs, and forms in some sort the centre of the town. It is a coarse and vigorous piece of realistic work, leaving much to be desired in the way of execution. But by far the ugliest and oddest monument in Salins is a bronze bust of the Republic on an awkward square pedestal of marble; in front of the pedestal runs a narrow ledge, and on this ledge stands a little naked amorino of bronze, who has just finished writing the word "Patrie" in letters of gold underneath the bust. The conception is grotesque enough in itself, but it is rendered irresistibly funny by the fact that the ledge has proved too narrow to support the amorino, and that in consequence a hollow has been made in the side of the marble pedestal to make room for his protuberant little abdomen.

The chief industry of the neighbourhood of Salins is the vine. The precipitous slopes of Mont Poupet produce a ruby-coloured wine which is only less esteemed than the famous and neighbouring vintage of Arbois, to the excellence of which Henri IV. pays frequent tribute in his letters. Unfortunately the wines of the Jura have been much mismanaged of late; they rapidly lose their colour, and are apt to become acid or insipid if kept for any length of time, nor can they ever be exported without admixture. The wines of the department are mainly red, but Salins itself produces a white and sparkling sweet wine which resembles a light Moselle. But the visitor who is curious in vintages should not leave the district without tasting the gold-coloured wine of Château-Châlon—a vineyard some miles south-west of Salins, in the valley of the Seille. It is a true, dry Madeira, and of an excellent quality and force. The vintage forms so characteristic a part of the social economy of the district that the visitor should not fail to read the pastoral novels of the Hebel of Franche-Comté, Max Buchon, a writer who combined with the French sprightliness not a little of the quaint domestic humour of Switzerland and the romantic credulity of the Black Forest. His books are the best literary product of the Jura, and reflect with most fidelity the characteristics of its inhabitants. Buchon was an indolent and timid man, who resisted the attempts of his friends and admirers to transplant him into Parisian literary society. He wisely preferred to be the chief writer of Franche-Comté to attaining with much labour and anxiety a third-rate position in the capital. He did good work in collecting and preserving the ballads and popular melodies of the mountains, songs that bear still the impress of the period of Spanish possession. There is a picturesque simplicity and tenderness about the Franc-Comtois folk-songs which give them a high place in such literature, nor are they yet by any means extinct. One may yet hear from a Gothic window in the winding Matachin the pure voice of a girl warbling the old melody of "Les Trois Princesses":—

Derrière chez mon père,
Vole, mon cœur, vole !
Derrière chez mon père
Il y a t'un pommier doux,
Il y a t'un pommier doux,
Tout doux et iou !
Il y a t'un pommier doux.

with one melodious stanza after another, closing in the charming confession:—

S'il gagne bataille,
Vole, mon cœur, vole !
S'il gagne bataille,
Il aura mes amours...
Il aura mes amours,
Tout doux et iou !
Il aura mes amours !
Qu'il gagne ou non gagne,
Vole, mon cœur, vole !
Qu'il gagne ou non gagne
Il les aura toujours...
Il les aura toujours,
Tout doux et iou !
Il les aura toujours !

Unfortunately, Max Buchon's collection of the ballads of Franche-Comté has long been out of print, but his novelettes are easy to obtain. No visitor to Salins should fail to put *Le Matachin* in his pocket, and ascending the steep incline of Fort Belin when the first red daisies star the grass, and the town lies in sunshine below him, read the pastoral loves and bewildering adventures of Josillon, Manuel, and Fifi. Although it is nearly thirty years since the book was written, it gives a picture of life among the vintagers of Salins and its neighbourhood in which there is hardly a word that might not have been written to-day. The stories of Max Buchon hold a place in French literature that cannot be said to be very significant, but which is unique as far as it goes. He is the only Frenchman who has been strongly influenced by the popular and legendary folk-tales of Germany. In reading his *märchen*, for such they really are, we are constantly reminded, not only of Hebel, of whom he was confessedly a disciple, but of the early manner of Auerbach and of the less-known stories of the Bernese Oberland, told in Swiss *puits* by Jeremias

Gotthelf. It is not creditable to the patriotism of Franche-Comté that no edition of the complete writings of Max Buchon is in existence. His collection of folk-songs and his novelette of *Le Matachin* alone suffice to claim for him the honours of revival.

THE RETURN OF ULYSSES.

MR. PARNELL'S restoration to his afflicted country, if he will accept England as his country, and if it is really he who has returned, as to which the public mind is still clouded with a doubt, puts an end to a very remarkable and interesting Odyssey. From the memorable hour when Mr. Parnell failed in his motion that Mr. Gladstone be not heard, he seems to have determined to put and carry a motion that he himself be not seen. He retired into cloudland like other unsuccessful heroes on similar occasions, and his whereabouts and occupation at once became a subject of the keenest interest. Some said he was at Paris, some said he was at Frankfurt "arranging telegraphic communications with America"—an awful and mysterious phrase. According to the general belief, he was simply obeying the solemn warning of not the least pleasing of Dickens's creations, and taking care of the "portable property," the proceeds of the Land League "rint." But there were not wanting base insinuations and innuendists who saw in Mr. Parnell's precipitate disappearance a kind of frenzy of John Dennis, or something similar to that remarkable infatuation which made Coleridge consider himself in danger of the fate of the Duke of Enghien. After the extrusion of the Irish members and the arrest of Davitt, there was no knowing what might happen, and Mr. Parnell gracefully yielded to the prayers of his friends not to expose *tam arum caput* to the vile machinations of Mr. Forster. Mr. Davitt and Mr. Parnell playing *écarté*, by special license of the persecutors, in a retired chamber of Portland, with a distant view of the sounding sea, was too dreadful an idea to be entertained for a moment. Indeed it has been hinted that there were times when even Paris seemed a scarcely safe enough refuge. There are policemen in Paris, and your Land Leaguer looks on a policeman, perhaps not without reason, as his natural enemy. The West, the land of the free, suggested itself, though, by the way, there are policemen there too, and of the most heavy-handed, prodigal not merely of buckshot, but of bullets. The West, however, the land of the free, appears to have expressed itself with unbecoming want of fervour in reference to this proposal. The American papers have spoken of Mr. Parnell—Parnell, as in the fine Republican manner they call him—as having run away, and they intimate that it is not likely to be "roses, roses all the way" for him if he returns to the States, whatever it may have been a year ago. So Mr. Parnell has issued a manifesto announcing his return to Ireland and to Parliament. He is returning with a terrible programme—a programme of no small interest, of which more anon. But for the present his occupation during his absence is what concerns us. The wildest and most picturesque of all the legends is that during his supposed presence in Paris he has twice been seen in London. This suggests the celebrated visits of another Charles Stuart, which George III. discovered by his own secret police, and which frightened Grenville or Lord North or whoever it was so terribly. Indeed his good-natured Majesty's traditional remark on the subject is still perhaps the most appropriate for sensible people to apply to the Parnellian exodus:—"Let the young man alone, and when he is tired he will go—[come] home again of his own accord." So has Mr. Parnell come home, or is coming home, and remembering the way in which he departed, he will no doubt bring his tail behind him (possibly even between his legs), to complete the quotation of which the best of monarchs was doubtless thinking.

The Hibernian Ulysses, however, during his wanderings has, like his model, seen many interesting men and things. *Kni men Tantalón einseid* ought to recur frequently in the tales which he will tell the Land Leaguers when the most flaring gas jet is kindled and the fizzingest bottle of zeedone has its strings cut. For, to the disgust of the Parisians, offers of the national potteen did not tempt Mr. Parnell, and he seems to have confined himself to the beverage beloved of those who like to make believe that they are drinking champagne, and thus to flavour their virtue with a spice of sin. Mr. Parnell has seen M. Victor Hugo, and the manifesto above alluded to shows perhaps some traces of the interview or of the eloquent anticipations which it produced in the Parnellian mind. But this interview was private, and we need not trouble ourselves with it. There can be no doubt that the great poet said all that the sublimest faculty of speech and the profoundest ignorance of the subject could together achieve. Other Parisian associates of the Irish Gracchus—a name of evil omen—have been liberal of their reports of his conversation; and in this case there can be not the slightest reason why these reports should not be made free with, for they are undoubtedly *publica materia*. Mr. Parnell seems to have specially haunted M. Rochefort at Paris, a proceeding which has not a little grieved some orthodox wearers of the green, and which is, in its way, odd. For Mr. Parnell is a shrewd enough person, and M. Rochefort ought to have for him many of the characteristics of an awful example. Both are men who, by birth, connexions, and education, had a fair future before them; one has already thrown it away by taking to the merry roads of demagoguism, the other is over his ankles in that mire already, and may perhaps arrive before long at the same goal. However, either

Mr. Parnell attached himself to M. Rochefort or M. Rochefort attached himself to Mr. Parnell; and the two great democrats exchanged ideas. We say exchanged, although the words put into the mouth of the member for Cork are so remarkably like the words of the member, or ex-member, for Paris that suspicions arise in the uncharitable non-democratic mind. The idol of the Irish people, according to M. Rochefort, is "a very fair young man"—quite a David, in fact; "his eye of steel is severe"—not mild steel at all—and "his face, almost ascetic, is calm." Indeed, the general attitude of Mr. Parnell, as described by M. Rochefort, reminds one of the attitude of an Irishman still more distinguished; "he was not angry, only sad." Mr. Parnell is sad for the calumnies of the Government press in England, a mysterious division of journalism to the identity of which M. Rochefort affords no further clue than an intimation that it includes the *Times* and the *Daily Telegraph*. In England we usually consider the *Standard* the Government organ at this moment, but M. Rochefort no doubt is not up to the latest revolutions of the journalistic wheel. The first question which Mr. Parnell asked was as to the influence of the *République Française* (a cunning dog, this member for Cork), knowing no doubt perfectly well that, if there is one newspaper which M. Rochefort in his editorial and personal capacity despises, it is this precise journal. "*The République Française*," was the proud reply, "is a paper very little read," a statement in which, we fear, M. Rochefort consulted rather his wishes than his knowledge of facts. The Macchiavellian Irishman next proceeded to hit M. Rochefort on the other wing, by remarking that "M. Gambetta wanted above all things to be agreeable to the Prince of Wales." On an auditor put in good temper by these artful beginnings, Mr. Parnell then began to "play it" in a manner which we cannot think creditable to his moral tone, though it shows a greater sense of humour than those who judge him merely from his Parliamentary utterances would suppose him to possess. The Irish, it seems, have been forbidden for a hundred years to possess arms, and there is therefore, it would appear, not so much as a pike-head or a flint musket between Cape Clear and the Giant's Causeway. War is hopeless, because the English would simply starve the Irish out, "as they have always done"—notably, for instance, last winter, when the Duchess of Marlborough presided over the operation. The English people are not represented in Parliament, only the aristocracy and the *bourgeoisie* (another remark which naturally enraptured M. Rochefort). Queen Elizabeth by a simple royal decree distributed the lands of Green Erin among the ancestors of the present landlords, all of whom are non-resident, and so it went on; and M. Rochefort swallowed it all, and doubtless thinks himself established as an authority for life on the Irish question. Whether a slight twinkle might or might not have been seen in the very fair young man's eye of steel as he quaffed the half bottle of *zodone*—but that was after another interview—is a point on which we shall offer no opinion.

So Mr. Parnell, in his *Olyseus*, saw Tantalus—that is to say, M. Rochefort—from whom the refreshing waters of power are apt to retreat so constantly just as they touch his lip; and he saw Teiresias—that is to say, Victor Hugo—and he saw, or may have seen, James Stephens, for whom any parallel that we could select out of the *Necyia* would be so uncomplimentary that we shall not select any. Of miscellaneous ghosts who gibbered at him, interviewers of the *Gaulois*, and so forth, there is no need to speak. But of his remarkable manifesto something must be said. The date Paris is wholly unnecessary, for the thing reeks of Paris—that is, of the peculiar kind of Parisian society in which Mr. Parnell seems to have mixed. Irish patriots have once more steeped themselves in French Republicanism, despite the very discouraging consequences of the former bath, and this is the result. The document, indeed, begins "Gentlemen," which is contrary to Republican etiquette, and, as it is addressed to the Land League, doubtfully sustainable as a statement of fact. It informs the Irish people of that wise resolution in reference to the American visit which we have already noticed. Then we come to the programme. Mr. Parnell is going to appeal to the people of England against the "territorialism and shopocracy which dominate Parliament." Household suffrage in the counties will "sound the doom of the English land system," a junction between English and Irish democracy will bring about the golden age, and "enfranchise labour from the taxes necessary to support standing armies." Meanwhile the tenant-farmers are urged to pursue their noble course. "The sacrifices demanded of them," says Mr. Parnell plaintively, "are not great," they are only asked not to pay their debts, and it may be admitted that, except to men of honour, this is not a very great sacrifice. The touch about shopocracy and the announced alliance between the democracy of England and of Ireland are especially Parisian. It remains to be seen whether this particular *article de Paris* will be found popular in Great Britain. It would be more remarkable than it is, for we do not know that Mr. Parnell has before made open profession of democratic principles, if the support which he has received from the small body of extreme Radicals had been less pronounced. One good turn deserves another, and Mr. Bradlaugh and Mr. Labouchere, Mr. Gollings and Mr. Thompson, must now feel that their chameleon-ship of the very fair young man with the ascetic eye of severe steel is no longer mere chivalry, but sound policy and self-interest well understood. Such are the results of steeping oneself in the pure floods of French Republicanism. The very fair young man comes out of them refreshed, invigorated, and with a programme.

"Down with the shopkeepers!" is Mr. Parnell's cry as he steps on the Kentish beach. The only fear is how the shopkeepers will like it. There are, as his new friends know, hardly any but shopkeepers in England, and we think we have heard that the class does exist in Ireland too. Perhaps they may not like to be put an end to; however, these are intricate points. It is sufficient that Mr. Parnell has had his days of retreat and meditation, not without mystery, like all the greatest characters of history. He has doubtless thought much—he certainly seems to have talked a good deal. Now he returns bringing with him his programme and the memory of the companionship of M. Rochefort. Whether Dr. Nulty and Dr. Gillooly will not feel it necessary to perform some slight form of exorcism before they resume intercourse with M. Rochefort's friend seems doubtful; but the point must be left for those reverend gentlemen to decide.

THE JESUIT IMMIGRATION.

IT is well that Exeter Hall, after a temporary eclipse, and indeed a serious menace of permanent extinction, has just been—if we may venture to borrow Cardinal Wiseman's words on a memorable occasion—"restored to its place in the ecclesiastical orbit." There is truly urgent work to be done for which no place could be more appropriate, and protests to be raised in every tone of eloquent indignation which may well wake the furthest echoes of that historic Hall. The Philistines are upon us—that is to say the Jesuits. There may be some short-sighted Protestants among us who exulted in the passing of the Ferry bill, and hailed in the summary suppression of the Catholic University in France and the closing of the Jesuit colleges a fresh triumph of Gospel truth. We fear they will be cruelly disappointed. Even supposing that the great Babylon has really collapsed in France—and that remains to be proved—their patriotism, if not their Protestantism, must be disturbed, when they hear of the new "slitting of the holy house"—not of Loretto but of Ignatius—to our own shores. It is true that the doomed or favoured spot specially selected for this last Jesuit aggression is some hours' sail distant from the English coast, but still it is English territory, and moreover there are ugly rumours of other establishments being appropriated or organized by the dreaded Order—in Sussex, in Wales, and elsewhere—besides the new Imperial Hotel at St. Heliers, the capital of Jersey. Jersey itself has hitherto been a kind of Protestant Paradise. The whole island only contains about 60,000 inhabitants, but we are assured that it includes a variety of denominations somewhat exceeding the usual, and tolerably liberal, English proportion, while the prevalent type of Anglicanism is of the extreme Evangelical kind. It is into the midst of this happy family, of whom it cannot perhaps quite be said that "at once they sing, at once they pray," but who at least all sing and pray against Popery with one heart and one voice, that the most Popish of Papal emissaries are about to thrust themselves. "The Assyrian comes down like a wolf on the fold," not indeed in this case a wolf in sheep's clothing—there may be some consolation in that—and the attempt will be made "to turn Jersey into a French Catholic University, making it another Island of Saints," and thus destroying alike its nationality and its religion. To be sure the prophet of evil tidings, who warns the denizens of Jersey of the things that are coming upon them, does remind them also that after all there is still some balm in Gilead. But his remark that our temper, habits, and educational system preclude the danger of any exclusive institutions, under whatever name, telling much on our religion or our politics, if true for England, is hardly true for Jersey, with its population of 60,000, where the Jesuit propaganda may prove rather a formidable affair. The second consolatory reflection suggested raises a question of wider import, bearing on the whole scheme of Jesuit education, but it is not one the accuracy of which is so obvious as the writer in the *Times* seems to imagine. He tells us that if "the Seminarian"—meaning apparently, not the student, but the teacher—is allowed to have free scope he will only succeed in producing "a creature absolutely selfish, opinionated, full of antipathies, incapable of compromise, and without anything in common with the world he is soon to encounter, except that which he cannot get rid of, the baser parts of his nature." And again we are told—in rather questionable English—that "the seminary succeeds in making men too well satisfied with themselves to be compatible with the work of the outer world." That no doubt hits a blot, and a serious blot, in the ordinary seminary system, but one not peculiar to Jesuit schools, and from which indeed in their palmiest days it was their boast to be exceptionally exempt. That for better or worse they did make men of the world was acknowledged by friend and foe alike, only their critics had a good deal to say about the methods of tortuous casuistry by which this result was achieved. Ranke even goes so far as to speak of their having abandoned all idea of subjugating the world to the spirit of religion, their own spirit on the contrary having succumbed to the influence of the world, and their sole aim being "to render themselves indispensable to their fellow-men, by whatever means this might be effected." He proceeds to observe that to ensure this purpose they deliberately relaxed and perverted not only the rules of their own Order but the precepts of religion and morality, and prostituted the solemn office of confession to their evil ends. This moral relaxation was of course of peculiar significance in a community which from the first had made the education of youth its chief employment.

But at all events, whatever may be thought of the means adopted, there can be no doubt that for a century or so after they rose into power Jesuit education throughout the continent of Europe was a conspicuous success. In England, where of course they had no opportunity of opening colleges till much later, they do not seem ever to have succeeded so well, and vigorous protests have been raised during the last few years, as our readers are aware, from more than one quarter in the English Roman Catholic body itself against parts of their disciplinary system, which are to say the least singularly uncongenial to English notions and habits in the training of youth. That however has no direct bearing on the prospects of their imported colleges, in Jersey and elsewhere, which are designed for the training not of English but of French boys, whom they are forbidden any longer to receive in their own country. In the training of French boys the Jesuits do appear, from the impartial testimony of such observers as Mr. Matthew Arnold, to have been very successful of late. They would indeed strangely have lost their old cunning, if they were unable to hold their own against the unloved and unlovely *lycée*, which, unless they are greatly maligned, show some of the worst moral faults of the "seminary" system, without offering any of its religious attractions. Both Ranke and Hallam have described the marvellous revival of learning they effected in Catholic Europe after the Reformation. The universities, then mainly in the hands of narrow and ignorant ecclesiastics, had failed entirely to keep pace with the advance of Protestant education, till the Jesuits got possession of them or founded rival colleges of their own to supply the want. It was found, says Hallam, that boys learnt more from them in six months than in two years under other masters, and as moreover they taught at that period gratuitously, Protestants often removed their children from the ordinary gymnasia to the Jesuit colleges, with results which may readily be conceived. In classical knowledge, especially of Latin, and in the elegance of their scholarship, they had no superiors, and many of the best Latin writers of the day were Jesuits. They took the lead in polite letters and classical style, and thus dexterously moulded the highest talents of the rising generation to the services of the Church. For in their hands the whole course of Liberal studies took one direction, one perpetual aim—never for a moment lost sight of—the propagation of the Roman Catholic faith. Latin verification was at that time highly prized, and their pupils were accordingly taught to write sacred poems, while the very structure of our old school friend, the *Gradus ad Parnassum*—a Jesuit compilation—was made studiously subservient to the promotion of Catholic orthodoxy. Cardinal Newman has told us in the *Apologia* how he used as a schoolboy, when he firmly believed the Pope to be Antichrist, to score out the pro-Papal epithets and synonyms in his *Gradus* and substitute the vilest terms of abuse he could think of in their place. The *Gradus* was meant to insinuate Popery into Protestant schools. There was again a taste for dramatic representation, and therefore the walls of the Jesuit colleges resounded with sacred tragedies. There was a prejudice at the time against stipendiary teachers, and hence the Jesuit professors, who had their wealthy endowments to fall back upon, increased their popularity by taking no fees. In Germany, in Spain, in Italy, in France, their colleges spread rapidly. "They conquered us," says Ranke, "on our own ground, in our own homes, and stripped us of a part of our country." They had three colleges in Rome, including one for German and one for English students. In France they notoriously took the lead in classical scholarship. "The Jesuits," Huet says, "write and speak Latin well, but their style is almost always too rhetorical. This is owing to their keeping regencies [academical exercises] from their early youth, which makes them speak incessantly in public." Jouvancy, whose Latin orations were published in 1700⁶ is said in the *Biographie Universelle* to have had no equal since Maffei and Muretus. The Jesuit Rapius's poem on Gardens, of some 3,000 lines, is commended by Hallam for its truly Virgilian spirit and rhythm, and sustained dignity of expression throughout. With so many claims on public attention and confidence in their educational work we cannot wonder at the rapid spread of Jesuit influence over Europe. Their first school was established at Gandia in the Kingdom of Valencia by Francis Borgia in 1546, and was soon erected into a university by the Pope and the King of Spain, as though a pledge and prophecy of the command they were speedily to acquire over the whole education of Catholic Europe.

But what is equally manifest on the surface of history and not at first sight equally easy to explain, is the fact that Jesuit popularity after a time receded almost as rapidly as it had advanced. The very qualities which had made the Order the most serviceable of allies and the most formidable of enemies contained indeed the seeds of public hatred and ultimate ruin. Their zeal, their compact union, their indefatigable and single devotion to a cause, rendered them often unscrupulous in the choice of means, and still oftener suspected. To Protestants they were naturally obnoxious, if only for their signal successes, but they had also no lack of adversaries within the pale of the Church they served with such exclusive loyalty, and even on the Papal throne, whom their intriguing and ambitious spirit had alienated or alarmed. Chief of course among the grounds of accusation against them stood the charge of what is popularly called Jesuitism, or, in other words, of encouraging by teaching and example a casuistical relaxation of the laws of morality. That there was truth in the indictment no one familiar with the Pro-

vincial Letters, not to go any further, can possibly doubt; and their conduct in some notable cases, as e.g. in the affair of "the Chinese Rites" and their persecution of Bishop Palafox, only too faithfully illustrated the crooked policy they were accused of justifying in their code of ethics. The testimony of writers like the late Professor Huber of Munich, or even Mr. Cartwright, can hardly be credited with judicial impartiality, but there is enough in the works of both writers on the subject to establish a strong case against the incriminated Order. Their services to learning and religion are undisputed, but to them the old saying may be applied with tolerable accuracy, *ubi bene nihil melius, ubi male nihil prius*. That the charges brought against them were often exaggerated is perfectly true, and Hallam's account of the various reasons—not always discreditable—which led them to embrace the laxer theories of moral obligation is a juster and more comprehensive one than Ranke's. But he admits that they employed their logical acumen in sophisms which undermined the foundations of moral integrity and thus "warred against the conscience they were bound to protect." They never really recovered from the wound inflicted by Pascal, and when a century later the Order was suppressed by the excellent Pope Clement XIV., at the united request of the Catholic Sovereigns of Europe, there were few to regret its fall. Their vigorous subsistence during the forty years of their nominal suppression, under the interested patronage of Protestant or schismatical Governments, tells more for the hardihood of their *esprit de corps* than for their honest submission to the authority they professed to reverence as supreme, absolute, and Divine. It was natural that the Catholic reaction of the present century should be heralded by their revival, but like other restored potentates they have learnt nothing and forgotten nothing. Their old ingenuity has not failed them, though it no longer secures them their old supremacy in the world of thought. They still retain the weakness and the strength of their old educational methods, which serve rather to polish and sharpen the intellect than to brace its individual energies, and are admirably adapted to produce a class of adroit special pleaders, but very ill adapted to develop originality of mind. It is a system more congenial to the Latin than to the Anglo-Saxon temper, and is no likelier in the future than in the past to become really acclimatized in England.

HECTOR BERLIOZ.

THERE are few more interesting pages in the literature of autobiography than the self-told story of Hector Berlioz. The book is as vivacious and amusing as the "Mémoires" of the great Dumas and as rich in violence and extravagance as the *Vita Scritta da Se Medesimo* of Benvenuto Cellini. With this latter work it has not a little in common. Apart from Cellini's ruffianism, indeed, there are several points of contact, not only between the two books, but between the two men also. Berlioz made the great goldsmith the hero of an opera, and it is not doubtful that he was in complete sympathy with his subject. In the Frenchman there is a full measure of the waywardness of temper, the impatience of authority, the resolute and daring humour, the passion of worship for what is great in art and of contempt for what is little and bad, which entered so largely into the composition of the Florentine. There is not much to choose between the Berlioz of the *Débats*, the author of the *Grotesques de la Musique* and the *A travers Chants*, and the Benvenuto who, as Il Lasca writes of him:—

Senza alcun ritegno o barbazzale,
Delle cose malfatte dicea male.

Benvenuto enlarges upon the joys of drawing from the life, and expatiates upon the greatness of Michel Angelo in much the same spirit and with much the same fury of admiration with which Berlioz descants upon the rapture of conducting an orchestra, and dilates upon the beauty of *Divinité du Styx* or the adagio of the Sonata in C sharp minor. It is written of Benvenuto, in connexion with Vasari's attack upon that cupola of Santa Maria del Fiore, which he was wont to call "The marvel of beautiful things," that, had he but lived to see the result,

Certo non capirebbe nelle pelle;
E saltando, e correndo, e fulminando,
S'andrebbe querelando,
E per tutto gridando ad alta voce
Giorgio d'Arezzo meterebbe in croce,
Oggi universalmente
Odio della gente
Quasi publico ladro e assassino;

and, in reading, we are irresistibly reminded of Berlioz betrampling Lachnith and the ingenious Castil-Blaze, and defending Beethoven against the destructive pedantry of Fétis. And, just as the "Vita" is invaluable as a personal record of artist-life in the Italy of the Renaissance, so are the "Mémoires" invaluable as a personal record of the works and ways of musicians in the Paris of the Romantic revival. Berlioz is revealed in them as one of the most commanding and original figures in the great movement in which he had the honour to bear a part. He is of the race of the giants. He is the musician of 1830, as Delacroix is the painter; and his work is as typical and as significant as the "Massacre de Scio" and the "Marino Faliero."

His eccentricities and extravagances were not, as with so many others, the effects of imitation; they were innate in him. He was born, as he says of himself, "à ne jamais agir comme tout le monde,

à prendre la vie et l'académie à contrepoin." The son of a country doctor, he began by preferring Gluck and Virgil to Cabanis and Muriel. At twelve he fell madly in love, and at nineteen he came to Paris to study surgery, when however he soon fell to reading *Alceste* and *Armide*. "Je lus et relus," he says, "les partitions de Gluck; je les copiai, je les appris par cœur; elles me firent perdre le sommeil, oublier le manger et le boire; j'en délirai. Et le jour où, après une anxieuse attente, il me fut enfin permis d'entendre *Iphigénie en Tauride*, je jurai, en sortant de l'Opéra, que malgré père, mère, oncles, tantes, grands-parents, et amis, je serais musicien." He kept his oath; and after studying for some time with Lesueur, the author of *Les Bérécés*, and writing a mass, an opera, and a grand dramatic scena for voice and orchestra, all of which he carefully destroyed, he entered the Conservatoire, where Reicha taught him counterpoint, and where he made a mortal foe of Cherubini. His father cut off the supplies; but he supported himself by singing in the chorus at a minor theatre. His mother bestowed her malediction upon him; but he went on working harder than ever. He failed to win the favour of his masters; his works were condemned as monstrosities; he was beaten time after time by nobodies of the purest water; and it was not until he was nearly twenty-seven years old that he won the *prix de Rome*, and could leave school. Meanwhile, however, his education, which was in great measure his own work, had been steadily advancing. At first his idols were Spontini and Gluck. Of Mozart he thought as of some one Italianate and ruined. His aversion was Rossini. "Je me suis alors demandé plus d'une fois," he says, "comment je pourrais m'y prendre pour miner le Théâtre-Italien, et le faire sauter un soir de représentation, avec toute sa population rossinienne." An author who made a great impression upon him was Byron, to whose influence is owing the *Harold en Italie*. The *Faust* translation of Gérard de Nerval inspired him with an idea which afterwards took shape in the *Damnation*. He was introduced, through one of the arrangements of Castil-Blaze, to the art of Weber, and it became one of the main influences of his life. Shakespeare, revealed to him by the acting of Macready and Miss Smithson—whom he presently married—in *Hamlet* and in *Romeo and Juliet*, almost killed him. "Shakespeare," he says, "en tombant ainsi sur moi à l'improviste, me foudroya. Son éclair, en m'ouvrant le ciel de l'art avec un fracas sublime, m'en illumina les plus lointaines profondeurs. Je reconnus la vraie grandeur, la vraie beauté, la vraie vérité dramatique. . . . Je vis, je compris, je sentis que j'étais vivant, qu'il fallait me lever et marcher." For a long time he could neither eat nor sleep, he could neither read nor work—"La seconde avait été trop forte, et je fus longtemps à me remettre." A similar effect was produced upon him by the discovery of Beethoven, for whom, from first to last, his admiration was boundless. To Berlioz that mighty master was "a king of kings"; his greater sonatas "serviront pour l'échelle métrique pour mesurer le développement de notre intelligence musicale"; he is "a Throne, a Domination, a Power," a Titan, a demigod. M. Legouvé says of Berlioz that he had but two books, Virgil and Shakespeare, and that these two he knew by heart. In the same way, it may be said of him that, with a great regard for Weber, he recognized the sovereignty of but two musicians, Gluck and Beethoven. It must be acknowledged that his taste was right, and such as may become a great artist.

His life was extraordinarily full and varied. He suffered cruelly and enjoyed greatly; his failures were hardly less complete than his successes. Abroad he was everywhere received with delight and with applause. In Paris, "la ville du monde où l'on aime le moins la musique, et où l'on fait le plus d'opéras comiques," himself and his music were for long years unpopular. He had many enemies, of all sorts and sizes; and he deserved them all. He was a distinguished writer as well as a great musician; he had plenty to say, and he knew how to say it; and in the columns of the *Débats* he held his own against all comers. He was bold, ardent, the possessor of an admirable style, and rich in wit, sense, and fun. There is not a page of his work, whether playful or serious, but bears the imprint of his personality and has its peculiar interest. Not the least curious and suggestive of his remarks are those in which his own compositions are in question. Heine, in a well-known passage, compared him to "an eagle-sized lark," to "a colossal nightingale," and went on to say that to him the music of Berlioz had in it "something primeval, if not antediluvian," and always made him think of mammoths and giant saurians, of Babylon the Great, and the wonders of Nineveh, and the hanging gardens of Semiramis. Berlioz repeats the comparison, apparently with some complacency, but is not slow to take exception to Heine's conclusion that he has "not much melody and no nuivété at all," and to remind the poet that he is speaking out of the depths of ignorance. He has written a good deal of so-called "architectural music," it is true—as, for instance, the *Symphonie Funèbre et Triomphale*, with its "sonnerie archangélique, simple mais noble, empanachée, armée, se levant triomphalement, retentissante, immense, annonçant à la terre et au ciel l'ouverture des portes de l'émpyrée," as the *Requiem*, with its colossal "Lacrymosa," its tremendous "Dies Ira"; as the *Symphonie Fantastique*, with its terrible "Sabbat" and its nightmare "Marche au Supplice"; as the *Te Deum*, "dont le finale est sans nul doute ce que j'ai produit de plus grandiose." But these things form but a part of his work, and, to be rightly judged, he must be considered as the composer of *Bénédict et Béatrice* and *L'Enfance du Christ*, of *Harold en Italie* and the *Troïens*, and the *Romeo et Juliette* as

well. Of late a reaction in his favour has set in, and we have been so fortunate as to hear some of the larger and the more important of these works, their enormous difficulty and complexity notwithstanding. Mr. Hallé has succeeded brilliantly with the *Damnation de Faust*; and the production of the *Enfance du Christ* is eagerly expected.

As regards the *Damnation*, Berlioz seems to have set no great store by it. He wrote it, words and music, with great rapidity; much of it in Paris, "chez moi, au café, au jardin des Tuileries, et jusque sur une borne du boulevard du Temple"; much of it, by rail and road, in steamboats and in taverns, during a journey through Bohemia and Hungary. The "Rakocsky March," written in a single night at Vienna, was first given at Pesth, to which city, so great was the excitement it created, Berlioz had to present the original score. The introduction, "Le vieil hiver," was made in the inn at Passau, the "Bords de l'Elbe" scene at Vienna; the "Ronde des Paysans" was jotted down at Breslau by the light of a shop-window; the "Remonte au Ciel" brought the author out of his bed at Pesth at midnight, and the "Jam nox stellata" was written at Breslau. With regard to this last, Berlioz relates that, at Moscow, authority was pleased to consider the song improper, and obliged him to pretend to suppress it, and that a Dresden critic, who also considered his Mephistopheles as a libel on the reputation of the excellent fiend, held it for an abominable slander on the morals of the German student, who was, he said, incapable of any such wickedness as is hymned in it. The *Damnation*, which was produced in 1846, was a complete failure; it was played but twice, and then to empty houses; and Berlioz, who was well-nigh ruined, swore solemnly that never while he lived would he write for the Parisians more. Here, in London, it has been prodigiously successful; in Paris, revived at the Opéra by M. Colonne, it was played many times in succession to overflowing houses.

THE MONASTIC SCRIPTORIUM.

SUETONIUS relates that Julius Caesar was the first to send letters to the Senate written on each page and folded into leaves for preservation. We are not sure that this is the earliest specific mention of the present form of book; but, if Julius was the first to supersede the troublesome roll by the bound volume, he deserves a bust in every library. The latter is a form that has received no improvement, and it is one which it seems impossible to change for the better. The unwinding of a roll and the opening of a book were processes of such different degrees of readiness that no other innovation of equal advantage to the reader was made until the small Latin letter was brought into use by the monks, and took the place of the uncial character, of which it is a modification. The older MSS. were written in capitals, without spaces or points of division in the lines, the whole running continuously as one word. The painful inconvenience of this arrangement makes it strange that the small letter should not have been generally adopted before the ninth century, though it had been introduced at least two centuries before. In this character the Psalter of Alfred the Great, which Astle, in his *History of Writing*, asserted to be in his library, was written. Even at that time the *i* had not received the dot above it, which Mabillon says was not to be found in MSS. before the thirteenth century; one of the earliest books in which the complete *i* occurs being Henry Justellus's MS. of the Gallican version of the Bible, written in 1294. Caesar's *Libellus Memorialis* we may assume to have been no masterpiece of art, being simply official documents executed with despatch. Though Ovid speaks of a rubricated title, or rather of the absence of one ("Nec titulus minio, nec cedro charta notetur," *Trist.* Eleg. i.), the earliest mention, according to Mr. M. D. Wyatt, of an illuminated book refers to a copy of the works of Homer, written in gold upon purple vellum, which Julius Capitolinus describes, in his Life of Maximinus the younger, to have been presented to that Emperor by his mother. The practice, however, of adding figures of silver and gold, crimson and purple to the pages of a MS., was chiefly the growth of a period when literature had become religious, and when a belief in the environment of saintly presences undreamed of in Roman philosophy had lent a new inspiration to the artist's work. Whether the rude art of the Catacombs gave rise to the maturer design and gorgeous ornamentation of the mediæval misal has hardly been determined, the influences of the Byzantine spirit of illustration having been thought to be more distinctly traceable in the artist craft of the monastic scriptorium than in the pictorial symbolism of underground Rome. A comparison, however, of some of the richest of the wall-paintings in the Catacombs, as reproduced in De Rossi's *Roma Sotterranea*, with the miniatures in Westwood's *Paleographia Sacra*, would show that the same cloud of witnesses which thronged the imagination of the early Christians in the seclusion of sepulchral Rome directed the hand of the mediæval monk, and suggested the like pictorial devices. In any case, his work was wrought with the most painful diligence; his book was written and enriched with a feeling that in what he was doing he helped towards his own salvation. "Whosoever shall read and understand this book, pray for the soul of me, the writer," would hardly be subscribed to a volume that had been carelessly transcribed or poorly executed. According to the lore of our Protestant boyhood, the monasteries, indeed, were the very castles

of indolence—an opinion that generally becomes modified on more exact and candid examination. To the busy man of the world contemplation is idleness, and the quiet routine of writing would seem but languid activity. But, inasmuch as the only centres of enlightenment in the Dark Ages were the scriptoria of the abbey, the labours of the monastic scribes ought, to a scholarly estimation, alone to be sufficient to make up for the withdrawal of a numerous section of men from the ordinary business of mankind. Though the triumphal march of literature began with the invention of printing, the materials of the triumph had been provided by the cloistral transcribers, who, by their preservation of the thoughts of the Hebrew, Greek, and Latin writers, supplied the chief “copy” for the compositor. It might seem idle to compare a great modern printing-office and its rapid productiveness with the slow manual efforts of the cloister to multiply copies of books; yet a fair consideration of what was produced by the latter would show that, though the feverish haste of modern execution—however consistent with hurrying modes of living—had no likeness in the past, yet the true human feeling which finds utterance in each page of a lovingly executed MS. has a charm that no mechanically produced volume can supply. If the only rays that we had received from the Dark Ages had been reflected from the illuminated MSS. of the abbey, we should have inherited so priceless a literature that its existence would alone be sufficient to invalidate the charge of drowsy inertness against the religious fraternities.

It is not always that we can point out the scriptorium in the architectural construction of a monastery. We must not imagine a spacious apartment like the refectory or the dormitory, commodious enough for the whole body of resident monks. All the brethren were not engaged in copying, nor in registering passing events; nor were the writing and illumination always done in a single large room. It sometimes happened that the work of transcription and historical compilation was effected in separate cells, or “carols,” which, as we shall see, were arranged in the cloistral walls, or incorporated with the monastic buildings. The word *scriptorium*, indeed, was not invariably a strictly defined term, being used not only for a large or a small chamber devoted to writing, but for cells or small rooms; and sometimes it was applied to larger apartments which, having no other particular name or use, were, as Dr. Maitland remarks, called *scriptoria*, even when not actually used, or specially intended, for the business of writing. Thus we are told that Arnold, Abbot of Villars in Brabant, when he forsook office (c. 1250) occupied a scriptorium, where he lived as a private person in his own apartment. One of his successors, Jacobus, who became abbot in 1276, attached similar cells to the outside of the calefactory, and somewhat later two others were added to the sacristan's house. Among the Cistercians the scriptorium was sometimes a private cell for study or recreation, and among the statutes, A.D. 1278, it is required “that monks to whom scriptoria are allowed *studendum vel recreandum* are not to remain in these apartments at times when they are required to be in the cloister.” Properly, however, and in the great abbey, the scriptorium was a large chamber, duly consecrated, where as many as twelve, or even twenty, persons were employed in copying and illuminating the sacred scriptures, service-books, and legends of saints, besides noting music and giving much attention to profane literature. The historiographer usually had his private study away from the other scribes. Estates were often devoted to the maintenance of the scriptorium; that at St. Edmundsbury was endowed with two mills, which were a considerable source of revenue; and in 1171 the tithes of a rectory were given to the cathedral convent of St. Swithin, Winchester, *ad libros transcribendos*. In like manner Nigel, A.D. 1160, appropriated two churches to the monks of Ely, *ad libros faciendos*. One of the works produced at St. Edmundsbury was Lydgate's *Boke of the Sege of Troy*, an original copy of which, written and illuminated by the hand of *Dawn John Lydgate, monk of Bery, atte excitacion and steryng of the moost worthi and myghty Prynce, Kyng Henry the Fyfthe*, we observe by a catalogue before us to be at the present moment offered by one of the chief London booksellers at the price of 1,720*l*. It is pleasant, by the way, to hear Lydgate praise his “maister Chaucer,” who “our English gilte with his sawes,” which had been before he says “rude and boisterous,” “far from perfection,” and of “little reputacion.” “God frede,” he adds, was the first to “magnetie and adorne it with his eloquence” and poetry, and therefore, “for my part,” says honest Lydgate, “I will never end

So as I can hym to magnifye
In my wryting playnly till I dye,
And God I pray his soule bryng in joye.”

The scriptorium of St. Alban's Abbey was built by Abbot Paulin, a Norman who caused many books to be transcribed there about the year 1080, Archbishop Lanfranc supplying the works to be copied. It was afterwards rebuilt at the expense of Thomas the thirtieth abbot (1349-96), with the oversight of Thomas de Walsingham, Cantor and Scriptorarius. The labours of the monks of St. Alban's were worthy of the importance of their monastery, the extant chronicles of their compilation affording the richest of all harvests for reapers in the field of English mediæval history. Of the St. Alban's historians Matthew Paris might be called an English Herodotus, for though his labours were grounded on the chronicle of Roger Wendover, who had been a monk of his own abbey, he was the first to connect foreign transactions with the history of his own country. His honesty and simplicity, with his power of dramatic narration, were qualities of style that were perhaps understood by King Henry III., who

ordered him to commemorate a great celebration of the feast of Edward the Confessor, appointing to him a seat near the throne that he might adequately view the scene. Happily, Paris's mental strength did not give way under the strain of his studies, so as to require the severe measures that were applied in the case of one of his brethren, Alexander de Langley, who was driven actually mad by his much learning. Langley was keeper of the Abbot's seal, and, moreover, so elegant a scholar, that he could write a letter to the Pope; but in his raving he showed himself proud and conceited. The Abbot ordered him to the cloister, where he persisted in his vaunting pretensions to superior intellect and scholarship. Much moved by this sad exhibition, his chief cited him to the Chapter-House, where he caused him to be flogged till he was bloody (“*usque ad copiosam sanguinis effusionem flagellari*”), and, being still unhumbled, he sent him to the cell at Bynham. There the unfortunate maniac was retained in solitary confinement and fetters until he died, when he was even buried in his chains (“*compedibus est sepultus*”).

If we wish to see the former scriptoria of the monks, we must look for them in the cloisters of the abbey and of the monastic cathedrals. At Clairvaux there were eight small cells in the lesser cloister appointed for the scribes engaged in copying works for the library, which was, as usual, placed over the chapter-house. Odo, first Abbot of St. Martin's at Tournay, used to exult in the number of writers which the Lord had given him; “for if you had gone into the cloisters, you might in general have seen a dozen young monks sitting on chairs, in perfect silence, writing at well-constructed tables.” All Jerome's Commentaries on the Prophets, all the works of St. Gregory, and everything that he could find of St. Augustine, Ambrose, Isidore, Bede, and the Lord Anselm, then Abbot of Bec and afterwards Archbishop of Canterbury, he caused to be diligently transcribed. Some of these MSS. are believed by Dr. Maitland to be “now the property of my learned friend, Dr. Todd, of Trinity Col., Dublin.” One of them, since sold for 20*l*, is entitled “Gregorialis,” and was compiled by, and is apparently in the handwriting of, Alulfus, who during forty-seven years was the *armarius*, or librarian, of the convent under Odo. In the west walk of the cloisters of the Abbey of St. Werburg, Ohester, are the arched recesses prepared as studies or carols for the monks, the latter name being obtained from their squareness of section (*carrels*, or *quarrels*). These were continued in the south walk, the ruins of them being yet visible. Each is lighted by a transomed window of two bays, while against the church wall, opposite the cells, were *almeries* to contain the books. In the destroyed south walk of Ohester Cathedral were also many carols, and some remain in a fairly perfect condition at the south end of the west walk. In the cloister of Worcester we find similar arrangements, but the most interesting example of the kind in England is in Gloucester Cathedral, formerly the Benedictine Abbey of St. Peter. The fan-traceried vaulting of the cloisters there belongs to the second half of the fourteenth century, and is the earliest and most beautiful in the kingdom. Running below the main windows, in the south ambulatory, is a series of twenty carols, or arched cells, with battlemented cresting, each lighted from the inside of the quadrangle by a small window of two divisions. In these silent retreats the busy copyists pursued their calm and unmolested work, and though wars and rebellions might be distracting the nation, they were no more disturbed by the noise of conflict than by the chirp of the sparrows in their cloister green. Silence, indeed, was an attribute of the scriptorium and cloister, and we may well believe that the scrupulous accuracy with which every letter was formed and connected, could only have happened by the most uninterrupted attention to the process of writing. Charles Lamb indeed says, in his queer way, that the “abbey church of Westminster hath nothing so solemn and spirit-soothing as the naked walls of a Quakers' meeting.” As we find by Elia's confession that the silence of a Friends' meeting was not absolutely unbroken, “some trembling female, generally ancient, now and then rising to lay out a few words which ‘she thought might suit the condition of some present,’” we may still keep to the traditional feeling that cathedral aisles and cloistral shades are as solemn and quiet as a Quakers' meeting-house. “To enjoy one another's want of conversation” was the rule of the writing apartments and carols of the abbey. When a book was wanted by one of the brethren, he made a movement as of turning over the leaves of a volume. To this action he added the sign of a cross if the work needed were a missal; for the gospels he crossed his forehead; for a gradual he made the sign of a cross, and kissed his finger, with other prescriptive motions for other books. When a pagan work was required, he was to use a general sign, and then to scratch his ear like a dog, because infidels may be likened to dogs. Sometimes, however, the copying was done by dictation, one of the transcribers reading aloud while the rest wrote accordingly. “Great pains,” remarks Sir T. Duffus Hardy, “were taken in copying the classics, the Latin Fathers, and all books of scholastic learning, but comparatively little labour seems to have been bestowed on the execution of books relating to national or monastic history, unless they were intended for presents.” It was in fitting continuity to the labours of the scriptoria that some of the earliest printing presses should have been set up within the monasteries. The Abbot of Westminster was one of the first patrons of Caxton, whose printing office was established in the Abbey. The earliest Italian printing press was in the Monastery of St. Scholastica at Subiaco, the productions of which are of singular beauty, and much prized by the collector. In the year 1480 a printing was established at St. Alban's, of which William Wallingford was

then prior. Also, in the next century (1525) a press, was set up at Tavistock, where a monk was the printer.

The Rule of St. Benedict ordained four hours to be daily set apart for reading, but it made no mention of writing as an employment for the monks. The labours of the pen were, however, involved in so much attention to books; and when we consider the vast materials for French and English history which have been provided by the monks, particularly the Benedictines, and add the unpublished MSS. of all kinds in public and in private collections, not forgetting the incalculable waste of the monastic libraries, we may conclude that though, as Cardinal Newman argues, the occupation of writing was but an accident of the monastic life, yet each great abbey, such as Fulda, St. Gall, Gandersheim, Fleury, St. Denis, St. Martin at Tours, and our own St. Alban's, was practically a society of letters, and a centre of public enlightenment.

THE WOODS IN WINTER.

EVERYONE with any feeling for the poetry of nature must be alive to the charm of the woods in spring, when the brown buds are bursting out in a delicate flush of vivid green; when the birds have broken into song and are beginning to busy themselves over their nesting. Or in summer, when the cool shadows of the heavy foliage are a delightful refuge from the glare of noonday, and when, like the lady in *Comus*, we may easily lose ourselves in lanes and alleys green, in dingles, bushy dells, or bosky bowers. Or in autumn, when the splendours of the fading leaves remind you of the plumage of the wings of the pheasants, with the golden and russet tints glowing in the slanting sunbeams. But in winter, many people unfamiliar with the country are inclined to associate the woods with all that is most gloomy and depressing. And they may have their sombre and even forbidding aspects, no doubt, according to the weather in which you may visit them. We should recommend none to go a-wandering there in wet, after a prolonged rainfall. It is labour and sorrow to plunge along the rides, deeply rutted by the wheels of the ponderous wood carts, when you sink over the ankles, or possibly above the knee, in the pools of standing water with their bottoms of tenacious mud. If you leave the path by way of bettering things, you find them still worse. Scrambling up the slippery slopes or descending them throws a heavy strain on the aching back sinews, and the branches are something worse than no protection from the rain, since each breath of the wind brings down a douche bath. The time to enjoy a winter walk in the woods is in a crisp, clear frost, strong enough to crystallize the superabundant moisture that would otherwise exhale in mists and vapours. Now the air is as dry as it is pure; and, though the cold may be severe, you hardly realize that, since the atmosphere is absolutely calm. Away from the paths you might fancy yourself in the solitude of Scandinavian forests, were it not for the sounds from the surrounding country, that remind you cheerfully of the near neighbourhood of man. To these sounds the senses seem preternaturally sharpened. You listen to the tinkle of the sheep-bells, mellowed into soft music by the distance; to the crowing of the cocks at cottages or farmsteadings; to the ring of the horses' hoofs on some iron-bound road far away. Close to you, the sparkling rime crackles at the tread of the feet, and the fallen branches snap under your boots with reports like the explosion of crackers. Nothing can be more delicately graceful than the frostwork on the twigs that interlace themselves overhead against the blue of the sky. The trunks of the tall firs are like slender columns of fretted silver; and, if there has been a recent snowfall, the black boughs of the spruces are weighted down under dazzling canopies. These little wintry bowers may form some sort of refuge for the wild animals that are being driven to hard shifts. If there is anything to spoil the pleasure of the walk, it is the feeling of the suffering that is being endured around you. Although in the light and the comparative warmth of high noon, such animals as you come across seem tolerably lively, yet you fancy you can see that they are in evil case by their ragged coats or staring feathers. The hares are most to be pitied in the circumstances. They may make the best of a miserable business cowering under one of the snow-laden boughs, but they have been forced to shift from their favourite snug forms. As for the rabbits, they have always their burrows for a retreat, since the snow-drift must be deep indeed that blocks these. But both hares and rabbits have been hard pushed for food, as you may gather from the withered twigs they have been gnawing, and from the height to which, standing on their hind legs, they have been barking the more succulent ash stems. It would appear indeed that nature, beneficent as she is in her arrangements, might have done something more to help the ground-game towards getting a livelihood in hard weather. For, as we may tell by the infinite intercrossing of their tracks on the snow, they must wander about in a most purposeless manner; instead of scraping and digging with a resolute purpose down to the grass which might give them some kind of nourishment. But if the game are in difficulties, the vermin are the gainers by that. The weasel running across the path, too earnest after some victim he is scenting to be aware of your presence, is on a hunt that is pretty sure to be successful, as hares or rabbits may be easily surprised. And the fox that by a sensational accident you almost set your foot upon, in a bed of crushed and snow-encumbered bracken, is evidently in tip-top condition. He goes off in an easy canter with

a saucy, devil-may-care air, comfortably done up in his ruddy wrappings of fur, and flourishing his well-tagged brush behind him. He has heard nothing of hounds, horses, or horn, and knows that your disturbing him is purely accidental. He probably passed the bitter evening coiled up luxuriously in his earth, and only emerged to seek his supper by the moonlight, when the exercise kept him agreeably warm. Doubtless he supped to his satisfaction on game, if he did not make a raid on the neighbouring poultry-yards; and if it pleased him to lie up in the bracken to digest the meal, we may be sure that he was not unpleasantly chilled. At this hour there are not very many birds about. Most of them have gathered into the thicker hedges, or gone to seek the sunnier exposures in the open fields to see what they may pick up; or the tamer of them have taken up their temporary quarters in the immediate neighbourhood of houses, where they are keeping soul and body together on the charity or waste of the inmates. But one bird there is, though the most familiar of them all, which will certainly come and keep you company in your wood walk. As you pause to admire some picturesque effect, you hear the confidential twitter of the robin over your shoulder; and there he is appealing to you with down-turned eye as if he hoped you might have a handful of crumbs in your pocket. For the robins, though sociable, are not gregarious, and scatter themselves everywhere through the woods, orchards, and hedgerows. Or it may be a tomtit that has hurried up on hearing your footsteps, and precedes you in the path you are going, in short, jerky flights from branch to branch. Now and then you may hear the harsh croak of the hooded crow winging his clumsy flight overhead, and scanning the cover for anything he may make a prey of, with cruel, keen eyes. Or you are almost startled by a harsh scream or chattering cry, and catch a glimpse of a flash of brilliant colour, as a jay or a magpie shoots across through the trees. Few birds are worse off in the winter, for they must almost renounce their natural diet, casting about for what they can find in the shape of carrion, or anything else. Wood-pigeons are few and far between, even in the woods they most frequent. They have flocked together, and have taken the habit of mingling with the rooks, searching for spots under clumps of trees in the open that may have been laid bare by the drip in a temporary thaw; or they may have even made their way into the gardens, where they are filling their crops with the cabbage-leaves.

But, as you walk on, the character of the woodland is changing. The dry banks dip down towards a hollow, where a brook, winding down a little valley, forms a swamp that leads on to a deep, dark pool. At least, there ought to be a swamp there in ordinary weather, but to-day of course it is so firmly frozen over that the walking is perfectly dry, though elastic. Before reaching it, you follow the course of the brook for a little way. Every now and then a blackbird rises from the spreading thorns that overhang it, or from beneath the bank where that has been hollowed by the current. Where there is black mould under the roots of the thorns, the chances are that the soil is scarcely so hard as elsewhere, and there are insects to be found by the hungry "orange bills." But there are not many signs of life in the willow beds and frozen rushes further on in the swamp; though towards the evening great flocks of redwings and fieldfares will probably be gathering in thither to roost. Silence is brooding over the little pool that lies half-overshadowed by the encircling alders. But, step as softly as you will, you cannot hope to approach it altogether undetected, for the rushes will crackle under your footsteps. There is a plash, succeeded by another and another. It is the water-rats scuttling from the bank to take shelter in their holes. For, though nine-tenths of the pool are frozen over, at the further end the white-sprinkled surface is broken by a black patch, where a spring bubbling up from under the boughs of a gnarled willow has prevented the ice from forming. And it is fortunate for the moorhens, who make the most of it, besides the other creatures that come to quench their thirst.

But though we may wander far and wide through the woods in winter without meeting a human being, they are not altogether or always deserted. You may hear the ringing strokes of the axe, and if, guided by them, you make your way towards the sound, you will find the woodmen at work, felling a strip of copse-wood. They are lopping the stems and shaping them into clean-dressed poles; laying aside the stout side shoots to be woven into hurdles, and stacking the twigs and branches in bundles for fire-wood. In woodland districts, where there is no lack of timber for the backgrounds, there is a wonderful charm in these periodical cuttings. At first sight you may grudge the graceful cover, or wish it had been spared for another spring at least. But it is soon brought home to you, on nearer observation, that the apparent loss will be a gain. The cutting lets in light and air, where before there had been a somewhat dull uniformity of shadow; and it opens up bright peeps into the landscape which till now had been effectually screened. The many-gabled farmhouse comes in picturesquely in the middle distance, with a swelling ridge of down or breezy bit of common skirting the far horizon behind. Then already, looking forward a couple of springs with the eye of imagination, you see the bare brown ground between the ash stoles covered with beds of primroses and cowslips and the purple blush of nodding wild hyacinths. It may be that, instead of cheery voices and echoing axe-blows, you are arrested by the murmur of suppressed voices. The speakers are neither trespassing nor about any other mischief. It is merely the lord of the manor or the lessee of his shootings, who is out with a ferreting party; and the more quietly he sets about his sport, the better his bag will be. They have chosen a secluded spot in a

clearing, where a bank is honeycombed with burrows and bolting-holes. A stalwart figure in velvet boots and gaiters is bending forward on chest and knees. He has set his ear to a hole, to hearken what is going forward underground; for the ferret has been "hanging" unduly, and the sportsmen have been getting impatient. There they stand in waiting attitudes, though the strain of attention is for the moment relaxed. And the sun that glances on the gunbarrels lights up other keepers behind, and ferret boxes and a spade or two with a gamebag, and a heap of dead rabbits, and a couple of eager terriers or spaniels, their heads cocked keenly on one side. It is altogether a lively sporting picture that might supply a spirited subject to a sympathetic artist. Still more picturesque and far more animated is the scene when the hounds have met and are drawing the covert. The frost is gone with the snow; and it is to be hoped that the wind has been drying the ground and clearing away the fog that hung in the bottom. We do not know that the prospects of the day's sport are great, for the woods are rambling and very extensive; and the fox, refusing to be forced into the open, may perseveringly run a ring in them. But to the disinterested onlooker the spectacle is all the more exhilarating on that account, when the rides are filled with groups of horsemen who, on their steeds of grey, brown, and bay, might figure with advantage on the canvas of a Cuyyp; while the brilliant flashes of the scarlet coats light up the surrounding dimness, and the cheery voices and laughter make the woods echo again. Indeed, there are many men whose recollections of the winter woods are even more pleasing than their bright associations with them in the softer seasons.

THE ALKALI ACT.

IN the present state of public business in the House of Commons it is difficult to feel more than a speculative interest in the contents of the Alkali Works Regulation Act. Even with all the advantages of urgency, the Coercion Bill takes its time. When that has been passed the Arms Bill remains, and when that is in turn disposed of, the only result will be to clear the way for the Land Bill. Some spare days must be found or made for Estimates and Supply; the Ballot Act cannot be allowed to expire without some provision for its re-enactment, if not for its amendment; and it will be extremely unfortunate if the Attorney-General is not allowed to deal with corrupt practices while the effect produced by the reports of the Election Commissioners is still fresh. As it is not to be expected that Parliament will sit on into September merely to improve the quality of the air in the neighbourhood of chemical works, it is easy to forecast the fortunes of a Bill which is likely to be opposed with much more zeal than it is supported. It will be a wonder if it gets read a second time in the Commons; it will be a miracle if it is carried through Committees. Under these circumstances, it would have been well if the Government had been content to deal with the subject in a slighter and more provisional fashion. Where the chances of abating existing nuisances are so few, the wiser course would have been to restrict the creation of fresh nuisances and to deal with those already in being at some more convenient because more leisurely season. More good would have been done by a Bill providing that no new works should be opened without the licence of the Local Government Board; and that, even with such licence, they should not be held to create any vested interest as against future legislation. The advantage of these provisions would be that the area of the nuisance which it is the object of such legislation to abate would not be extended in the interval. Without some such precaution each withdrawal of a Noxious Gases Bill is an invitation to those engaged in the production of these gases to do their worst. Parliament is naturally disposed to treat existing nuisances with more tenderness than it shows to nuisances subsequently created; and in the space of a year a good deal can be done in the way of enlarging old works and opening new ones.

The Government have preferred, however, to bring in a Bill which professes to deal with the whole subject, and this has now been read a second time in the House of Lords. Its authors cannot be charged with the sin of ambition. The Bill introduced by the late Government was not a very tremendous measure; but it had quite a vigorous, and even blustering, air by the side of Lord Huntley's modest suggestions. It was proved before the Royal Commission on Noxious Vapours that copper works are quite as injurious both to health and vegetation as alkali works; and in the Bill of 1879 copper works were expressly included. It is true that they were dealt with in a more gentle manner than alkali works. While the latter were subjected to specific regulations, copper works were only to be compelled to prevent the escape of noxious gas when it could be done at a reasonable expense. The reason, no doubt, for this variation was that assigned by the Royal Commissioners for excluding copper works from the scope of their recommendations. To make copper works harmless requires a large outlay, and in the then, and unfortunately still present, state of the copper trade the means of making a large outlay were not forthcoming. We pointed out at the time that, though this might constitute a reason for not bearing hardly upon works already in being, it was no reason at all for allowing new works to be opened upon the same easy conditions. The Alkali Works Regulation Bill gets over all difficulties upon this head by making no mention of copper works. In common with eleven other trades in-

cluded in Mr. Solater Booth's Bill, they are altogether left out of consideration. Lord Midleton pointed out on Tuesday that in thus picking and choosing between trades the Government are perpetuating an injustice which has already given occasion to much complaint. An owner of alkali works is compelled to adopt costly processes for consuming the noxious gases given out in the manufacture, or is subjected to a heavy fine for not adopting them. Can he be expected not to feel angry when he sees that the owner of other works, giving out gases quite as noxious in at least equal abundance, has neither to consume them nor to suffer for not consuming them? Nor does the mischief end with the sense of injustice thus created. The same feeling of hardship extends to the Inspectors who have to watch the alkali works, and to the magistrates who have to deal with the charges brought against their owners. Nobody says, in so many words, "I will have nothing to do with asking for and imposing penalties on one manufacturer for doing what another is allowed not to do," but the desire to adjust the balance is there insensibly, and the effect of it will probably be seen in laxity in the prosecution of offenders, and in leniency in dealing with them when prosecuted. The Archbishop of Canterbury is naturally disturbed at the restricted scope of the Bill, inasmuch as it will seemingly do little or nothing for the inhabitants of Lambeth. Of late years "Doulton ware" has come into fashion, and the demand for it has led to a great enlargement of the potteries which are the special industry of the district. It is one of the many ill consequences of the settlement of rich and poor in different neighbourhoods that the rich do not know what the poor suffer. If Lambeth were made up of alternate palaces and hovels, the inmates of both would be alike inconvenienced by the fumes of the potteries. As it is, the rich live elsewhere and escape, while the poor are forced to remain and suffer.

Lord Kimberley defended the narrowness of the present Bill on the ground that great care must be taken lest, by interference with works from which the poor derived their means of living, these works should be stopped. No doubt this is a part of the question which it is necessary to keep carefully in view. A village deriving its subsistence from works which destroy vegetation and lower the standard of health for some miles round would have just cause to complain if, in its zeal to purify the air, Parliament shut up the works and left the workers destitute. Yet, if the owner is forced to introduce processes into the manufacture which eat up all his profits, the works will probably be destroyed quite as effectually as though they were closed by Act of Parliament. In such a case as this there are two methods of abating the nuisance which may be adopted without running the risk which Lord Kimberley deprecates. In the first place, the ingenuity of inventors may be stimulated by a provision that whenever a process can be discovered by which the noxious gases may be got rid of at a cost which shall not be ruinous to the owner, the Local Government Board may order him to adopt this process. The dislike to incur a large expenditure is only one of the motives which indisposes manufacturers to do the best they can in the way of consuming noxious gases. Dislike to try new experiments is often quite as much the cause of their inaction, and this is not a sentiment with which the Legislature has any reason to deal tenderly. If the Local Government Board was known to be always on the look out for processes sufficiently cheap in their application to be reasonably enforced upon manufacturers, there would be constant inducement held out to inventors to give their minds to the discovery of something that should answer to this description. In the second place, the opening of similar works in places where they have not hitherto existed may be forbidden unless the owners are able to show that no injurious results will follow. The argument that works which give subsistence to a large number of persons must not be closed, lest in trying to save the district from discomfort we land it in destitution, does not apply in this case. When works are opened in a district hitherto unpolluted by noxious gases, the population which is to live by them has still to be brought together. If permission to open them is refused, no one is injured, because the people on whom the injury is to be inflicted are not there to receive it. The only persons who are likely to be affected one way or the other are those who already live in the neighbourhood, and who will almost certainly be anxious to prevent the nuisance from being created.

The controversy between local and central inspection is decided by this Bill in favour of the central authority. The Inspectors are to be appointed by the Local Government Board and paid by the Treasury. A slight concession, however, is made to the local principle by a provision that any sanitary authority applying for an additional Inspector, and undertaking to pay at least one-half of his salary, may have one appointed for its own district. In this way local inspection will be tried under favourable conditions. The ordinary fault of local inspection lies in the indifference of the local authorities. Where these have been found willing to spend money in getting an Inspector all to themselves, they will probably take care to get useful work out of him.

A WEEK ON THE NILE.

I.

THERE are now no fewer than three practicable routes open to the Nile voyager. He may take a Cook's ticket and go up by steamer. He may go to Soot by train and complete the journey by the postal boat, in which case he will have little time for sight-seeing. Or he may go by dahabieh. If, as some say,

the word "dahabieh" means golden, it will be the more correct to characterize this last as the golden route. True, some derive "dahabieh" differently, and refer it to a word signifying travel. The derivation of words in common use by natives and foreigners alike is always a little difficult, and dahabieh suggests "dragoman," a similarly popular and similarly corrupted expression, which it needs little more philological skill than is enjoyed by many travellers to connect with the Hebrew *targum*, and interpret by interpreter. Certain it is that to travel with a dragoman in a dahabieh is the easiest and, in most cases, the pleasantest way of spending a winter or a week that has yet been devised. You carry your house with you. You have your books, your work, your healthful play. If your home party is large enough, you will have no strangers; if not, the presence of one or two is an agreeable variety. The larger boats hold seven or eight people comfortably; and it is, as a general rule, better if you have places to fill up to choose casually any one who is willing to come than to make the party exclusively of friends. Friendship is sometimes sorely tested in a three months' voyage, whereas acquaintanceship often ripens into friendship. The number of dahabiehs which leave Cairo every winter for the First or the Second Cataract is above a hundred, of which fifty per cent. are English, forty per cent. American, and the rest German, an odd French or Italian flag being sometimes seen. Unfortunately, when the Frenchman or Italian does come to Egypt, he makes his presence known and his visit memorable by defacing all the monuments within his reach; and it is seriously proposed this year that all travellers departing from Cairo should be asked to make collections of the names of people who have inscribed them on the ancient sculptures with a view to their publication in the local *Gazette* as a warning to future offenders. But it may be feared that such a course would only cause worse destructions than ever by people emulous of the fame of Erostratus. It is very easy for a sojourner at Cairo to get leave from the leader of a party going up the Nile in a dahabieh to go on board for a few days, if there is a vacant berth, and the dragoman is propitious. The trip should not at the utmost cost more than 1*l.* a day, including the railway fare back to Cairo from whatever point the boat may have reached. The traveller obtains a certain amount of knowledge as to the advantages and drawbacks of the Nile voyage, and comes back wiser, and perhaps sadder—for he wishes he had arranged to go in this fashion all the way.

At first sight the boat presents a very handsome, not to say magnificent, appearance. It is somewhat the shape of an English passenger steamer with a high stern cabin and poop. But in the Nile boat there is no fore cabin, and the half deck comes forward beyond the middle. In front of the door is a small open space on which the dragoman sits in gorgeous apparel and gives his orders to captain and crew alike in a stentorian voice, his words well mingled with such expressions as "ibn kalb," or "ibn khan-seer," son of a dog or a pig, as the case may be. The mast is a little further forward, and is a stout construction some fifteen or twenty feet high, on the top of which, fastened by a kind of leathern bingio, is the yard. This is formed by joining three timbers, until the whole is something like one hundred feet long. The sail is of a single piece, and there is no provision for taking in a reef. On the whole, the effect of the full sail, supplemented by a little sail at the stern, is very fine. A fleet of dahabiehs running "swan's wing" before the wind, with the setting sun imparting a rosy hue to the sails, and the Nile itself shining like gold, is a sight which, once seen, is never to be forgotten. When we enter the saloon we find it a square room with divans at either side, and many windows and mirrors, as well as a skylight. A narrow passage, on either side of which are the sleeping cabins, leads to a second or ladies' saloon, and from it a stern gallery or balcony is reached, which is particularly useful to an artist, if one is on board. Many dahabiehs, however, are without this feature, and on the whole it is more ornamental than useful, as it is too cold when the north wind blows, and we are going up stream, and too hot when we have turned and are coming back with the full blaze into it of the southern sun. The sleeping cabins are often very wide and comfortable, sometimes mere cribs. The windows rattle unceasingly, and are only opened and closed at the risk of pinching your fingers. We have seen other drawbacks to the pleasures of a voyage. One gentleman who in a crowded boat was assigned a bed on the top of a bath, was much annoyed by being treated to a shower-bath in the morning watch. Some boats contain more than the contract number of passengers in the shape of rats and other vermin. There are constant draughts from open windows and doors that will not shut. The rudder creaks with a sound intermediate between a snore and the cry of a dying child. The night, or rather the early morning, is often very cold—so cold, at least, that the bed clothes provided overnight are insufficient, and you rise to find that you have piled upon your feet not only all the contents of your portmanteau, but perhaps the portmanteau itself. Moreover, you have hardly started on the voyage when you find out how much is left behind, and as long as you are in sight of Cairo, which is often for several days, you send messengers for forgotten boxes of biscuits, or to change the tea, or to fetch more blankets, until at last you are too far to send except for something very important; the more so, as your messenger finds it impossible, especially if you have given him a few francs, to return before the next day, if then. On one occasion a messenger despatched to the next town to post and bring back letters, did not return, and after two days another sailor was sent to seek him. He also remained away, and, finally, the dragoman himself proceeded to the town, which was some

ten miles off, and found the two mariners in a coffee-shop listening to the impassioned music of a singing-girl. Such defections are not, however, common, and the men sent out generally return duly to the boat. On the whole, the members of the crew of a Nile boat are a very fine, stalwart, hard-working, and obliging set, and, what is more, so honest and so well behaved, that you may trust them implicitly. The courtly *reis*, or captain, addresses them as "My sons," and they obey his orders, even to the length of plunging into the unknown depths of the dark river on cold nights, when the boat is caught on a sandbank, or has to be towed to a safe anchorage by the shore.

At last we get out of sight of the white mosque of Mohammed Ali on the cliff above Cairo, and are fairly on the voyage, with the wind steady from the north, and the great sail, with its dark blue border and long red pennant, bending gracefully before us. We pass Ikhoda and the Nilometer, the place where, as the dragoman informs us, Pharaoh's daughter found Moses. We pass the great honeycombed hills of Toora, whence the stone for the Pyramids was taken across to Memphis. The site of Memphis is marked by the seemingly endless grove of dark palms on the right, and as the evening wanes the Pyramids on the sandy plateau beyond, turn from yellow to pink, and finally to purple. Those of us who have not travelled that way before are astonished at the number of the Pyramids. "We thought," they say, "there were three and no more, yet from one point it is easy to count a score." This observation probably leads to a lecture on the history and object of pyramids, and if one of the party knows Arabic, he forms a class at once, and so learning is not neglected, though on pleasure we are so determinedly bent. Very few tourists contrive to "do" the Nile without becoming more or less interested in the antiquities and their history, and a fellow-passenger who can read a hieroglyph will have to find the answers to an endless catechism. When we stop for the night dinner is announced, and we reluctantly tear ourselves from the after-glow and the zodiacal light, and the stars with their bright reflections in the river, to sit down to a repast which astonishes the inexperienced voyager, not only by its lavish abundance, but by its superior cookery. The brown Arab cook, with a wretched little mud stove in a sort of box before the mast, will turn out a dinner of eight or nine separate dishes, served perhaps for ten or a dozen people, superior in every way to the dinners on any one of the half-dozen English boats in which we have made the voyage out and home. Egyptian meat is not enticing in itself, but the cooking goes far to redeem it; and we cannot but think what famous food our cook would produce if he had the good English beef and mutton we have so often seen ruined in the galley of an ocean steamer. The dragoman is always inclined to make too much display, and contrives to have a magnificent dessert of fresh and dried fruits and sweetmeats during the whole course of the voyage.

Next morning, perhaps, the wind is contrary, and we are either tied up to the bank or "tracking"—that is, a dozen unhappy sailors are dragging us slowly along, chanting a wild song as they go, and pulling at the rate of perhaps three miles an hour. It is weary work for the men, and almost as weary for the passengers, who, between the English dislike of being dragged by human beings turned into beasts of burden, and the impatience engendered by the slowness of the progress, sometimes find themselves in a very irritable mood. This frame of mind is best relieved by a walk; but to get ashore is not always easy. The simplest way is to take off your boots and wade; but the ladies of the party want to come. The captain shouts to the men to stop, but they are chanting as they swing along, and do not hear him, or think he is urging them to greater efforts. Perhaps, after all, the dragoman condescends to step into the breach, and, calling the cook's boy to his aid, puts the party ashore in a row-boat. But this is an unusual experience; and the chances are that the steersman dashes the dahabieh against the bank with a vehemence which throws the trackers on their faces, and in a moment half of them are asleep on the sand where they fall, and the others have come down to the water's edge, or plunged in boldly, and run out the plank, or carried you ashore. Then a sailor is told off to walk after you with a long pole to keep troublesome people and buffaloes away, and the rest rouse themselves and recommence their chant. You look proudly at the boat. In gliding state the "gilded vessel" goes, her reflection in the still water doubling the imposing impression she makes. The bank is in some places ten or twelve feet above the surface of the water, in others a flat, shelving, sandy shore. Sometimes you can go for miles along what looks like the towing-path of a canal at home. Again, there are peninsulas and capes to be rounded, or the men have to swim across a bay with the rope in their teeth. You seem to carry a little England with you when you are among your own belongings and your own social usages on board; but when you land you realize how even a few miles from Cairo, and a few hundred yards from your dahabieh, you are indeed in a foreign land. But we must reserve our notes of the scenery and the people for another paper.

THE PROPOSED MONETARY CONFERENCE.

M. BARTHELEMY ST-HILAIRE is said to have informed his colleagues in the French Ministry that the United States have agreed to take part in an International Monetary Conference, to be held in Paris next summer, for the purpose

of considering how best a general system of bimetallism can be adopted. It is not yet known, and probably is not yet settled, how the invitations are to be sent out to the other Powers; whether, that is, France alone, or France in conjunction with the United States, will send them. But it seems to be generally expected that Germany, Austria, and Italy will make no objection to be represented; and it is assumed, as a matter of course, that England also will send delegates. We are not quite sure that it would not be the better course for England to decline the invitation. For two entire generations we have now had a currency as nearly perfect as it can be; and it is out of the question, therefore, that we should agree to change it because other nations are less fortunate. It may be objected, and no doubt it is to a certain extent true, that India is intensely interested in the silver question, and that England is a trustee for India. But, although India has, no doubt, suffered from the depreciation of silver, she has not done so in her internal trade. The currency of India itself is perfectly satisfactory. There is no decrease in the purchasing power of silver in India—or, at least, no greater decrease than is often produced by mere changes in the state of credit in a community. And, this being so, it would be the height of unwisdom to tamper with a currency that is so satisfactory for the real purposes for which a currency exists. India has suffered from the depreciation of silver because, having a silver currency, she has incurred obligations in gold, and gold, as compared with silver, has become of enormously greater value. But this is no reason for a change in the Indian currency, and we doubt very strongly whether such a change would in the least diminish the evil. It has been conclusively settled, as the result of the discussions raised by the various proposals of late years made to tamper with the Indian currency, that all such proposals originated in a misconception of the problem to be solved, and are undeserving of consideration by the Indian Government. We may conclude, therefore, as a matter beyond doubt, that neither India nor England will agree to the adoption of bimetallism; and, this being so, it would be the wiser course at once to tell France and the United States that we cannot enter into a discussion for adopting a system which we are perfectly resolved we shall not adopt, and it would be advisable even in the interests of France and the United States themselves. For, if the Conference is to be successful, its object certainly will not be served by the presence of delegates instructed not to agree to the resolutions to be proposed for adoption. But it is generally assumed that it would be discourteous to refuse the invitation; and we suppose, therefore, that English delegates will attend the Conference, and will go there with instructions similar to those delivered to Mr. Goschen and Mr. Hicks Gibbs a couple of years ago.

Nor do the other Powers really need our co-operation in this matter. The depreciation of silver was originated by the decision of Germany to substitute gold for silver as the standard of value when she adopted the wise resolution to abolish the various currencies previously existing, and to introduce one uniform currency for the whole Empire. The unification of the currency was a most wise step, whether regarded from an economic or a political point of view. But the substitution of gold for silver was unwise. Germany is too poor a country to need a metal so dear as gold, and her trade would really be better served by a currency of a cheaper material. The volume of her trade is comparatively small. The transactions themselves are also individually small, and therefore silver would constitute for her a much better standard of value. There is no earthly reason why Germany should not of her own motion, apart altogether from what other Powers may do, decide to go back from gold to silver, while maintaining the unification of her currency. That would be the best course, and it would probably in itself put an end to the depreciation of silver originated by the previous action of Germany. But in the way of doing this there is the false shame which forbids a Government to confess that it has made a grievous and costly mistake in a matter of such moment. And there is the further obstacle that it is generally supposed, because England has a single gold standard, and is the greatest of commercial nations, that, therefore, there must be some peculiar virtue in a gold currency. That is, of course, a mere superstition. A gold currency suits England because she is the greatest of commercial countries and because her transactions are individually of large amount. She needs, therefore, a large coin like a sovereign, as the unit of her calculations; but a country like Germany has no such need, and is better served by a smaller unit. Lastly, there is the fear that, in abandoning gold to England as the sole standard of value, other nations would be giving up to her a great commercial advantage; that, in short, where the best monetary system is, there will follow the best financial business of the world, and that, consequently, England will continue to be the centre of the banking and trade of the world. This, again, is a mere superstition. It is not because England has a gold currency that she is the world's banker, but because she has the greatest available capital, because her banking system is more developed than that of other countries, and because her trade is greater. She does a larger business with every part of the world than any other country does, and consequently she is able to avail herself of her surplus funds in a way that they cannot attempt. But it is very probable, indeed, that the refusal of England to adopt bimetallism will induce other countries, and more particularly the United States, to follow the example, and that, therefore, the Conference will fall to the ground. If so, we are

not sure that any injury will be done to the real interests of any of the countries about to be represented at the Conference. Bimetalism in itself is a mistaken idea, and the non-success of the proposal to adopt bimetalism generally can, therefore, not be regarded by any good economist as a matter for regret. At the same time, if the United States, France, Italy, and Germany wish to adopt bimetalism, no doubt it is wise on their part to come to an agreement as to the proportions which shall be established between gold and silver, and as to the general currency of the coins of the several countries adopting the system within the territories of the others. It was no doubt an advantage to the countries of the Latin Union—France, Italy, Belgium, Switzerland, and Greece—that they had a common money, and that the coin of each circulated freely within the territories of the rest. It would particularly have been an advantage if all had had throughout metallic money. And in the same way it would doubtless be an advantage, if the United States and Germany are to join the Latin Union, that they should arrange the terms on which they are to do so. But it is very doubtful, indeed, apart altogether from the jealousy that will be felt in regard to England, whether Germany will consent to say that the policy she adopted at the end of the Franco-German war was a mistake, and that she has to apply to be admitted within the Union founded by France, and of which France is the head. The United States, France, and the other countries of the Latin Union, however, are bimetallic; and in going into a Conference to settle between them the basis on which bimetalism shall be continued, they are acting rationally and prudently, provided they have made up their minds to maintain bimetalism. At present, as is well known, the bimetallic system is suspended in France and the other countries of the Latin Union, silver being no longer freely coined; while in the United States the relation borne by silver to gold is not the same as it is within the Latin Union. It is not unreasonable, therefore, that each party should desire to come to some agreement with the others as to what relation is to be adopted, and as to whether bimetalism is to be resumed in full force in the future.

It does not appear probable, then, that the proposed Conference will lead to much result. England, as we have been pointing out, cannot agree to a change of her currency; and the other countries will probably be too jealous of England to bind themselves to a system which she rejects, while Germany will hardly like to confess that the great coinage reform which has cost her so much was an extravagant blunder. But it is quite clear all the same that the position of the United States, France, and Germany in regard to their coinage is becoming intolerable. Germany, as we have just been saying, began the mischief. She made a mistake in adopting a standard of value unsuited to her circumstances, and she committed a further mistake in stopping short when success was within her reach, instead of strenuously carrying out the reform which had already cost her very dear. She now has a large gold coinage, with a very considerable silver currency which legally is of the same value as gold, but intrinsically is not so. France, on the other hand, which has been bi-metallic since the Revolution, though still remaining so in theory, in practice has suspended bimetalism. For several years now, no silver has been allowed to be coined, and consequently the French silver pieces maintain their value only because they enjoy a monopoly. As a natural consequence of this state of things, France has been rapidly losing her gold. A few years ago the Bank of France held the greater part of its metallic reserve in gold, and only the smaller part of it in silver. Now its gold reserve has fallen to a little more than 21 millions, while the silver exceeds 50 millions. If she allows things to go on as at present, before very long the whole of her gold will have disappeared, and then she will have been left with silver alone. No doubt France is rich enough to buy back gold, whenever she really makes up her mind to the sacrifice; but, even if she does so, how is she to get rid of the mass of silver which has accumulated in the country? The Bank of France clearly cannot afford the loss which would be entailed upon her were silver to be demonetized by the sale of over fifty millions sterling of that metal, and, therefore, the French Government, whose debt is already great enough, will have to bear the burden. The United States, again, are producers of silver, and it is to their interest, therefore, that the value of silver should be maintained; that they should be able to obtain a good price for so important a commodity. Their settled national policy is to give protection to native industry, and the silver interest has known how to avail itself of this policy, and has compelled the Government to adopt bimetalism, and to pass an Act making compulsory the coinage every year of 4,800,000 of silver. But this silver the people will not take, and it is consequently accumulating in the Treasury vaults. It will be a serious loss to the Government if the Milled Act is repealed, and this silver has to be sold as a depreciated commodity, while we may be sure the silver interest will use all its influence to prevent such a consummation. There is no denying, then, the dilemma in which those three great nations find themselves, and it is very plain that they cannot much longer go on in this way. But, as we have already said, the Conference plan on which they have hit is hardly likely to help them out of their difficulties.

THE THEATRES.

MR. EDWIN BOOTH'S *King Lear* thus far surpasses any performance which he has given to a London audience. It is true that there is no single quality displayed in it of the possession of which he had not before given evidence; but on no former occasion has so much been demanded of him at once, and on no former occasion has his genius been so unflagging. The word we have just used, "genius," is one against the too bounteous use of which we have often protested; and there are few words which lose their value more by being scattered broadcast. If we had hesitated to apply it to Mr. Booth's acting before he had appeared as *Othello* and *King Lear*, we should have hesitated no longer after he had done so. In his rendering of both characters there was apparent that native sense of grandeur and poetry which not even the highest talent can achieve, but the combination of which with all that the highest talent can acquire in the direction of art and artifice may certainly be said to deserve the name of genius. In *Othello*, as we observed, the actor's power on a few occasions seemed to flag; in *King Lear* there are no such occasions. From first to last the character, with its senility, its slowly and surely increasing madness, its overwhelming bursts of passion, its moving tenderness and feebleness, and, underlying and seen through all these, that authority to which Kent makes marked reference, was seized and presented with extraordinary force. So complete are the interest and the illusion that it is only when the play is over that the fine art which rules the storm of passion is apparent, and that such delicate inventive touches as the suggestion to Lear's wandering wits of the troop of horse shod with felt are remembered. The character is of course the more difficult because it begins at such high pressure in the very first scene that any coming tardy off after that scene has been successfully played would be unhappily accented. Nothing could well be finer than Mr. Booth's rage and disappointment with Cordelia, and the half-insane curse which follows them, and throughout the scene his senile yet royal bearing, and that grace and happiness of gesture to which we have on other occasions referred, were marked. Mr. Booth seems to have founded, rightly, as it seems to us, his conception of Lear's attitude at the period of the play's beginning upon the significant speeches interchanged between Regan and Goneril, which are omitted in the stage version:—

GON. You see how full of changes his age is; the observation we have made of it hath not been little; he always loved our sister most, and with what poor judgment he hath now cast her off appears too grossly.

REG. 'Tis the infirmity of his age; yet he hath ever but slenderly known himself.

GON. The best and soundest of his time hath been but rash; then must we look to receive from his age, not alone the imperfections of long-engrafted condition, but, therewithal, the unruly waywardness that infirm and choleric years bring with them.

In *King Lear*'s next scene, with Kent and Oswald, Mr. Booth marks a slight increase in what may be called his "doitedness," and his rising anger with Goneril leads admirably up to the overpowering passion of the well-known speech ending

that she may feel
How sharper than a serpent's tooth it is
To have a thankless child.

In the second act there is intense pathos in his eager welcoming of Regan and the disappointment which quickly follows upon it, finely marked in, amongst other points, the delivery of the words to Kent, "O sir, are you free? Some other time for that," as contrasted with the fury of the subsequent question, "Who put my man i' the stocks?" A striking proof of the excellence of Mr. Booth's performance is found in the fact that the great speech at the end of this act, ending with

No, you unnatural hags,
I will have such revenges on you both,
That all the world shall—I will do such things:—
What they are, yet I know not: but they shall be
The terrors of the earth. You think I'll weep;
No, I'll not weep:—
I have full cause of weeping; but this heart
Shall break into a hundred thousand flaws,
Or ere I'll weep.—O fool! I shall go mad!

is to the full as effective and impressive as the speech already referred to in the former act. The growing madness of the scene on the heath, marked among other things by the fascinated interest with which Lear listens to Poor Tom's babblings, is admirably expressed, and the scene of actual madness is acted with a power and reality in which the truest art on the actor's part avoids any hint of repulsiveness. But Mr. Booth's greatest triumph is perhaps attained in the concluding scenes of the play. His *Othello* had shown that he was not deficient in tenderness, as on some former occasions he had seemed to be; but it hardly prepared one for the overpowering pathos of "For as I am a man, I think this lady, To be my child Cordelia." We have seen no acting more thrilling than Mr. Booth's in this and in the last scene of the tragedy—scenes which none but a great actor could give with the combination of feeling and skill which the words demand. The pathetic confusion and wandering of the speech just referred to, with its sudden gleam of recognition at the end, are matched by the wailing over Cordelia's body, interrupted by, "I kill'd the slave that was a hanging thee." No less touching is Lear's death, with the moments immediately preceding it. Altogether, it would be difficult to speak too highly of a performance which cannot but be the result of close and careful

study, working hand in hand with imagination and passion. It is to be regretted that such a piece of acting is so "dreadfully attended," for the most part, by the other actors concerned. Mr. Ryder's Kent is admirable, and so is Mr. F. Charles's Fool. Mr. Redmund probably has good intentions as Edgar, but gives them expression in a somewhat blatant way. Of the rest of the personages it is best not to speak at all.

It is not unamusing to note the attitude produced in the minds of some critics by the revival of a Shakspearian play which has not been seen for a long time on the English stage except in a bastard Italian version. On this occasion the unfamiliar has become, oddly enough, not so much magnificent as matter for a kind of respectful gibing. It has been discovered that the play contains situations which may perhaps raise or suggest a laugh, and yet, as we all know, it is really a tragedy. What is more odd is that fault has been found with the acting version for its being mutilated and confusing, while at the same time the ruthless length of the play, in spite of the "mutilations," has not given satisfaction. As a matter of fact, Mr. Booth's acting version is far more clear and coherent than is the original play.

A chief feature in the revival at Sadler's Wells, under Miss Isabel Bateman's management, of *Macbeth* is the marked improvement which is to be observed in Mrs. Crowe's Lady Macbeth, a part in which she now seems able to give far more successful expression than she did before to her feeling of the character. Her acting, especially in the scene of meeting with the Thane, was charged with a feeling of the situation, and was marked by singular grace and dignity of gesture. Mr. Warner's Macbeth is a less satisfactory performance. Mr. Vezin's Macduff is given with dignity and impulse. The play is presented with Locke's singing witches, personages who seem to us curiously out of place in it, but whose introduction pleases some of the audience now, as no doubt it did when they were first invented. The manner in which the whole thing is arranged augurs well for the success of the management.

REVIEWS.

MAHAFFY'S DESCARTES.*

THE present demand for readable presentations of the ideas of the great writers, ancient and modern, appears to be almost insatiable. We are having supplied to us just now not only series of light volumes on ancient and on foreign classics and on English men of letters, but also two distinct series of sketches of philosophers. The avowed object of these works is to make the leading thoughts of the writers treated of known to the general reader, and only secondarily to assist the student of philosophy. The publishers of the series which now specially interests us count, they tell us, on a general "growing interest in Philosophy, arising out of the diffusion of Learning and the progress of Science." These works are to tell the reader "who the founders of the chief systems were, and how they dealt with the great questions of the Universe"; after that, it seems, "to give an outline of their lives and characters, to show how the systems were connected with the individualities of the writers," and so on. The series will, it is thought, "thus unfold the History of Modern Philosophy under the light cast on it by the labours of the chief system-builders." The scheme is certainly a bold one. To get at the heart of a philosophic system, to perceive its manifold relations to other systems, and to make all this intelligible and interesting to the "general reader" within the limits of two hundred pages, may safely be said to be no light task. If practicable at all, it can only be so to the hands of a thorough expert, familiar with all the ground to be travelled over, and having the happy art of reshaping the materials which he has made completely his own, so as to give them a form which will at once appeal to the unphilosophic popular intelligence.

The appearance of Professor Mahaffy's volume on Descartes at the head of the series gives one a good opportunity of appreciating the nature of the practical problem to be solved. If anybody is qualified to make philosophy readable even to one who runs, it should be the Professor. He is by no means what the Germans call a pure *Philosoph von Fach*; on the contrary, the chair which he fills at Dublin is devoted to Ancient History. He has written on a number of distinctly popular subjects; for example, Greek social life. And while thus a man of letters, he has tried his hand at popularizing metaphysics by attacking one of the most difficult systems of ancient or modern times, Kant's Critical Philosophy. After this, one would suppose that to make Descartes digestible to the average reader's intellectual stomach would be a mere bagatelle to Professor Mahaffy. Yet, strange to say, instead of having rejoiced to show his powers by lightly taking the leap offered him, he appears rather to have backed, and refused to take it at all, preferring to reach his desired goal by a circuitous road. In other words, the author has talked very little about the philosophy of Descartes, but occupied himself mainly in giving an account of the man, his life, his relations to the Church, to courts, to society, and so on. And, even with respect to Descartes' writings, Professor Mahaffy seems to think that

* *Philosophical Classics for English Readers*. Edited by W. Knight, LL.D. *Descartes*, by J. P. Mahaffy, M.A., &c. Edinburgh and London: Blackwood & Sons. 1880.

it belongs to his purpose to give an account of his work in mathematics, astronomy, optics, and so on, quite as much as in philosophy; at least he gives considerable space to setting forth his achievements in these branches of science. By thus conceiving his subject, the writer has certainly succeeded in making a readable volume. The history of the French *gentilhomme's* friendship with royal ladies, of his coquettings with the Church, and even of his quaint physical conceptions as to the vortices and the pineal gland, have on the face of them a charm which it would be more difficult to extract from the doctrines of innate ideas, of perception, or of logical method as unfolded in the *Règles pour la direction de l'esprit*. But, then, who could have anticipated that the interpreter of Kant to English readers would have cared to lighten his task in this way?

There are several conceivable reasons why Mr. Mahaffy may have preferred to take the course he has taken. He may have shrewdly suspected, or have gathered from his earlier experiences, that the general reader cannot readily be enticed into giving the requisite attention to the mastery of a writer's philosophic conceptions. In other words, he may be sceptical as to the practicability of the plan set forth by the publishers in their prospectus. But, if so, we are left to wonder why he accepted the task of expounding a philosopher at all. Or he may have taken his particular view of the subject because this happens to be more congenial to his mind. This is certainly the more natural supposition, and is moreover borne out by internal evidence. The exposition of the philosophy which, as we have said, occupies but a proportionately small part of the volume, does not read like the work of a mind that has thoroughly saturated itself for the moment with the ideas to be unfolded. On the contrary, the expositor appears to look at the system of Descartes rather from without than from within. He tells us all about the history of the philosopher's doctrines, gives a full and detailed account of his various writings, makes now and again neat little *résumés* of his arguments, and yet never, to our thinking, succeeds in making his ideas intelligible to the modern point of view. When he does attempt to define Descartes' position in relation to modern problems, he seems to us to be anything but helpful.

To give but one instance. What can be made of this? "We can hardly doubt that in its original form his system ought to have established extension on the same basis as thought, being the clear and distinct perception which we have of a quality different from thought. But Descartes' philosophy was the very opposite of what historians of philosophy have described it—it was not a system based on the observation of the facts of consciousness" (p. 150). Whom does Mr. Mahaffy mean by the historians of philosophy? Does he include Kuno Fischer, the first living expounder of Descartes, in the class? Again, if his system is not what these historians represent it as being, how can we be in the state of hardly doubting "that, in its original form," &c.? Anybody who takes this view seems to us totally to misapprehend what Descartes means by intuitive certainty. The criterion of certainty to him is that reflection cannot weaken the conviction by introducing any possible ground of doubt. He found, on a first view of the matter at least, that reflection might throw our persuasion of the existence of external things into a position of unstable equilibrium, whereas it could not even momentarily disturb our conviction of our conscious mental existence. If Descartes had shared common modern views respecting the relation of subject to object, thought to existence, he would, or, to use Mr. Mahaffy's term, he "ought" to, have put the certainty of each on the same level. But then Descartes' system is what it is just because it preceded all the modern discussions about the relation of subject to object in knowledge. Since, moreover, this was the conception of certainty habitually present to Descartes' mind, he did not feel called on to distinguish in an emphatic way between the immediate certainty belonging to self-evident affirmations as the *cogito ergo sum* and the mediate or derivative certainty obtained by simple and clear demonstration. In point of fact, in the *Règles* he uses the word intuition both for the apprehension of self-evident principles and for the recognition of the necessary conclusiveness of a demonstration. Mr. Mahaffy notices this (p. 150), but by his way of referring to it as the overlooking of "a capital distinction" shows that he looks on it simply as a defect in Descartes' method, without appearing to see how it is connected with the cardinal idea and purpose of his philosophy.

Taken, however, in the light of a summary of Descartes' principal writings, Mr. Mahaffy's volume is to be praised for its general clearness and its precision of language in the absence of all technicalities of expression. This is of course saying less than would be said if the writings thus epitomized were those of a technical writer like Kant, since Descartes' own language, if we except, perhaps, parts of the *Règles*, is singularly clear; yet it deserves to be recorded. In some places, too, Mr. Mahaffy has added to the English reader's knowledge of Descartes by references to neglected writings. Thus, the account of his ethical views, taken from letters on the Sovereign Good prepared for the Princess Elizabeth and the Queen of Sweden, is a welcome addition to our knowledge of the father of modern philosophy. Possibly Mr. Mahaffy makes too much of these discourses, which do not give us anything like a system of ethics. Yet they contain valuable points, as, for example, the possibility of regarding the three ancient conceptions of the highest good, pleasure, virtue, and perfection of development, as alike true and reconcilable under a larger conception (p. 191). Mr. Mahaffy's endeavour to bring

into view the less commonly recognized side of Descartes' work deserves all praise. It is only a pity that such good work should be here and there marred now by an over-estimate of Descartes' contributions, now by a strong and inexact statement respecting his relation to other thinkers. For example, what Mr. Mahaffy quotes as "acute psychological remarks on the combination of pleasurable and painful elements in the emotions of the theatre," &c. (pp. 188, 189), will certainly not strike most psychologists as such. They can hardly fail to be reminded by contrast of Hume's penetrating observations on the same subject. Again, when the author asserts (p. 161) that Descartes, in the Sixth Discourse of his *Dioptric*, "lays down explicitly all the arguments and illustrations" with respect to the perception of distance used long afterwards by Berkeley in his *Theory of Vision*, and which the latter dishonourably wishes to pass off as perfectly original, the reader is inclined to suspect a touch of exaggeration. Certainly it is an exaggeration to say that "the metaphysic of Locke and of his English followers down to the present century was essentially anti-Cartesian" (p. 204); and, when the writer goes on to say that this metaphysic was generally, for that reason, "unfruitful and shallow," the reader's confidence in his sobriety of mind is not likely to be re-established. Then Mr. Mahaffy's way of accounting for this shallowness is likely to strike the reader as a little odd. He says that this was due to the fact that metaphysics became divorced from mathematics. By a "remarkable accident," he observes, it happened that "none of the leading English metaphysicians in the seventeenth century were mathematicians." This gave "ignorant people" a chance of talking metaphysics—among others (so it seems) Locke and his followers—"which they could not easily attempt as long as the principles of Descartes prevailed." But, since Mr. Mahaffy tells us only two or three pages before that, even in the full zenith of the Cartesian philosophy, when, therefore, it may be safely said to have "prevailed," not only ignorant writers, but mere talkers in society, including fine "Cartesian ladies," began to learn Cartesianism for social purposes, like card-playing, this remark about ignorant people taking up philosophy because it had become divorced from mathematics is a little perplexing.

Yet an occasional dash of Hibernian warmth and force of utterance is after all not unpleasant in itself, and if one is content to read Mr. Mahaffy's book, not so much to get exact ideas about Descartes' position in the history of philosophy as to contemplate a curious picture of a remarkable man, the presence of this touch of exaggeration now and again will not seem out of place. Our author may be congratulated on having made the picture of Descartes in the midst of his social surroundings, learned, clerical, and fashionable, very complete and vivid. He evidently enjoys setting forth the essentially non-theological and pagan cast of mind of the man, who, in spite of numerous obstacles, skillfully managed for so long to maintain friendly relations with Jesuits and with Protestant clergy. Mr. Mahaffy by no means spares the weaknesses of Descartes, and dwells at some length on his fear of Church disapproval, and on the questionable means which he employed, as for example in dealing with the doctrine of the Eucharist, to avoid the experience of Galileo. Yet, on the whole, the biographer seems to be in sufficient sympathy with the type of character portrayed; as well as with that ideal of gentlemanly "generosity," with its due recognition of the claims of the senses, and of reason, of expediency, and of truth, to which it sought to conform.

ASPHODEL.*

MISS BRADDON is a wise woman, for she knows how to read the signs of the times and to profit by them. Twenty years ago people were more romantic than they are at present, and when Mr. Wilkie Collins published the *Woman in White* it was received with acclamations that showed that he had exactly hit the taste of his age. Miss Braddon followed suit with a series of novels where "life becomes a spasm and history a whizz," of which the most powerful example is *Henry Dunbar*. Now murders and bigamies have ceased to interest, and detectives have been found out. The world has become more self-conscious; and Miss Braddon, quick to see that some change is necessary, gives us the blue china, the Japanese screens, and afternoon teas, that make up so large a portion of modern existence.

The heroine of this new novel is not called Asphodel, as we might have expected, but Daphne. Indeed, the name of Asphodel is only once mentioned in the book, in the statement that it was given to the heroine when a child by a "painter friend of her father's." This hardly seems a sufficient reason for the choice of a title; still, meaningless as it is, it is at least an advance on *Just as I Am*. Daphne is the daughter of Sir Vernon Lawford by his second wife, who leaves him a few years after their marriage. Sir Vernon conceives a bitter dislike to the child, whom he sends from one school to another, and when the reader makes acquaintance with her, she is staying with a governess and a schoolfellow at an inn at Fontainebleau. Daphne is a very erratic young person, and has taken advantage of her governess's sick headache to escape into the forest with the heavy and respectable Martha Dibb, and to bask away the long summer's day. She is always boasting of her indifference to heat, as well she may, for surely no damsel of ordinary sensibi-

* *Asphodel. A Novel.* By the Author of "*Lady Audley's Secret*." 3 vols. London: Maxwell & Co.

littles would have dreamed of appearing on a suffocating June morning in a "blue serge dress lined with scarlet cord up the back," and with scarlet stockings peeping from below it. The only possible excuse for such a costume would have been hair like the raven's wing, but Daphne's locks are of the brightest gold. In this amazing dress she is attempting a comprehensive sketch of the surrounding country, when a voice from behind a rock makes several gratuitous suggestions as to colour. This voice of course belongs to the hero, and, for all the idea we have of his personality, he might as well have remained behind the rock for the rest of the book. By and by, however, he emerges, fraternizes with Daphne, and asks to be allowed to join her picnic. Their meal is scanty and not very inviting, the *pièce de résistance* being half a fowl which "even in its zenith" (what is the zenith of a fowl?) had been a poor specimen of its kind. However, they make the best of it; and, by the time they have finished, matters have advanced so far that the gentleman inquires the lady's name, which she tells him is Poppæa. She is led to do this not from any special admiration of that lady's character, but merely because Poppæa was the last person of whom Daphne had read. In return the hero, whose name we may as well say at once was Gerald Goring, gives her a sketch of his family history, and of the lady to whom he is engaged, though without mentioning either his name or hers. It is, therefore, a great blow to Daphne when a year later he appears at home as the betrothed of her beautiful half sister Madoline (why not Madeline?). The devotion of this pair of sisters is at least as unusual as their constant expression of it. Indeed verbal endearments are lavished on each other in the most unblushing way by all the characters, who never open their mouths without apostrophizing the person to whom they are speaking with some tender epithet beginning with a D. Crushing as beat she can her year-old passion for her future brother-in-law, Daphne takes to athletic pursuits—rowing, billiards, and lawn-tennis—in company with a rejected lover of Madoline's, one Edgar Turchill, owner of a very old and beautiful place in the neighbourhood, of which he speedily longs to make Daphne mistress. Miss Braddon is at her best when she is describing these old Warwickshire halls and pastures, which it is evident she both knows and loves. We are sorry to say she has not succeeded so well with her human beings. Daphne, indeed, with her impulsive, pleasure-loving, yet truthful nature, is on the whole possible enough, and if her language contains an undue amount of the word "awful," she is often amusing in her flippancy. But the others have no individuality at all. Edgar Turchill is a dreary specimen of bucolic worthiness, Madoline is "splendidly null," while Gerald Goring, the man of many talents and more laziness, son of a self-made father and high-born mother, and sent to Eton at fifteen, is no more like a real person than the flowers on Mr. Morris's daisy paper are like real daisies. Miss Braddon has done much better than this. However little we may approve of the heroes of her former novels, at least we know something definite about them, and could describe them if necessary. But we have as little idea of what Mr. Goring is like as people present at a dark *seance* of the shape of the spirit hand that touches their cheek.

Thus far the story is a mere idyl, but with Mr. Goring's arrival it takes a shape which involuntarily challenges comparison with the temptation of Maggie Tulliver. Daphne, too, sees her danger, struggles and tries to avoid it; and, by way of safeguard, accepts the proffered devotion of Edgar Turchill. Gerald Goring, whose marriage has been postponed by the selfishness of Madoline's father, takes refuge in Canada; but, when the warm season comes on, he returns to England, and the two pairs of lovers and Sir Vernou go abroad together on a three months' tour. This tour occupies the whole of the third volume, and is a mixture of Baedeker and the diary of an enthusiastic soul on first leaving England. We are told at what hour they rose, how each person breakfasted, when they neglected to come in for luncheon, and when they did not. The two "supreme" moments that came to them were at Fribourg, listening to the organ and standing on the bridge; and it seems hard that the same place should claim both. At last matters came to a crisis in the woods at Gilon. The blue lake "winks at Daphne like a Titanic eye." Mr. Goring makes his confession in a more mythological way than we should have thought possible, even from the son of a self-made contractor:—

"You are not going to escape me so easily," he said, pale to the lips with strongest feeling. "No; you and I have a long reckoning to settle. What do you think I am made of, that you dare to treat me as you have done for the last month? Am I a dog, to be whistled to your side, to be lured away from love and fealty to another by every trick, and grace, and charm within the compass of woman's art, and then to be dismissed like a dog—sent back to my former owner? You think you can cure me of my folly—cure me by silence and averted looks—that I can forget you and be again the man I was before I loved you. Daphne, you should know me better than that. You have kindled a fire in my blood which you alone can quench. You have steeped me in a poison for which you have the only antidote. Oh! my Cléopâtre! my Cléopâtre! will you refuse the balm that can heal my wounds, the balsam that you alone can bestow?"

Daphne, not seeing how to put things straight, though the man does "look like an old Greek god," goes into the middle of the lake and drowns herself. Of course the end has been obvious all along; when the reader is continually impressed with a young lady's love of water, and it is also hinted that the same young lady has a dark fate hanging over her, he must be stupid indeed if he cannot put two and two together. There does not, however, seem any valid reason for bringing her all the way out to Geneva to drown her, when she was for ever boating on the Avon at

home; and, as her father justly observed before the event, a few feet would be as effectual for the purpose as many thousands. Daphne does her best, however, but, like most self-sacrifices, hers is made in vain. Her sister's marriage is broken off, and the next year Mr. Goring ends a remarkably useless career in an accident on the Matterhorn.

Apart from the character of Daphne, any interest that *Asphodel* may possess lies in the padding; in the pictures of Shakespeare's country, of the level pastures and old manors of that part of the world, in the elaborate meals, and still more elaborate costumes. We have counted no less than twenty-one repasts in the book, set down with a minuteness worthy of a menu at a Lord Mayor's feast, and this without reckoning afternoon teas, which are simply numberless. In the millinery department, too, Miss Braddon has been equally energetic; thirty-seven dresses of all sorts, with gloves and stockings to match, grace the pages of her novel, and will no doubt fire the imagination of the feminine reader. Plain and fancy; ball costumes, most *recherchés*; picnic ditto; plain serge costumes, for rowing wear. We fear that *Asphodel* will seriously injure the sale of *Le Follet* and *Myra's Journal*; and that, as we walk through the street, we shall be able at once to say to our friends, "You have got on a 'Goring suit' or a 'Daphne demi-toilette.'" Even in dressing her heroine Miss Braddon has done her duty, according to latter-day lights. Twenty years ago people would have shuddered at the thought of putting a fair girl into yellow; but, whatever may be her private opinions, Miss Braddon knows too well what is right to think of reserving yellow to the dark-haired, brown-skinned section of humanity. By the way, next time Miss Braddon wishes to drown a heroine, let her choose a less grotesque symptom of despair than this:—"Daphne had been without all appetite, even for her beloved rolls and honey."

PERUVIAN BARK.*

THERE is more in this book than its title would lead us to think. It may fairly be divided into two distinct and separate parts. The first portion deals with the adventures of Mr. Markham and his colleagues on the slopes and ridges of the Andes, where they went to collect the seeds and plants of the chinchona tree in its native wilds. In the second we have a detailed narrative of the introduction of this febrifuge into British India, Ceylon, Jamaica, and Java and Mexico. There are, further, some chapters throwing light on the improvement and cultivation of the caoutchouc tree, on maize, and on cotton. And there is a catalogue of the literature of chinchona in which, in the midst of official reports and medical and botanical essays, we learn that there is a novel extant on the cure of the Countess of Chinchona, written by Mmc. de Genlis, which, if "erroneous in every particular, as far as all the facts are concerned," yet shows how early this subject had attracted general attention. Nor must it be imagined that this "popular" account discards science or descends to the level of the mechanics' institute or the young lady's circulating library. It deals with medical analysis and horticultural details; it could only have been written by one who had studied botany and who possessed an aptitude for the acquisition of foreign languages; and while it avoids egotism and self-assertion, it can scarcely fail to enhance the reputation of the author both in his literary treatment of the subject and as a pioneer of cultivation in the recesses of dense forests deluged with tropical rains.

It is also worthy of note that, although the introduction of the chinchona tree into India had occupied the attention of the Government since 1839, nothing was really done until Lord Dalhousie himself took the matter in hand. People who dream vaguely of that statesman as occupied solely with the overthrow of effete dynasties and the annexation of rich and misgoverned kingdoms, may one day be astonished to learn the number of internal reforms which are due mainly to his prescience. Postal reform, the telegraph, the railway, and other solid measures were begun, and some were begun and finished, in consequence of his exhaustive Minutes. It was not, however, until 1860 that Mr. Markham, under Lord Halifax as Secretary of State, set to work in earnest. Nothing can be more commendable than the pains taken by the author to secure from the public a meed of approbation for his fellow-labourers. To pick the brains of clever subordinates or lieutenants; to appropriate the happy suggestions of colleagues or to look on men as mere inanimate tools; to take the credit of success yourself and to cast adroitly the blame of failure on others; has often been the resource of second-rate administrators, diplomatists, and commanders. Mr. Markham is determined that every one shall get the full credit of his own performances, and he laments pathetically the scantiness of the rewards doled out, or the ungracious refusals experienced at the hands of Government. In truth, everybody in these adventures underwent an enormous deal of physical discomfort, and was exposed to some real dangers. The vast tract productive of chinchona trees was partitioned out as follows. Mr. Markham himself selected the region of the *Calsanya* tree, which is found in Bolivia and in a part of Peru, and in this he was assisted by a gardener, John Weir. To Dr. Spruce, an eminent and practical botanist, were allotted the forests of Ecuador, famous for the species *Succirubra* or red bark.

* *Peruvian Bark: a Popular Account of the Introduction of Chinchona Cultivation into British India.* By Clements R. Markham, C.B., F.R.S. 1860-1880. With Maps and Illustrations. London: John Murray. 1880.

This gentleman was aided by a gardener, Robert Cross, who, with the fervid energy and determination of a Scotchman, endured cold, wet, shipwreck, and fever without ever giving in or losing sight of his main object. Mr. Pritchett went to hunt for grey bark in the forests of Huanuco. And Mr. Leger, who has given his name to one species of the tree, laboured as an independent coadjutor in the forests of Bolivia. For a full account of the journeys performed and the expedients resorted to by these explorers we must refer readers to the book itself. Their experiences of jungle life correspond with those of Mr. Bigg-Wither and Mr. Smith in Brazil. The scenery was occasionally highly picturesque, and fatigue and hunger were forgotten at the sight of passes of surpassing grandeur and beauty. There were snowy peaks, stupendous waterfalls, and clear torrents breaking into masses of foam over huge boulders of granite. At times the route lay over grassy highlands called *perjonales*, dotted with clumps of trees like an English park or chase, while splendid mountain ranges formed the horizon. But these wide views were soon exchanged for a narrow path under enormous forest trees, that shut out the midday sun, and for sticky mud and bamboos that barred progress and needed the axe. While the thermometer never rose to 80°, the explorers were drenched with heavy showers, or chilled with incessant drizzle; the cold at night was trying; hoar frost sparkled on the grass in the morning; and the travellers had to put up with such shelter as was afforded by a rock, a small tent, or a shed never watertight from the first and now half-ruined. Then there were the inevitable plagues of the tropics, such as venomous insects, and especially a fly which raised "blood-red lumps all over the hands and face." At night they were kept awake by heavy storms of thunder and lightning, and we conclude either that the whole party was amply fortified by frequent doses of the very bark for which they had come, or else that Mr. Markham did not think it necessary to expatiate on the inroads made by fevers and agues. Provisions were not abundant, and had to be carried on the backs of native Indians, most of whom distinguished themselves by a fidelity, an endurance of hardship, and an intelligence which would have done credit to a Scotch Highlander. Mr. Markham lays great stress on the merits of the coca-leaf, which on such an expedition surpasses betel, tobacco, or any other stimulant. It grows on a shrub from four to six feet high, planted in dark clay specially prepared for the purpose; and, when rolled into a ball and chewed at the rate of two or three ounces a day, it enables the eater to support a great amount of fatigue, and prevents any difficulty of breathing at high elevations. Its smell is agreeable and aromatic; it cures headaches and rheumatism; and it has, of course, no affinity with cacao or cocoa. To add to these advantages, when used in moderation, it soothes and strengthens, and, unlike opium or alcohol, is not followed by an injurious reaction. It would have been well if Mr. Markham and his colleagues had encountered no obstacles but a treacherous climate and miry paths. On arriving at the region of chinchona they were dismayed by the results of reckless and indiscriminate usage. Some trees had been ruthlessly felled. Others had been stripped of all their bark and left standing. The slopes of hills had been cleared of every tree and shrub by annual fires. In fact, Peruvians and Bolivians had used the bounties of nature with more than the average prodigality of Asiatics; and the process of denudation was helped, instead of being hindered, by meddling and ridiculous legislation. To this improvident wastefulness was added an absurd prejudice against such harmless, or more truly such philanthropic, projects as those of the author. Fortunately Mr. Markham had provided himself with recommendations in high places procured through the Foreign Office. But when were passports and Presidential recommendations proof against the obstruction of municipal *Juntas* and the stupidity of pompous and bigoted Alcaldes? One of these noisy obstructionists was most appropriately named Bobadilla; and how Mr. Markham had to write, explain, and expostulate, and eventually to get to the port of embarkation by forced marches, carrying off his cuttings and his seeds in triumph, is all very happily and pointedly told.

Readers not hitherto versed in the literature of the chinchona tree might be puzzled with the elaborate catalogue compiled by scientific writers with both *stirpes* and *capita*. The products of the trees are further calculated to perplex. Besides the common term quinine, we are told of chinchonine, quinidine, chinchonidine, quinaimine, quinoval, and even a quinetum. About the exact difference between these substances, their qualities, solubility, and uses, the pages afford ample information. But, without going into a classification not yet finally settled, we may state that, for all essential purposes, the quinine region may be divided into five sections. Peru and Bolivia produce the *Calisaya*, with the yellow bark. Huanuco has grey bark of three sorts. The Loxa region, near Quito, gives the crown bark known as *officinalis*. The *Succirubra* or red bark, comes from the region of Lima; and the Columbian bark from Pitayo and Onaqueta. The tree itself is tall and stately, with green leaves crossed by crimson veins and with clusters of flowers, roseate, crimson, or white; and it gives forth a delicious aromatic fragrance. When crowded together the trees shoot up to a great height, and have tufts at their summits but no lower branches.

It would have been highly disheartening if, after evading foolish juntas, senseless alcaldes, and red-faced Manuels, and risking life and health in the slopes of the Andes, the author had not been able to conclude his work with the announcement of its complete success. All dangers were not over when Callao or Panama was

reached. There was the journey to England across the Atlantic, the heat of the Red Sea, and the perils of the Indian Ocean. Every difficulty was, however, surmounted by careful packing of the seeds, and by enclosing the plants in what are termed Wardian cases, on the plan adopted by Mr. Fortune, who used them in 1849 for the conveyance of tea to India; and when the "horrors of the middle passage" had done no injury, there was need of much care and discrimination in the selection of sites as nurseries and plantations. The Neilgherries were fortunately chosen for the first experiment, as in point of height, moisture, and atmospheric peculiarities, they bear the closest resemblance to the birthplace of the tree. And at the head of the plantation there was the late Mr. M'Ivor, then or since the ablest arboriculturist in India. The experiment began in 1861, and it was soon perceived that the plants required moderate protection at first, and then plenty of light and air. Afterwards two plantations sprang up at Dodabetta and Nedivattam, and in a general way we may conclude that *Succirubra* flourishes better and yields a larger portion of alkaloids in India than the *Calisaya* or perhaps any other variety. *Officinalis* does well on the higher elevations; and the grey bark from the Huanuco forests has been growing in vigour and productiveness. At first every effort was directed to the judicious selection of sites, the distribution of seed and cuttings, and the propagation of the species beyond the possibility of extinction and failure. Private speculation came to aid public enterprise; and under Lord Canning's rules for the grant of waste lands to enterprising merchants, some fifty private gardens were laid out. So rapid was the progress that trees so planted began to yield seeds in 1866, and by 1870 the time came for reaping the harvest. One obvious way of treating the plants was coppicing, as is done with birch, hazel, and ash in our own woods. After eight years the young trees were cut and the stumps were left to send out new shoots. But Mr. M'Ivor hit on a plan of cutting the bark in ribbons from the standing tree, leaving intervals untouched, and covering the stripped portions with moss so as to exclude light and air. It was found that the bark was renewed, and alkaloids were secreted in the portions so treated. At the end of some months the bark left on the tree was removed, and the bare spaces were similarly covered with moss; and as the tree grows this alternate process appears likely to go on indefinitely. Other experiments were made in crossing one species with another, and there can be little doubt that, under skilful management, fresh experiments may result in wider and more lucrative results. It is shown already that trees have been barked three, four, and six times, and that each tree can be made to yield 3 lbs. of bark.

Success near Ootacamund has led to attempts on the Palnai and the Annamali Hills in the Madras Presidency, where there are spots of different altitudes between 3,000 and 7,000 feet. A beginning has been made in the native State of Travancore, and in the hills of the Tinnevely district, and on the Shevaroy in Salem. In the Wynnad, hitherto known as a successful field for coffee-planters, the chinchona-tree has been naturalized, and there seems no reason why it should not be introduced into Coorg. If the Mahabeshwar Hills have been unsuitable owing to a climate which alternates between extreme dryness and excessive rainfall, a fair start has been made at a place called Rungbi, some twelve miles from the hill-station of Darjeeling; and, not content with benefiting British India, Mr. Markham has furthered the acclimatization of chinchona in Ceylon and in the Blue Mountains of Jamaica. Foreign countries have been invited to form chinchona plantations. In spite of revolution and bloodshed, the *Succirubra* and the *Officinalis* have taken root in Mexico; and, in spite of mistakes, there are now more than a million and a half of plants in the Dutch dependency of Java. In short, the success of an experiment begun just twenty years ago, is now placed beyond doubt, mischance, or cavil.

The importance of an adequate supply of this valuable medicine always at hand, independent of interruption from wars, revolution, and short-sighted legislation in South America, cannot be overestimated. Many an English magistrate and English soldier has owed his life to quinine. In Bengal it is familiar to the natives as *quinyan*, and we have rarely found the smallest objection made to it on the score of caste when dispensed by English hands. A plentiful supply of the unadulterated article might be the means of checking, in some measure, the ravages of the epidemic now known as the Burdwan fever. To Englishmen sent to punish Looshais or Nagas on the Eastern frontier, and to sportsmen or explorers as a prophylactic, quinine is as essential a part of their equipment as a waterproof coverlet or a single-poled tent. Whether quinine will ever be manufactured on such an extensive and profitable scale as to take the place of opium in China may fairly be doubted. But the very last report from India shows that the plantations of Government are thriving; that a large distribution of plants to the public is still going on; that the crop raised in the Neilgherries alone was 114,000 lbs., some of which was exported to England; and that, after due provision for establishments, collection, buildings, roads, and repairs, there was a clear net profit on the transaction of some 32,000*l*. We cannot follow Mr. Markham into his ingenious suggestions for the cultivation of the *Ficus elastica* which produces indiarubber, or for the improvement of Indian cotton by a supply from Peru; nor can we speculate whether sugar could be extracted from stalks of maize. The author may rest assured that his name will ever be honourably associated with the acclimatization in India of one of the most invaluable medicines ever dispensed to a fever-stricken popu-

lation, whether by civil surgeons and inspectors of the regular medical service, or by civil magistrates, compelled by the exigencies of their position to appear before the native community in the part of *Le Médecin malgré lui*.

LLOYD'S NORTH AFRICAN CHURCH.

THE great Church of the Carthaginian Primacy is a noble subject for the ecclesiastical historian. There is a dramatic completeness in its story. It gave early promise of a magnificently productive and influential life, and its end was singularly tragic; while it brought in turn upon the scene three epoch-making *dramatis personæ* in the three characteristic Latin Africans, Tertullian, Cyprian, and Augustine. Through them the Church of pro-consular Africa has permanently affected all Western Christendom, Protestant as well as Roman Catholic, sects as well as churches, the New World as well as the Old World. The African Tertullian Latinized the theological and ecclesiastical language of the West. In all controversies on the constitution of the Church, Westerners have appealed to the African Cyprian. No one has contributed so much to Western theology as the African Augustine. "Africa, not Rome," as Dean Milman has aptly said, "gave birth to Latin Christianity."

Mr. Lloyd is very far indeed from being an original pioneer or a road-maker. But he can claim the honourable distinction of being the first Englishman who has attempted to write the history of the Church of North-Western Africa as an organic whole, from the earliest glimpses of it in the writings of Tertullian until its extinction by the Saracen invaders. His guides are not always the very best or most expert; he seems to have made the acquaintance of only one amongst the recognized specialists; but those upon whom he has relied are usually good and fairly safe; the chief of them are either English, like Gibbon and Canon Robertson, or else have become English-speaking, like the three great North African Fathers and the Church historians Fleury and Neander, by the intermediation of translators. He has taken laudable pains with the secular topography of his subject, not omitting to use recent sources, both solid and light, such as Mr. Bosworth Smith's *Carthage and the Carthaginians*, and Miss Séguin's chatty book about Algiers. His ecclesiastical topography is very loose and thin, at which we are the more surprised because the only specialist writer whom he has used, the Jesuit Stefano Antonio Morcelli, is here specially diffuse, and has placed at the end of his last volume three large maps of the distribution of the episcopal sees in the various provinces. The fact that Morcelli was a Jesuit, and dedicated his *Africana Christiana* to a Pope, naturally suggests the presumption that he is likely to be an unsafe guide on one of the critical points in the history of the Church of Carthage—its relations with the Church of Rome during the primacy of Cyprian and the primacy of Aurelius. Michael Leydekker, Professor of Theology at Utrecht, in his *Historia Ecclesiæ Africane Illustrata*, published at Utrecht in 1690, deals largely with this point amongst others. His huge book, indeed, is not a history, but a wearisome mass of dissertations about various matters connected with the Church of Carthage. In 1622 M. A. Capellus published a special dissertation, *De Appellationibus Ecclesiæ Africane ad Romanam sedem*, which was republished in Rome a century later. The matter has been handled more recently by Dr. Reinkens, the German Old Catholic Bishop. Mr. Lloyd does not seem to know either of these writers, nor does he cite Morcelli in his account of the relations between Stephen of Rome and Cyprian, and between Zosimus of Rome and Aurelius. In the latter case he contents himself wholly with Fleury and Robertson. We often wish that he had stuck more closely to Morcelli; it might have given greater clearness to his book. Morcelli was no historian in the modern conception of the word; he was a hard and dry annalist, after the fashion of the mediæval chroniclers, and he has thus put together an admirable framework for the modern historian to work upon. The mere conspectus of the annals of the African Church, from A.D. 197 to A.D. 670, which he has prefixed to his first volume, occupies sixty folio columns. The whole remainder of Morcelli's first volume is taken up with a catalogue of the North African sees and lists of the succession in each see where it can be traced, together with a short biography of every bishop of whom any notice is extant. Mr. Lloyd has not even compiled a list of the known Bishops of Carthage. We find no mention of Agrippinus until we reach the age of Cyprian, and then the reference is only accidental. Whether Optatus, who is mentioned as bishop in the Acts of the Passion of SS. Perpetua and Felicitas, or, as Seitz thinks, Agrippinus first held the Carthaginian see, Mr. Lloyd does not attempt to decide. "A Synod at Carthage, under Agrippinus, who was bishop at the end of the second century," says Mr. Lloyd, in his account of St. Cyprian, "had ruled in favour of re-baptism," and he places at the foot of the page the very loose reference "Morcelli, i." St. Cyprian himself referred to this Council in his Epistles. St. Augustine blamed the ruling of this Council, and he and Vincent of Lerins both say that Bishop Agrippinus was the first to introduce the usage of second baptism. The exact date of the important Council which Mr. Lloyd describes indefinitely as "a Synod" has been a matter of controversy until our own day. It was attended, as St. Cyprian told Quintus, a bishop of Mauritania, by the prelates "who governed

the Church of the Lord in Africa and Numidia." Wiltsch calls the first Council of all (in Africa) "the African Council," and places it in 215 or 217. Bishop Hefele thinks that it was probably "the most ancient synod of Latin Africa." He observes that the date cannot be exactly verified, but that it took place "under the reign of Pope Callistus I."—that is to say, between 218 and 222. Morcelli, Mr. Lloyd's authority, places it in 179. Dr. Döllinger has clearly proved from one of the charges brought by Hippolytus against Callistus that the Synod must have been held before the death of the latter.

Mr. Lloyd is usually vague, insecure, and generalizing when he writes of the famous North African Synods. "A Council was held at Hippo in A.D. 393," he says, "under the presidency of Aurelius, Bishop of Carthage, who summoned the Council by Augustine's advice. This was the first of a series of plenary Councils, as they were called, comprising the whole province of Africa in its largest sense. No less than eighteen such Councils were held between the years 393 and 419, in which hardly any point of doctrine or discipline was left untouched." If he had traced the history and work of these African synods, which began nearly a century and a half earlier than 393, or if he had made the succession of the Bishops of Carthage the backbone of his history, the book need have been no longer than it is, but it would have left a more definite and uniform impression upon the readers for whom it is intended. It is a marvel that Mr. Lloyd should have, as he evidently has, some perception of the importance of these Councils, and yet should never have troubled himself to look at Hefele's *Councilsgeschichte*, especially as the two volumes necessary for his purpose have been translated into English. His subject is "the Church" of North Africa. But of the actual concrete Church—the organized congregations of living men and women, who chose the bishops who sat in these Councils, to whom Tertullian ministered, over whom Cyprian and Augustine presided—we get from him next to no glimpse at all. We find, of course, summary biographies of Tertullian, Cyprian, and Augustine; but the life of each is an oft-told story, for the three belong even more conspicuously to universal Church history, and to every section of that history—to the history of dogma, of schism, of heresy, of ecclesiastical constitution—than to the history of their own local church. Mr. Lloyd tells us that Tertullian, in his *Apology*, "has set before us a vivid picture of the Christian society in Africa," and he quotes plentifully from Tertullian and from St. Cyprian's letters; but he seems too often to approach each of those sources secondhand, through the mediation of Blunt *On the Right Use of the Early Fathers*. From the canons of the African Councils he might have derived a rich mass of information about the life, character, and habits of the clergy and laity of the North African congregations; and he might have found some aid from the chapter headed "Mores Christianorum" in the *Primordia Ecclesiæ Africane* of the late erudite Bishop of Zealand, Friedrich Christian Karl Heinrich Muntor, the author of the *Religion der Karthager*, who was an expert and specialist upon Punic archaeology, both before and after the Christianization of Latin North Africa. The canons, like the letters of Cyprian, bear incidental witness to the originally democratic constitution of the Carthaginian Church; and its historian might have shown its development into an aristocracy, and finally into a limited monarchy, and how it was that the Independent, the Presbyterian, and Episcopalian of the seventeenth century each imagined that his own ideal constitution of the visible Church had been more or less reached by the Christian congregations of North Africa. The great Synod of Hippo in 393, to which Mr. Lloyd refers—the "Plenarium totius Africæ Concilium," as it is called by St. Augustine, who was present at the Council—ruled that no one might be ordained unless he had passed the probation or obtained the testimony of the people, a provision which has been gradually attenuated into our modern *si quis*. Even this canon of Aurelius marked a declension from the earlier and fuller statement of the democratic basis of ecclesiastical authority by Cyprian and his fellows in their common letter to the clergy and people of the Churches of Legio, Asturia, and Emerita in Spain. "Plebs ipsa maxime," they said, "habet potestatem vel eligendi dignos sacerdotes, vel indignos recusandi." The student of English history will recollect what a use was made of the precedent of the Church of Carthage and the letters of Cyprian by Marshall, Calamy, and the other Presbyterian authors of the famous "Smectymnus" in their attack upon Archbishop Laud and the Anglican episcopate; while the admiring biographer of their great enemy published his Life of Laud under the title of *Cyprianus Anglicus*. The Puritans were able to cite the authority of the great Council of Hippo in their attacks upon the English drama, one of its canons coupling together, just as they did, "actors and apostates." The traces of the abiding influence of the Church of the Carthaginian primacy upon Western Christendom—Protestant, Anglican, and Roman alike—are innumerable. A chapter indicating some of the signs that this wonderful Church, though dead, yet speaketh, would have formed an instructive and interesting appendix to Mr. Lloyd's book.

Mr. Lloyd often cites Neander, and it is not improbable that his subject and title were suggested by the frequent reference of the German historian to the "Nordafrikanische Kirche" as a distinct ecclesiastical organism. Neander applies the term exclusively, and Mr. Lloyd follows him in applying it exclusively, to the Church of Latin North Africa. Often, like Bishop Muntor, Morcelli, Leydekker, P. A. Sanchez, and M. A. Capellus, he strikes out the qualification "North" and calls it simply the "African Church." Doubtless there was just reason for this nomenclature during the

lifetime of Tertullian and Augustine, and during the session of the great African Councils, although bishops sat in the latter whose sees were outside the province to which the name of Africa was then technically limited. But our modern extension of the name to the entire continent is sure to be uppermost in the minds of the readers of the "Home Library." When the late Dr. Burton of Oxford spoke in his lectures of "the African Church," he meant the Church of North-Eastern Africa, the Church of the Evangelist St. Mark, the Church of Olement of Alexandria and Origen. When Mr. Lloyd uses the same term, he expressly restricts it to the Church of Tertullian and Cyprian, and excludes from it the Church of Olement and Athanasius. Hence the general reader, for whose use alone a popular sketch like Mr. Lloyd's can be intended, may miss the important fact in the evolution of Christendom that the two most wonderful and productive of all the primitive Churches were both located in what he now knows as Africa. The careful Emanuel A. Schelstrate, canon and cantor of Antwerp Cathedral, who crossed swords with our own Stillingfleet, gave to his useful dissertations upon the origin, doctrine, rites, synods, and history of this Church the more exact title *Ecclesia Africana sub Primatu Carthaginiensi*. As Bishop Hefele has indicated, in his article on the African Church in the *Kirchenlexicon* of Wetzer and Welte, the title is the common property of two Churches, if not of three—the Greek-speaking Church of Egypt and Cyrenaica, the Alexandrian patriarchate; the Latin-speaking Church of Proconsular Africa, Numidia, and Mauritania; and, thirdly, the Abyssinian or Ethiopian Church. The Negus Johannes of Abyssinia, or Ethiopia as he prefers to call it, has lately boasted that his own community is the only African Church which has held fast its Christian faith century after century against the successive onslaughts of heathenism and Mohammedanism. One unhappy characteristic was common to both the great divisions of North African Christendom—to the Western Church of Carthage and the Eastern Church of Alexandria. Neither of these magnificent and powerful Churches, so rich in the genius of their teachers and rulers, was ever really a national Church. The Church of Tertullian and St. Augustine was Latin, and not Punic; the Church of Origen and St. Athanasius was Greek, and not Egyptian. Both lands, before they became Christian, as Mr. Maurice has observed, had received a civilization and culture which were foreign to them, and not only foreign, but unnatural. The marvellous triumph of the Mohammedan invasion along the whole of North Africa, from east to west, may perhaps be held to justify the same thinker's conclusion that "the Church had not struck its roots deeply into one land or into the other, that it had not taken hold of those who were the proper inhabitants of the soil, that in the one country it was too purely Greek, in the other far too exclusively Latin." The Abyssinian monarch showed that he possessed some historical consciousness, as well as patriotism, when he told the Catholic and Protestant missionaries a few weeks ago, that he did not want either of them, because the Ethiopians were already Christians, and had held fast their faith under a strain which had destroyed that of more prosperous and civilized peoples.

Mr. Lloyd only once ventures to criticize Neander. The latter agrees with Wiltach, with Seitz (the author of the excellent article "Nordafrikanische Kirche" in Herzog's *Real-Encyclopädie für Protestantische Theologie und Kirche*, which Mr. Lloyd has evidently not seen), with Bishop Munter, and with almost all modern Protestant scholars, in holding the probability of the Roman origin of the African Latin Church. "There is no sure ground for Neander's conjecture," says Mr. Lloyd, and thereupon he jerks out a new conjecture of his own. The most Latin of all Churches may have had an Eastern origin, as he fancies, because, "in facilities of intercourse with the Holy Land, Carthage was not inferior to Rome." If Carthage had obtained her Christianity from the East, it would have come by way of Egypt, through Cyrenaica rather than from the Holy Land. But Hefele, though he regards St. Mark as the Apostle of Cyrenaica as well as of Egypt, does not imagine that he passed further west into Latin Africa. Mr. Lloyd should have remembered Dean Milman's suggestion that an ecclesiastical intercourse between Rome and Carthage was to be expected from their busy commercial intercourse, which, "on account of the corn-trade alone, was probably more regular and rapid than in any other part of the Empire."

"The African Church," says Mr. Lloyd, "reached the culminating point of its history at the Great Council of Carthage in A.D. 418." It would be more true to say that the contemporary events of the Vandal invasion and the death of St. Augustine during the Vandal siege of Hippo, in A.D. 430, mark the political and biographical turning-point in the life of the Church of Latin North Africa. Mr. Lloyd's chapters on the "Vandal Invasion" and "Vandal Persecutions" show that he did not make a very wide literary search before sitting down to compile them. If the Catholics were persecuted after the Vandal conquest, they had persecuted the Donatists before the invasion, and the latter made common cause with the invaders. Here Mr. Lloyd might have profitably used Papenordt's *Geschichte der Vandalischen Herrschaft in Afrika*; but his references in these chapters are solely to Gibbon, Bingham, M. de Sainte-Marie's *La Tunisie Chrétienne*, Fleury, Cardinal Newman's notes on a portion of Fleury, and thrice to Morcelli. Even Salvian's well-known description of the terrible immorality of the clergy and laity of the Carthaginian Church is cursorily cited second-hand from Fleury, and as Fleury omits its most characteristic point, Mr. Lloyd follows him in the omission. Salvian probably exaggerated when he said that it was scarcely possible, after the strictest search,

to find one chaste person in the Carthaginian Church. But such an assertion is of no slight significance for the historian of that Church, when he brings it into connexion with the fact that the North African bishops, after long struggles, had only just succeeded in imposing celibacy upon four orders of the clergy. At the Council of Carthage, in A.D. 401, less than forty years before the Vandal conquest of the city, a canon was passed prohibiting bishops, presbyters, deacons, and subdeacons, from intercourse with their wives, on pain of deposition, adding that the clergy of the other orders were not to be forced to such continence—*nisi maturiori aetate*. The canon was proposed by the renowned Bishop Aurelius. Hefele cites it as Number 4, and omits its inclusion of subdeacons; but it occurs in the *Codex Canonum Ecclesie Africanae* as Number 3, and subjoined as a reason "qui sacra mysteria contractant." The Jesuit annalist Morcelli characteristically traces the catastrophe of the drama of this African Church, "*Afrorum exitus luctuosus*," to the laxity of the bishops of Africa and Libya, who violated the canons by continuing to live with their own wives. Schelstrate takes the same view. As Shakespeare marches the vigorous young Fortinbras across the stage in the last scene of *Hamlet*, to console the audience as far as possible for the death of the protagonist, so Morcelli closes the annals of the dead Church of St. Augustine of Hippo by calling attention to the prosperity of the new Church of St. Augustine of Canterbury. The "*Britanni*" appear to console the Catholic Church for the loss of the "Afri."

EASTERN TOURS.*

WHEN the pilgrims of the middle ages after long absence and great hardships returned from the Holy Land they occasionally gave to the world an account of what they saw, and very precious their modest little discourses are, although sometimes wanting in detail; as, for instance, when the description of Jerusalem is confined to such a sentence as "We here kissed the tree from which the Holy Cross was made, and beheld the stone on which sat the cock who crowed thrice before St. Peter." But, meagre as they are, they incidentally give us valuable information as to distances, the existence of ancient names attaching to certain sites, the appearance of ruins that have since been swept away, and above all they are almost our only sources for such topographical information of the time. The modern pilgrim is a totally different being; he is actuated, no doubt, by a longing to set eyes on the scenes so familiar to him by name, but yet so far off and so intangible; a desire to discover for himself that Jerusalem does really exist, and that the Mount of Olives does not belong to the region whose chronicles are always dated "once upon a time." He may even be stirred by deep and serious motives more akin to those of his mediæval prototype, motives which are far too sacred to be lightly spoken of. But let the reasons that induce him to visit the Holy Land be what they may, one heavy sense of duty oppresses him, making himself anxious and wretched at the time and others afterward inexpressibly sad—he must write a book. In other lands he can lazily admire the freshness and novelty of the life he sees around him, can revel in the beauties of nature and the picturesque. Not so in Palestine. Note-book in hand, he must, like a broker's man, make an inventory of all he sees; he must keep his ears ever on the alert, lest he miss some Scripture name; and he must carefully record the impression made upon him by the first view of each sacred spot. What does it matter to him if the guide-book which he holds in his hand contains the same information, and a vast deal more, much better told? It is not only his duty, but his proud privilege, to check it off and pronounce the guide-book right. What if Brown, in his "Holiday on Holy Hills," or Jones, in his "Se'nnight in Sinai," or Robinson, in his "Saunterings on Sacred Shores," wept the same tears and sang the same hymn as the Haram Area came in sight from Olivet? the public—the public at the local Sunday School or Penny Reading-room—will demand of him an account, and will not abate him one tear-drop or one line of Keble's *Christian Year*. Thus it is that season after season the book-market is flooded with so-called books of Eastern travel, nine-tenths of which are of no real or permanent interest whatever. It is a pity that we cannot have, in a cheap and uniform handy series, all the really useful books on the subject—Stanley, Robinson, Sepp, and others—and "Boycott" authors of the mere tourist class, who add nothing to our knowledge, and seldom even serve to while away an hour with their entertaining style. The first two at least of the books mentioned below belong to this class. Mrs. Sumner's work is a fairly readable account of an ordinary three months' excursion to Egypt and Palestine, begins in the orthodox way with a description of the start from Charing Cross Station, and ends, as is most fit, with a recommendation of the dragoman employed by the party. More than this we cannot say for it. Mr. Weld's book is like the last-mentioned, "only more so"; the heading of chapter ix. will give an exact indication of the style and contents—"Jerusalem and Olivet, The Longing of My Life Fulfilled, a Striking

* *Our Holiday in the East*. By Mrs. George Sumner. London: Harst & Blackett. 1881.

Sacred Palm Lands. By A. G. Weld. London: Longmans, Green, & Co. 1881.

The New Playground; or, Wanderings in Algeria. By A. A. Knox. London: C. Kegan Paul & Co. 1881.

View, The Wailing Place, &c. &c."; it is guide-book seasoned with sentiment throughout; but has the advantage of being in a less pretentious and more convenient form, as well as of having been carefully compared throughout with the recognized authorities on Palestine topography. One phase of the modern Pilgrim's character which we omitted to mention just now is well exemplified in these pages—namely, the curious moral transformation which he too often undergoes while upon his travels; read, for instance, the following:—

We next drove along the Mahmûdiyyeh Canal, to the garden of one of the late Viceroy's daughters. On our way we expressed a wish for some pods of the Lebbek-tree (*Albizia Lebbek* of the West Indies), which is extensively planted along the roadside; so down jumped our tall, little dragoman Hamard, and kicking off his slippers, climbed up the tree in the twinkling of an eye; then tearing down a branch laden with pods, he presented it to us. At the Princess's garden (which was gay with the *Poinsettia pulcherrima*), he was equally free in gathering "hashish," and various plants; and in rooting up a geranium out of one of a row of flower-vases, he broke the vase in two, for which accident he was so far from being sorry that he only swore at the people in charge for its having been so rickety on its base.

We wonder what would be thought of a party of foreign travellers in this country who permitted their servant to act in such a manner in a lady's garden? No wonder that the English are so respected in the East.

Mr. Knox's *The New Playground: or, Wanderings in Algeria*, treats of a less hacknied subject, and, as the author really went in pursuit of health and pleasure, and has occasionally something new to tell us, we must premise that we do not by any means include him in the category of our Modern Pilgrims; indeed, his book forms a most pleasant contrast to those we have described. On the contrary, there is a freshness and unconventional *naïveté* about his style which is absolutely charming, and while he scorns to present his readers with ill-disguised extracts from Murray, he gives them just the amount of useful information which an intending visitor to the country would require. The author declares emphatically that he did not come out in quest of adventures, and, as he remarks, "If I heard that a lion or panther had arrived at Algiers, and was in the habit of taking his usual 'walking exercise' on the 'slopes' of Mustapha Supérieur (where we are now residing), I should instantly gratify a liberal curiosity as to the site of Carthage, which has the advantage of being some way off." His only object was health and quiet, and Algiers certainly would appear to offer greater facilities in these respects than most places on the Mediterranean shores for elderly people and invalids; for there, at least, warm hours in the open air are always to be had. Nor is the distance from London at all deterrent; for Algiers may be reached in three or four days, allowing plenty of time for rest upon the way, and the worst that can be anticipated on the sea passage is a sharp encounter with the mistral. Mr. Knox's account of his own experience of this wind is well worth reading, and the scene and sensations must be painfully familiar to many of our readers. After expressing his apprehensions when he found that it was blowing so furious a gale at Marseilles, and his satisfaction at the smooth way in which they glided through the water as they left the harbour, he says:—

At this moment the *Said* took a five-barred gate—in fact, there may have been six bars—and then playfully threw herself on one side. . . . our berths were across ship (I do not know if that be the nautical term, "athwart" sounds more in the style of the late Captain Marryat), and all I know is that for about twelve hours we were at one moment standing on our heads and were then replaced upon our heels; but oh, the awful moment between the two processes. . . . There was a sound of crockery and of people running. Alas! that was no banquet, no scene of genial hospitality for which they were making preparation. . . . for the rest of the night I remember nothing but the wails of exhausted men and women, who had lost the power of groaning; the long-drawn swish of the seas which we had shipped along the deck; the absurd jangle of the bell above, as the poor ignorant sailors made it out to be two bells or six bells, or as it might happen. What have bells got to do with it? Say it is a hundred bells at once and have done with it, if you can't tell us what o'clock it is in a rational way.

At length he arrived in port and made his first acquaintance with Algerine pirates. In his agitation he had forgotten the Mohammedan profession of faith in Arabic, which he had carefully studied with a view to conciliating the Moslem should he get into trouble—not that he wished to hold out any hope of his immediate conversion, but, as he says, "I should have liked to feel that I was open to fair argument on the subject of Mecca, if they would only leave the umbrellas alone."

One chapter is devoted to the question of Algerine piracy, but not exactly to the wholesale kidnapping of Christians, the permission of which was for centuries the disgrace of civilized Europe. Mr. Knox deals only with the phase of it which he himself met with—to wit, the marauders who lurk about and endeavour to sell a villa to the unwary traveller. We must take it as a sound principle to begin with, that every man against whom you may brush shoulders in Algiers wishes to let you or sell you a villa. The tricks, traps, and dangers of this nefarious traffic are well exposed, and if after reading "*The New Playground*," a visitor to French Africa finds himself the occupant at an exorbitant rent or price of an unwholesome and ill-drained tenement, it is his own fault.

During his stay in Algiers a rather serious fire occurred, burning down the theatre, and threatening the Government-house and neighbouring buildings. An alarm was raised that this was the work of native incendiaries, that a plot was on foot to burn down the town, and at one time the public uneasiness nearly attained the dimensions of a panic; but "the nonsense subsided as it rose.

There was a fire; there had been loss of life; but there was no native conspiracy to burn down the town, and get rid of the French. Enough had been done to gratify the hotel-keepers on the Riviera, but we could not go further." The last sentence is an amusing illustration of the natural tendency one has to identify oneself with the cause of the place at which one may happen to be staying, and to take a lively interest in the local rivalry with a neighbouring town. Like Charles Lamb, Mr. Knox sometimes chafed under the undisturbed leisure which he enjoyed and occasionally yearned after the old routine of his magisterial duties. The native police court accordingly had great attractions for him, and although he did not understand a word of the language, he found it of great interest to compare its proceedings with those of the London tribunal over which he himself had so long and honourably presided. He quotes a supposed verbatim report of a typical case before the *Cadi*, from the work of Captain Richard, formerly *chef du Bureau Arabe* at Orleansville, which gives a very just, though facetious, account of Arab summary legal procedure. The book does not pretend to give us much of the history of the country about which it treats, but what we are told is very well worth perusal. The sketches of the origin and vicissitudes of the Kabyles, or Berber "confederations," from the earliest times until their final subjection by the French, is lucid and concise. It is a pity, however, that the author has not resisted the too common temptation to talk in one or two places about what he knows nothing of. To say, for instance, that the tattoo marks on women's faces are forbidden in the Koran, and are there called *ketchet el chytan*, or "devil's writing," is simple nonsense. Again, it is very odd to find the legend of the conquest of Gog and Magog (probably the Turkomans) by Alexander the Great, which is embodied in a somewhat legendary form in Chapter xviii. of the Koran, told as a local legend of the Last Day. It is worth while comparing the two accounts:—

MOHAMMED.

They said, "O Dhu'l Kurnain! verily Gog and Magog (Yajuj and Majuj) are doing evil in the land. Shall we pay thee tribute on condition that thou set between us and them a rampart?" He said, "What my Lord has established me in is better; so help me with your strength, and I will set between you and them a barrier. Bring me pigs of iron until they fill up the space between the mountain sides." Said he, "Blow it until it makes a fire." Said he, "Bring me that I may pour over it molten brass." So they could not scale it and they could not tunnel it. . . . And we left some of them to surge on that day over others, and the trumpet shall be blown and we will gather them together.

But perhaps General Dannius's book, from which our author borrows, is to be blamed for these and similar slips. Of the Kabyles themselves Mr. Knox seems to entertain a high opinion, and considers them far superior to the Arabs, both physically and intellectually. We prefer to pass over his account of the atrocities attributed to the French in their campaign against this people in 1846, and in the insurrection of 1850-51. A conflict with a fierce and semi-barbarous people always produces a greater crop of horrors than even the wholesale massacres of modern civilized warfare, and reprisals often take a form that reads unpleasant in a despatch. We can only hope that the memory of former cruelties may soon die out, and that Algeria may continue to prosper, as she no doubt has done hitherto, beneath French rule.

There are so many little bits of genuine humour in the author's comments on what he saw, that we should like to quote them all, and offer them as "*Orient pearls at random strung*" to the reader, but this would not be fair to the work itself. The following specimen is quite true to nature:—

He was dark even for an Arab, and came from some place in the desert beyond Tuggurt. He had been saving up money in order to get married, and his bride was waiting for him at some hot place in the sand. The wedding must needs be a hurried one, for he would have to get back quick to Biskra to resume his work. I suppose the usual Arab idea of a honeymoon would be to spend a few happy, happy days with the bride, give her a good beating with a stick, lock her up, and hand the key to a female relative advanced in years, who would redeliver the young lady to you in fair condition on your return.

The book is one rather of pleasant chat than of statistics, or even of ordinary travelling incidents: and it is quite refreshing, amid the depressing influences of the winter we are passing through, to follow the genial author in his rambles through a land of calm and sunshine.

TWO MINOR NOVELS.*

THE first of these two novels is nothing but an overgrown tract. It has been written with a highly moral object, and may be looked upon as a kind of young ladies' supplement to Murray's Handbook to Gibraltar. The natives of that town, we

* *The Life of a Rock Scorpion*. By Flora Calpensis, Author of "Reminiscences of Gibraltar," "Holiday Amusements," &c. London: Charing Cross Publishing Company.

Dorothy Compton. A Story of the '15. By J. R. Henslowe. London: Kerby and Endeau. 1880.

learn, are known by the name of the "Rock Scorpions"; and in the *Life of a Rock Scorpion* are clearly set forth the dangers to which fascinating and highly respectable young females will find themselves exposed from the officers of the garrison. But forewarned is forearmed. Let those who intend to settle there, before they leave Southampton, provide themselves with a copy of this virtuous story, and study it in the intervals of sea-sickness. If they do so, they will derive from it this additional gain. They will find it such uncommonly dull reading, that they will readily admit that, after all, sea-sickness is not the greatest ill in life. It may be bad, very bad, but there are stories which cause even greater misery. Nevertheless, we trust that they will look upon the careful perusal of this tale as a solemn duty, and will persevere in it to the end. For, to quote the author's own words, it has been "written with a view to warning young ladies who are about to take up a residence with their families on the Rock of the many dangerous companions they may be thrown amongst, should they trust too much to their own sagacity in choosing their acquaintances, refusing to listen, as Eva did, to the wise counsels of a mother." What they are to do if they do not happen to have any mother at all, we are nowhere told. In that case we presume that it would be always found that they had a virtuous godmother, or a widow aunt in reduced circumstances but most piously disposed. Even, however, if they have neither one nor the other, still they have only to follow the excellent precepts which are scattered with a liberal hand through the pages of this work, in order each to secure perfect propriety of conduct, and in the end a virtuous clergyman for a husband. The author is not merely content with leading her heroine to the very brink of destruction, and making the wicked hero shoot himself dead, but she takes care besides always so to point her moral that the most careless cannot fail to find it. We come, for instance, across such passages as the following:—"Here, at the closing of this chapter, the author entreats the young 'debutantes on this world's stage' (to whom this little work is especially dedicated) to lay the lessons it contains to heart." She adds force to her entreaties by laying down principles of morality which, if not altogether new, are at least true. "To deceive," she tells her young friends, "is reprehensible in the extreme." In the sufferings that the heroine brought upon herself by the neglect of this sound rule of conduct, a striking warning is offered. To her fortunes, then, we will at once turn.

When the story opens, Eveline Osborn is, indeed, in a very sad state of mind. She was young and beautiful, no doubt; but what do youth and beauty avail when the possessor of them reproaches the best of papas and mammas with their "everlasting lectures"? She had hitherto been known by the endearing name of Rosebud; but she turns round on her mother, Lady Osborn, and says, "For goodness sake, do leave off this absurd cognomen, and call me 'Eva,' if you must curtail my name." Her fond parent begins by replying, "You used to be all gentleness to your invalid mother, while yet your joyous spirit kept us all alive." The heroine's conduct after a couple of pages of good talk became so outrageous that "she flung herself out of the room, banging the door after her, thereby terribly shaking Lady Osborn's weak nerves." We could almost wish that here, too, as well as in other places, the author had paused to point the moral. "Lay this lesson to heart," she might have said, addressing her dear young friends, "that to bang doors is in itself reprehensible in the extreme, even though the weak nerves of a mother are not thereby terribly shaken." Before long a wicked Captain comes upon the scene, who, we regret to say, was the eldest son of a nobleman. He makes love to Eva, and makes it on the sly. In this evil course he is countenanced by the family of the Beaumonts, who pretend to be as fashionable as they are really abandoned. But let us be comforted; for "severe," says our author in her moral preface, "will be their future punishment, we may be sure." It is not for want of warnings that Eva listens to him. She has a virtuous sister, who was engaged to a wealthy and virtuous Colonel, "who gave her much good advice, but it was lost on the thoughtless girl." The wife of a highly respectable baronet, herself the mother of a large family of children, raises also her warning voice. But Eva flirts away with her Captain, till one evening at a dance he presses her to consent to a secret engagement, "as he said his father, Lord Lansdown, was against his marrying until he was twenty-six years of age." Happily, at that moment a female voice, seemingly from amongst the drapery, was heard crying out in tones of the deepest feeling, and with a foreign accent, "Eveline, beware. Heed him not." The heroine almost faints. The wicked Captain gnashes his teeth and shakes his fist in the direction whence came the sound, exclaiming, "Had I not this angel on my arm, I would tear down every stitch of this infernal bunting, and search out this voice." He had—as was only natural in the depraved heir to a peerage—drunk too much champagne, and he makes a great deal of noise. He places Eva in an armchair, and rushes in pursuit of the voice. Her knees knock together, and her teeth chatter, she becomes icy cold, and, at last, with some return of a sense of propriety, she cries out, "Oh, where is dear papa?" The old gentleman had, meanwhile, unfortunately fallen asleep in the midst of the gaiety. As his hair was silky silver, and as he was wearing his "star and ribbon of knighthood and his medals, &c.," no doubt he presented a very venerable appearance. When he was roused and learnt what had happened, he did not allow the weakness of a parent to make him forget the duty of a father. "Your conduct," he said to his giddy daughter, "has been most reprehensible; since I fell

asleep yonder, our friends are all scandalized." Of course he at once took her home, and, we fear, thereby lost his supper. Her brother remained behind biting his nails and knitting his brows. Under ordinary circumstances such conduct at an evening party would also be most reprehensible: but, considering the provocation which he had received from the villain of the story, it was more than excusable. "'Confound the fellow!' he exclaimed, in a loud whisper, stamping his foot." The chapter thereupon closes, but it is plain to every one that he means to challenge the guilty Captain to a duel.

For a time, however, a little harmony is restored; but when the Captain "had the 'hardiesse' to call on the Osborns, he was very properly informed that Lady and Miss Osborn were indisposed and could see no one, and that the others were out riding." The speaker of the mysterious voice at last makes herself known, and declares that she is the Captain's wife. When he heard of this, "a black and dreadful look came over his usually handsome face," and he resolved to kill her. Why he does not do so we have failed to make out. However, he will not give up the heroine, but writes to propose that she shall run away with him. By this time a severe illness had brought this lovely, but misguided, creature to a very proper state of mind, and she sends him a letter, not unworthy in its high moral tone of the author of the book. "I beg to say," she begins, "I have received your singularly insulting and objectionable note, sent, too, clandestinely I perceive." She ends by exhorting him to repent. So far is he from listening to her that he at once runs away with one of the wicked Beaumonts, and before long goes mad and blows his head to atoms. "Thus ended," the moralist observes, "the career of a man who had been all his life the victim of his own bad and uncontrolled passions." Very different are the fortunes of the Osborns. A few lines further down on the very page on which we read of this suicide, we are told that the virtuous Maud married her no less virtuous Colonel. In the next paragraph, with much satisfaction, we read that "Eveline, who had now become quite as good and quiet as her sister, was engaged ere long to a clergyman residing near their house." That she had become quiet mattered unfortunately but very little to Lady Osborn, for that exemplary lady shortly afterwards died. She might have been allowed the satisfaction, we think, of living to see that her beloved daughter did not have a relapse in her morals; but, on the contrary, always closed the door so carefully that even the weakest of nerves could not have been shaken.

In passing from the *Life of a Rock Scorpion* to *Dorothy Compton* we rise—fall, may be, some will consider it—from the region of tracts to that of high-flown romance. The scene of the tale is laid in the Jacobite rebellion of 1715. The author, being a lady, and a very young one perhaps, is naturally devoted to the cause of the Stuarts. Her heroine, who gives her name to the story, is a youthful heiress living in the north of England. The most remarkable thing about her that we have been able to discover is that one day "a faint breeze lifted the tendrils of soft brown hair from her forehead." In the days of George I. the author should know hair was hair and tendrils were tendrils. Whatever delicacies there may have been in the literature of those days, extravagant nonsense was most carefully avoided. At that time, moreover, the sun used to set after the good old fashion. There were no "tender, pearly tints, that melted into the faint azure which slept in the calm of coming night"; nor was there anywhere in creation "a garb of violet glory." In fact, nature, if somewhat commonplace, at all events had not learnt to make herself utterly ridiculous. But to return to our heroine. She of course has a lover, and a lover who is on the side of the Pretender. He has a rival in one of her cousins, who, as every one must have expected, turns out to be a traitor to the good cause. In his eyes one day was seen "an evil glitter." Later on, when the rebels are at Preston, the figure of a man, cloaked and disguised, appears on the scene. "Once he looked up into the murky sky, and showed a pale face with an evil smile on it. 'One step nearer to you, Dorothy,' he said, softly, 'and for him, the scaffold.'" The speaker, of course, was the wicked cousin; and by "him" in italics is meant the rival. When the flight of the rebels takes place, the lover gallops off to take leave of Dorothy. In the midst of their sad farewells in walks the wicked cousin and greets all present with his usual languid grace. But the lover started forward; "their eyes met—fierce defiance on the part of the one, deep enduring hatred on that of the other." Some hard words pass about among the company, such as rebel, traitor, false, dishonoured, fairly mouthed; till at last the villain, turning to his virtuous rival, exclaims, "We have been rivals, fair sir, but I fancy the cord or the axe will end it now." He thereupon announces the approach of a troop of dragoons. The lover springs to the door to escape, but the villain draws a pistol from his breast. That moment "a dark figure passed swiftly across his vision. Too late." He fired, and the unhappy heroine fell down mortally wounded. The cousin fled "in a frenzy of anguish, remorse, and despair never to be assuaged," and became a buccaneer, or a Jesuit missionary, or a Carmelite monk. The hero escaped, and was not seen again till the 45, when he was slain on Clifton Moor.

Mixed up with the story are little scraps of history. It is, we suppose, a misprint when in one place we find Bolingbroke called Sir John. In another passage we are told that this statesman "reserved for himself the seats and the management of the Foreign Office." For "seats," perhaps, we should read "seals"; but in

any case "Foreign Office" has a strange sound when used of the early years of last century. In writing of the year 1714, the author says that Addison "was famous then for 'the Campaign,' but hereafter to be better valued for the *Spectator*." It is clear that she believes that the *Spectator* was written, not in the days of Queen Anne, but of George I. In a romantic novel we must remember, however, that such errors as these are scarcely blemishes. At all events, they will not render *Dorothy Compton* at all less acceptable to those who are so strangely constituted in their minds as to be able to read it with any degree of pleasure.

THE ANTIQUARY.

THE ANTIQUARY has adopted for its motto two lines from *Troilus and Cressida* :—

Instructed by the antiquary times,
He is, he must, he cannot but be wise.

Shakespeare's feeling for antiquarian study, however, was associated with the workings of the great passions of humanity as illustrated by the deeds of people of old; and it may be doubted if he cared for the exploration of ruins, for descants upon architecture, or for gathering together stone implements, coins, or even book-plates, which kinds of antiquarianism belong to a later and less metaphysical stage of the science. In the "Wisdom of Solomon" the carved idol or moss-grown altar of a worn-out creed was accounted "a stone good for nothing"; and we expect that the author of *The Antiquary's* precept would not have valued the like "work of an ancient hand" at a much higher rate than did Solomon. The word "cathedral" only once occurs in our master poet, and then simply as an adjective to "church"; while the only person of his dramas who is represented to contemplate a "wasted building" is a rough-mannered Goth, as if the broken and formless walls of a decayed structure suited rather with a rude and unshapen nature than with cultivated feeling :—

Renowned Lucius, from our troops I strayed
To gaze upon a ruinous monastery;
And as I earnestly did fix mine eye
Upon the wasted building, suddenly
I heard a child cry underneath the walls.

Titus Andronicus.

The act of "black-night" connected with the finding of this child is in keeping with the uncanny something that was believed to haunt a deserted ruin, an opinion which is as old as the Talmud, and one that still lingers among the fathers of the village. According to the Rabbis there are three reasons why a decayed building should not be entered :—1. Your intention may be suspected. 2. The walls may fall and crush you. 3. The place may be the den of evil spirits. But instead of being like the ruins of old Babylon, full of doleful creatures and dancing satyrs, we find in these days within the broken circuit of Stonehenge or beneath the arches of Tintern such lively visitors as 'Arry and the girl of his choice, who in their holiday pastime may be as nimble-footed as the satyrs, though their movement may be in less grim keeping with the severity of the surroundings. The spectre or hobgoblin has sometimes been no ineffectual protector of the remains of the past, and we are told in an article on "A Viking's Ship," that the tumulus or funeral hill at Gogstad in the south-west part of Christiania Fjord in Norway, within which this old craft was lately found, had been during some centuries undisturbed, because of the belief of avenging sprites being the guardians of the treasure enclosed. Unfortunately this wholesome dread had not been strong enough at some earlier day to prevent marauders breaking in upon the slumbering chieftain, whose battleship had become his bier, wherein he now waited with his horses and hounds for the Universal Father to summon him once more to launch upon the waves towards which the stem of his vessel was already directed.

The present volume of *The Antiquary* opens with the concluding part of Mr. E. B. Ferrey's lecture on Old St. Paul's, which is full of sagacious inference, and if consulted in connexion with Hollar's plates in Dugdale's *St. Paul's*, or with Longman's *Three Cathedrals*, will enable the reader to recall the grandeur of the second church, with its many chapels and shrines. Of these chantries, indeed, he may gain a more accurate notion by reference to the lately published *Documents Illustrative of the History of St. Paul's Cathedral*, edited by Canon Simpson for the Camden Society, a work that would have increased the interest of Mr. Ferrey's papers had it appeared in time for his use. He might then have noted how, in pre-Reformation days, the difficulties in raising money for restorations and for the endowment of altars were met by grants of Indulgences to all who contributed to such pious works. These grants, of which seventy-six are enumerated, supply in many instances the dates at which particular parts of the Cathedral were built or repaired; and, however much dislike may be had towards such a very un-Protestant system of raising funds, we may charitably allow something for the difficulties of the position, bazaars not having then become a religious institution. It is curious, moreover, to notice that as late as 1635-6 there occurs very like the grant of an Indulgence, when on March 5th Sir Ralph Ashton escaped doing penance in his own parish church by paying 300*l.* towards the repair of the west end of St. Paul's; and similarly, in 1636,

a clandestine marriage is purged on payment of 150*l.* for the benefit of the same church. It seems as difficult to ascertain what was the actual length of Old St. Paul's as to count twice alike the stones of Stonehenge, on which monument we have of course here a paper; but Canon Simpson accepts the result of Mr. Ferrey's careful study of the question that the total length from east to west was 596 feet, being 66 feet longer than Winchester Cathedral. Turning to Dr. Brinsley Nicholson's article on Stonehenge, we find that its huge trilithons were, according to the latest theory of their intention, raised for a primitive Christian temple, which is a view that will perhaps be superseded by an equally successful attempt to prove them to have formed the original British synagogue of the lost tribe of Israel, an hypothesis that we wonder some ingenious Anglo-Israelite has not already proposed. Archaeologists seem as much at a loss to decide upon the age of these concentric rings as to fix the date when the flaming zones were first flung round the planet Saturn, a power to which Stonehenge has, in fact, been argued to be dedicated. It has, moreover, been pronounced to be Buddhist, Phœnician, Druidical, Roman, Celtic, and Saxon—to belong to a time as early as (literally) the expulsion from Paradise, and to as late as the Danish invasion of England. Whether it be a sepulchral trophy, an altar to an unknown god, a court of justice, an astronomical observatory, or a serpent temple that wound circle within circle, and was an earthly Inferno for holocausts of human victims, seems likely to remain undetermined. It is remarkable, however, that after the prolonged clash of archaeological theories, perhaps the favourite opinion is one which explains the gigantic ruin to have been "a cenotaph or memorial kirk erected by a British King, Aurelius Ambrosius, to commemorate the death of those who had fallen in the great struggle with Hengist, or who were slain by his treachery" (see *Quarterly Review*, vol. 108, p. 207), which is just the account Geoffrey of Monmouth has given, with the additional explanation that Merlin transferred the stones by magic art from Ireland. But Dr. Nicholson no more connects their origin with Aurelius Ambrosius than with Merlin the magician. "I have seen governors of islands in my time," says Sancho Panza, "who hardly came up to the heel of my shoe." So it may be said that the usual cromlech hardly comes up to the Friar's Heel at Stonehenge. Therefore, Stonehenge is not a cromlech, but a temple. Who were the worshippers therein is a further question. In the first place the writer in *The Antiquary* denies that Stonehenge answers to the usual representation of being formed of two concentric circles enclosing two ellipses, the latter features, he declares, being, not two ellipses, but two semi-elliptical or horseshoe curves. With the dismissal of the ellipses vanishes also the theory that they were dedicated to the moon, and symbolised the mystic egg, the mother of us all. The notion, moreover, of a serpent temple stretching out into an almost interminable length of winding avenue, seems refuted by the literal fact that no head nor tail can be made of the reptile figured. Lord Nelson, it is said, nailed a horseshoe to the mast of the *Victory* as a charm against witchcraft, or against the craft of the enemy, but he would have been as surprised as we are to be told that his notion had been derived from Druidism, and was expressed by the two curves of Stonehenge. We think also that Dr. Nicholson is smiling at our credulity when he tempts us to believe that the throwing a slipper after a bridegroom and bride is because the heel of a shoe is shaped like a horseshoe, and because that horseshoe is shaped like the curves within the trilithons on Sarum's Plain. But this leads him to speak of the Friar's Heel, and the fact that, at sunrise on the 21st of June, the rays strike on the top of that particular stone induces him to argue that Stonehenge was a temple to the sun, which conclusion, as solar theories are now fashionable, we may as well adopt as any other. At any rate, if analogous to, it seems less extravagant than the Rev. Edward Duke's hypothesis, that "our ingenious ancestors portrayed on the Wiltshire Downs a planetarium, or stationary orrery, located on a meridional line, extending north and south, the length of sixteen miles; that the planetary temples thus located, seven in number, will, if put into motion, be supposed to revolve round Silbury Hill, as the centre of this grand astronomical scheme; that thus Saturn, the extreme planet to the south, would in his orbit describe a circle with a diameter of thirty-two miles," &c.

Of less striking significance than the monument we have been considering, but of almost equally obscure origin, is a stone in Pannier Alley, London, with a sculpture of a boy sitting on a pannier or maund, and dated 1688. This stone is inferred to have been substituted for one mentioned A.D. 889, in the grant of the tract of land whereon it stood, by King Alfred, to Wærfriht, Bishop of Worcester, for the purpose of a market, the place until lately having been known as Newgate Market. The words, "Hwæt-mundes stane," used in the deed of concession, was argued by Mr. H. C. Ooote to mean a stone house belonging to one Hwæt-mund, but Mr. Kerslake in a brief paper on the subject has perhaps more judiciously suggested that the phrase may be interpreted as wheat-maund stone, the word maund being still in use for a large basket. The stone, therefore, it is inferred, was the original market centre or cross to which wheat or like grain was brought.

Among the monuments in the Grey Friars' Church, as given in Stow's *Survey of London*, we find, under the date 1523, "Alice Lat Hungerford, hanged at Tiborne for murdering her husband." Mr. W. J. Hardy has taken considerable pains to extend the in-

formation here given, and he first of all cites the fuller statement of John Stow in his *Chronicle of England*, where, under the same year, it is said, "The 20 February the Lady Alice Hungerford, a knight's wife, for murdering her husband was led from the Tower of London to Hloborne, and there put into a cart with one of her servants, and so caryed to Tyborne and both hanged. She was buried in the Grey Fryers Church at London." An inventory of the goods of Lady Agnes Hungerford, "which belonged to the King's grace by forfeiture for felony and murder," was printed in the 38th volume of *The Archaeologia*, with notes by Mr. Gough Nichols, who proves that for Alice we should read Agnes, she being the second wife of Sir Edward Hungerford, father of Lord Hungerford, who was executed for treason in 1541. As Sir Edward died only a few months before the conviction of his unhappy wife, it has been supposed that he was the victim whose murder was expiated at the gallows. This is clearly proved not to have been the fact. The Lady Alice had formerly been the wife of John Cotell, who was strangled at her instance on December 28, 1518, the motive for the crime seeming to have been that he stood in the way of her obtaining the hand of Sir Edward Hungerford. Not far from Bath, on a high piece of ground, are the ruins of Farleigh Hungerford Castle, including a perfect little family chapel with some costly tombs. Against the north-western tower is the site of the kitchen furnace wherein the body of John Cotell was consumed to ashes, the effectiveness with which this part of the tragedy was evidently done being such as would have thrown no discredit upon the tremendous apparatus of the modern cremationists. Miss Braddon's typical novel might well have been titled *Lady Hungerford's Secret*, only that it would have seemed to do violence to fiction as well as to fact to represent that in the great castle of a certain lord a village wife had caused her husband to be cast into a fiery furnace in order that she might marry the lord himself, which she did. How she maintained the guilty secret during five years till the death of her second husband, which Mr. Hardy shows from the Close Rolls to have happened on January 24, 1522, seems as mysterious as that the actual perpetrators of the crime should be able to consume the body of the murdered man within the walls of an inhabited castle. The writer in *The Antiquary* has had recourse to the "Coram Rege Roll" for his facts, and had the editor of *The Grey Friars' Chronicle* for the Camden Society, who is identical with the contributor of the "Inventory" to *The Archaeologia*, gone to the same source he would have been saved from some singularly unhappy conjectures in his notes upon the case of Lady Hungerford.

A paper on "The Politeness of our Forefathers" contains an abstract of *The Rules of Civility*, a book of etiquette licensed in 1671, and intended for the improvement of the English people. The work is a translation from the French, which fact explains how one of the rules was rather too late for adoption in this country. That is, when a consecrated Host or the Pope's legate was met on the way, "it is a respect due to them for us to stop our coach till they be passed; the men to be uncovered, and the ladies to pull off their masks." But, "if it be the Sacrament, we must out of our coach if we can, and down upon our knees, though in the middle of the street." It is suggested that one use of the mask was to enable the fair wearers to see the wicked comedies of the Restoration without their blushes being discerned. Though it was not thought irreverent for men to cover their heads in church, and it was customary to wear their hats, even in the presence of ladies, at the dinner-table, it was considered "no less than rudeness in a woman to enter into any one's chamber to whom she owes any respect with her gown tucked up, with her mask upon her face, or a hood about her head, unless it be thin and perspicuous." One point of politeness we should have thought almost unnecessary, even at that time, to enjoin, only that we now as rarely snuff candles with snuffers as with our naked fingers:—"If it so happen that you be alone together with a person of quality, and the candle be to be snuffed, you must do it with the snuffers, not with your fingers, and that neatly and quickly, lest the person of honour be offended with the smell." Another paper on social aspects is by Lord Talbot de Malahide, entitled "The Grub Street Journal," and is an abstract of that publication, which began in 1730, and was followed by the *Gentleman's Magazine*. The chief Irish agitation of the times seems to have been in the clock of St. Warburgh's Church, Dublin, which on September 2nd of the above year became so violently excited by a hurricane that "its hand, our correspondent writes, was turned about for a quarter of an hour together with the same velocity as the flyers of a jack usually move." The good feeling of their Majesties and the rest of the Royal family towards the tutelar saint of Ireland was shown by their wearing crosses on March 17th in honour of St. Patrick's Day. Perhaps this compliment to the Irish was in recompense for four-fifths of that people having just before been suddenly deprived of their right of representation in Parliament by the disfranchisement of the Roman Catholics. With respect to English morals and manners Lord Talbot de Malahide's paper may be read without endangering our self-flattery that we are better than our fathers.

We are not sure that Mr. J. H. Parker's anecdotal contributions on the "Victorian Revival of Gothic Architecture" are not the most interesting in the volume, though we might recommend several others, besides what we have cited, to the reader's attention. Among these Mr. H. B. Wheatley's papers on bibliography and bookbinding should not be overlooked. To conclude, there is enough antiquarian feeling among the reading

classes to justify the attempt to establish a periodical for their service; and there is enough pleasant, and at times solid, discourse in the present volume to suit a diversity of tastes, while the most fastidious eye may be pleased by the beauty of its paper and letter-press.

THE ARABIAN GOLDEN TREASURY.*

AN attempt to bring a very far-away literature within ordinary reach deserves a hearty recognition, especially when it has to do with a literature so little known, yet known to be so great, as Arabian poetry. The masterpieces of Arabian poetry are almost unknown in England; and such translations as have been attempted up to quite recent years have failed to represent in any adequate manner the characteristics of the originals. It is not that the Arabs possessed no poetry, or that English scholars were ignorant of their fame; on the contrary, the peculiar esteem in which eloquence and poetry were held among the Arabs is among the stock parallels of the historian, and never fails of emphatic notice in every essay on the life of Mohammed and the religion of Islam. One is tired of hearing of the fair of Okadh, and the poetic contests that were believed to take place there, of the prize poems that were (or were not) suspended on the Kaaba, and the saying of the Khalif Omar. Every one knows that the Arabs held poetry to be one of the highest of divine gifts, and rejoiced over the advent of a poet as over the chief glory of their tribe. We do not want to be told how truly the Arab loved poetry, how great was the poet's power, and how widespread his fame and influence. We wish to be allowed to judge of this poetry for ourselves, without being compelled to learn a language which, according to one of the foremost of its grammarians, demands five hundred years of incessant application before one can consider himself perfected in its knowledge. When the highest authority committed two grammatical errors in his life, and died with the confession that he had something on his mind concerning the particle "hatta," it is evident that Arabic is not a study to be lightly undertaken. So much the stronger is the obligation laid upon those who have mastered it, so far as the span of human life allows, to reveal what they can of its literature to the unlearned; but hitherto the duty has been but sparingly acknowledged and imperfectly fulfilled.

It may be believed, however, that we are now fairly in the way of being taught somewhat more fully and more accurately the essential character of Arabian poetry. Mr. Lyall's contributions to the *Journal of the Bengal Asiatic Society*; Professor Palmer's "Song of the Reed," and his charming version of the mediæval Egyptian poet Zuhayr; Mr. W. Clifford Palgrave's "Omar"; are good omens of the light to come. None of these scholars, however, have attempted to treat Arab poetry as the literature of every European nation has been treated again and again. It was left for one who disclaims any proficiency in Oriental languages to compile the *Golden Treasury of Arabian songs and lyrics*, and bring Arabian poetry within the reach of English readers. Mr. Clouston deserves all thanks for the preparation of the beautiful *édition de luxe*, one of whose seventy copies lies before us; and a wider gratitude belongs to the smaller and less choice, but more purchasable, edition which he has issued simultaneously. We have no fault to find with his share in the work. He has performed his editorial functions with scrupulous care and fine judgment. With a few exceptions, his collection contains all that can be gathered of Arabian poetry in English, and he has had the good fortune to be able to include some original translations by Mr. Redhouse never before published. The editor's introduction is comprehensive and excellently written, and the notes at the end of the volume evince a considerable knowledge of the literature of the subject. Mr. Clouston has not only for the first time given us a fairly representative anthology of Arabian poetry, he has also executed a difficult task with rare taste.

The objections that must rise in every reader's mind are not to the manner, but the matter. A very large proportion of the translations are wholly alien in style and tone to the originals they profess to represent. The staple of the collection, occupying half its bulk, are the translations by Sir William Jones of the *Mosallakat*, or seven prize poems, and J. D. Carlyle's *Specimens of Arabian Poetry* (1796 and 1810). Neither of these works can be regarded as worthy representatives of the originals. The *Mosallakat* are the oldest and most famous poems in the language, acknowledged models of what an Arabic kasida or ode should be. Sir William Jones puts them into the ornate and effeminate prose which characterized his era in translation, and it is difficult to understand the power and rude eloquence of these Bedouin songs when we read them in the stilted periods of a posthumous Queen Anne essayist. Sir William Jones could turn his polished style to excellent use in other directions; but Addison himself would have made an indifferent translator of desert song. A single example will show the faultiness of Sir W. Jones's versions—their misrepresentation of the originals in meaning, and still more in tone. We will first quote some lines of the bold vigorous *Mosallaka* of Zuhayr, as rendered by Mr. Lyall in the *Bengal Asiatic Journal*; and then give Sir W.

* *Arabian Poetry for English Readers*. Edited, with Introduction and Notes, by W. A. Clouston. Glasgow: Privately printed. 1881.
The Lay of the Hingirites. Translated and Edited by Captain W. F. Prideaux, Fellow of the University of Bombay, &c. Lahore: Printed at the High School Press. 1879

Jones's translation of the same. Some verses will be seen to be transposed in the two renderings; but the comparison between the two is not seriously complicated by the variation in the order. Mr. Lyall's is a nearly literal translation, in the metre of the original, but without retaining the rhyme. The measure is "the noble cadence called the *Tawil*, most loved of all by the ancient poets. Each hemistich consists of four feet, arranged thus:—

— — — | — — — | — — — | — — —

It is the measure, in fact, of Browning's *Abt Vogler*, as Mr. Lyall shows in quoting such lines as

Existent behind all laws that made them, and lo they are;

and

And there! ye have heard and seen: consider and bow the head.

The poem begins with a lament for the flitting of the tribe from the pasture-lands, the departure of the women, and especially of his wife, Umm Aufa:—

Are they of Umm Aufa's tents—these black lines that speak no word
In the stony plain of El-Mutathellom and ed-Darrâj?
Yea and the place where her camp stood in er-Raqmatân is now
Like the tracery drawn afresh by the veins of the inner wrist.
The wild kine roam there large-eyed and the deer pass to and fro,
And their younglings rise up to suck from the spots where they lie
all round.

I stood there and gazed: since I saw it last twenty years had flown,
And much I pondered thereon: hard was it to know again—
The black stones in order laid in the place where the pot was set,
And the trench like a cistern's root with its sides unbroken still.
And when I knew it at last for her resting-place, I cried,
"Good greeting to thee, O House—fair peace in the morn to thee!"
Look forth, O friend—canst thou see ought of ladies camel borne
That journey along the upland there above Jurthum well?
Their litters are hung with precious stuffs, and thin veils thereon
Cast loosely, their borders rose, as though they were dyed in blood.
Sideways they sat as their beasts climb the ridge of es-Sûbân
—In them were the sweetness and grace of one nourished in wealth
and ease.

They went on their way at dawn—they started before sunrise:
Straight did they make for the vale of er-Rass as hand for mouth.
Dainty and playful their mood to one who should try its worth,
And faces fair to an eye skilled to trace out loveliness.
And the tassels of scarlet wool in the spots where they sat them down
Glowed red like to 'ishrig seeds, fresh-fallen, unbroken, bright.
And when they reached the wells where the deep blue water lies,
They cast down their staves and set them to pitch the tents for rest.
On their right rose el-Qunân, and the rugged skirts thereof—
And in el-Qunân now many are friends and foes of mine!
At eve they left es-Sûbân: then they crossed its ridge again,
Borne on the fair-fashioned litters, all new and builded broad.

In this translation one hears the true desert ring; it has the rugged grandeur of the original. What then can be said of Sir William Jones's rendering of the passage?—

Are these the only traces of the lovely Oummaufa? Are these the silent
ruins of her mansion in the rough plains of Derrange and Mothatallem?

Are the remains of her abode, in the two stations of Rakma, become
like blue stains renewed with fresh wound on the veins of the wrist?

There the wild cows with large eyes, and the milk-white deer, walk in
slow succession, while their young rise hastily to follow them from every
lair.

On this plain I stepped after an absence of twenty summers, and
with difficulty could recollect the mansion of my fair one after long medi-
tation;

After surveying the black stones on which her cauldron used to be raised,
and the canal round her tent, like the margin of a fish-pond, which time
had not destroyed;

Soon as I recollected the dwelling-place of my beloved, I said to the
remains of her bower—"Hail, sweet bower! may this morning be fair and
auspicious!"

But I added, "Look, my friend! dost thou not discern a company of
maidens seated on camels, and advancing over the high ground above the
streams of Jorham?"

They leave on their right the mountains and rocky plains of Kensa. (O,
how many of my bitter foes, and how many of my firm allies, does Kensa
contain!

They are mounted in carriages covered with costly awnings, and with
rose-coloured veils, the linings of which have the hue of crimson andem-
wood.

They now appear by the valley of Suban, and now they pass through it;
the trappings of all their camels are new and large.

When they ascend from the bosom of the vale, they sit forward on the
saddle-cloths, with every mark of a voluptuous gaiety.

The locks of stained wool, that fall from their carriages whenever they
alight, resemble the scarlet berries of nightshade not yet crushed.

They rose at daybreak; they proceeded at early dawn; they are
advancing towards the valley of Ras, directly and surely, as the hand to the
mouth.

Now, when they have reached the brink of yon blue gushing rivulet, they
fix the poles of their tents, like the Arabs with a settled mansion.

Among them the nice gazer on beauty may find delight, and the curious
observant eye may be gratified with the charming objects.—Pp. 31, 32.

It is unnecessary to point out the singular inappropriateness
of many of Sir William Jones's phrases, or the mastery of bathos
evinced in the preceding quotation. All that can be said of
his translation of the Moallakat is that it is the only complete
version in English; and, until the happy time comes when (as
Mr. Clouston hints) the whole collection of Moallakats shall
have the advantage of Mr. Lyall's fine interpretation, we must
be thankful for this careful reprint of a rare work, and accept
Sir W. Jones's translations, in spite of their mistakes, their foreign
treatment, and their unfortunate style, as better than nothing.

Dr. Carlyle's renderings of a miscellaneous set of Arabic odes of
various ages are even less happy than Sir William Jones's; for Carlyle
adds to a stilted language the vices of conventional verse. A tame but
melodious version of the opening of Lebîd's beautiful Moallaka
reminds one faintly of Goldsmith; and indeed all Dr. Carlyle's

translations have the smack of a 'prentice hand at work on a
Deserted Village. Happily Carlyle has chiefly devoted his at-
tention to the gratulatory and amatory odes of the Court poets of
the Khalifate, and has not often meddled with the greater poems
of the elder Arabs. But still his renderings are wholly alien in
tone from the originals. One of the least wretched of his pieces
is perhaps that "To a Lady Weeping":—

When I beheld thy blue eye shine
Through the bright drop that Pity drew,
I saw beneath those tears of thine
A blue-eyed violet bathed in dew.

The violet ever scents the gale,
Its hues adorn the fairest wreath;
But sweetest through a dewy veil
Its colours grow, its odours breathe.

And thus thy charms in brightness rise;
When Wit and Pleasure round thee play;
When Mirth sits smiling in thine eyes,
Who but admires their sprightly ray?
But when through Pity's flood they gleam,
Who but must love their softened beam?—P. 120.

Mr. Clouston has done his best in giving us Sir William Jones's
and Dr. Carlyle's translations; they were all that could be had.
But his chief service lies in the latter part of the volume. His
excellent epitome of the First Part of the famous Bedouin romance
of Antar, with all the poetry included in it, will be highly prized.
Few possess Terriack Hamilton's still-born offspring, and still fewer
have succeeded in reading it. The present abridgment is really
all we want. It is a worthy record of a splendid career. Antar
is the Lancelot of the desert, with all his nobleness and none of
his guilt; and the epitaph of the Knight of the Round Table is
scarcely grander than the words the aged Sheikh pronounced over
the dead body of the Arab hero:—"Glory to thee, brave warrior!
who, during thy life, has been the defender of thy tribe, and who, even
after thy death, hast saved thy brethren by the terror of thy corpse
and of thy name! May thy soul live for ever! May the refreshing
dews moisten the ground of this, thy last exploit!" Very wel-
come, too, are Mr. Redhouse's scholarlike translations of the two
Poems of the Mantle; one recited by Kaab, son of Zohayr, whose
Moallaka we have already quoted, in the presence and in praise
of the Prophet Mohammed in the ninth year of the Hegira;
and the other written six hundred years later by El-Busiri,
and still, after six centuries more, renowned through all the
kingdoms of Islam, inscribed on amulets, and chanted in sickness
and over the dead. In an appendix we find extracts from Captain
(now Major) Prideaux's *Lay of the Himyarites*, a very remarkable
poem which has had the good fortune to find a worthy trans-
lator. This abstract of Major Prideaux's work is the more valu-
able as the copy of his original treatise now before us bears the
notice that the issue was limited to twenty-five copies, and the
high merits of the translation could therefore be appreciated only
by a very limited audience. It is worth remarking that this
édition de luxe of the *Lay of the Himyarites* was set up, printed,
and bound, by one pupil of the High School of Selore in Central
India; certainly a phenomenon in the bibliography of tall copies.
Mr. W. Gifford Palgrave's "Omar the Mogheere," in *Essays on
Eastern Questions*, also appears in this Appendix, as well as Mr.
J. Payne's specimens of the poetry of the *Arabian Nights*, re-
printed and abstracted from the *New Quarterly Magazine*. The
notes which conclude the volume are full, not only of interest-
ing biographical traditions and explanations of questions of
manners and customs raised in the poems, but also of fragments
from Mr. Lyall, Professor Palmer, and others, of notable merit.
The appendix is, in short, the most valuable part of the book. We
are glad to have the only complete English version of the seven
oldest Arabic poems, in spite of its faults; and Dr. Carlyle's
renderings are better than nothing; but the various pieces col-
lected together in the latter half of the volume are more welcome
still. All who care to know practically everything that can be
learnt in English concerning the ancient poetry of the Arabs will
find Mr. Clouston's skilfully prepared volume a great acquisition.
The poetry is worth studying, and if it is not always as well in-
terpreted as it might be, at least the version here given is the best
to be had as yet. This Arabian Golden Treasury gathers together
all, or almost all, that has been done thus far to popularize the
great masters of Arab poetry. To have accomplished this is no
slight performance; and if the work serves to encourage those
living scholars who have the rare gift of worthily rendering the
Arabian poets, to improve upon it, we may hope before long to
see Arabian lyrics as excellently selected and represented in
English as English lyrics have been by the brother of one of the
most notable of the translators whose verse appears in Mr.
Clouston's delightful volume.

GERMAN LITERATURE.

THE almost inexhaustible stores of Maria Theresa's correspond-
ence (1) are yielding Herr von Arneth material for yet
another publication, which will, however, probably be the last.
Two volumes already published contain her hitherto inedited
letters to the members of her family, two more, yet to follow, will
comprise her correspondence with private friends. The letters

(1) *Briefe der Kaiserin Maria Theresia an ihre Kinder und Freunde.*
Herausgegeben von Alfred Ritter von Arneth. Bde. 1, 2. Wien: Braun-
müller. London: Williams & Norgate.

belonging to the former class would have been far more numerous but for her own strict injunctions that they should be destroyed, which were in most cases carried out by the recipients. Those addressed to her son Ferdinand, Viceroy of Lombardy, and his consort, were, nevertheless, for the most part preserved, and form by much the largest and most important part of the present publication. Their interest is principally personal and domestic, and they generally exhibit the Empress's character in the most favourable light. As might be expected from an affectionate, and at the same time strong-willed, mother, she is rather too much given to tutoring and lecturing the young Prince; but, on the whole, the correspondence displays great wisdom and good sense, as well as a most kindly nature. The letters to her son Maximilian, and her daughter Maria Christina, are of a similar stamp. Those to the Archduke Leopold of Tuscany, which must have been very interesting, are unfortunately lost, and almost everything addressed to the Emperor Joseph and Marie Antoinette has been already published. Nothing like a connected narrative of her reign can be extracted from this collection, but there are constant references to events small and great, and Maria Theresa's remarks vividly exhibit the excellent understanding she had received from nature, as well as the bigotry and timidity inevitably produced by an unfortunate education. She was so little in harmony with the enlightened spirit of her time as to assent with reluctance to the abolition of torture in criminal cases, a reform of which she has usually received the credit. On the other hand, she felt the sincerest compassion for the peasantry when oppressed by extortionate landlords, and wished to take stronger measures for their relief than her son and her Ministers would allow. Her expressions on the partition of Poland are exceedingly strong. "The disasters of the Turks," she says, "the hopelessness of aid from France and England, the fear of being involved without allies in a war with Russia and Prussia, famine and pestilence among my people, have compelled me to consent to this unhallowed proposal, which will cast a shadow upon my whole reign. I must write no more, or my emotion will overcome me, and I shall fall into the most dismal melancholy." On the whole, it may be said that very few sovereigns, equally estimable with Maria Theresa in private life, have displayed equal capacity as rulers.

Two volumes of correspondence between Count Prokesch-Osten, Gentz, and Metternich (2) constitute a valuable contribution to the history of Austrian diplomacy. During the Greek war of independence Prokesch acted as an Austrian diplomatic agent in Greece; subsequently he was Minister at Athens, and witnessed the successful insurrection of 1843. His letters afford important materials for the study of these transactions; from a more extended point of view they are interesting as an unconscious *exposé* of Austrian policy. It is not difficult to discover from them why Austria should be condemned to eternal sterility. The beginning, middle, and end of all her diplomacy is the necessity of self-preservation imposed upon a weak and distracted State, with an utter absence of the patriotic aspirations which Russia, England, and France are respectively more or less able to enkindle among the nationalities of the Balkan peninsula. *Conservans le chaos* would really be a very fair condensation of the principles of Austrian policy in this part of the world, in Metternich's time, at all events. One considerable section of the correspondence, written from Italy and Germany in 1831 and 1832, treats of the general politics of Europe, and discloses how thoroughly the advocates of the absolutist system had lost faith in its permanence, while at the same time their very distrust of the political and social fabric they supported prevented their attempting the slightest reform in it, lest any interference should bring it down. As letters, the communications interchanged between Gentz and Prokesch are excellent, and exhibit on the former's part the fanciful, sentimental, almost romantic attachment so well known from other similar collections, and which contrasts so curiously with his political clear-headedness. Even in politics, however, he is fertile and full of speculation, and would evidently have been much more in place as the Minister of a free commonwealth than as the agent of the purely repressive policy of Metternich. The latter's letters indicate his practical good sense within narrow limits, and his absolute incapacity for adding anything to his originally scanty stock of ideas and political maxims. Some of the most interesting are written after his overthrow, which does not appear to have affected his self-satisfaction or his convictions. There is no trace of any consciousness of the unparalleled opportunity he had lost by obstinately entrenching himself behind an effete system, the untenableness of which he fully recognized.

"Landmarks in the Lives of Nations" (3) is a series of historical chapters on memorable epochs in modern history, beginning with the Reformation and ending with the achievement of German and Italian unity, which is apparently regarded as crowning the edifice. The revolt of the Netherlands, the English and French Revolutions, American Independence, and the War of Liberation against Napoleon are among the more important chapters. An ultra-German patriotism and animosity against France are occasionally perceptible, but on the whole the execution is fair, and the work is enlivened by frequent extracts from standard historians.

(3) *Marksteine im Leben der Völker.* Von C. F. Maurer. Leipzig: Kummer. London: Williams & Norgate.

Professor Ernst Meier (4) has prepared a very thorough account of those reforms of Stein and Hardenberg to which the present greatness of Prussia is so largely owing, in so far as they affected the Civil Service. The subject, which involves an account of the administrative system as it existed in the eighteenth century, is at a first view dry and repulsive, but will be found by no means devoid of interest when fairly grappled with, while an acquaintance with it is essential to a just appreciation of Stein and Hardenberg's great work.

The second volume of Kosuth's writings (5) during his exile comprise his letters, pamphlets, and other public documents composed subsequently to the Italian campaign of 1859. They would be unanswerable if Austria and Hungary had Europe to themselves, but their undeniable rhetorical and dialectical power is nullified by their author's indisposition to take account of actual circumstances; and it is no mean proof of the political intelligence of the Magyars that appeals so fervent and so plausible should have produced so little effect.

The thesis that "modern Christianity is a civilized heathenism" has been recently advanced in England by a very orthodox clergyman. Herr Radenhausen (6) arrives at the same conclusion rather by historical investigation than by contrasting the preaching of the first ages with the practice of the present; nor is he at all inclined to restore primitive Christianity when its nature has been ascertained. His arguments present little novelty, and his work is chiefly remarkable as indicating that his own position is much more nearly Theistic than when he wrote his celebrated "Ist," and thus confirming the impression that the ultra-materialist school is losing ground in Germany.

The Rossano MS. of the Gospels (7) is one of the most interesting palæographical discoveries made of late. From time immemorial a magnificent MS. written in silver letters upon a purple ground, and containing the Gospels of Matthew and Mark, had been lying unnoticed in the cathedral library of a small Calabrian town. It had, indeed, been briefly alluded to in an obscure book, which dated it eight hundred years too late. A German traveller first recognized it as one of the oldest of New Testament codices, the oldest of all known New Testament MSS. with miniatures, and counting among its numerous examples of the artistic treatment of sacred subjects several treated, so far as hitherto known, for the first time. It is therefore a valuable link in the history of the transition from classical to Byzantine art, and many of its delineations are of considerable artistic merit. The careful reproductions in Professors Gebhardt and Harnack's handsome volume afford a ready means of estimating its importance in this respect. It is of less account from the point of view of textual criticism, but nevertheless presents some peculiar readings, frequently agreeing with the earlier versions of the Latin Vulgate. It originally contained all four Gospels, but the two latter have perished, apparently from damp.

Dr. Studer's translation of and comment upon the Book of Job (8) will be allowed to be an able and useful publication, even when the writer's views fail to command entire assent. His interpretation is substantially that made familiar to English readers by Mr. Froude's remarkable essay. The book of Job is a protest against the accepted Hebrew view which considered all afflictions as tokens of the Divine displeasure. It thus runs directly counter to the most cherished Jewish prejudices, and could only obtain admission into the canon by being provided with a prologue and epilogue at variance with the true tendency of the work, and the interpolation of the speeches of Jehovah and Elihu. It may be questioned whether the acceptance of such sweeping suggestions is preferable to the admission that the writer of Job, like other great poets and thinkers, was sometimes inconsistent with himself. Dr. Studer, however, presents his view with great ability and clearness, and his translation is dignified and energetic.

Professor Kaegi (9) has prepared a very interesting and useful little volume on primitive Indian civilization as exhibited in the Rigveda, the only authentic source of information for the manners and institutions, as well as the religion, of the first Aryan invaders of the Indian peninsula. It is not so comprehensive as Zimmer's recent work on the same subject, but it is perfectly adapted to the requirements of readers who are satisfied with a general knowledge of it. Nearly half the little volume is occupied with notes, referring to passages in the Vedas as proofs and illustrations of the statements made in the text.

Dr. Bastian's treatise on the religious myths of the South Sea Islanders (10) contains, as usual with him, a great amount of interesting but badly digested information. It is divided into two sections, one devoted to New Zealand, the other to Hawaii. Obscure and frequently childish as these South Sea cosmogonies appear on the whole, they have frequent glimpses of profound meaning, and not a few traces of their remote origin and affinity with the mythologies of the Asiatic and American continents. If Dr. Bastian's volume wears a somewhat formidable appearance from the amount of the Polynesian vernacular it contains, it, on the other hand, contains also not a little English, the author having reprinted Mr. White's lectures on the subject, never properly published, and now inaccessible in their original form.

The concluding parts of Simons and Wagner's magnificent illustrated work on Spain (11) treat principally of Granada and the Alhambra, ending with the palm groves of Elche. The views of the Alhambra are exquisite with their delicacy of execution and wealth of minute detail, and, generally speaking, it may be said that no illustrated work is more thoroughly satisfactory, and that no artist has been more successful than Professor Wagner in seizing the indefinite national atmosphere which imparts so peculiar a colouring to Spanish scenery and architecture, as well as in attaining mere outward exactness of detail.

Baron von Ompteda's (12) principal object in visiting this country appears to have been the study of English parks and gardens, which he has examined with attention at Windsor, Kew, Hatfield, and Woburn, adding a chapter on floral exhibitions. He has, however, extended his researches to the national character and manners, and shows himself as sensible of the strong points of the former as national susceptibility could require, and perhaps even too indulgent a censor of our foibles. As an example of the weakest side of the English character, he enters into details on its besetting infirmity of intemperance; on the other side, he describes the manly amusements and ennobling historical associations of Oxford life in a most genial spirit. He endeavours with much kindness and good sense to remove current German prejudices against England, and it may be hoped that his volume will contribute to confirm the mutual good feeling between the countries which foolish persons in both have endeavoured to disturb.

Düntzer's Life of Schiller (13) is the counterpart of his biography of Goethe, an eminently useful and indeed henceforth indispensable book, with no pretension to literary merit beyond that attaching to an intelligent and workmanlike compilation. Seldom have the higher departments of the biographer's vocation been so consistently ignored, and the compiler's attention more resolutely bestowed upon the art of using scissors and paste without incoherency. Such success could only be attainable by one thoroughly acquainted with every inch of the ground. Herr Düntzer's perfect mastery over his materials has enabled him to fuse the enormous mass of Schiller-literature which the last half-century has produced into a clear and consistent narrative, accounting for almost every day of his hero's life, and invaluable for reference, although too matter of fact and overloaded with minutiae to attract general readers. The author's laudable desire to employ the very words of his authorities frequently gives his diction a patchwork character, but this was probably in his plan. Nor is it any fault of Düntzer's that Schiller, notwithstanding the nobility of his nature, is a less interesting subject for biography than Goethe, even though his life was more eventful. Goethe's intimate connexion with the entire history of European thought since his appearance imparts a significance to any incident of his career which contributed either to mould or to illustrate his mind, while the interest attaching to Schiller's biography is mainly personal. The volume is adorned by the same abundance of portraits, facsimiles, and views as distinguished its companion, and the judgment displayed in their selection is not inferior.

The second volume of Adolf Ebert's history of mediæval literature (14) embraces the period of Charlemagne's immediate successors, perhaps the most dismal epoch in all literary history, an era positively repulsive but for the honour and sympathy due to the few who, amid the deepest discouragement, contrived to preserve the torch of knowledge from utter extinction. The excellent intentions of many of the dull annalists and superstitious hagiographers of this melancholy time entitle them to a respect which the intrinsic value of their work would fail in securing them. One great genius, Erigena, adorns Ebert's pages. Archbishop Hinemar, apart from his writings, is an interesting personage; and of Rabanus Ebert justly says that he was the first to display that universality which has since come to be recognized as the distinctive note of the German literary character. Of most of the rest it need only be said that the little which deserves to be recorded is clearly and elegantly recorded here.

Dr. Adalbert Schroeter's rendering of Walter von der Vogel-

(10) *Die Heilige Sage der Polynesier*. Von Adolf Bastian. Leipzig: Brockhaus. London: Kolckmann.

(11) *Spanien*. In Schilderungen von Theodor Simons. Reich illustriert von Professor Alexander Wagner. Berlin: Pachtel. London: Trübner & Co.

(12) *Bilder aus dem Leben in England*. Von Ludwig Forstmann von Ompteda. Breslau: Schottlaender. London: Williams & Norgate.

(13) *Schillers Leben*. Von H. Düntzer. Leipzig: Fult. London: Williams & Norgate.

(14) *Allgemeine Geschichte der Literatur des Mittelalters im Abendlande*. Von Adolf Ebert. Bd. 2. Leipzig: Vogel. London: Kolckmann.

weide's poems (15) into modern German is a very meritorious piece of work, and it is no reproach to the translator that his powers do not extend to the reproduction of the incommunicable vitality of the original. Such a performance, however excellent, must always have the air of a *réchauffé*.

The Meiningen performers (16), whose advent in London this season is expected with interest in theatrical circles, are the subject of an ingenious criticism in the form of a dialogue, with especial reference to the question of the extent to which stage decoration is allowable. The writer's private opinion seems, on the whole, adverse to the Meiningen practice, but the point is professedly left undecided.

The late J. L. Klein died when his gigantic history of the drama was but half completed, and the dimensions of even this moiety render it unserviceable except as a book of reference. It may be questioned whether his successor Prüls (17) has not fallen into the opposite error, and whether his present volume, respectable in point of bulk as it is, is spacious enough for the entire history of the national dramas of Spain and Italy, with a retrospective survey of the mediæval miracle play thrown in. The very conception of a general history of the stage involves a dilemma; if the scale on which it is undertaken is adequate the work is intolerably voluminous; if a more restricted plan be adopted, the execution is inferior to that of books treating of special departments of the subject. Herr Prüls's account of the Spanish drama, for example, though very good, cannot be compared to Schack's. He has nevertheless achieved all the success compatible with his design.

It is remarkable that two novelists should simultaneously adventure upon the delicate theme of Hadrian and Antinous (18). The treatment of the subject is less reserved in "George Taylor's" story than in *Der Kaiser* of Ebers, and perhaps on this account the effect is more decidedly antique than in the latter, notwithstanding Ebers's copiousness and accuracy of archaeological detail. At the same time, *Antinous* is not for a moment to be classed with scandalous novels; its tendency is indeed, on the whole, rather of an edifying character. Antinous is brought into contact with Christianity, which he is represented as inclined to embrace but for the dissuasion of his Imperial protector. Deprived of sober guidance, he falls a victim to the suggestions of an Egyptian priest, a tool of the worthless Verus, who dreads his influence with Hadrian. As a novel the book is above the average, full of life and variety, a clever and creditable, though distinctly imitative, attempt in the style of *The Last Days of Pompeii*. The principal drawback is the inadequate portrait of Hadrian; but Sir Walter Scott himself succeeded no better when he attempted to delineate extreme versatility in the person of Buckingham.

The title of "Queen Catharine's Ghost" (19) scarcely prepares the reader for an exposure, in the form of a tale, of the tricks of modern spiritualists, apparently founded upon Sir George Sitwell and Mr. Von Buch's renowned capture of the ghost in Great Russell Street about the beginning of last year.

Heinrich Keller's "Sinnjediht" continues its course in the *Deutsche Rundschau* (20). It has the author's characteristic merits, with perhaps less of local colouring than is usual with him. A long letter from Marshal Paskewitch to Prince Gortschakoff, written shortly after the fall of Sebastopol, is full of interest to students of diplomacy and military men. The old Marshal rates his former protégé soundly, and attributes the failure of the campaign to his incapacity. A lively sketch of both the men is added. Dr. Proyer's essay on "Hypnotism" is particularly interesting to Englishmen, for the full justice it renders to our countryman Braid, the first to frame a correct theory of this mysterious phenomenon, and whose investigations form the frequently unacknowledged basis of all that has been subsequently written upon it.

The GROSVENOR GALLERY Exhibition of Water-Colour Drawings, and
Decorative Designs, by living Artists, NOW OPEN
Daily, Ten to Six.

Admission, 1s. Season Tickets, 5s.

DORÉ'S GREAT WORKS, "CHRIST LEAVING the
PRÆTORIUM," "CHRIST ENTERING JERUSALEM," and "MOSES BEFORE
PHARAOH," each 33 by 25 inch, with "Dream of Pilate's Wife," "Christian Martyrs," &c.
at the DORÉ GALLERY, 25 New Bond Street. Daily, Ten to Six, 1s.

MATRICULATION EXAMINATION.—UNIVERSITY of
LONDON.—Instruction in all the subjects of the above Examination is given at
GUY'S HOSPITAL. The CLASSES for the June Examination will commence on Monday,
March 21. The classes are not confined to Students of the Hospital. For further particulars
address the DEAN, Guy's Hospital, S.E.

CRYSTAL PALACE COMPANY'S SCHOOL of
PRACTICAL ENGINEERING.—I. The Mechanical Course. II. Civil Engineering
Division. III. Colonial Section. Prospectus on application to the undersigned, in the Office
of the Crystal Palace Company's School of Art, Science, and Literature, in the Library, Crystal
Palace.
F. K. J. SHENTON, Superintendent Library Department.

CHELTEMHAM COLLEGE.—TWELVE SCHOLARSHIPS.
Eight £40; Four £20. Election, third Tuesday in May.—Apply to the SECRETARY,
The College, Cheltenham.

MARLBOROUGH COLLEGE, February 1881.—TWELVE
SCHOLARSHIPS, varying in value from £80 to £15 a year, besides a certain number
of FREE ADMISSIONS, will be competed for in June next. These Scholarships are open to
members of the School and others without distinction; two will be offered for proficiency in
Mathematics. Age of Candidates for the Twelve to Sixteen. Full particulars may be obtained
on application to Mr. SEAR, the College, Marlborough.
A New Edition of the COLLEGE REGISTER is now ready, to be had of Mr. SELLICK
post free, 1s. 6d.

CLIFTON COLLEGE CLASSICAL, MATHEMATICAL,
and NATURAL SCIENCE SCHOLARSHIPS.—NINE or more open to Competition
at Midsummer 1881, value from £25 to £50 a year, which may be increased from a special fund
to £80 a year in case of Scholars who require it.—Further particulars from the HEAD MASTER,
or SECRETARY, the College, Clifton, Bristol.

MALVERN COLLEGE.
The NEXT TERM will begin on Tuesday, May 10.

STRATFORD-ON-AVON.—TRINITY COLLEGE SCHOOL.
The War-Jen. RICHARD V. CURRY, M.A., is assisted by Seven Resident Graduate
Masters. Special attention paid to Modern Languages. Classical and Modern Studies. Junior
Department for Young Boys. Exhibition to the Universities. Large Playing Fields, Gym-
nasium, Five Courts, &c. Terms, 50 and 60 Guineas. Apply to the WARDEN.

ST. EDMUND'S COLLEGE, SALISBURY.—A HIGH-
CLASS SCHOOL for SONS of GENTLEMEN. The religious training is upon
definite Church principles. Boys are Educated with much care and thoroughness. They
receive individual teaching and help wherever needed. Candidates for Matriculation at the
Universities are specially prepared. Terms, £75 a year.—For references, prospectus, or any
further particulars, apply to the Warden, Rev. G. H. BOURNE, D.C.L.

CARSHALTON HOUSE SCHOOL, Surrey.—BOYS carefully
prepared for Civil and Military Examinations.

SANDHURST and MILITIA EXAMINATIONS.—Mr.
ALFRED TUCKER, Salamis, 16 Lee Park, Lee, S.E., in the year 1880 Passed Nine
out of Ten for the Preliminary; Four Pupils obtained Commissions in the Marines; Four
Admission to Sandhurst; Four Militia Officers qualified. Mr. TUCKER's average number of
Pupils is Twelve.

MR. H. LÖHBAUGH, Principal of a School at M. Gladbach,
Stadth. Prussia, receives into his family One or Two Young ENGLISH GENTLE-
MEN, sons of learning German and French. Individual teaching and help when needed.
Inclusive Terms, £5 a month.

ARMY ENTRANCE EXAMINATION.—There is a Depart-
ment in connection with BLAIR LODGE SCHOOL, Potomac Station, &c., for
preparing PUPILS for the above Examinations. All the Candidates (including J. M. Holman,
First in History Examination) sent up to the War Office in 1880 have been successful.
Absence from town life, and individual preparation.—For full particulars apply to the
HEAD-MASTER.

PREPARATION for SANDHURST, WOOLWICH, and
COOPER'S HILL.—Individual Tuition. Special attention paid to the speaking of
Modern Languages.—For terms, address Mr. E. VIDAL, Roseville, Farnham Grove, Hampton,
Surrey.

FRANK COOPER, M.A. Oxon, prepares a few PUPILS for
the Public Schools. The House, expressly enlarged, stands close to the sea, on a gravelly
soil, between Bournemouth and Lymington. References given and required.—Address, River-
nells, Milford, Lymington, Hants.

WANTED, PRIVATE TUITION, by a GRADUATE of
a Scottish University, who has had considerable experience in teaching. Terms
moderate.—Address, M.A. care of Mr. James Bolton, Librarian, 39 and 40 St. George's Place,
Knightsbridge.

TO PARENTS resident in INDIA, GUARDIANS, and
Others.—A LADY, who has a small and select SCHOOL at Kenilworth, offering the
advantages of a healthy country place with the attendance of first-rate Masters from
Leamington and elsewhere, is prepared to take entire charge of Two or Three YOUNG
LADIES (or little Girls whose Education has been well commenced) to be educated
with her other Pupils. Resident Foreign Governesses. Good references given and required.
Moderate terms, according to educational and other requirements.—Apply to MESSRS. LATTY &
HUNT, Solicitors, 11 Devonshire Street, Bishopsgate Street, London.

TO ARCHITECTS and SURVEYORS.—A JUNIOR ASSIST-
ANT desires RE-ENGAGEMENT. Neat draughtsman, good and quick tracer and
writer, fair colourist; thoroughly acquainted with the general office routine. Three and a half
years' experience with a good architect. Full references, and specimens given.—Address,
H. G., 35 Effort Road, Drayton Park, Highbury.

ESTATE MANAGEMENT.—C. E. CURTIS, Author of
"Estate Management," and Professor of Estate Management at the Wills and Hants
College, will have a Vacancy for a Gentleman as PUPIL in March.—Address, Danvers,
Alton, Hants.

CURATE WANTED, Whittington, near Lichfield. Single.
Views moderate. Title can be given.—For particulars, address, Rev. Hon. G. B.
Loom, Whittington, Lichfield.

TO LITERARY MEN.—The Co-operation of a few able
WRITERS for the PRESS is desired in connection with the development of an
industry having important public aspects.—Communications, containing specimens of work,
and stating in what quarters short Articles could probably be arranged for, will be received in
confidence by X., care of J. W. Vickers, 5 Nicholas Lane, E.C.

A GENTLEMAN, of Literary pursuits, willing to undertake
an entire share in a Work already started, may INVEST £1,000 on favourable terms.—
Full particulars from ROBINSON and WALTON, Auctioneers, &c., Foultry Chambers, 11 Foultry,
London, E.C.

TO BE LET, with immediate possession, 55 LOFTUS ROAD,
Uxbridge Road, Shepherd's Bush, W., within a few minutes' walk of the Metropolitan
and London and North-Western Stations. The House, which has just undergone complete
repairs, contains Ten good Rooms, and is well arranged as to domestic offices, with good
Garden at the rear overlooking fields.—Apply to Mr. J. BOARDMAN, Builder, 9 Pleasant Place,
Uxbridge Road, W.

SUNNINGDALE, HERKS.—DALE LODGE.—
This FREEHOLD ESTATE of about Three Acres, to be SOLD or LET on LEASE.
The house has every accommodation for a Family, is delightfully situated in this beautiful
and healthy locality, with charming views.
There are Coachhouses, Stabling, Gardener's and Coachman's Cottages, &c. About half a
mile from the Railway Station, and the same distance from one of the entrances into Windsor
Park.
Full particulars to be obtained from Wm. SIM, Esq., 1 Danes Inn, Strand.

JEWELS.—SALES by AUCTION

DIAMONDS. THREE DAYS IN EACH WEEK
WATCHES. at
CHAINS. DEBENHAM, STORR, & SONS'
SILVER. GREAT AUCTION MART,

THE BUSINESS OF THE HOUSE OF COMMONS.

THE accident which befell Mr. GLADSTONE on his return from Marlborough House would at any time have called for the heartiest regret from political foes and friends alike. It is a subject for general congratulation that the treacherous freaks of an English winter have not in this instance been productive of more than temporary inconvenience to the PRIME MINISTER. But, from the point of view of public business merely, the accident could hardly have happened at a more unlucky time. On Thursday afternoon Mr. GLADSTONE was expected not merely to move a second resolution of urgency in reference to the Coercion Bill, but to make a somewhat similar motion, though of an older type, in reference to the Army Estimates, and to state the intentions of the Government in reference to the course of business generally. Very great interest attached to all these proceedings, and it did not appear, from the remarks of Lord HARTINGTON on Thursday night, that the PREMIER'S usual viceregent was either empowered to act as plenipotentiary, or was even conscious of the importance attached to the position he held. The Government is at the present moment in a very peculiar position. It has been entrusted with altogether unprecedented powers and facilities by the House of Commons, and the Opposition, confiding in the programme of Protection Bill, Arms Bill, Land Bill, has been content to waive even the semblance of obstruction. On Monday last, with the assistance of the great majority of Conservatives, an immediate closure was granted to the Government, notwithstanding the merited dislike which the stringency of the SPEAKER'S new rules even as amended had aroused. Since that time it has been confidently asserted that the Ministers intend to drop the Arms Bill, to which at least as much importance is attached by all those who have considered the position of Ireland as to the Protection of Persons and Property Bill, and that the facilities granted for these purposes are sought to be wrested for the purpose of facilitating the ordinary business of Supply. This being the case, it was absolutely necessary that some authoritative and definite explanation of the purposes of the Cabinet should be vouchsafed to those members of Parliament who in Opposition have distinguished themselves by a course of proceedings so remarkably different from that in which their predecessors indulged. The dropping of the Arms Bill would be a distinct breach of faith. The intercalation of the Estimates so as to postpone the Irish measures would be a breach of faith as distinct in fact, though possibly not quite so definite in form. Every allowance must be made for a Cabinet which, after all, is merely Mr. GLADSTONE multiplied, and which naturally goes to pieces when its head is temporarily disabled. But the singular condition of public affairs more than justified Sir STAFFORD NORTHCOTE in the demand which he made on Thursday for more light. It certainly seemed that advantage was sought to be taken of the state of things which the House has created for one purpose to bring about a state entirely different.

Even, however, if this be not the case there would still be ground for regarding with considerable suspicion and regret the course which events have taken in the House of Commons during the last few weeks. In the first place the Government have got themselves into a dilemma as to the actual conduct of business. If they move to take Monday for supply they expose themselves, as Sir STAFFORD NORTHCOTE told them amiably enough, in a reference

to his own experiences, to almost indefinite opposition, while the delay involves a practical breach of the understanding entered into at the beginning of the Session. If they do not, the business of the House and the country may wait indefinitely upon the pleasure of independent members, while the chances of the Land Bill become, to say the least, remote. But this is not all. It is impossible to deny, with any regard to the facts, that the hasty and arbitrary proceedings which have been resorted to might have been made entirely unnecessary by a firmer use of the powers actually possessed by the House, the Speaker, and the Chairman of Committees on the eve of the *coup d'état*. An attempt has been made to show that the successive silencing of individual obstructives which the Conservative leaders endeavoured, to initiate at midnight would have taken too much time—some ten or twelve hours, in fact. Never, perhaps, was there a more unfortunate plea. For, as a matter of fact, almost exactly this period was, after Dr. PLAYFAIR'S recoil from his task, wasted in idle discussion, at the end of which what was undoubtedly an act requiring indemnity, and only technically justifiable when that indemnity was accorded, was necessary. There was, therefore, nothing gained; there was very much lost. It is quite conceivable that the mass of the Conservative party, after the partial capitulation of the SPEAKER on the morning of this day week, and in view of the serious danger of seeming for party purposes to thwart the Government in carrying out a measure of the importance and necessity of which all Englishmen are convinced, should shrink from opposing the closure demanded by Mr. GLADSTONE on Monday, and redemanded by Lord HARTINGTON on Thursday. But it is quite as easy to understand, and moreover to approve, the action of the ten or twelve members of the party who took a different course. The refusal of the closure would not, they argued, imperil the passing of the Bill; the granting of it would rivet still further the chains which Parliament has imposed upon itself, and would strengthen the precedent for reimposing those chains in the future. This, we take it, was the contention of which Mr. BRERFORD HOPE made himself the spokesman in his letter of Tuesday, and it is one which certainly deserves the most serious consideration.

It is to these two points, then—the difficulty of discerning the result, in the long run, of trusting a Ministry with urgency, and the bad effect on the future conduct of business which the too frequent application of the heroic method must have—that chief attention ought to be paid. It is true of course that, according to the conditions of the state of urgency which Sir STAFFORD NORTHCOTE succeeded in getting recognized, almost any unanimous minority which is likely for some time to come to find itself in Opposition can bar the proceeding. But it must be remembered that though it is at present impossible to spring fresh measures on the House under cover of urgency, the granting of this provides the Government of the day with advantages which they may or may not misuse. For instance, in this particular case it may be taken for granted that urgency would not have been voted originally, nor the closure granted on Monday or Thursday, had it been certainly known that the Government would drop the Arms Bill. Many other situations may be imagined in which, though both parties may be sufficiently in accord on the subject of the measure actually before the House, the expediting of that measure might enable the Government to bring in with a greater chance of success other measures most distasteful

to the Opposition, to discard the moderation which, while they were in need of Opposition help, they had observed, and in other ways to gain advantages by means intended for them by their temporary allies. This, it may be said, is merely a party argument. The same, however, cannot be said of the argument drawn from the demoralizing effect of these urgency devices. Already suggestions have been made by Radical members, and not unfavourably received by Mr. GLADSTONE, to the effect that the ordinary, as well as the extraordinary, procedure of Parliament wants a little freshening up. This is only what might be expected. The humdrum course which the experience of centuries has shown to be best calculated for the preservation of freedom of speech and freedom of action becomes intolerably dull after a week or two of sensational and dramatic proceedings, of urgencies and clôtures, of strings of amendments put without debate, and batches of members turned out of the House. The mouth of the House already shows signs of spoiling in consequence of the sawing of this newfangled curb, and it will take a much gentler hand than Mr. GLADSTONE'S to ride it comfortably with the snaffle again. There is nothing in the least surprising in this. It is as much human nature as it is horse nature. But in the present temper of certain persons who are in authority, this temper will have to be met with more arbitrary measures, and so the evil will grow ever worse and worse. This is not a cheerful prophecy of the possibilities of the situation, but it is one which seems not unlikely to be fulfilled.

THE LAND LEAGUE AGITATORS.

MR. PARNELL'S mob popularity in Ireland seems not to be impaired; nor has the seditious section of the priesthood been alienated from his cause by the alliance with the French faction which murdered Archbishop DARBOY. As might have been expected, Mr. PARNELL'S version of the obstructive proceedings in the House of Commons was loudly applauded by a crowded meeting, although he made the surprising statement that he had during the whole Session only had the opportunity of speaking for twenty minutes against the principle of the Protection Bill. It may perhaps be true that, of six weeks exclusively occupied by the Bill, Mr. PARNELL and his allies have devoted only a very small time to the discussion of its merits. It was reported that one of the most successful practitioners of obstruction on one occasion questioned a decision of the SPEAKER, remarking at the same time audibly to his friends, "This will do as well as anything else." The opponents of the Bill might have delivered any number of speeches of any length against the principle or details of the Bill, if they had not ostentatiously attempted to defeat it, not by argument, but by waste of time. Mr. PARNELL boasts that, whereas a former Coercion Bill was passed in one or two sittings, the present measure will have occupied the House of Commons for at least seven weeks. If a suspension or relaxation of the ordinary law is required in the public interest, any unnecessary delay in legislation is an evil. The malcontents have inflicted much annoyance on the House of Commons; and they have made themselves and their cause thoroughly unpopular in Great Britain. It is not easy to perceive that they have gained any corresponding advantage for themselves or their clients. The certainty that the Bill would be passed has fortunately had to some extent the same effect which might have been produced if its provisions had been in force.

Mr. PARNELL repeats the advice which he has often before given, that rents or unjust rents should not be paid. Either the tenant or the local branch of the Land League is to decide whether the rent is just. The farmers are informed that the amount must be excessive if it is larger than GRIFFITH'S valuation. As Mr. PARNELL well knows, the Land League has in many cases prohibited payment of a rent equal to the valuation or even smaller. The maximum which he proposes is entirely arbitrary; and, according to his statement in the House of Commons, the adoption of the valuation as a rule would deprive the landowners of one-third of their property. For the remainder they would not only have no security, but a precedent for complete spoliation would have been established. If the occupiers or their delegates are to fix rents irrespectively of contract, they will have ample power and abundant motive for withholding rent altogether. Mr. PARNELL openly encourages wholesale robbery

by announcing the impending abolition of landlordism, or, in other words, of rent. He, at least, is consistent, whatever may be the case with his priestly supporters, in promising the co-operation of French revolutionary Socialists. The clamour against large landed proprietors is almost entirely confined to the United Kingdom. In other countries, where land is more generally divided, the bloated capitalist, instead of the tyrant landlord, becomes the object of vituperation and menace. In Germany or France the law might perhaps interfere with the exhortation of a demagogue to waste or destroy the property of employers. Mr. PARNELL advised farmers who, having refused to pay their rent, were threatened with eviction to plough up all the grass land before they left, so that the landlord or the incoming tenant might not have any grass for his cattle. It seems that the form of crime which he recommended is made specially penal under a statute. Mr. PARNELL has consequently withdrawn his suggestion, not because compliance would be wicked, but because it may be dangerous to the perpetrator of the outrage.

The House of Commons, though it was until Monday still oppressed with the Protection Bill, has lately had the end in sight. On the last night of the debate in Committee Mr. FORSTER took occasion to declare that the state of Ireland still rendered the measure necessary. The agitators scarcely care seriously to contradict him. If they could produce in Ireland a conviction that the Land League is innocuous, they would have disarmed themselves. Partly through fear, and to a great extent in reliance on the power of the League, a large number of tenants have refused to perform their contracts. If the demagogues with the machinery at their disposal could not neither punish the honest nor protect the defaulters, they could no longer demand obedience. Some of the managers of the League have at different times announced that, if the Protection Bill were passed, the tenantry would no longer pay their rents. Mr. PARNELL in his last speech more moderately confined the prophecy or prohibition to rents which were deemed by the League to be unjust, and to all rents which exceeded GRIFFITH'S valuation. That it should be in the power of agitators to threaten so direct an attack on the rights of property is in itself a strong argument for measures which may tend to thwart their machinations. The discretionary power of arrest in disturbed districts will probably deprive them of the services of their police. Mr. PARNELL'S boast that the services of the whole population will be at their disposal is an empty flourish. The immediate agents who commit outrages in the interest of the League have an almost professional character, and are comparatively few in number. It is reported with much probability that many of them have already thought it prudent to abscond.

The controversy on the due order of Irish legislation has lately been revived. A reference to precedent scarcely supports the contention of those who would have deferred the protection of life and property till the land-law of Ireland had been fundamentally altered. The opponents of the legislative policy of the Government quote the conduct of the Duke of WELLINGTON in 1829 in defence of their opinion. The Catholic Relief Bill had been accompanied by two restrictive measures, directed respectively against the Catholic Association and the forty-shilling freeholders. Both Bills were easily carried, with the support of the ultra-Tories, before the Relief Bill was passed. The Ministers determined that the subsidiary Bills should not be tendered for the Royal Assent until the King had sanctioned the Relief Bill in writing. They had reason for apprehending that, but for the precaution which had been taken, the King might at the last moment have drawn back, and have tried to form a Protestant Government. Nothing could be further from the Duke of WELLINGTON'S thoughts than the notion that relief of alleged grievances ought to take precedence of measures for the maintenance of order. In the present case experience has demonstrated the expediency or necessity of giving precedence to the Protection Bill. It is well known that the Land Bill, whatever may be its provisions, will not be accepted by the leaders of the Land League; and a measure which must involve complicated details would have furnished opportunities for endless obstruction. The withdrawal or postponement of the Peace Preservation Bill would disappoint all friends of order who wished to repose confidence in the Government. It had been assumed that the error of allowing the former Arms Bill to expire was about to be corrected.

The only incident in the debate on the Report which

attracted or deserved attention was the short discussion on Mr. PARNELL's proposal to exclude treason and cognate offences from the provisions of the Bill. In the same spirit in which he formerly excused the murder of Mr. BOYD on the ground that there was no branch of the Land League in the district, Mr. PARNELL described the Salford explosion, by which one child was killed and another wounded, as a practical joke. To Sir W. HARCOURT's quotation of atrocious threats of murder and arson uttered by a former Fenian convict, the Land League members replied that similar language was often used in America, and that the Land League was not connected with the Fenian organization. The Land League agitators nevertheless incessantly boast of the aid which they expect from America; and Sir W. HARCOURT has proved that they are identified in policy and organization with the American Fenians. If neither they nor their associates are likely to commit treason, or practical jokes in the nature of treasonable practices, they have no interest in diminishing the securities against the commission of such crimes. Mr. PARNELL has on more than one occasion publicly stated that he may at some future time emancipate himself from the constitutional restraints to which he now professedly submits. He has never concealed his hope that the extermination of landlords will lead to the separation of Ireland from the United Kingdom. He will perhaps wait to accomplish his design till Mr. GLADSTONE or Mr. FORSTER has redeemed the wild and thoughtless pledge of lowering the Irish franchise to a point at which the lowest and most disaffected rabble will enjoy undisputed political supremacy. The actual representation is too select to satisfy the aspirations of Liberal Ministers.

THE TRANSVAAL NEGOTIATIONS.

THE message which Sir HERCULES ROBINSON has been directed to address to the Boer leaders through the President of the ORANGE FREE STATE causes more surprise than satisfaction. The communication was made in answer to an inquiry on behalf of the Boers whether their independence would be recognized if they desisted from opposition. In reply they were informed that, if armed opposition ceased forthwith, HER MAJESTY'S Government would endeavour to frame such a scheme as, they believe, would satisfy all enlightened friends of the Transvaal country. The concession of independence is thus left an open question, if indeed the Boers and their friends may not contend that it is implicitly promised. If the Government is not prepared to yield to force a surrender which had been distinctly refused before the revolt, the Boers have reason to complain of the ambiguity of the declaration. On the other hand, it seems scarcely possible that, even to gratify the enlightened friends of the Transvaal, the English Government would tamely acquiesce in the abandonment of all its pretensions, merely because an insufficient force was defeated in an attack on a strong position. The obstinacy of adversaries has often saved feeble diplomatists from the consequence of their own timidity. The letter addressed by KRUGER, one of the leaders of the Transvaal Boers, to the Government of the Orange Free State, seems to show that the questionable negotiations in progress are not likely to lead to any practical result, while the opinion in the Free State itself as expressed by an enormous majority of its Volksraad, appears to demand a complete surrender to the Boers. The revolt in the Transvaal has, according to its apologists, been provoked by the conduct of the English Government, and the sole avowed object of its promoters was to re-establish an independent Republic. The issue now proposed is wider; and if it is seriously raised, it can only be decided by war. Mr. KRUGER declares that it is the purpose of himself and his associates to render the whole of South Africa as independent as America. With geographical rhetoric he demands that, from Simon's Bay to the Zambesi, the whole of Africa must belong to the Afrikaner, a name which is usually applied to the descendants of Continental Europeans, excluding the English. It had not been previously known that the eight or ten thousand Dutch farmers of the Transvaal had determined not only to appropriate to their exclusive use a territory as large as France, but to conquer or liberate Natal, Griqualand, and the wide region which belongs to the Cape Colony. Some millions of natives, including the inhabitants of regions where English rule has never been established, are to become subject, in free or servile condition, to the new

Republic. The title of the English Crown to Cape Town itself, though it is confirmed by nearly a century of possession, is to be summarily abolished. The English settlers, forming perhaps two-fifths of the whole white population of South Africa, will, in the first instance, have the choice between suicidal rebellion and expulsion or compulsory political servitude. There has hitherto been no instance of an English population living under foreign dominion; but it is perhaps not impossible that Englishmen, like other European colonists, might as a result of the fortunes of war be compelled to recognize an alien sovereignty. Until their subjection is accomplished, there is a certain audacity in the announcement that the English colonists in South Africa are to be forcibly detached from their allegiance. Notwithstanding their successes at the beginning of the campaign, the Boer leaders might remember that they are not yet permanently victorious. If their bluster puts an end to premature attempts at compromise, it will not have been wholly useless. It may be observed that Sir BARTLE FRERE, in his instructive letter on the Transvaal question, speaks of Mr. KRUGER as a moderate and reasonable man; and he adds that for some time after the annexation he held office under the English Government.

Another advantageous result of a declaration of internecine war will be to silence officious Continental patrons of the Boers, or at least to render their interference harmless. Fortunately no Government is at present disposed to quarrel with England; but the embarrassments of a neighbouring Power are sometimes regarded with complacency; and a few zealous patriots in Holland have persuaded themselves that they ought to sympathize with the revolt in the Transvaal. The same persons might probably approve of the institution of a powerful Dutch State in South Africa; but they can scarcely expect the Government or people of England to submit to the demands of the Boers. The precedent of the rebellion of the North American provinces in the last century is not applicable to the Cape. If the great mass of the population deliberately wished for independence, England, according to principles which have been generally recognized, would not insist on retaining any part of its dominion by force, except, perhaps, two or three naval stations which could be easily defended. As long as the English colonists retain their loyalty they are entitled to protection by the whole force of the Empire. There is no reason to apprehend that the Dutch inhabitants of the Cape Colony will respond to KRUGER's invitation. It would be madness to engage without provocation in a rebellion which would be also a civil war. Though there have sometimes been jealousies and rivalries between the two races, they have formed one political community. The English element is more largely represented in the present Cabinet; but the last Minister was of foreign descent, and his policy was favoured by the Dutch. It had not hitherto been expected by either party that the whole country should be claimed exclusively by the so-called Afrikaners. It is true that the sovereignty of England was founded on conquest; but at the distant time when the Cape was annexed Holland had become virtually a province of France. The English immigration is of later date.

The only analogy which exists between the present difficulties and the separation of the American colonies applies to the Transvaal rather than the Cape. It has often been observed that one of the principal causes of the American rebellion was the conquest of Canada. Against the French the colonists and the mother-country had been engaged in a common cause; and, when the contest was decided, they were for the first time at leisure to fall out among themselves. The destruction of the Zulu power has had a similar effect on the relations between England and the Transvaal. If CETHEWAYO were still at the head of his formidable army, the Boers would have acquiesced in English sovereignty, because it gave them a right to protection. They are now believed to be intriguing with the petty native chiefs for aid, which will certainly be refused if barbarians are capable of distinguishing between friends and enemies. The English Government will not repent the mistake of the last century by employing savages against enemies of European extraction. The effect of the Basuto war, which is now approaching its end, cannot be confidently anticipated. The colonial Government, having from the first abstained from demanding the assistance of English troops, will naturally regard its unaided victory as a confirmation of its right to practical

independence; but, if the Transvaal complications create differences between the two sections of the population of the colony, it will not be forgotten that the Basuto war was promoted by a Ministry of English race, or that some of the burgher troops abandoned their comrades in the middle of the war. The dominant party will not be prepared to acquiesce in the claim of the Afrianders to exclusive supremacy in all the States and provinces of the continent.

In his answer to Lord BRABOURNE Lord KIMBERLEY naturally declined to furnish information as to the prospects of a peaceable settlement. If the negotiations happily fail, the result will be due rather to the improvident obstinacy of the Boers than to the firmness or dignity of the Government. The discussion in the House of Lords may perhaps have been useful in dissipating some popular illusions. Lord BRABOURNE, who during Mr. GLADSTONE's last Administration represented the Colonial Office in the House of Commons, adhered to the opinion which he has consistently maintained, that Lord CARNAEVON's annexation of the Transvaal was politic and just. The expediency of the measure is, in truth, more doubtful than its justice. Sir THEOPHILUS SHEPSTONE may have been too sanguine in his belief that the people approved the annexation, but they tacitly acquiesced. They have since received great and costly benefits from the English Government. They have been relieved from financial insolvency or collapse, and an efficient local administration has been established. The change in their relations to the native tribes is still more important. Before the annexation the Boers were scarcely able to make head against SECOCOENI; and they would have been helpless against the powerful Zulu army, if CETEWAYO had, in accordance with his repeated threats, invaded the Transvaal. It is not too much to say that, but for the native wars which have been conducted at the exclusive expense of England, the Boers of the Transvaal would not have ventured to engage in the present insurrection. Lord BRABOURNE entered fully into the question whether the Boers had violated the terms of the Convention under which they obtained their independence by their maintenance of slavery or compulsory servitude. Lord KIMBERLEY confirmed the statement that women and children had been enslaved or sold; but he distinguished among the three communities which ultimately combined to form the Transvaal Republic. The more remote settlers were more lawless than those who lived in a comparatively civilized neighbourhood. The oppression which may have been practised on the natives affects the present policy of the English Government rather than the merits of the original annexation. It was not because the Boers kept native slaves that Sir THEOPHILUS SHEPSTONE superseded the President and the Volksraad. The assumption of sovereignty may have afterwards entailed on the Government responsibilities which cannot properly be disclaimed. There is reason to believe that the natives are strenuously opposed to the re-establishment of the Dutch Republic.

M. GAMBETTA'S SPEECH.

M. GAMBETTA'S speech on Monday is important, not for any new light which it brings to bear upon his future policy, but for the clearness with which he specifies the condition under which it will become his duty to announce that policy to the world. He is exceedingly careful to disclaim any interference, past or future, with the existing Government. It is not his business to tell the Cabinet what it ought to do, or to criticize what it has done. Nor has he at any time laboured to set up a secret Cabinet by the side of the Cabinet nominally in office, or to supersede the Cabinet nominally in office by the issue of instructions or suggestions intended to override it. His attitude ever since he became President of the Chamber of Deputies has been one of observation and reserve. He has noted what has gone on, and formed his own conclusions with regard to it; but he has kept those conclusions strictly to himself. The assertions to the contrary have not been mistakes; they have been wilful misrepresentations. Those who have invented and circulated them are not mere busybodies, bent upon knowing more than there is to be known; they are enemies of the Republic, anxious to injure the Republic through one of its most devoted servants. Nothing that

could have this effect has been too untrue or too mischievous for them to say it. When they found that their countrymen could not be induced to distrust M. GAMBETTA as regards home politics, they had recourse to foreign affairs. When they had failed to make the nation suspect him of aiming at making himself Dictator, they tried to make it believe that he was going to commit France to war. "GAMBETTA, c'est la guerre" has been their cry ever since the Cherbourg speech, and as the elections have approached the energy of those who sustain it has been redoubled. M. GAMBETTA meets all this by a positive denial, and by a demand for the production of evidence that he has done one single thing of which he has been accused. He has a policy—that much he admits; but he utterly refuses to say at present what that policy is. It will be time enough for him to break silence upon this point when the country has unmistakably called him to play another part than that which is at present assigned to him. Until that day comes France will be governed by the men whom she has chosen to govern her. When she makes a change in this respect, and elects to be governed by M. GAMBETTA, the reason for his reserve will be at end, and France will know the man in whom she has so steadfastly believed.

It is not often that statements apparently so contradictory as those made by M. GAMBETTA's enemies and those made by M. GAMBETTA himself admit of being reconciled. In this case, however, there seems to be no reason why both may not be substantially true. M. GAMBETTA says that he has not attempted to influence the action of the Government; his enemies say that the action of the Government on a great number of points—on all points, indeed, down to the time that the evident unwillingness of the country to see itself committed to a policy which can by possibility lead to war, made it necessary for the Government, with the acquiescence of M. GAMBETTA, to lower their tone upon the Greek question—has been influenced by him. Put in this way, there is no real incompatibility between the two assertions. A politician may exercise a very powerful influence on the policy of a Government without making any direct attempt to bring about the ends which, as a matter of fact, are brought about. Mr. GLADSTONE's position before and during the general election is exactly a case in point. He was not the leader of the Opposition; he constantly disclaimed any desire to be replaced in power; it is quite possible that he held little or no direct intercourse with the nominal leader of Opposition. But the one thing that either Liberals or Conservatives cared to know about either a candidate or a policy was what Mr. GLADSTONE thought on the subject. The country had decided that a Liberal victory would be Mr. GLADSTONE's victory, and that a Liberal defeat would be Mr. GLADSTONE's defeat. What Mr. GLADSTONE was to the Liberal party in the interval between the election of the present Parliament and the dissolution of the last Parliament, M. GAMBETTA has been to the Republican party ever since M. GRÉVY has been President. When M. GAMBETTA says that he is a simple soldier, fighting in the ranks, he does but reproduce Mr. GLADSTONE's protestations. When other people say that where M. GAMBETTA fights, there, whether he calls himself soldier or general, the battle will always be the hardest and success or reverse the most decisive, they only repeat what all England was saying about Mr. GLADSTONE down to the moment that the elections set the question at rest. Real and apparent power are not always or necessarily vested in the same person, and where they are divided there will always be room for the kind of misrepresentations of which M. GAMBETTA now complains.

The speech of Monday will, at all events, have the effect of making these so-called misrepresentations useless for the future. The only object that the authors of them could have proposed to themselves was to make it universally acknowledged that it is M. GAMBETTA, and not the Minister who happens at the moment to be President of the Council, who really governs France. Now that M. GAMBETTA has avowed in his place in Parliament that he is ready to govern France whenever France asks him to do so, this universal acknowledgment has been secured. There is not probably at this moment a single section of French politicians which does not wish to see M. GAMBETTA at the head of affairs. This desire is, no doubt, prompted by very different motives. The Royalist or the Communist desires to see him dis-

credited by failure to deal adequately with the immense difficulties of the situation. The Republican thinks that the difficulties of the situation will not be fairly faced until M. GAMBETTA takes the reins into his own hands. Hitherto the confusions which have again and again shown themselves in the Chamber of Deputies have mostly had their origin in the attempt of some section or other to make GAMBETTA say plainly whether and when he meant to take them into his hands. Upon this point there is no longer any room for uncertainty. It is not France that is waiting for M. GAMBETTA, but M. GAMBETTA that is waiting for France. He will continue to play the part he has played hitherto until such time as the country shall unmistakably assign him a different part. Those who wish to hasten the day on which M. GAMBETTA exchanges the chair of the Chamber of Deputies for some more directly political post have now only to encourage the country to make its wishes known. As soon as that is done, M. GAMBETTA has pledged himself not to ignore or resist the summons. There is not one word in his speech which reads like false or assumed modesty. M. GAMBETTA is perfectly conscious of the place he fills in the country, and he only defers taking formal possession of it until such time as he can make his seat completely secure.

M. GAMBETTA has not defined the method by which his countrymen are to make him acquainted with their will. But with a general election in prospect this is not a point upon which any serious difficulty need arise. From now till the canvass begins every intending candidate on the Republican side will be considering how he can best identify his return with M. GAMBETTA's assumption of power. Possibly he will say openly in his address to the electors, that, if returned, he will call upon M. GAMBETTA to redeem his promise and to place himself at the disposal of France. Possibly some formula will be devised which will express this sentiment quite as clearly without putting it into words. Whichever course is adopted, the result will be the same. The Republican deputies will come to Paris pledged up to the eyes to place M. GAMBETTA in whatever position he thinks it most convenient to hold as the real ruler of France. If he desires to be Minister, M. GRÉVY will no longer omit to send for him. If he desires to be President, probably M. GRÉVY, who has never opposed himself to the ascertained wishes of the nation, will retire from public life a little sooner than he would otherwise have done. As the Constitution stands, however, there seems no reason to suppose that M. GAMBETTA's ambition will go beyond the post of Prime Minister. In strong hands this is at present a place of more real power than that held by the nominal Chief of the State. The President has to do what his Ministers tell him, and that is scarcely a function which it would suit M. GAMBETTA to discharge. During the rest of M. GRÉVY's tenure of office M. GAMBETTA will have time enough to take counsel with himself whether he will be better able to carry out his policy as an elected President with Ministers of his own choosing or as a Minister imposed upon the President by the will of the Chamber of Deputies. If he determines to be M. GRÉVY's successor, he will probably first procure a change in the method of election. A President elected by the Legislature will always occupy an unsatisfactory position if the Legislature which elected him has been replaced by another of different views. He may feel sure that, if the country had to choose between him and the Legislature, its choice would still fall upon him; but, with the dislike that French Republicans have to dissolution, he may have no means of putting the issue thus plainly. The great power that the President exercises in the United States will always be before his eyes, and the only way to attain similar power for himself will be to give the election of the President to the people instead of to the two Chambers. The charge of aiming at a dictatorship, which is sure to be brought against a President, or expectant President, who suggests such a change in the Constitution, will be easily repelled by an appeal to the American example. Indeed, the mechanism of the existing French Constitution has the conspicuous fault that it first makes the Chief of the State more directly a representative of the Legislature than the Ministers themselves, and then takes away the authority which it has given by compelling him to exercise it through Ministers over the choice of whom he has at most only a veto. The circumstances under which the Constitution

came into being do not invest it with any of that sacredness which would lead Frenchmen to cling to it after its operation has been shown to be illogical.

TURKEY AND GREECE.

IF the concurrent testimony of almost all purveyors of news may be trusted, the Powers have practically agreed to modify in favour of Turkey the award or recommendation of the Berlin Conference. Notwithstanding the reserves of the English Government, some of the parties to the negotiation seriously insist on the surrender of Janina or of Metzovo. The Porte has therefore gained something considerable by its refusal to yield to pressure; and the judgment of the Powers has perhaps also been affected by the introduction of a new element into the controversy since the date of the Conference. The organization of the Albanian League, while it constitutes an additional embarrassment for Turkey, at the same time places a new difficulty in the way of Greek territorial aggrandizement. According to a late report, the League was preparing both to resist Turkish authority in Northern Albania, and to detach troops, if required, against the Greeks in the South. If the statement is accurate, the Greek Government would be ill advised in provoking a formidable local resistance. The diversions which may perhaps be effected to the detriment of Turkey would not concern the Albanians; and an extension of territory effected against the wish of the population would be invasions and insecure. The Porte, encouraged perhaps by partial diplomatic success, hopes also to retain the town and district of Prevesa on the shores of the Gulf of Arta. It is understood that the English Ambassador will strongly oppose the demand; but it is not known whether he is instructed ultimately to yield if his colleagues should be of an opposite opinion. It seems that there is no longer any dispute about Thessaly, though perhaps the Turks have not formally withdrawn their claim to Larissa. Ingenious politicians attribute the comparative pliancy of the SULTAN on the question of Thessaly to a belief that Austria, in the prospect of the future acquisition of Salonica, objects to the acquisition by Greece of the shores of the Gulf of Volo, but little reliance can be placed on far-fetched speculations. When the boundaries of the Kingdom of Greece were about to be settled more than fifty years ago, one of the frontier lines under discussion was drawn from the Gulf of Arta to the Gulf of Volo. An objection was raised on the part of the English Government to the possession by Greece of a port in the immediate neighbourhood of Corfu, which might, as it was feared, become in practice a Russian naval station. The transfer of the Ionian Islands to Greece has entirely altered the position of affairs.

The statement that the German and Austrian Ambassadors have arrived at a complete understanding with the Porte is probably premature. The English Government has perhaps sufficient reasons for continuing to maintain the validity of the decision of the Conference. The participation of Mr. GOSCHEN in the discussion between the Porte and the Ambassadors proves that he cannot have been instructed to treat the Berlin award as a final and irrevocable decision. It would indeed be idle to rely on the concert of Europe, when half the Powers repudiate their former agreement, and all are engaged in a fresh negotiation on the same subject. The English Government probably uses the decision of the Conference as an instrument of legitimate pressure, by announcing to the Porte that, in default of an amicable settlement, the title of Greece to the whole territory in dispute, including Janina and Metzovo, would be regarded as valid. The interpretation of the award has repeatedly varied in accordance with the wishes or policy of different Powers. M. DE FREYCINET at one time declared that it created an irrefragable right or title, though he left to England the honour and the duty of enforcing the alleged decree of Europe. In other words, he magnified the importance of the result of the Conference, for the purpose of showing that the French Government had exhausted its obligations to Greece. Only two or three months before he had insisted that the naval demonstration should be continued until the claims of Greece were satisfied. His successor, desiring to restrain the warlike ardour of Greece, explained that the award was a simple recommendation, which Turkey was at

liberty to decline. The large exportation of Government rifles from France to Greece has not been satisfactorily explained by M. FERRY. It was doubtful whether M. ST. HILAIRE's language tended to promote peaceable dispositions at Athens, and he had perhaps forgotten that he was encouraging resistance at Constantinople. The English Government may or may not be liable to the charge of turbulence and imprudence; but from first to last it seems to have been consistent. If the other Governments had agreed, force would have been employed to compel the submission of Turkey. When Austria, Germany, and France successively drew back, England still, as far as possible, maintained the cause of Greece. The armaments, which may perhaps after all precipitate a rupture, would probably not have been undertaken but for the encouragement of the English Government. If its policy had prevailed, the Porte would, rightly or wrongly, have been forced into submission.

The scheme of compensating Greece for disappointment on the mainland by the acquisition of Crete is probably confined to irresponsible projectors. It seems unlikely that, after recent experience of the difficulty of negotiating with the Porte and with one another, the Great Powers should voluntarily raise an entirely new diplomatic issue. The most zealous friends of the Greek race can scarcely contend that Crete is in urgent need of liberation. Since the establishment of the present administrative system, the island has been tranquil; and any discontent which may exist prevails rather among the Mussulman minority than among the Greeks, who are believed to illustrate their numerical preponderance by an arrogant demeanour. It would seem that they enjoy the control of the local finances, for some of them lately proposed to punish the Governor of Crete on account of supposed disregard of their wishes by depriving him of half of his salary. Although Crete may perhaps be destined at some future time to form part of the Greek State, it is doubtful whether the Christian population at present desires annexation. Another reason against introducing the question of Crete into the controversy is that the substitution of one territory for another is at variance with the only principle which can justify the transfer from Turkey to Greece. It can be no satisfaction to the population of any part of Epirus or Thessaly, if it remains against its will under Turkish dominion, to know that somewhere else Greek Christians have become Hellenic subjects. The theory of compensation as it was exemplified at the Congress at Vienna was consistent and intelligible. The allied Governments professedly looked only to the dynastic rights or claims; and a king who had been obliged to give up two or three hundred thousand subjects to satisfy an ambitious neighbour was, according to established rules, entitled to an equivalent at the expense of some still more helpless potentate. The doctrine of nationalities, which had not then been invented, constitutes the only title of the Greek kingdom to aggrandizement. The right vested in the subjects, and not in the sovereign, is obviously incapable of being transferred.

The question of peace or war will necessarily be decided in a few weeks. Before the end of March the season for military operations will have begun; and if the Greeks have finally determined to seize the disputed territory by force, they will have nothing to gain by delay. There is no reason to apprehend that the Turkish Government will exercise its undoubted right of anticipating attack. The SULTAN well knows that he has nothing to gain by war, although he may not reconcile himself to the sacrifices by which alone it can be averted. Even in the event of war, the Porte has voluntarily pledged itself not to make use of its superiority at sea. The Turkish Ministers are probably aware that some or all of the Powers would interfere to prevent the bombardment of Athens or of the Piræus. At the same time, they have declared their intention of carrying the war into the enemy's country, if, as they profess to believe, they are strong enough to repel invasion. The Porte also undertakes to remain on the defensive until Greece commits some act of hostility. All the Ambassadors in the Notes which they presented a few days ago reminded the Turkish Government of its promise. They also concur in the intimation that the concessions which have hitherto been offered will not be deemed sufficient. It is not at present known whether the Powers are agreed as to limits which might be accepted as satisfactory. If a compromise is finally effected, the task of obtaining the assent of Greece will still remain to be accomplished. Notwith-

standing the warlike language of Greek politicians of all parties, it is improbable that a large and immediate addition of territory will be refused in the uncertain hope of obtaining something more. It will be a defect in the settlement that it is unlikely to be final; but the Greeks may find some consolation even in their belief that they suffer present injustice. The decision of the Conference of Berlin will serve as an excuse for future claims to be preferred on suitable occasions. It is certain that the difficulties of Turkey will continue or recur, with the result of furnishing evasions and unfriendly neighbours with opportunities of aggression.

CENTRAL ASIAN AFFAIRS.

THE tyranny of the Coercion Bill has driven Lord LYTON's motion on the subject of Candahar into next week; but the interval seems to be rather grateful than otherwise to the partisans on both sides. Arguments of all kinds are being accumulated by persons who appear to be regardless of Lord HARTINGTON's ingenuous avowal that, though the Government do not object to listen to them, they have made up their minds beforehand not to be convinced. Sir LEWIS PELLY has been once more overthrowing the Duke of ARGYLE, who in this particular question reminds the contemplative man irresistibly of the pith soldiers of his youth, things of no weight nor power of resistance, but possessed of a miraculous faculty of recovery. Intelligence comes from all parts of the world as to the impression created by the Cabul correspondence—an impression which, it need hardly be said, is uniform enough. Lord GEORGE HAMILTON and a certain "IGNOTUS" are at daggers drawn as to the plans of the late Indian Government. A curious and characteristic attempt has also been made to get up a diversion in favour of Russia by means of the story about Major BUTLER, Lord LYTON, and the Tarcomans. As an instance of the tendency of certain Radicals to the weakness which is sometimes called Cosmopolitanism and sometimes fouling your own nest, the effort is interesting, but in itself it might have been better planned. For it is not necessary to examine even the amount of truth which there may be in the story that in 1876-7 Major BUTLER, at the instigation of the Viceroy, visited the Tekke Tarcomans and instructed them in the art of war. The ingenious, but unluckily ill-informed, correspondent of the *Daily News* who calls himself "DINADAN"—an unceremonious borrowing of the name of a knight of ARTHUR's Court who did not deserve such base usage—seems to be ignorant of facts and dates to a really remarkable degree. Had everything taken place (an enormous concession) as he supposes it to have taken place, the parallel with the Cabul intrigue would unluckily still be incomplete in some important particulars. For, by his showing, the proceeding took place long before the Treaty of Berlin. We have the repeated assurances of his friends, with Lord BEACONSFIELD as their witness, that everything done before that by Russia against England was *de bonna guerre*. Perhaps, however, the refusal to recognize as allowable on one side what is admitted to have been allowable on the other is nearly as characteristic of the party from which it comes as the readiness to accept any idle rumour in the desire to discredit England.

Although, however, this particular attempt to drag Central Asian affairs into the Afghan question is as idle as it is improper, there is no doubt that the Tarcomans and their fate must enter largely into the calculations of every one who approaches the Candahar question in a different spirit from that of Lord HARTINGTON, and who is willing to let his conclusion follow his reasoning and not to adjust the reasoning to the conclusion. Since the fall of Geok Tepe great uncertainty has prevailed as to the probability of the Russians pushing on to Merv or limiting their advance to the district of Askabad. Even now we have no official intimation, either English or Russian, as to any such intentions of limitation. HER MAJESTY's Government believe that the Russians are not going to Merv. Mysterious and contradictory statements are made from St. Petersburg as to the movements of the Russian generals and armies. In the last few days, however, two important contributions have been made to the Central Asian question, the one being that part of Professor YAMSKY's letter to Lord LYTON which deals directly with the question of an advance to Merv, the other the telegrams from the *Daily News* Correspondent on the

Persian frontier. Professor VAMBÉRY, like other Continental critics, thinks that in the letter the Russians will not go to Merv, because (which is doubtless true) it is not their direct way to Herat. The *Daily News* Correspondent does not think, but tells us facts. It seems that after the rout at Geok Tepe and the surrender of many thousand families, the Tekkes by no means abandoned the hope of resistance. Their leader, MACDUMKULI KHAN, assembled a considerable force at the Tejend Swamp northward and eastward of Askabad, and the Merv Turcomans prepared for an obstinate resistance. For the moment, however, General SKOBELÉFF and his officers appear to have other things to do than to fight; as indeed, being prudent commanders, they should have. They are purchasing large supplies of food in the fertile Persian border districts of Derages and Kelat. They are endeavouring to induce the remaining Tekke clans of the Askabad district to come in. They are passing and repassing along the now beaten highway from Geok Tepe to the Caspian, bringing up, no doubt, stores and perhaps men. Besides all this, they have apparently established a complete hold over Persia, a matter of the first importance to them. General SKOBELÉFF, we are told, has signified his intention of marching if necessary through the SHAH's territory, and so far has this been from exciting any ill-feeling that the Government of Teheran have given orders to send back refugee Turcomans, they being regarded as Russian subjects. That is to say, the Russianization of the Central Tekkes is regarded by Persia as an accomplished fact, and everything is going on in due course for the conversion of the province, if we may so call it, of Askabad into part of the CZAR's dominions. Russian troops and Russian territory have thus appeared at little more than a hundred miles from Meshed, at little more than three hundred miles from Herat. Nor even if the Tekke resistance were to continue, can that resistance be any more looked upon as a bar to a Russian advance. The last "reserve" of the Turcomans is out of the direct way to Afghanistan and India, and could at worst be an awkward flank neighbour to such an advance. The remnant of the Akkals and the Merv men are, from this time forward, *cerné* by the forces of General KAUFMANN on one side, by the new Transcaspian province and its garrison on the other. They may, and probably will, give trouble, and will be sooner or later treated as their Western kinsmen have been. But they cease to be in any strictness a bar to the progress of Russia eastwards and southwards.

Such is the construction which seems most reasonable to put on the latest news from Northern Persia, taken in conjunction not merely with Professor VAMBÉRY's opinion, but with the facts of geography. This latter addition is perhaps worth making, for there are not wanting ingenious persons who would otherwise say "Professor VAMBÉRY is 'a Russophobe.'" A Russophobe cannot introduce or obliterate mountains or rivers in Russian official maps, nor can he lengthen or shorten the number of versts from one place to another. It may be taken for granted that henceforward, whether the Russians go to Merv or whether they do not, the last serious barrier between them and Afghanistan has been removed. It might possibly be set up again under certain contingencies, though this is doubtful, but for the present it is gone. Indeed, the apologists of Russia and Lord HARTINGTON hardly deny this. They have discovered that although the Government thinks Russia will not go to Merv, it is very likely that she will go there, and that, provided we go away instantly from Candahar, it does not in the least matter. In the same way it may be said that if a man treads on your toes the easiest way of escaping the inconvenience is to draw your foot back. It certainly is for a time. But the same argument would necessitate the evacuation of Quetta when the Russians come to Herat, of Peshawur when they come to Cabul. It is undeniable that if we "scuttle" fast enough on each occasion, unpleasant collisions cannot possibly occur. If the reduction is to the absurd, it can only be pleaded that the argument reduced is absurd in itself. But there seems to be a kind of judgment in the theological *seems* on the opponents of the retention of Candahar. There are many Englishmen who hate the very name of Afghanistan with its association of blunders and disasters, and who would be only too glad to keep out of it. But when they ask for some reasonable argument to justify its abandonment, Lord HARTINGTON answers that HER MAJESTY's Government have made up their minds not to be convinced; Colonel GORDON tells them in Wednesday's *Times* that they had much better look to the China Sea—as if a

man should say, "My dear sir, what nonsense is this you 'tell me about your heart; your heel is in serious danger, 'I tell you'—and other advisers cap the climax by urging that as Russia is probably coming to Merv, England obviously ought to go away from Candahar. The childish folly of such reasoning as this, the still more childish folly of refusing to reason at all, is enough to make dispassionate critics despair of ever seeing the question fairly argued out on the only two grounds of solid argument which the advocates of surrender hold—the financial ground and the ground of probable irritation to the Afghans. The facts of both points are in controversy, as any one who chooses to read the report of the Candahar meeting at St. James's Hall may see. But even supposing them to be admitted, the question remains whether the fall of Geok Tepe does not necessitate the holding of Candahar at any price of money or unpopularity. We look to have this argued, and we are told that if Russia is advancing there is so much the more reason for England to fall back.

THE INCORPORATED LAW SOCIETY AND THE BAR.

THE Council of the Incorporated Law Society may at least be congratulated on their courage. They have lately been making suggestions to the mixed Committee which is now engaged in considering the working of the Judicature Acts. Upon the greater number of these suggestions we shall not say anything. Important as they may be in themselves, they are overshadowed by the suggestion that comes fifth in the list. We shrink from the responsibility of either describing or abridging this wonderful paragraph, and it is fortunately not so long but that we can afford to quote its entire words:—"There can be 'no reasonable doubt that the main cause of the heavy 'expense of modern litigation is due to the largely increased fees paid to counsel of late years, and especially 'to the comparatively recent practice of giving daily refreshers, which were all but unknown a quarter of 'a century ago. It is therefore recommended that daily refreshers should be abolished, as being one of the 'principal causes of the undue lengthening of trials, and 'the increased expense thereby occasioned.'" A good deal was said a year or two back about the largely increased fees paid to doctors of late years, but in that case the complainants were the people who had actually to find the money. In the present case the charge is brought by a class which is only remotely interested in making it good. If solicitors are obliged to advance counsel's fees in the first instance, they have seldom any difficulty in recouping themselves. Indeed, the fees to counsel are perhaps the item in the whole bill which the client pays most willingly. Here at least he feels he has something like value for his money, whereas the other items, however well he may be satisfied with the general result, usually carry with them a sense of hopeless bewilderment. There is no reason, of course, to find fault with professional zeal when it is exerted on behalf of others; but in this instance, unfortunately, there seems much reason to doubt whether professional zeal has been equalled by professional accuracy. If the Council had confined themselves to calling attention to the increase in counsel's fees, it is not likely that they would have received any official reply. There are no statistics to show how barristers' fees to-day compare with barristers' fees twenty or fifty years ago. Whether they have increased, or diminished, or remained the same is one of those points which can only be decided by individual experience, and upon which individual experience would probably give a very uncertain sound. But the Council of the Incorporated Law Society has done more than this. It has singled out a specific instance of a general abuse, and declared that "the main cause of the 'heavy expense of modern litigation' is the 'comparatively recent practice of giving daily refresher fees.'" If they had stopped even here the Bar might probably have seen no reason to take offence. After all, it matters little to counsel whether daily refresher fees do or do not add to the expense of litigation. Going to law must always be a luxury; and, so long as the price asked for it is not prohibitive, those who dispense it are not likely to find any fault. But when the Council recommend that daily refreshers should be abolished as being one of the principal causes of the undue lengthening of trials, and so of their increased expense, the challenge addressed to the Bar becomes very

much more direct. Perhaps we ought rather to say seems to become very much more direct, because the Council have expressly disclaimed the most obvious, if not the only, meaning of their words. The ATTORNEY-GENERAL pointed out in reply to their suggestion that, if they meant to imply that barristers who are in the habit of receiving refreshers intentionally prolong cases to an unnecessary length for the sake of pecuniary advantage to themselves, the statement contained a direct charge against the honour and even the honesty of every member of the Bar. Thereupon the Council unanimously directed their President to assure the ATTORNEY-GENERAL that they did not intend to prefer such a charge; that the meaning attached to the suggestion in question is incorrect; and—warming apparently as they went on disclaiming—that they had no intention of making any accusation whatever against the Bar. Upon receiving these assurances the ATTORNEY-GENERAL had of course nothing to do but to express the pleasure with which the Bar would learn that the meaning attributed to the suggestion of the Council was incorrect. But he went on to say that the President's letter would have been read with still greater pleasure if it had conveyed what meaning the Council of the Incorporation of the Law Society did attach to the words they had used. It will be generally admitted that this addition to the ATTORNEY-GENERAL'S reply says no more than is reasonable. The more the suggestion of the Council of the Incorporated Law Society is looked at the harder it becomes to give it any meaning except the meaning we are expressly told we are not to give it. That in the minds of the Council there is some connexion between daily refreshers and the undue lengthening of trials is beyond question, since the only reason why daily refreshers are to be abolished is that they are "one of the principal causes" of this undue lengthening. But how can daily refreshers be a cause of the undue lengthening of trials except by some occult influence which they exert upon the counsel who receive them? Clients are not likely to spin out a trial for the pleasure of paying refreshers. Solicitors, though, as they have not to find the money, there is not that distinct and individual twinge about the act of payment which there would be if the client himself waited on the counsel, cannot be actively anxious to pay them. Judges invariably wish to get through every case as quickly as they can. Thus, by a process of exhaustion, we come back at last to the barristers as the root of the evil.

At this point the Council of the Incorporated Law Society come again to our aid. The President has written a second letter to the ATTORNEY-GENERAL, in which he endeavours to give the Bar that "greater pleasure" which, according to Sir HENRY JAMES, they would derive from learning what meaning the Council attach to the words contained in their suggestion. Refreshers, says the President, have an inevitable tendency to lengthen legal proceedings; but it is the system, not the individuals, that are in fault. Barristers do spin out cases in which they are engaged, in order to get "refreshers"; but, so long as it is the practice to take "refreshers" they are not to blame for doing this. It is the system that is wrong, not the particular persons by whom the system is worked. We confess to looking with great suspicion upon explanations of this kind. What they come to is this, that so long as a bad custom exists in a trade, traders may conform to it without doing anything wrong. If it is the custom, for example, to send out calico to China which is really little more than prepared plaster of Paris, it is not dishonest for manufacturers to make cloth of this kind. The practice is dishonest, but it may be properly followed by honest men. To minds which have not had the advantage of a Manchester training this seems a pure quibble. If it is dishonest to put too much size into calico, without mentioning the fact to the purchaser, the manufacturer who does it is dishonest, and the fact that he has a great many partners in his dishonesty does not make his case better. If it is dishonest to spin out a trial for the purpose of getting refreshers, the barrister who does it is dishonest, and the fact that he has a great many partners in his dishonesty does not make his case any better than it made the manufacturer's. The Council of the Incorporated Law Society try to make their suggestion as little offensive as they can by comparing the custom of taking "refreshers" with the custom of charging for the preparation of legal docu-

ments according to their length. The analogy does not strike us as quite perfect. If a solicitor is paid for drawing a deed according neither to the importance of the interests involved, nor to the time and care required for its preparation, but simply according to the number of words used, it is almost impossible that he should not insert some surplus matter in a deed which has given him a great deal of trouble, if at the same time that deed admits of being brought within a small compass. If he were to say no more than he is obliged to say, he would not be adequately paid for his work, and he will naturally argue that so long as the law allows this system of calculating charges to go on unaltered, he must take the only means that are open to him of redressing the balance. Where refreshers are concerned, this reasoning does not apply. They are not the only mode in which a barrister gets paid for proceedings in court; they are merely a provision designed to protect him against accidental delays in the conduct of a trial. If he deliberately creates the accident for the sake of the money it brings him in, he is committing an act of dishonesty, and no sophisms about systems will help him.

The plain duty of the Council of the Incorporated Law Society, now that they have defined the sense in which they wish their suggestion to be taken, is to offer the Judicature Acts Committee some proof that their theory is correct. A body of experienced solicitors cannot have formed a conclusion of this kind without supposing themselves to be in possession of specific data upon which to rest it. They must have been led to the belief that counsel needlessly lengthen trials in order to get refreshers by the observation of particular cases in which this plan has been pursued. There is no need for them to mention any names. What is important to know is, not who it is that has allowed his desire for refreshers to make him forgetful of his duty to his client, but whether a counsel's duty to his client is ever foregone for this motive. The facts which have led the Council of the Incorporated Law Society to think that it is so foregone may be narrated to the Committee without their being identified with this or that counsel. Probably when this comes to be done the Committee will be able to suggest other explanations, which equally account for the facts, or to convince the Incorporated Society that, however the facts are to be explained, the interpretation they have placed on them is not the true one. Unless the generally expressed opinion of the profession is altogether mistaken, it is not long trials that pay best. A barrister makes more by getting rid of a case quickly, and so being free to begin another, than he makes by having a case hanging on his hands, even though the alternative is sweetened by refreshers.

EGYPT.

THE question which arose out of the conflict in Tunis between a French Company and a British subject appears to be still under the consideration of the English and French Governments. There is a strong wish in France that the matter should be referred to arbitration, and taken out of the hands of the local tribunals. M. JULES FERRY stated in the French Chamber that this was the arrangement which had been agreed on; but Sir CHARLES DILKE, in reply to the question in the House of Commons, merely said that the French Government had made a proposal, which had been referred to the Law Officers. If the French can show any valid reasons of a legal rather than a political character why the question at issue should not be left to the local tribunals, every attention ought to be paid to their arguments; and the history of the relations of different European States to each other, and of all European States to the local power under the special provisions which have been from time to time made applicable to different parts of the Ottoman Empire, is so extraordinary and so complicated, that it is impossible to say beforehand that there are no precedents to justify any line which France may choose to adopt. But to the French the main point of interest is, not that any particular method of solving a passing difficulty with the English Government should be adopted, but that in some way or other they should make their supremacy felt at Tunis. Timid as they are in every other quarter, the French are ambitious and

pushing in North Africa. They have just voted the funds for the construction of the first section of a railway which is to be ultimately pushed from the Niger to the Mediterranean, and they openly proclaim that they have before their eyes the dazzling vision of an unquestioned French supremacy over the whole Southern littoral of the Mediterranean from Morocco to Egypt. When they get to Egypt they own that they must share their supremacy with England. They cannot suppose that we shall give up our share of the protectorate, and the meaning of this protectorate has recently received a strange illustration. Some of the officers of the KHEDIVÉ'S army considered themselves aggrieved by the MINISTER of WAR, who had promoted over their heads persons of Circassian origin. They sent in a remonstrance, which was so strongly worded as to constitute an act of insubordination, and orders were given for their arrest. When they were arrested, they told the soldiers that they thought they were going to prison, and that, if their apprehensions turned out to be well founded, they hoped their men would come and take them out. As they did not reappear, their men went and took them out; and then the soldiers and the late prisoners marched to the KHEDIVÉ'S palace, and demanded the dismissal of the MINISTER of WAR. The mutiny was complete, and it was completely successful. The KHEDIVÉ had no army with which to put down the army that had revolted. But he called in the assistance of the English and French Consuls-General. They settled the matter. They talked to the men, preached wholesome doctrines to them, inquired into the grievances of the officers, and sanctioned the dismissal of the MINISTER of WAR. They acted, in fact, exactly as the representatives of the Indian Government at the Court of a protected prince, who was allowed to keep up a force of his own, would have acted under similar circumstances. They were the recognized superiors of the KHEDIVÉ, his Ministers, the officers, and the soldiers. The mutiny was not against them, but against the highest person under their protection; and, while they had much to order and arrange, they had nothing to recast. It happened very fortunately for their comfort that they could conscientiously say that the MINISTER of WAR had, in their opinion, been in the wrong. What they would have done if they had thought themselves bound in honour to support him it is equally difficult and unnecessary to conjecture. How the joint protectorate would in the last resort be enforced no one dares to ask. But as yet things have never been pushed beyond a safe and pleasant point; and the joint protectorate, not having been rudely tested, is enough of a reality to have enabled an English and a French official to lay down, without exciting a murmur of dissent, how his mutinous army ought to be treated by a protected prince.

The finances of Egypt are now in excellent order. There is a budget carefully framed by experienced Europeans, every item of which is studied with an anxious wish not to encourage false hopes and which shows a modest surplus. A Parliamentary paper recently published gives the chief heads of the Budget as submitted to the English Government. The total debt of Egypt is 96,000,000*l.*, but a considerable portion of this is covered by the estates of the Daira Sanieh and the Domains, and the uncovered debt only amounts to 78,000,000*l.* Although, however, the proceeds of these estates may suffice to pay the interest on the loans they secure, the total burden on the wealth of the country is represented by the total interest paid, whether the funds for paying it are derived from estates or from any other source. The available revenue is put down at 8,500,000*l.* and the outgoings at 8,300,000*l.*, and of this latter sum 3,500,000*l.* is wanted to pay the interest on the debt. Other small payments, such as the interest on the Suez Canal shares, leave 4,600,000*l.* for the expenses of the Government; but this includes the Tribute and a reserve fund, so that only 3,500,000*l.* remain for the purposes of administration. The KHEDIVÉ has a Civil List of 300,000*l.* a year, and the charges of the numerous members of his father's family on this list are so heavy that it is only by the persevering economy which he consistently practises that he is enabled to go on without getting into debt. Only 400,000*l.* is allotted to the Ministers of War and Marine, so that the KHEDIVÉ undoubtedly keeps his mutineers at a cheap rate, and the army is little more than a police force. The Budget shows an estimated surplus of 110,000*l.*,

but there is a reserve fund of 150,000*l.*, and there is an allowance of 200,000*l.* made in the calculation of incomes to meet the possibility of taxes not being fully collected. If the reserve fund, which is provided against unforeseen expenses, is not wholly wanted for such expenses, and if the taxes are collected fully or nearly fully, the real surplus will necessarily be higher than that which is calculated in the Budget. Mr. COLVIN, the English Controller, reckons the surplus for the present year at 300,000*l.* This will be expended after the close of the year in public works, and in the present year there will be expended in public works a still larger sum, being the ascertained surplus of 1880. Public works are thus to have the exact amount devoted to them which the Government has got actually in hand. They are to be paid for out of money that has been earned, and not out of money that is being earned. This is very satisfactory, and is in accordance with the extremest doctrines of prudence. But those who know Egypt are aware that Egypt has good years and bad years, and the first doubt that will suggest itself to them is whether the Budget has not been calculated on the basis of good years only. Mr. COLVIN is specially anxious to remove this doubt. Last year happened to be a good year, but it has not been taken as a precedent. Care, he says, has been taken to base the figures of receipts on the most prudent data, and to reject all estimates based merely on the favourable receipts of 1880. In such cases we must trust some one, and there is no reason why we should not trust the Controllers-General, not only on account of their personal qualities, but because the system over which they preside has now been in operation for a time sufficiently long for them to have at their command the materials for a sound judgment.

The most important event going on in Egypt now that the finances have been put in order is that of the revision of the Code and the reconstitution of the international tribunals. The Egyptian Government has been very anxious to lessen as much as possible the foreign character of the tribunals, and to make them much more dependent on the Administration. An opportune pamphlet by Mr. PERRY has laid before the English public the general nature of the scheme which the Egyptian Government put forward. Its chief feature was the constitution of a Court of Revision, to sit at Cairo and hear appeals not only from the subordinate Appeal Court of Alexandria, but also from native Courts. This tribunal was to be composed of eight natives and seven foreigners, so that the natives would have a preponderance, and the object of the device was twofold. In the first place, the existing Appeal Court, with its majority of foreign judges, would have been subordinate to a Court in which the natives had a majority, which would sit at Cairo, and would be under the influence of the Government. In the next place, it would in some degree meet the demand for protecting the natives against native injustice by offering them in the last resort a Court where the native judges would be in a majority, but where their majority would be very slight, and in which they would be in any case exposed to the criticism of their foreign colleagues. It is stated that the Judicial Reform Committee has rejected this part of the proposals of the Government, and it is difficult to see how the representatives of foreign Powers could have been expected to accept it. It instituted a double appeal, with its endless delay and costs, and it contrived that the final appeal should be from a strong court to a weak one. The present Court of Appeal at Alexandria gives judgments which are sound, learned, and honest, and no foreigner could have possibly gained by having a further appeal from such a Court to another in which natives preponderated. It was further proposed that questions between the Administration and aggrieved foreigners should be settled by a new tribunal like the French Tribunal of Conflicts, and that this Tribunal should be composed of the Minister of Justice and two high functionaries. If these high functionaries were to be merely native nominees of the Government, it would be absurd to erect a tribunal where the Government would be at once a party to the suit and the sole judge; but it is extremely difficult to say how questions between foreigners and the Administration ought to be decided, and they certainly cannot be left to the International Tribunal in the vague and loose way in which they were left by the Code at present in force. Lastly, the Egyptian Government endeavoured to meet what is a real want in the present system. It is absurd

that there should be no authority with power to make any alterations or amendments in the Code which from time to time may be necessary. There must, of course, be some limit to the changes that are made. Foreign nations which accept a Code cannot allow that a totally different Code should be forced upon them under the disguise of amendments and alterations. But there ought to be some means of getting minor changes made which experience may show to be advisable, in order that the working of the Code may be made as efficient as possible. The proposal of the Government is that such changes may be made by a Committee, consisting of the Minister of Justice, three foreign judges, and one native judge, and if it were somewhat modified, the suggestion would be perhaps as good as one as could be made.

THE FYLDE.

THE district of Lancashire known as the Fylde is seldom explored by travellers from outside. Lying between the estuaries of the Ribble and the Wyre, and to the west of the main line of the London and North-Western Railway, it is beyond the range of business men, who for the most part stop short at Preston, and out of the track of tourists bound for the Lake district or for Scotland. Were it not for the watering-places of Blackpool and Lytham, which in summer are crowded with visitors from the manufacturing towns of Lancashire and Yorkshire, the Fylde would be left entirely to the monotonous round of agricultural life. Even the rise of these towns only affects the country in their immediate neighbourhood, and that merely by stimulating the trade in milk, butter, and eggs. Frequenters of seaside places seldom seem conscious of the existence of the country around them, and whether from dislike of walking exercise, or from a praiseworthy desire to inhale as much sea-air as possible in a given time, they generally confine their attention pretty closely to the pier and promenade, occasionally varying the monotony of these resorts by visits to the aquarium or winter gardens. Nowhere is this tendency more apparent than at the watering-places of the Fylde. The character of the scenery is not, indeed, calculated to tempt comfort-loving tourists. The country has a bleak and desolate aspect. Cambridgeshire is scarcely flatter, or the fens more destitute of colour. The oaks from which the hundred of Amounderness probably has its name have long since sunk beneath the surface, and gone to the composition of the peaty soil which covers so much of the district. The few trees which are scattered about here and there are dwarfed and distorted by the prevalent winds from the sea, bending inland in unnatural curves. Every branch and every shoot follows monotonously the line of growth of the trees itself, and any twig which ventures to strike out a line of its own is at once cut off by the wind, so that the trees present the scrubbed and one-sided appearance of well-worn birch brooms. A farmer of the district, who was regarded as a great traveller on the strength of a journey to Leicester, always remembered as the most remarkable feature of Midland scenery that the trees in those parts "grew the same all the way round." Camden tells us that Fylde is a corruption of field, and the derivation is certainly plausible enough. From the level nature of the country even the hedges feel the full force of the wind. They, too, grow away from the sea, and curl over as if to shelter themselves under the lee of the banks on which they stand. No doubt they are the best judges of their own interests, but any mere human being who has walked the district in a time of hard frost, with a bitter east wind blowing across the broad tract of level ground which extends to the outlying spurs of the Pennine range, will be inclined to wonder that the cutting blasts which come from this direction have not power at least to equalize matters, and restore vegetation to its normal attitude. In spite of its rather dreary character, the scenery has that charm of subdued colouring which increases as one grows familiar with it. The white buildings, too, afford a pleasant relief to the prevailing grey tones. Churches, farmhouses, and cottages are almost universally whitewashed, and the incongruous effect of the few exceptions to this rule proves that popular instinct has chosen appropriately. Towards harvest time the ripening crops give light and warmth to the scenery. No one who has not visited the district at this season will readily believe that so bleak a tract of country can be very fertile. Yet there are probably few parts of the North of England where farming is more successfully carried on. Wheat and root crops grow heavily in the deep rich soil, and Fylde hay and Fylde horses are known far beyond the limits of their own district. The size of the homesteads and the extent of the farm buildings bear witness to the prosperity of their owners. The plain square houses, too, with their trim gardens, have a well-to-do appearance. They are often protected on the seaward side by a belt of trees, and some have large flagstones fastened to the roof by iron clamps to keep the slates in their places during the frequent gales. The cottages differ from cottages elsewhere only in the greater thickness of their walls and scarcity of windows, which, moreover, are not of a size to admit the quantity of air demanded by sanitary science. However, as they are not for the most part made as to admit of their being opened, their dimensions are of minor importance. In a district so wind-swept nothing could

keep out fresh air, and the appearance of the people does not suggest unhealthy conditions of life. The farm women especially, with their muscular arms and massive proportions, inspire the degenerate Southron with a wonder only inferior to that caused by the aspect of the "brow-wenchers" in the colliery districts.

The coast line of the Fylde is interesting on account of the changes which are constantly taking place in it. From the mouth of the Ribble, past Lytham, and on to the southern extremity of Blackpool, the shore is fringed by low sandhills; and, as no one takes the simple precaution of sheltering the land by planting willows, the sand in stormy weather blows over the fields to the discomfort of the inhabitants and the injury of the grass. For some distance out to sea there is a succession of shoals and sandbanks, and in some places the land seems to be gaining rapidly on the sea. The sandbanks are being raised higher and higher by the action of the tide, and a little way south of Blackpool houses which are now only a few yards away from the water's edge at high tide may in no long time be as far from the average high-water mark as those on the promenade at Southport on the opposite side of the estuary. Within the limits of the borough of Blackpool the character of the coast changes abruptly. The range of low sandhills, which tradition says once extended without interruption to the mouth of the Wyre, comes to an end. The sea wall, which at South Shore is an insignificant slope offering little protection against a high tide accompanied by a south-westerly wind, rises in the middle of the town to a considerable height. Sandbanks disappear, and large masses of shingle, swept from north to south by the ebbing tide, cover the beach. Until lately these rolling masses have done much damage to the sea wall, but the authorities have now built strong wooden groins, running out at right angles to the wall. The drifting shingle is thus intercepted and piled up in heaps to protect the fabric which it before helped to destroy. To the north of Blackpool the process which is going on at the opposite end of the town is reversed. The sea is gaining steadily on the land. Where the sea wall ends, its line is continued by a range of cliffs, formed by an unnatural alliance of sand and clay, and rising to some height above the beach beneath. At spring tides the waves reach and to some extent undermine the foot of the cliffs. Every shower brings down the sand from their face, and the projecting lumps of clay thus left unsupported crack and crumble in the sun, and are in their turn washed down by the next rain, laying bare a fresh surface to the action of the weather. Sometimes, after long-continued rain, the fall takes place on so large a scale as almost to reach the dignity of a landslip. Red masses of freshly exposed clay and broad stripes of turf hang precariously half way down the cliff, until the next high tide carries away the loose heap beneath them, and they tumble to the bottom. The beaten track running along the brink of the cliff is here and there broken in upon by a new gap, and the feet of passers-by have scarcely marked out a fresh path when the hurdle with which a neighbouring farmer has fenced it finds its way down the slope with the next fall of the crumbling margin. Here and there along the cliffs farmhouses and buildings stand at a distance from the sea which would greatly astonish those who built them, and no doubt the time will come when they must follow the pasture lands down the face of the cliff. On the inland side the ground slopes rapidly down to a valley, which cannot be very far above the level of high-water mark, so that, when the cliff is once eaten away, a large part of the district will be submerged, unless in the meantime steps are taken to check the process of destruction which is going on. The ruins of the original Rosall Hall have long been under water; and perhaps in years to come the boatmen of a new watering-place may tell, as their fellows on the coast of Suffolk do now, of villages to be seen under the water, and may point out the walls of submerged churches to visitors whose bodily sufferings deprive them of all power to verify such statements.

From the highest point of the cliff a fine view is to be had over land and sea. On the north the horizon is bounded by the hills of Cumberland, which rise one behind another in fainter and fainter shades of grey, until the dim outline of Black Combe shuts out all beyond. The monotonous succession of cliffs and sandhills in the foreground is only broken by a red-brick house, standing almost on the shore, the most desolate abode that can be imagined. A few miserable looking fallow-deer in a paddock behind it strike one with the same sense of incongruity as is caused by suddenly meeting the elephant of a travelling circus in the quiet streets of a provincial town. Two miles or so further on are the buildings of Rosall School, standing back from the sea, and protected by a high embankment. The landmark on Rosall point and the spars of the shipping at Fleetwood rise on the north-west and north-east of the school, and beyond them Morecambe Bay stretches away to the foot of the hills, where the smoke from the chimneys of Barrow stands out dark against the grey slopes behind it. The mountains of North Wales to the south, and the Isle of Anglesea running far out to sea on the south-west, are only to be seen on very clear days. Rarer still in broad daylight is a view of the Isle of Man—a sight foretelling rain, but in summer the sun, as it sets in the north-west, clearly defines the dark peaks of the island against a background of red or golden clouds.

With the exception of Fleetwood, of which we shall speak presently, and Blackpool, whose history is much like that of any rapidly increasing watering-place, there are no towns of much importance in the district. The most ancient is probably Kirkham, which lies midway between Preston and Blackpool, and about three miles from the northern shore of the Ribble estuary,

The church and tithes were given to the convent of Shrewsbury by Roger de Poitou, to whom the hundred of Amondeneas was granted after the Norman Conquest. From this time until the reign of Edward III. the various rights and privileges connected with the church were the subject of frequent dispute and litigation. In 1195 a controversy arose between the monks of Shrewsbury and Theobald Walter concerning the right of patronage of the church. The matter was compromised, but was revived about ninety years later in the reign of Edward I., when the King gave the advowson to the Abbey of Vale Royal which he had established in Cheshire. Theobald Walter, surnamed Le Botiller, a descendant of the previous Theobald, and founder of the Irish family of Butler, denied the King's right to the advowson, but the question was decided against him. Some uncertainty, however, seems still to have existed, and at the close of the following reign the Abbot of Vale Royal was summoned to prove his right to the church of Kirkham before the Archbishop of York. He succeeded in doing so; but, in spite of this, a dispute occurred a few years later between the Abbots of Vale Royal and Shrewsbury respecting a pension due from the former as successors of Theobald Walter, who had agreed by the terms of the compromise effected in 1195 to pay twelve marks a year to the Abbot of Shrewsbury. The dispute again ended in favour of Vale Royal. Almost before the affair was settled the Abbot of Vale Royal was again involved in litigation, this time with a layman. He had refused to sell the tithes to Sir William de Clifton, who revenged himself by preventing any one else from collecting them. He drove away tithe-collectors by force, refused to pay the Abbot certain sums due to him, and had Thomas, the clerk, scourged in the town of Preston. When summoned before the Abbot of Westminster he neither appeared nor acknowledged the summons in any way. One is somewhat surprised to find that this matter, too, was settled by arbitration, the decision being most justly given against Sir William de Clifton. At the dissolution of monasteries, the manor of Kirkham and the advowson of the church were given to Christ Church, Oxford. The seventeenth century brought fresh troubles to Kirkham. Parochial affairs were managed by thirty sworn men, two from each of the townships composing the parish. The records of these "Thirty men" tell us that in 1636 a dispute arose between them and the vicar, Edward Fleetwood, as to their right of meeting in the church, and other matters. As they refused the conditions which he proposed, the vicar locked himself up in the church on the occasion of their next meeting, and left them to hold their assembly outside. In spite of an appeal from the "Thirty men" to the Archbishop of York, and the support which the petitioners received from the Bishop of Chester, the quarrel continued for three years, and not until 1639 was the meeting on Easter Tuesday held in the church. Richard Clegg, who seems to have held the living from 1666 until 1720, was a worthy successor of Fleetwood. In 1672 one Cuthbert Harrison opened a meeting-house for Nonconformists within the Parish of Kirkham, which was shortly afterwards closed by order of Parliament. Harrison had previously been curate of Singleton, a chapelry in the same parish, and had either been ejected from his cure on the passing of the Act of Uniformity, or had given it up a few years before. When his meeting-house was closed he still baptized children, and performed the ceremony of marriage. For an offence of the latter class he was summoned before the Ecclesiastical Court, and both he and the man whom he had married were impartially excommunicated. Continuing to attend his parish church he was ejected by the indignant vicar, who afterwards sued him for 120 shillings, a fine for non-attendance at church during six months. This was too much, even for a judge under the Stuarts, and Harrison was acquitted, the judge concluding his summing up with the remark, "There's fiddle to be hanged and fiddle not to be hanged." Kirkham retains scarcely any traces of its ancient history. It is a dirty, straggling town, paved for the most part with round stones painful to walk upon. The church was "restored" in detachments during the first half of the present century, and a few mills and weaving sheds, in which the manufacture of flax and cotton is carried on, are the most important buildings in the town. About five miles west of Kirkham lies Marton Moss, the chief "Moss" of the district. Though insignificant when compared with the vast wastes of Pilling and Cockerham to the north of the Wyre, it is six miles long, and a little over a mile wide at its greatest width. Its surface consists mainly of peat, in which Celtic remains have been found. Large trunks of trees are embedded in the peat and in the clay beneath it, and as they lie almost without exception in a south-easterly direction, it is supposed with much reason that they were overthrown by an incursion of the sea. Marton Mere is situated on the north of the Moss. It is now of no great size, but from indications in the neighbourhood it must once have been a large lake, and the rights of fishery in it were of some value as late as any rate as the reign of Elizabeth. The black peaty water, oozing from the Mere and the Moss and collecting in a large pool near the shore, gave its name to the fishing village of Blackpool, now a flourishing watering-place. In cutting the dykes of the Mere, various Celtic and Roman remains have been found, among others the foundations of a part of the Roman road which traversed the district. This road has always been known as the Danes' Pad. Probably its use by the northern freebooters in their incursions removed from the minds of the inhabitants all memory of its original constructors. It passed through Kirkham, past Marton and Poulton, as far as Fleetwood.

There is much interesting matter in the history of Poulton, but here, too, the restorers have been at work, and in 1751 the church, which had stood for more than six centuries, was pulled down to give place to what a local historian calls "a more commodious building." In connexion with this act of barbarism the memory of one Welsh, of Marton, deserves to be kept green. When asked for a subscription towards the work, he expressed his views on restoration at large in verses whose form does him less credit than the matter which they contain:—

While here on earth I do abide,
I'll keep up walls and pull down pride;
To build anew I'll ne'er consent,
Nor make the needy poor lament.

The only port of the district is Fleetwood-on-Wyre, a town with a rather curious history. It has not, like the generality of seaports, gradually grown into importance, but affords an instructive example of the results of trying to create a demand by affording a supply. About the year 1836 the lord of the manor, Sir Hesketh Fleetwood, whose seat, Rossall Hall, forms the nucleus of the buildings of Rossall School, conceived the idea of making a seaport at the mouth of the Wyre. The land on which he proposed to build the town was a barren waste, exposed to the incursions of the sea on one side, and occasionally flooded by the river on the other. However, a railway, harbour, and dock company was floated without difficulty; for those were the days when railways were regarded as sure roads to wealth, whatever might otherwise be their direction. The town was laid out with broad, straight streets; church, chapels, and hotels sprang up with the rapidity usual in such cases; and everything was done on the American principle of expecting the population to grow up to the size of the town, instead of enlarging the town according to the needs of the population. The North Euston Hotel, an enormous stone building, one face of which looks north across the estuary, the other west, over the sea, was erected, and it was hoped that the town would become not merely a thriving seaport, but also a fashionable watering-place. Its success in the latter capacity was limited. For a year or two visitors came in tolerable numbers, but the place was soon forsaken for Blackpool, where it is possible to build a house facing the sea without any immediate prospect of having it washed down again, and where the scenery does not consist mainly of sandbanks glazed with river mud. The trade, too, of the town failed to realize the inordinate expectations of sanguine speculators, and the present appearance of Fleetwood is dismal enough. Plots of land in the middle of the town are not yet built upon, and in the fine stone terrace looking across the estuary about half the houses are to let. The great hotel was, as might have been expected, a costly failure. It was bought by Government, and converted first into a school of musketry and then into barracks. A fate similar to that of the hotel befel the Custom-house, which was found to be far too large for the quantity of business to be done. It was sold, and the offices were removed to a smaller building. It would be rash to say that Fleetwood had absolutely failed as a seaport. If its trade has not increased at the rate anticipated by those who expected the town to rival Liverpool in the importation of cotton, at least it does not appear to be diminishing. A little cotton, and considerable quantities of timber are imported from America; there is a fair export trade in coal, and traffic with Belfast and other Irish ports is sometimes tolerably brisk. But if a high tide were one day to sweep Fleetwood away altogether, the commerce of England, or even of Lancashire, would not be fatally affected.

THE BLESSINGS OF THE BALLOT.

THE sweet little cherub which watches over the fortunes of Her Majesty's present Ministry has shown more than one indication that he possesses a somewhat mischievous and "Puckish" disposition. But—in a comparatively minor matter—he has rarely played a wicked trick than in making the appearance of the abstract of the new Ballot Bill coincide with the Report of the Sandwich Election Commissioners, unless it be in effecting a similar coincidence between the pathetic expostulations of Mr. Schnadhorst, of Birmingham, with the Attorney-General, and the results of the inquiry of a laborious person into the statistics of election inquiries between the first Reform Bill and the present time. The representative of the Birmingham Caucus and the National Liberal Federation pathetically pleads for permission to spend a little more money on the independent electors of his immaculate town. The statistical person referred to will have it that, for every five Conservatives displaced in the last half-century for corrupt practices, eight Liberals have been extruded from Parliament. The coincidence is no doubt fortuitous; coincidences always are, but it is one of these things which invite the attention of the unkindly disposed. The claims of the National Liberal Federation rested, we had always thought, upon the purest and noblest confidence in the ultimate prevalence of sound argument and accurate information. The National Liberal *fédérés* feels how awful goodness is, how lovely are the principles of Mr. Gladstone, and how inexpressibly black and foul are the practices and principles of the wicked Tory, and so he goes and votes for the particular representative of Ormuzd detailed as candidate by his federation, and against the particular representative of Ahriman who is sent by Chaos and Old Night to oppose that good man.

According, however, to the expostulation of Mr. Schnadhorst, it would appear that even here there are "certain condolences, certain vails." There is no knowing what may become of the *fédéré* uncomfortable by these. It is true that Sir Henry James's proposed stringencies would affect the wicked Tory as well as the good Liberal. But Mr. Schnadhorst seems to think that somehow or other the want of the sinews of war would make the Liberal knee specially weak. He has had large experience, and far be it from us to say that his protest is not based on a knowledge of the kind of voter whom but a few short months ago he led to so glorious a victory.

The coincidence of the Ballot Act and the Sandwich petition, however, is of wider import than this. It will be remembered that the extremer Radical organs were very angry with Mr. Justice Manisty for certain outspoken remarks of his last year on the demoralizing influence of the Ballot. In ordinary cases, indeed, it is considered no small part of a judge's duty to put his finger on the causes of crime and to point them out. This, however, was a case of touching the ark, and one really expected to see the question of the advisableness of making judges removable with each change of Ministry brought in and argued. However, Mr. Justice Manisty was of course ignored by the masters of a majority—on paper—of a hundred or a hundred and fifty. The Ballot Bill now in force expires this year, and Sir Charles Dilke and Mr. Chamberlain—backed up *pro forma* by the Home Secretary and the Attorney-General—have set themselves to the task of uttering in due Parliamentary form an *est eo perpetua*. We do not know that there is any need to examine the provisions of this measure at great length. Some of them are sensible enough, such as the permission to amend faulty nominations. Some of them, such as the fine imposed on the voter who displays his ballot paper, are merely logical amplifications of the principle that the performance of the first duty of a citizen is a thing to be ashamed of and to slink out of as if it were a crime. The only real significance of the Bill, however, is the fact of its being perpetual. The Ballot, we are to suppose, has been so grand a success, the effect upon the purity of elections so marked, the tendency to exalt the display of individual intelligence so striking, that we cannot be too quick about securing such a blessing for our children and our children's children. It is true that the woes of Mr. Schnadhorst and the elaborate precautions of the Attorney-General seem to show that there is still some screw loose which does not seem to have been driven home by the all-powerful Ballot. It is true also that the Sandwich Election Commissioners have included in their findings what is called in the slang to which modern Englishmen are but too prone, a "nasty one" for the Ballot. The most austere critics of Mr. Justice Manisty will hardly, we suppose, accuse these gentlemen of stepping out of their province in making remarks about the Ballot. It was their business to do so: they were appointed for the purpose of doing so; and they would have been guilty of a grave dereliction of duty if they had omitted it. They think that "it did not appear that the Ballot had the slightest effect in checking bribery. On the contrary, while it enabled many persons to take bribes from both sides, it did not render a single person unwilling to bribe for fear of bribing in vain." This last is a peculiarly unkind cut. The Ballot, persons with short memories may perhaps forget, was originally adopted mainly to prevent bribery and other forms of corruption. Since it has become evident that it does not do this, but that on the other hand it demoralizes the constituencies far more than the most shameless bribery under the system of open voting, a fresh line has been taken by its defenders. If people discover that bribery is in vain, they will not bribe. The Sandwich Commissioners come in here, and observe, with the utmost politeness, that this inference is quite unfounded. The election agent of to-day has a new version of the old proverb about laughing. "He bribes best who bribes last," and there is always the chance of bribing last. Nor, this being the case, is there room for the forlorn ballotteer to take refuge behind Sir Henry James's Bill, even were it safe from the raking fire of Mr. Schnadhorst and the National Liberal Federation. For the most stringent law of the kind cannot touch direct bribery. It can render indirect bribery difficult and dangerous, but direct bribery is as dangerous and as difficult as it can well be at present. It is this, and not the hiring of messengers and watchmen, the expenditure on Committee Rooms, and exhibition of placards, which the Ballot directly tends to facilitate, and this no legislation will ever do away with.

It is needless to say that these remarks are not made with the slightest anticipation of putting any spoke in the wheels of the Ballot Bill. We shall have our ballot doubtless *καὶ λοιμὸς αὐτῷ*. For it is one of the peculiar sapiences which distinguish this particular country of sapience that, though we frequently undo many wise things, and cry out against reversing the undoing, we never undo a foolish one. Indeed, in this fact would perhaps lie the chief justification for a policy of the mere dogged Abinetos-like obstruction which certain Radicals like to charge upon their political opponents. When you know that a thing, good or bad, is absolutely irreplaceable if once removed, there is at least a *prima facie* case for objecting to its removal. However, it is too late of course for that. We shall, as we have said, have our Ballot; and Mr. Justice Manisty and the Sandwich Commissioners and a little common sense and election experience, aided by the ingenuous openness of Mr. Schnadhorst, tell us what we shall have with it. In small, or comparatively small, boroughs we shall have the same kind of shameless double-dealing

which characterized the last election. "Man in the Moon" will be more carefully chosen, party managers and election agents will be more studious of avoiding any connexion with these functionaries, and candidates will take very good care not to let their cheques-books bear witness of any indiscretion. But the money will be spent, and it will be received in a manner which will do infinitely more harm to the public morality than the old unblushing practices which, after all, in many cases did comparatively little damage to the morals of anybody, public or private. To austere virtuous persons it may seem inconceivable that a man should take a ten-pound note for his vote, and yet be a sound politician as far as he went, and not feel that the money soiled in any way either his hand or his pocket. Yet it was beyond all doubt in many instances the case. The most ingenious moral casuist will hardly pretend that this unconscionable can prevail when the elector is bribed on both sides, and promises both sides, with the necessary result of breaking his word always to one, and sometimes, as late disclosures have shown, to both. Where bribery of individuals is impossible or difficult, then will come into play bribery in groups. We have seen that one prominent member of associations, who, we are quite sure, has the sincerest wish to keep out of all illegal practices, argues that a considerable expenditure of money is absolutely necessary. Suppose the law forbids that expenditure. Mr. Schnadhorst, of course, would resign at once, or do his best on the meagre pittance left. But somebody less scrupulous than Mr. Schnadhorst will certainly be found elsewhere, or in his place, and "organization" on both sides will go on merrily. Messengers and watchers and Committeemen and detectives to look after wicked Tories or Radicals, as the case may be, having become illegal, plain hiring of voters at so much a head remains. That the American associations which these federations, and so forth, take as their models, are in many cases merely organized bribing clubs, is tolerably notorious, and it seems a little inconsistent with facts to urge that Englishmen are too high-minded to accept pay of this kind. That is to say, the Ballot will and must be powerless in checking corruption in its simplest sense of the acceptance of money by voters, while it will bring in, or rather has brought in, a new kind of demoralization. After all, it is almost amusing to notice the extraordinary power of fetishes. It would puzzle any one to say why Radicals should have any particular weakness for the Ballot. It does not favour their assertions of the superiority of their own side in argument; it has not, as a fact, been particularly favourable to them in result; it is troublesome, tedious, expensive; that it prevents bribery has been shown to be utterly false, and it is by no means certain that it is much more effectual in preventing intimidation, which is, besides, on the whole, rather out of date and very easily prevented by other means. The only attraction which the plan seems to possess is its peculiarly un-English nature, according to the standard of "Englishness" at which those who like the Ballot are never tiring of protesting, and which, to do them justice, they have succeeded of late days in discrediting very considerably. It might have been thought that a man who did not dare to give openly his vote for the men or the measures he thought likely to help his country, and against those he thought likely to hurt it, had better not have a vote at all. But the gospel of the new Radicalism is secrecy. You must protect the Dissenter who is ashamed to confess his aim to the brutal Census-man; you must shield the voter who has taken toll of both parties, and would rather not have it known to which he has given his valuable suffrage.

DUELS IN FICTION.

THOUGH duelling has gone out of fashion in England, that is no reason why novelists should not make use of it. Incidents so stirring and delightful are afforded by no other form of sport, save when the learned pen of Ouida discourses of odds and welters, of runs and hurdles, and steeplechases. Duelling remains in fiction a permanent and valuable tradition, just as the stage preserves the institutions of confidential chambermaids, and of valets who do not object to a friendly cudgelling. Mr. Trollope took Phineas Finn to Orléans sands or some equally convenient trying place with an enemy. The author of *Errant* has a very pleasing duel with revolvers in his agreeable romance, and a charming affair with sabres between two English officers. The high-born and chivalrous hero exposes his leg; the low-born Scotch villain very imprudently aims a cut at the same, when the hero withdraws his limb, and cuts his opponent's head nearly off. "After the inquest," as in the parallel case of the fight with the barges in *Codlingsby*, the hero of *Errant* pensions off the widow and the children of his Scotch antagonist, a fellow, as we have observed, of no family. Dickens has one duel at least between Sir Mulberry Hawk and the nobleman known indifferently as Lord Verisopht and Lord Frederick Verisopht. But Dickens was not devoted to duels; he was not a man of old family. The author of *Guy Livingstone* (we think we do his memory no injustice in saying that he himself had been "out") was fond of the duel, particularly the barrier duel with pistols, an interesting but fatal form of the game. Thackeray liked a bout of fisticuffs best—witness that historical affair between Ennui, Harry and Riggs, also the combat between Cuff and Dobbin, wherein "Figs' left" played so gallant and victorious a part. Unfortunately Thackeray gives us details of the battle between Lord Kew and Castillanosa. We only learn from the confession of M. de

Gastillones that it was lucky for Lord Kew that he fell at the first fire, the Frenchman being "generally sure of his coup." As for Kew, he had meant never to fire at all, a resolution with which we have no sympathy, agreeing rather with the boatswain who took part in the triangular duel in *Midshipman Easy*—"Why, you don't think I'm going to be fired at for nothing?" said the boatswain; "no, no; I'll have my shot, anyhow."

Fired by these martial reminiscences, we propose to glance through the more notable duels of modern fiction, disregarding the affair of Hector with Achilles and the single combats of the middle ages. It is difficult, however, to resist the temptation to linger over the duel in *Anne of Geierstein* between Arthur Phillipson and a big Swiss gentleman. The Swiss at that time used the large two-handed swords which, according to Colonel Lane Fox's treatise on arms, "were well spoken of by the people who employed them." The blade of the Swiss measured five feet, and was wielded with both hands. It must have been a sword of this kind that the father of the old found so much too heavy for his declining powers that he staggered about under it, as we have seen a man do beneath the burden of too weighty a salmon-rod. Mr. Phillipson declined to use a two-handed sword of which he had no experience, and, "with the instructions of Bottaferma in his remembrance," attacked his colossal antagonist. The difficulty and trouble of a two-handed sword is that you have to get your adversary to defer hostilities till you have drawn your weapon out of the sheath, which hangs behind your back. Phillipson gave his enemy time to draw;—"a fair show," as they say in Texas—and the battle was engaged, Phillipson using the old-fashioned hanging guard. Parries were not of much use when a two-handed sword was swinging about, but, by dint of skipping out of the way and riposting cleverly, Phillipson had the advantage in this singular duel without seconds. Scott was not the man to let his English hero be hit by a foreigner like poor Lord Kew in *The Newcomes*.

Alexandre Dumas, whether he was "the best swordsman in France" or not, was very fond of enlivening his stories with a little sword-play. The advice of D'Artagnan père to young D'Artagnan will be remembered:—"Battez-vous à tout-propos; battez-vous d'autant plus que les duels sont défendus, et que, par conséquent, il y a deux fois du courage à se battre." D'Artagnan obeyed this advice so well that he at once accepted challenges for the same day from the redoubtable Porthos, the melancholy Athos, and the devout Aramis. These engagements being prevented by the arrival of five of the Cardinal's men, D'Artagnan and the three Musketeers fight their five rivals, and D'Artagnan shows rather inconsistent prowess. He fights in the Italian fashion, leaping and bounding around, *s'écartant à tout moment des règles reçues*, and this though, *à défaut de la pratique, il avait une profonde théorie*. Profound theory, in France, is opposed to the system of leaping and jiggling which the Italians practise. In the recent assaults in Paris, third-rate Frenchmen have defeated a boasted Italian master of the demonstrative skipping school.

Since Dumas's time, no French novelist has written more of duels than M. Fortuné du Boisgobey, a writer on whom a portion of the mantle of Gaboriau has fallen. Duels make up almost all the interest of his story *L'Épingle Rose*. The villain is no one more sublime than a medical student, a semi-professional fencer and pistol-shot, known as "the Champion of the Schools." The first incident in the story is the return of one of the heroes, Fabien, from a party. He loses his road, finds himself in an unknown part of old Paris (the date is about 1823) and meets a man with a sedan-chair. The man of the sedan-chair says that his invalid brother is within it, and asks Fabien to help him to carry the patient to a hospital. The good-natured hero consents; the police come up, the other man decamps, and the dead body of Fabien's cousin is found in the chair. He has been killed by a sword-thrust in the eye. Next we have an encounter in a fencing-room between one of the Swiss Guard and Marcas, the villain, with two of his friends. The weapons are foils, with the buttons removed. The Swiss fights the two others first, and wounds both, in spite of their policy of breaking ground and retreating. When it comes to Marcas's turn, he proposes to fight on the billiard-table, that there may be no chance of retreat on either side. He then leaps within his antagonist's guard, and stabs him in the eye. He tries the same trick in another duel, but is baffled by a second armed with a long stick, who declares that hitting in the eye is not fair. We confess that there seems to us no reason why a duellist should not pink his man where he can, though Wat Tindling "never counted him a man who would strike below the knee." But Marcas's great duel is fought with pistols in the vaults under a hall where the Carbonari are about to meet. His antagonist is Fabien, the hero. The conditions are that each party may advance as he pleases to a spot in the centre of the ground. Each has a loaded pistol, and two extra charges. The weapons of course are the old flint-locks, "same I shot Captain Marker," as Rawdon Crawley says. Fabien is smoking a cigar. At the first fire both men miss. Marcas's second fire knocks off the hammer of Fabien's pistol. The latter is thus disarmed, and all seems over. The miscreant Marcas begins to mock his victim, loads with great deliberation, and promises, if possible, to kill him with a single shot. The feelings of the reader (if he does not foresee what follows) are powerfully worked on, for Marcas has been killing respectable people, right and left, all through the story. A happy thought occurs to Fabien. He throws open the pan of his flint-lock, and sees that the priming is all right. "You see you are not disarmed," sneers the miscreant Marcas; "if a

spark fell from one of the torches, your pistol might still go off." Fabien calmly remarks that he means to kill Marcas, levels his weapon with steady aim, and fires the priming with the lighted end of his cigar. Marcas is shot through the body, and expires in an unrepentant frame of mind. This we venture to think one of the most ingenious duels of romance.

Lever liked a duel, and the traditions of Irish society gave him plenty of materials. There is no better duel in fiction than that of the *Purcell Papers*, by Mr. Sheridan Le Fanu, in which Fighting Fitzgerald murders a young squire with terrible deliberateness. The Irish, peasantry and landlords, appear to have flocked to a duel, as if to a cattle-show or fair, to enjoy the spectacle, and with no idea of interfering. The retainers of the man who fell appear to have taken up his blood-feud, and made it desirable for the victor to ride off as swiftly as possible. Nevertheless, Fitzgerald appears to have been almost as successful as a villain of incredible inhumanity, mentioned by Tallemant des Réaux, who had killed seventy-two men in single combat. Lever's best duel, unless we except that in *Tom Burke*, is the famous affair of Bodkin and Charles O'Malley. Every one remembers the advice of Considine—who, by the way, "had been out and hit the wrong man on the knee, a mere tourist, writing a book on Connemara"—"Hold your pistol thus; no finger on the guard there, these two on the trigger. Drop the muzzle a bit; bend your elbow a trifle more; sight your man outside your arm; outside, mind, and take him in the hip; and, if anywhere higher, no matter." Better advice could not, in the social circumstances, have been given to a young man entering on life. Count Considine was good enough to add, "You've a good eye; never take it off him after you're on the ground; follow him everywhere. Poor Callaghan that's gone, shot his man always that way." If the principles of Considine were still in force, it is interesting to speculate how many Irish and English constituencies would now be engaged in filling up vacancies in their representation. English novelists generally prefer duels with the pistol. This seems a mistake, as there is much more "business" with the sword. The *Corsican Brothers* proves this. In Dumas's novel Fabien and Châteaufort fight with pistols. The stage tradition has altered these to swords and the very irregular poniards. In *Peter Simple* Marryat makes O'Brien, who had never fenced, kill a French swordsman thus:—"He suddenly made a spring and rushed on his adversary, stabbing at him with a velocity quite astonishing." Against that stratagem science has devised the *coup d'arrêt*, which would have closed the career of O'Brien. That gallant officer ended the duel by seizing his opponent's sword, which is forbidden by all the laws of the game, and would not have been permitted by the seconds. If English novelists are to make such errors, perhaps they had better stick to the pistol.

THE FRATRY, CARLISLE CATHEDRAL.

ONE of the best examples now remaining in England of the class of buildings to which we lately devoted an article, the "Monastic Refectory," is that of the Austin Canons at Carlisle, commonly known as the "Fratry" of that Cathedral. The words "Refectory" and "Fratry," or "Frater House"—"domus in qua fratres una comedunt, in signum mutui amoris"—are practically synonymous. Indeed "Fratry" was at one time the more popular designation in England, though Carlisle is probably the only place where it has survived the crash of the Dissolution. So obsolete, in fact, has the term become, that its very meaning has been forgotten. No one of our time was more intimately acquainted with the disposition and arrangements of a mediæval monastery than the late Mr. Edmund Sharpe of Lancaster. And yet, strange to say, in his work on the *Architecture of the Cistercians*—the authoritative work on the plan and distribution of the foundations of that order—the name "Fratry" is given to the monks' day-room, the "Pisalis," or "Calofactory," the long, double-aisled, vaulted apartment adjacent to the chapter-house, stretching out beyond the other buildings on the east side of the cloister, warmed by fireplaces, or, as at St. Gall, by flues under the floor—"cujus refugio hybernalis algoris intemperies levigatur"—of which such noble specimens are to be seen at Furness (one of the largest and finest in Europe), Fountains, Kirkstall, and other Cistercian houses. The same mistake has been made, happily not too late to be rectified, by Mr. C. C. Hodgson in the excellent series of architectural illustrations of Hexham Priory—a work worthy to take rank by the side of Mr. Neale's magnificent architectural history of St. Albans—which is on the eve of publication. Now that the nomenclature of conventual arrangement has obtained scientific accuracy, such a misappropriation is nothing less than an archaeological anachronism.

It is not a little remarkable how very rare has been the preservation of a monastic refectory in England. Shattered walls alone remain to mark the site at Canterbury and Peterborough. That of Norwich is a roofless ruin, partly preserved by having been employed to form a residentiary house. The Refectory of Durham, which became the common hall of the minor canons after the Dissolution, was so completely altered by Dean Sudbury at the close of the seventeenth century, when he converted it to its present use as the cathedral library, that it retains little of the original fabric but the walls, and the Norman undercroft, which is now being drained and opened out by the Dean and Chapter. We cannot remember more than five perfect examples, and these

only owe their escape from destruction to their having been converted to some utilitarian purpose. Those at Chester and Worcester became the school-rooms of their cathedrals. That at Beaulieu, in spite of the irremediable want of orientation which compels the altar to look south instead of east, has been converted, reading-pulpit and all, into the parish church. Less fortunate in its use, the refectory of Oleeve Abbey would doubtless have gone the way of the church and other portions of the buildings if it had not proved admirably suited for the purposes of a barn. What special reason saved the Fraternity of Carlisle in the general havoc of monastic buildings in the sixteenth century is not recorded. A survival of the Dissolution, and of the still more fatal period of the Civil War—when the cloisters, chapter-house, and canons' residences were swept away, and all but two bays of the stern Norman nave were demolished to build guard-houses for the city—the Restoration found it shattered but still standing. Patched up by Machell, the clerical reviver of classical architecture in the diocese of Carlisle, who introduced into the north front, originally half hidden by the cloister pentice roof, some heavy Italianizing windows, to the serious weakening of the fabric, over the removal of which by Mr. Street the "Society for the Preservation of Ancient Buildings" has been shrieking so wildly, the Fraternity entered on a long period of neglect, degradation, and decay. The old oak-timbered roof gave place to a modern ceiling. The noble proportions of the hall, 79 feet long by 27 feet broad, were concealed by partition walls. The lofty traceried windows were hidden by huge wooden shutters, to protect their tempting expanse of glass from the stones and bullets shot from the adjacent city wall. Had it not been the only building, besides their mutilated cathedral and their own restored houses of residence, remaining to the Dean and Chapter for the performance of every capitular act and the fulfilment of every capitular duty, it would probably have shared the fate of the Infirmary at Norwich and the Guesten Hall at Worcester, and have been demolished as a nuisance and an obstruction. When at last, towards the beginning of this century, the Chapter determined to put the dilapidated building into decent repair, it was only more completely to obscure its ancient features. Their first desire, as with their brethren at Durham when they pulled down their unique Norman chapter-house and turned it into a modern parlour, and we imagine, with nearly all the Chapters of the age, was to make themselves comfortable. "The interior"—we quote from Storer's *Cathedrals*, 1814—"was fitted up in a magnificent style, and formed three apartments—i.e. a kitchen, dining or audit room, and library." To disguise the awkwardness of the proportions of the rooms, the floor was raised nearly to the sill of the window, and a flat plaster ceiling was drawn across at as low a level as practicable, while every feature that bespoke its early date and told of its history was mutilated or concealed. In this unhappy condition the Fraternity of Carlisle continued till the other day, when the Dean and Chapter, having resolved on the restoration of the building, by a happy inspiration, decided to entrust the work to Mr. G. E. Street. A wiser choice, as the event has proved, could not have been made. The restoration has been so thoroughly conservative that even Sir Edmund Beckett, who denounces that epithet as clanking "some deeper scheme of destructiveness and innovation than usual," and states that the suspicions which its use awakens have never been belied, could hardly, we think, fail to recognize its excellence. That the anti-restorationists would be satisfied was more than the most sanguine could have ventured to hope. But with all our experience we were scarcely prepared for the fierce denunciation with which Mr. Street's conscientious endeavours to restore the original character of the building have been visited. Indeed so unsparing has been the condemnation, written and spoken, of his plans, that the most incredulous began to question whether there might not be something in it. It was true that such accusations were *a priori* improbable against a man who was known to be one of the most conservative architects of the day, unwilling almost to a fault to meddle with ancient work, and who, in the case of St. Albans' roof, headed the vigorous, but unsuccessful—and in our opinion happily unsuccessful—crusade against the restoration of its original high pitch. But we know that principles and practice do not always tally; that a man's deeds sometimes, through force of circumstances, contradict his words; and we confess to having felt some little curiosity, on a recent visit to Carlisle, whether we should discover that Mr. Street had, as was pertinaciously asserted, wilfully removed "precious features" "essential to the historical continuity of the fabric," and was so refacing and veneering the venerable walls with fresh ashlar as to all intents and purposes to convert an old building into a new one. But we came, we saw, and we were satisfied that the charges brought against Mr. Street were entirely groundless; and after inspecting the works now in progress we can only wish that every ancient building, when subjected to restoration, were placed in equally able and conscientious hands.

To make our readers understand the head and front of Mr. Street's offending we must briefly describe the building itself. The Fraternity occupies the normal position of a monastic refectory (normal, that is, except in the Cistercian order) parallel to the church, on the southern side of the now destroyed cloister court. It was originally of Decorated date, c. 1300; but the large traceried windows on the south side, and the alterations made by Prior Gondibour, c. 1484, have given it the appearance of a building of the fifteenth century. It stands on a vaulted undercroft of six bays, the groining springing from low clusters without any capitals. A minute examination

of the masonry shows that the vaulting was taken down and reconstructed by Prior Gondibour on a somewhat higher level. The older springers are simply chamfered, while the later ribs are slightly concave. The central line or groove marked in the stone, from which the Carlisle masons set out their work, is only found in the original masonry, coming to an abrupt termination at the commencement of the new springers. The raising of the floor by Gondibour rendered a new door necessary on a higher level. This had perished in its turn. But in the course of the repair Mr. Street came upon the jamb and base of the original doorway, of about 1300 A.D., which he has carefully restored on the old lines, exactly reproducing the mouldings, which were of exquisite beauty. This door, which is some little distance from the ground, will be approached, as it always must have been, by a short flight of steps, and will be protected by the restoration of one or more bays of the destroyed cloister, of which the hook corbels remain in the Fraternity wall, and the foundations have been discovered by digging. May we express a hope that this will be only a first instalment of a further restoration of the cloisters, and that the east walk will be eventually carried to the Prior's door, now blocked, in the west bay of the south aisle of the nave. The present pretentious gabled doorway on the south front of the transept, where no door could have been, is a costly but most unhappy legacy of a former cathedral architect, which goes far to justify the protest against works of so-called restoration, as it completely falsifies the history of the building by obliterating the connexion of the canons' dormitory with the transept. The trace of the dormitory gable and the door of access to the staircase leading down into the church, which may be seen in Storer's view, are unhappily now among the things of the past. To return—Mr. Street's new door will open into the screens of the hall, as they did of old time. On the western wall are two very curious serving hatches, now blocked, opening into the destroyed conventual kitchens. As we have indicated, Mr. Street found this noble hall divided into three rooms by partition walls. These he has thrown down, and opened out the whole apartment, with the exception of the slype at the east end, containing pantries, &c., now to be converted into a muniment room, replacing the plaster ceiling and modern roof with a semi-hexagonal coved ceiling, with tie beams and kingposts, which has a very good effect. No part of Mr. Street's work caused so loud an outcry as the removal of the semi-classical windows put in by Machell, to which reference has already been made. The result entirely justifies the course Mr. Street adopted. They were ordinary square-headed windows, with a central mullion and transom, of the type familiar to Cambridge men at the Bishop's Hostel at Trinity, and in Catherine Hall—we beg pardon, St. Catherine's College—without beauty in themselves, and completely out of place. Besides this, they seriously weakened the building by their violation of the principles of construction. The windows carried an oak lintel, eight feet across, and, having no arch, they were far too wide for stability, and the decay of the timber had brought about a serious process of crushing. The reconstruction of that part of the building was necessary, and few can now seriously regret that, when once taken out, these incongruous examples of penetration were not replaced. It may be mentioned, as another example of the unreasonableness of the anti-restoration clamour, that it was laid as a serious charge against Mr. Street that he had pulled down—and of course meant to destroy—some elaborate fourteenth-century niches on the interior of the north wall. The fact is that these niches had been torn down in Machell's repair from the eastern wall, and used, with the aid of lath and plaster, to block up the small fourteenth-century windows above the cloister roof, the style of which was out of keeping with the classical revival then in vogue. The niches are now reoccupying their original position above the high table, and add much dignity to the room. An inspection of the outside walls shows how carefully the ancient masonry has been dealt with. No single stone has been cut out that would serve its purpose. But, as many pieces of the soft red sandstone had perished to the depth of six or eight inches, the stability of the walls demanded a considerable amount of repair. It is needless to say that the beautiful reading pulpit on the south side—so strangely called by Mr. Billings a confessional (did he imagine the canons came into the refectory to confess?), with its exquisite panelled ceiling, seat, and water drain for the reader, and every other part of the mediæval arrangements, has received the most careful treatment at Mr. Street's hands. Every ancient feature has been preserved, and where previously removed, as with the string courses within, has been, when traceable, carefully restored. It is not too much to say that when the restoration, now fast approaching completion, is finished, the Fraternity of Carlisle will exhibit the most perfect example of a mediæval monastic refectory to be seen in England. We can only wish that those of Chester and Worcester may soon receive similar treatment from the same or equally able hands.

RECENT DISCOVERIES AT GHEEZEH.

IT is many years since anything of importance has rewarded the archaeologist at the Pyramids. True, considerable sums have been spent—perhaps we should say wasted—by English and American enthusiasts bent upon verifying the fallacious measurements of the spots of the Pyramid religion. An Englishman,

what is content to see ordinary history recorded in the cairns of Shoofoo and his predecessors and successors, regrets to think that, when a little intelligent research and the employment of a small sum of money might gain for our country the credit of a brilliant discovery, the French and German explorers are laying bare a series of remarkable structures, and adding to our knowledge of the beginnings of history. They smile contemptuously as they watch our countrymen taking a cast of the "boss" in the "King's Chamber" of the Great Pyramid, or laboriously measuring and mapping every stone in the passage. We used to take the lead in Egyptian discovery. Colonel Howard Vyse and Mr. Perring, in the dark ages of hieroglyphic knowledge, made plans and drawings which have never been superseded for accuracy and observation. Now we do nothing. The believer in the mission of the Great Pyramid knows no hieroglyphs, and as it is part of his religion that the Great Pyramid was built before any other, his few historical ideas are literally inverted. He looks at every fact upside down. It was reserved for an American to reach perhaps the climax of absurdity. The officer sent to remove the standing obelisk of Alexandria from its place, in order to ship it to New York, gravely announced that he had discovered Freemasons' marks on the pedestal. This precious discovery was published everywhere, and was probably a matter of immense pride to the clever engineer who made it. But as Americans and English are not very clearly distinguished in the Continental mind, it only added another to the daily recurring proofs that English-speaking people know nothing about Egyptology as a science. We hear of one expedition after another; there is almost always a dweller in the tombs at Gheezeh, who spends his nights in searching for the "pyramid inch"; money is to be had for removing the most interesting monuments from their proper places; but we leave it to others to do any real work, and even at our Universities there is no encouragement offered to the study of the language and the history which lie at the root of all subsequent developments of literature and art. Meanwhile the riddle of the Sphinx is being slowly solved by foreigners. The succession of the Pharaohs of the early period is being gradually unravelled. The scattered notices of the oldest civilization are being brought together. A theory on which we can at least argue has been formed as to the original religion of the country. The questions which must engage the attention of the Egyptian archaeologist of the future are being carefully stated, and in scientific terms. But none of this work is done by Englishmen. The only English publication which professes to deal with Egyptian records never contains a single hieroglyph; and the only Society which has done anything to remove our reproach was founded solely to promote "biblical archaeology," of which the history of Egypt is only a branch. Our investigations stop at the passage of the Red Sea, or at best reach back to Joseph and the Hyksos.

In December 1879, the late M. Mariette, of the Boudak Museum, read a paper in Paris before the Académie des Inscriptions, in which he stated the questions relating to further excavations in Egypt. Among other points on which he dwelt was the still unsettled history of the Sphinx. M. Mariette's opinions may be briefly stated without our committing ourselves to a full assent. So far the absolute proofs as to the antiquity of the Sphinx only take him back to the reign of Thothmes IV. of the Eighteenth Dynasty, who lived about 1600 B.C. True, a tablet has been found in which he is spoken of as existing in the time of Shoofoo, the first king of the Fourth Dynasty, whose date is unknown, but has been approximately put at 4200 B.C. The authenticity of this tablet is more than doubtful, though it may be the copy of an ancient and contemporary document. One of M. Mariette's favourite objects was the verification of its statements, an object he has not lived to see attained. He considered the Sphinx a monument of the highest antiquity, and was not unwilling to see in it a tomb, according to the supposition of Pliny. Adjoining the Sphinx—that is, about eighty yards to the south of it—is a building which was first uncovered by M. Mariette himself. It has often been described, and here it may suffice to say that it consists of an excavation of oblong form, lined with immense masses of red granite and alabaster, and divided at one part by columns into a kind of nave and aisles. The entrance to this building is in a corner, by a low doorway, to which a sloping passage conducts us from the surface of the surrounding rocky platform. In this building M. Mariette saw a temple dedicated to the service of the Sphinx. He probably stood almost alone in taking this view. A temple is not likely to have been built underground, without any façade; for the façade of which M. Mariette speaks is merely the side wall of part of the sloping passage. Nor would a temple be without an entrance higher than five feet, or have niches and benches such as in all the tombs of the early period are found to have been arranged for the reception of coffins. The "Temple of the Sphinx" resembles exactly in plan and arrangement one of the *mastabas* at Sakkarah, which have been so often described as abounding in pictures of ancient life. There are no pictures here, but it does not follow that there never were any; and no fewer than nine statues of the Pharaoh Chafra, the builder of the second Pyramid, with two of a monkey or cynocephalus, were found when the building was explored. The existence of these statues, bearing hieroglyphs which could not be mistaken, pointed strongly to a connexion between this strange underground structure and the pyramid which uniform tradition has assigned to Chafra. When we stand facing the Sphinx it is seen that this pyramid is exactly square with it to the westward, though at a distance of several hundred yards. The builders of that time cared little for exact symmetry, and the correspondence may have been accidental. But M. Mariette insists

that the building to the south of the Sphinx belonged to a period more remote than that of Chafra, and was made for the worship of the god of whom the Sphinx was the embodiment. To others, the building is a tomb. Its plan resembles the plan of numberless other tombs built of less magnificent materials. It is going out of the way to assign to it any other purpose than the obvious one. Moreover, the Temple of the Sphinx had already been discovered—namely, between the paws—and the inscription made there by Thothmes IV. proved only that the Sphinx existed in his day. The Sphinx is cut from the native rock, and, in a more or less perfect form, must have existed where it is from time immemorial, as a dozen similar rocks exist in other parts of Egypt. But M. Mariette was surely running away with his subject when he asked if the Sphinx does not go back to a period far anterior to Menes—which, in a geological sense, it does—and when he added, with an outburst of purely French rhetoric, that it buries itself so profoundly in the night of ages, that we must attribute its construction to those personages of the ante-historical age to whom the hieroglyphs give the name of Hor-Shesoo, "the successors of Hor." This is "very tall writing," but is not on that account more convincing. The lamented explorer was little given to speculation, and every Egyptian student is pleased to be let into the secret of his theories. At the same time even his illustrious name must not blind us as to the unsubstantial base on which this particular theory rests. We may say the same of another theory—namely, that the "Temple of the Sphinx" is also the tomb of the king who caused the rock to be cut into that form. At present all the indications connect that "temple" with the second Pyramid; and within a few weeks Herr Brugsch, a relative of the historian of Egypt, has made a discovery which to most people will appear decisive as to this question. Herr Brugsch has not yet published the details of his discovery, and we are still in the dark on many points; but it is certain that the remains of a very remarkable and significant structure, or series of structures, have been brought to light.

If we take up the plan of Gheezeh in Murray's *Handbook* we may perceive at the eastern side of the pyramid of Chafra the ruins of the temple which was attached to every pyramid. This temple is remarkable, even among so many cyclopean structures, for the immense size of the stone blocks of which it was built. Although there are these considerable relics of the temple, there are none of a causeway such as may be seen leading from so many of the other pyramids. But something much more interesting has just been found. It is a paved pathway or passage, leading from the temple door to the so-called "Temple of the Sphinx." It has been carefully traced, and is nearly perfect, but, so far, no walls on either side have been discovered. The stone is disposed in enormous blocks, placed with great exactness. At the upper end, close to the temple of the pyramid, there was laid bare the remains of a granite doorway; and near it were the fragments of a green diorite statue bearing the name of Chafra. Nine similar statues had been found in a well or pit in the Temple of the Sphinx and are now in the Boudak Museum, but this discovery tends to confirm the attribution of the second Pyramid to that Pharaoh which had hitherto rested on the assertion of Herodotus. The question has still to be answered as to the objects of the passage. It does not enter the Temple of the Sphinx, though it may have entered an upper structure of which the present remains are only the crypt. But the existence of the passage goes far to establish the connexion, already more than suspected, of Chafra with the granite and alabaster tomb-house, and we may, without indulging too much in guesswork, conclude that it is a tomb-house and not a temple, and that, moreover, it has nothing whatever to do with the Sphinx. It may be the burial-place of the family of Chafra; or, as one archaeologist has suggested, it may have been an embalming-house. But we have no reason for supposing that the people or kings of the pyramid period were ever embalmed. Very few bodies have been preserved after the lapse of so many ages, even the skeletons having perished; but one of the few is in the British Museum, in a sad state of neglect. It is the body, or what is left of the body, of Menkaora, the builder of the third Pyramid, and has not been embalmed, but simply wrapped in cerecloth.

THE WOES OF EXAMINERS.

IN our levelling age the Examiner is one of the few persons who still command a feeling of reverence. His powers are absolute, and these powers are possessed by right of superior knowledge. Placed thus high he is naturally supposed to lead an enviable existence. Having himself safely crossed the troubled waters of the candidate state, he now looks back complacently on those who still struggle with its adverse currents. And in addition to this feeling of security after danger, he is supposed to experience an intense gratification of the love of power. He is, to the imagination of the trembling aspirants who are expecting to come under his jurisdiction, a sort of Olympic deity enthroned high in an imperturbable calm, taking delight in dealing out judgments to the luckless mortals who gather at his feet.

This idea of the Examiner, like all ideas formed *ab extra*, is far from being correct. A certain kind of pleasure does, no doubt, fall to the lot of the energetic official, conscious of his strength and eager to measure it against the powers of the whole Philistine army of candidates and their leaders—the coaches. Yet there is

another side to the picture. The pleasures of power, here as elsewhere, are purchased at a cost of mental unrest. Uneasy lies the head that revolves a series of coming examinations. At least this is true of the examiner so far as he is at the same time human. Let us suppose that he is a conscientious man, concerned to fulfil to his utmost the duties of his position. He desires to be fair and straightforward, and shrinks from the paltriness of setting tricky questions. Yet, on the other hand, he has to use a certain ingenuity in avoiding the more obvious paths of inquiry which the coach is pretty certain to have occupied beforehand. He thus finds that to avoid the two extremes of the tricky and the commonplace is by no means easy. To make his papers fair, yet searching and frustrative of superficial cram, taxes all his knowledge and all his ingenuity, and he is happy if he gets to the end of his task with a clear head and an unruffled temper.

But if the preparation of papers is apt to disturb the Olympian repose of our examiner, much more is the second stage of his labour, the inspection of the answers sent in. He has plumed himself perhaps on the originality of his questions and their fitness to elicit the fruits of careful reading and reflection. But lo! the point of these carefully framed questions is altogether missed. Instead of the intelligent responses gladdening the examiner's heart as much as a bit of favourable literary criticism, there return to his hands barefaced quotations from text-books which have but the remotest connexion with the question set. As he goes on wading through his reams of hurried penmanship he becomes oppressed with the monotony of the effusions. The same misses recur *ad nauseam*. The inspiration of the text-book works like a divine afflatus hurrying its subjects onwards in total disregard of the questions under their eyes. By and by, after he has read again and again the same reply, he very likely begins himself to lose the real point of his question. He grows obfuscated, and is half inclined to think that this unlooked-for consensus of independent opinion conclusively establishes the perfect fitness of the answer. This clamorous appeal to the text-book is too much for him, and he feels his initial self-confidence fast oozing away. When he emerges from this temporary confusion of brain he will probably experience a powerful reaction. Awakened from his illusions, he will now learn to see the candidate as he actually is—a creature destitute of assimilating power and utterly dependent on the letter of his text-books. Yet this abandonment of his ideal, this self-accommodation to the actual and inevitable, will be a painful process, and henceforth much of the glory of his office will seem to have departed.

While examinations by paper are thus attended with certain vexations, *visd voce* examinations are apt to be still more worrying. To sit closeted with candidates on a hot afternoon in August, as in the examinations of the Civil Service, giving three-quarters of an hour to each, is trying to the most enthusiastic examiner. When conducting a paper examination, a man is not brought into personal contact with his candidates. As they sit ensconced behind their desks his eye may wander over them without a tremor of emotion. They exist for him only in the light of so many writing-machines, whose rate of work is of interest to him in so far as it determines the quantity of his own subsequent labours. It is far otherwise in a *visd voce* examination. A man is suddenly brought into close relations with a person capable of acting on his mind in an indefinite number of ways through the avenues of the eye and the ear. He is called on to engage in something like conversation with this concrete being, and he has his part to sustain as a superior in knowledge, invested with certain powers over this person's destiny. If the examiner is possessed of ordinary human feelings, he will probably enter the audience chamber with some misgiving. On the one hand, he is anxious to preserve his reputation untarnished in this encounter of tongue. And he may possibly have a presentiment that his adversary is going to upset him on some out-of-the-way point in a text-book that is not too familiar to him. Experience will soon teach him that these fears are groundless, and that the average examinee knows exceedingly little of the works which he enumerates. But his troubles are not over yet. He is naturally desirous, not only to preserve his own prestige as examiner, but to pass the thirty or forty minutes with this amiable-looking youth as pleasantly as possible. And, if he is troubled with ordinary human sympathies, he can hardly fail to feel some pity for the nervous figure that awkwardly takes up its position as his *vis-à-vis*, and proceeds to study its hands with something of the earnestness of a chiromantist. The good-natured examiner seeks to allay this trepidation and encourage his visitor by some elementary question. In many cases his good feeling will expose him to fresh troubles. The smart youth no sooner perceives that the examiner is disposed to be friendly than he begins to try a number of tricks in order to ward off the attack which he dreads. Taking up some point in a question he wanders off, perhaps airing knowledge which has not been asked for, or directly inviting his interrogator to stray too by asking his views on some debated question. There is a certain excitement in watching and checkmating these manoeuvres, though it may involve rather more exertion than one cares about on a sultry summer afternoon. Far otherwise is it with the more ordinary method of trying to hide ignorance by hesitation and apparent reflection. It is here that the good-natured examiner is apt to be most cruelly imposed on. The candidate, though wholly ignorant on the matter raised by a question, manages by sundry noises to simulate the birth throes of discovery, in the hope that the questioner will be encouraged to help him. Nothing is more exasperating to the examiner than to find at the end of five

minutes of this sort of delay that all his variations of the original question produce no effect, for the very good reason that his hearer knows nothing about the subject. Like Socrates, he feels most chagrin when his obdetric efforts fail because there is no knowledge to elicit, not even the consciousness of ignorance itself. The conceit of the candidate class which forbids their owning to ignorance is probably the most irritating feature in the examiner's experience. And when, as sometimes happens, this stolidity is found to underlie a magnificent display of knowledge in the shape of a lengthy enumeration of books read, the examiner must be a happily constituted person if he does not for the moment experience the agitation of a passion from which the wise man is supposed to be free.

It is not to be wondered at that, amid these disturbing influences, the poor examiner should now and again feel considerable difficulty in determining the comparative merits of his candidates. Of course if the youthful conception of an examiner is correct, this source of trouble must be a very insignificant one. A sense of justice is the last thing which candidates are disposed to ascribe to those who sit in judgment on their intellectual claims. According to their idea, marks are knocked down to a particular name or number according to the whim of the moment, and without the least endeavour to come to a just estimate. This image of the examiner is not, however, always correct. It may happen that he brings a modest degree of conscientiousness to his duties. And, if so, he will find ample grounds for solicitude. To feel sure that the opinion which grows up during the half hour's perusal of papers or listening to oral responses is the product of a close inspection of merit, and is uninfluenced by a number of irrelevant considerations, is not by any means an easy thing. The experienced examiner becomes aware that even when he thinks himself most scrupulously fair, subtle influences unconsciously work in his mind to the disturbance of his judgment. Thus, to give but one example, he will discover in reviewing a batch of papers that quite unawares he has gradually lowered the standard as he advanced, the general level of the answers actually presented to him insensibly modifying the ideal expectations with which he set out. And if this source of anxiety exists in the case of paper examinations, there are far graver ones in that of *visd voce* interrogations. It is barely possible, indeed, to compare two men strictly with reference to their intellectual attainments, when innumerable and undiscovered influences are at work attracting the mind to one and repelling it from the other. The conscientious examiner who reflects on these things will find it exceedingly hard to satisfy himself that he has been perfectly just in his decisions. And thus, even when the annoyances of the process of investigation are over, there is apt to linger in his mind the vexing after-thought that he has not been as fair as he might have been.

Altogether, then, the examinational experience is not without its peculiar bitterness. The average man can hardly go through this experience without an appreciable loss of self-complacency. The pitfalls of his office will be pretty sure to upset him sooner or later. His intellectual self-estimation may indeed remain intact; for, as we have said, the experiences of the examiner are apt to lead him to magnify the interval that separates him from his candidates. It is his moral self-respect that runs the risk of becoming impaired. In addition to this, his familiarity with his work will pretty certainly confirm any cynical views respecting the powers of the human mind with which he set out. The examiner has a fine field of observation open to him if he is disposed to make researches on the general stupidity of his kind. It would be interesting to watch the subsequent mental history of examiners of long standing. Not a few of them may be expected to develop into uncompromising misanthropists. The man who has for years peered into the depths of folly which reveal themselves in an examination room may naturally be supposed to take something of his ruffled temper with him when he makes a larger survey of mankind as a whole. The force of habit may easily impel him to look on his hapless race as consisting of an many potential candidates, a large proportion of whom he would be prepared to pluck. The man who thus comes to regard the world as a big examination room will hardly entertain very flattering sentiments towards his fellows. Yet, if we find his tone somewhat too contemptuous, let us at least reflect on the vexing and humiliating experiences which served to engender it.

THE BISHOPS' BIBLE.

THERE is no version of the Scriptures as yet published in this country which has not savoured more or less of the Calvinistic heresy, and unquestionably the Bible of which we are going to give some account in this article is no exception to the remark. The Bishops' Bible, so called because its idea originated with Matthew Parker, Archbishop of Canterbury, and its execution was due to several other Bishops, this translation being intended by the Bishops as a body to supersede all earlier translations, is probably far less known than any of its predecessors. Other versions have been reprinted in modern times; but this passed silently away, after having struggled for near half a century, from 1568 to 1606, through about as many editions as it had years of existence. It deserved its fate; for perhaps it is the poorest translation that has ever been made, in spite of its compilers having had the advantage of comparing several very tolerable versions which had previously

been printed and extensively circulated. The Genevan translation which immediately preceded it, was the work of several scholars acting in concert. In the present case, each translator was responsible only for his own part of the work, hurriedly done in a period of less than two years; whilst the Englishmen who translated the Bible from the original at Geneva were evidently acting in concert, and that for many years, with those who about the same time published a French translation, or rather revision of a previous translation, which appeared in 1567. The identity of the Calendars appended to this French translation and to the English version of 1569, if we may use the word as applying to Calendars which are in different languages, and the similar mode adopted in numbering the verses, alone would prove how intimately connected the English refugees and the French residents at Geneva were with each other. And the contrast presented between the Genevan and the Bishops' Bible is what might have been expected from their antecedents. We are at a loss to conceive how any scholar could have spoken of this version as being in any sense "creditably" done. We shall endeavour, as far as possible, to avoid what has been said by Dr. Eadie and others on this work, what we have to say about it having been derived from our own personal observation of the original and some subsequent editions.

The first edition of this Bible is a huge folio, bearing date 1568, weighing nearly 20 lbs.; and the first idea that naturally strikes the reader who will look through the book with such knowledge of its external history as may be derived from Strype and subsequent writers is that it has been executed in a careless and slovenly way. The evidence of want of plan and concert in its compilers is patent from beginning to end. In the first place, there is a great variation in the amount of marginal annotation. Thus the Book of Daniel, which was done by Bentham, Bishop of Lichfield and Coventry, is so copiously annotated that the whole margin of the book is full, whilst Isaiah and Jeremiah, done by Horne, Bishop of Winchester, have scarcely any notes. Again, in the Gospels and Acts there are very few notes, such as there are consisting mainly of explanations of words, whilst in the Epistles there are notes added in the margin of every chapter. And not only is there this variety where the translators are different, but even in the books consigned to the same translator there is no kind of uniformity in the amount of annotation. In some cases it almost looks as if the translator had begun to add notes freely, and, soon getting tired of his task, dropped them either wholly or partially. Thus, in the beginning of the Revelation, there are five notes copied verbatim from the Geneva Bible, and afterwards the text is printed without notes and almost without marginal references. Of the character of the notes we shall have more to say when we speak of the contents of the book. For the present we confine ourselves to its outside appearance. That no sort of superintendence was used in producing it is plain from the headings at the tops of the pages. The book is divided into five portions, the foliation beginning anew at the Book of Joshua, at the Psalms, the Apocrypha, and the New Testament, and the appearance is as if the different portions had been sent to the press separately, and printed independent of each other. Thus the first portion has the headlines in Roman character—"The creation," "The lawe," "Solempne feastes," "Moyses repenteth the lawe," &c. The next portion has them in the same brief fashion in italics, and so it goes on till the 31st chapter of the second book of Chronicles, where, at the end of sheet S., fol. cxliv., they end with the word *Hezekia*; the rest of the volume, including the New Testament, being entirely destitute of them, with the exception of the Psalms, where there are headings in Roman character adapted for the daily service thus—"Moneth the xiiii. day, Mornyng prayer," &c. The Book of Psalms also differs from the rest of the volume in having no marginal references. The second edition, which was published in 1569, in a very small 4to. size, supplies corrections of all these points, and has the foliation continuous from the 1st of Genesis to the end of Job, thus dividing the Bible into four portions instead of five, the headings of the chapters being continued all in the same Roman type to the end of the Chronicles and through the remainder of this portion of the Bible. There is added also before the book of Ezra a "profitable declaration for the understanding" of the history, which was continued in subsequent editions of this version, as likewise was "a necessarie table for the knowledge of the state of Juda," prefixed to the first book of Maccabees, and a "Table to make plain the difficultie" of the two genealogies of St. Matthew and St. Luke—"The order of times" between the Acts and the Epistle to the Romans was reprinted from the first edition. The table for the better understanding of St. Matt. xxvi., St. Mark xiv., St. Luke xxii., and St. John xix., at the end of St. Matthew, was not introduced till 1577. Next to nothing has been said of this little edition of 1569 by writers on bibliography. Strype notices that it was revised anew, but speaks of divers notes in the margin being introduced, but these are mostly reprinted and abridged from the folio of 1568, and Lewis appears to be unconscious of any alteration in this edition. The chief difference in the notes of this edition is that many of those of 1568 were omitted for want of space in the margin of so small a book. But it furnishes evidence both of the carelessness of the compilers of the previous folio, and also of the desire of the authorities to supersede the Genevan version by providing a Bible in convenient size for the use of private families. Not only was it provided with maps and tables which the Genevans were without; but headings were added at the tops of the pages in the New Testament, after the manner of the Genevan Bible, though in the first instance not copied from that edition. In later editions of a quarto form

the publishers made a nearer approach to the Genevan Bibles, and actually adopted the headlines of that edition with but few variations, even including the grotesque account of St. John Baptist's death as "The inconvenience of dauncing." The appearance of some of these editions leads to the conjecture that they were meant to deceive the unwary into the idea that they were the same with the Genevans. It requires a comparison of two copies for a casual reader to decide of the edition of 1584 whether he has in his hands a Bible of the Genevan or of the Bishops' version.

The edition of 1568 was ill adapted for the purpose of being read in the parish churches, having marginal notes—which of course were of no use for this particular object—and having about a hundred woodcuts which had been previously used in some German Bible and which were equally out of place in such a volume. These, again, were distributed very unevenly, about eighty being in the earlier historical books, nearly one-fourth of these being given to Genesis alone. And here is certainly another instance of want of supervision, as the New Testament is quite as prolific as the Old of subjects admitting of pictorial illustration. These woodcuts were not inserted in the second folio of 1572, of which we shall have more to say hereafter. A few were introduced into it, but they are entirely distinct from those of the first edition of 1568. The little 4to of 1569, into which they might with great advantage have been introduced, as it must have been intended solely for private and family reading, is entirely destitute of woodcuts, although, as we have observed above, it is furnished with helps in the way of explanatory tables and maps.

There are other conspicuous faults in the get-up of this Bishops' Bible, indicating carelessness and want of general superintendence. They may perhaps be regarded as trivial, but they all point to the same conclusion. Thus the headings at the top of the pages of the first two books of Kings, commonly called the First and Second Books of Samuel, were no doubt intended to show, when the book was open, 1 Kings in the left-hand page and 1 Samuel on the right, as arranged on the second folio of 1572, whereas the leaves are mostly so arranged that for four consecutive pages the heading is 1 Kings, and for the following four 1 Samuel. Whilst we are on the subject of mistakes we may also mention the absurd mode of spelling adopted in this edition, and even continued in 1572, of the name of St. Matthew. All the headings of the pages of this Gospel have the word spelt *Matthaww*, the translators apparently forgetting that there is no such letter in the Greek or Latin alphabet as (*w*) when they adopted the diphthong (*æ*) to assimilate the word to Latin spelling.

There is so much to say as regards the bibliography of the editions of the Bishops' Bible, that we must in this article confine our attention to this part of the subject, reserving our criticism of the translation to a future time. And first for the edition of 1569. Scarcely any notice has been taken of this, the second edition of the Bishops' Bible, till Mr. Francis Fry called attention to the differences of reading between it and the editions of the preceding year and of 1572, in order to show that an undated edition of the New Testament—of which there are only two known copies, one at Lambeth, the other at Manchester, hitherto supposed to be of Tyndale's version—was really printed from the Bishops' of 1569. It certainly does seem a remarkable instance of folly that an Archbishop should put out a translation of the Bible which he wished to impose upon the Church as the Authorized Version, and pay so little attention to its compilation that it should need being altered in the very next year after its appearance and then be submitted to a thorough revision within three years more. Yet such is the exact state of the case as regards the Bishops' Version. What wonder that there should be a general distrust of a version of which so little care was taken that, in its second edition—namely, that in quarto of 1569—there should have been a necessity for altering hundreds of passages, and that, in spite of these alterations, which are generally improvements, being adopted, the next folio edition of 1572, which followed it in three years, should have recurred to nearly all the inferior renderings of the first edition of 1568. It is true that whole books—e.g. the Prophet Hosea—remained nearly unaltered; but some of the historical books have several variations, and, in one instance, as many as eighteen in one chapter. And in spite of this alteration in 1569, the folio of 1572 in the Old Testament in every instance follows the readings of 1568. In this second folio edition, though there were no alterations worth mentioning in the Old Testament, several hundred changes were introduced into the New. The alterations in the New Testament in 1569, indeed, were few, and consisted generally of a substitution of a different word in the text, whilst the original reading of 1568 was preserved in the margin, and of abbreviations of the headings of the chapters, made for the purpose of saving space, but which were executed upon no principle of choice, it being apparently left to the printer to insert or exclude according to his own caprice, so long as somewhat more than half the headings were left out. The Psalms were retained of the same version as that of 1568, but the attempt to use these in the public service of the Church proved abortive, and in 1572 the editors were obliged to print the Psalms in double columns, the left hand being called "the translation used in common prayer," and the right hand column being "the translation after the Hebrewes," i.e. the translation newly made for this edition. In subsequent editions they were obliged to drop the new translation altogether and recur to the version of the Great Bible as still used in the Church of England. The failure in the attempt to substitute a new version of the Psalms to be used in

the public service of the Church was only part and parcel of the general failure of this version to accommodate itself to the public taste; there being only one edition, the folio of 1585, in which the new version of the Psalms was reprinted, and then without attention being called to their use at morning and evening prayer on the different days of the month. This edition is described on the title-page of the New Testament as being "newly perused and authorized." Not only was it never authorized for public reading, but it is plain from the comparative paucity of editions of the smaller size that it was seldom used in families, and the Geneva version held its ground against it till its final suppression by Laud.

In conclusion of this part of the history of the Bishops' Bible we may observe that it is strange recent writers should have given so little credit to the list of Revisers which accompanies the letter of Archbishop Parker to Cecil of October 8, 1568, which is in the Record Office, and was printed in the *Correspondence of Matthew Parker*. It tallies almost exactly with the initials appended to the books, and supplies all the additional information that was needed, though singularly enough it omits all mention of the Psalms, which are commonly thought to have been done by Thomas Becon, because of the initials T. B. The editor of that volume, however, appears to have misread J. Lich & Covent. for T. Lich & Covent., Thomas being the Christian name of Bentham, Bishop of Lichfield and Coventry.

We reserve the miserable absurdities of the translation and notes of this Bible for a future opportunity.

THE WEATHER AND THE CHASE.

IN the matter of the weather and its sudden changes, hunting men are almost as much given to grumbling as farmers. It would save both hunting man and farmer an infinity of trouble and temper if he could arrange the season to suit himself; for of course in any fairly representative gathering from the hunting constituencies there would be wide differences of ideas. Enthusiasts with great studs would object to frosts; while people of smaller means, with their two or three horses, would vote for interludes of hard weather at regular intervals—say, a week of frost to a fortnight of mild days. But one and all would undoubtedly protest against those sudden and tremendous thaws with the consequent floods we have been lately experiencing; as well as to those protracted openings of the flood-gates of the heavens that distribute the "countries" pretty equally between swamp and picturesque lake scenery. There are wealthy devotees, we know, who seem to have been born philosophers, and who complacently accept the rough with the smooth so long as there is any possibility of "going." They will sleep out in miserable quarters for the sake of a by-day with some distant pack. Or they rise at a most unnatural hour in the morning, and push forward over miles of muddy cross-roads on their cover backs through the fogs that confound all their notions of local geography, and in raw damps that chill them to the marrow. Even when the ground is hard here and there under the hedges, and there is a wrinkled coating of ice on the puddles in the cart ruts, they will go a long way in the hope of the master keeping his appointment, hedging against the contingency of missing a good thing. Naturally, nothing in the shape of wet ground day after day will stop these hard-riding philosophers; and as they have almost a superfluity of horses to fall back upon, the mishaps in their hunting adventures affect them but lightly. It is a very different thing with the man who does his best with a modest stud. He would willingly disregard the weather if he could afford it; but, as it is, the weather is of momentous importance to him. He must nurse the horses that are overwrought in an open season. Probably he hacks his hunter to cover, and he cannot afford to ride him a long distance on the offchance of a meet. And taking him out, when the country is unusually heavy "going," is doubtful satisfaction in any case. When his heart is with the hounds as they are running cheerily two or three fields ahead, he must hold hard and steady the impetuous animal, which may already have been somewhat reduced in condition, as assuredly he has severe work in store. An unseasonable strain of the back sinews may knock both horse and rider out of time for some of the best weeks of the season; and even a cold that confines the invalid to the stable will be disturbing to future arrangements. After all, however, both these classes of excellent sportsmen contrive to get a great deal of value for their expenditure, be it large or small. They take, as we have said, the rough with the smooth; they have discounted beforehand the drawbacks of their favourite amusement; and when, at the close of the season, they indulge in a retrospect striking the balance in a spirit of placid content, they find subjects on the whole for sincere congratulation. The fact is that they are sportsmen to the backbone; their sorrows are effaced by the recollection of their excitements; and in the remembrance of brilliant runs all the rest fades from their memory. They did their croaking and grumbling from day to day. But they are delighted to talk of that capital thing, all the more thrilling for being comparatively unexpected. When a tantalizing morning, with cover after cover drawn blank, had gradually dispersed the crowd of outsiders and hangers-on; when the master, huntsmen, and whip, followed by the steadfast few who still stuck faithfully to them, had trotted on to an outlying patch of gorse by way of a

last chance; when the hounds were hardly known in before they were out again, with the stout old dog-box viewed away before them, with his mind resolutely set on a refuge in the woods skirting heights on the remote horizon—then surely no faster or more exciting burst was ever recorded in the annals of the hunt. The course lay along a rich undulating vale, and over what might be fairly called the perfection of a hunting country, with its broad pastures and light fallows. The banks were high and the hedges stiff, but nevertheless it was all fair fencing; and as every man took an independent line of his own, there was no dangerous hustling at treacherous gaps. The chief casualties were at the water-jumps, for twice or thrice they had to clear the brimming stream, and the brimming stream was really "a bumper"; but these only gave an agreeable piquancy to the run. Except for one brief check, which was far from unwelcome, when the hounds threw up in a tainted fallow among a flock of sheep, the pace from first to last was voted "tremendous"; and nothing could have lived through it but men with hearts in the right place, mounted on thoroughbreds "with something in hand." Like the soldiers of Henry V. at Agincourt, the few riders who were in at that memorable death shall still stand a-tiptoe when that day is named; and there are a dozen more experiences of a similar kind, the reflections on which are scarcely less pleasurable.

But, in contrast to such hard-riding heroes, there is another order of "sportsmen" who are far more common than is popularly believed, since they keep the secret of their own feelings so admirably that sometimes it can hardly be said to be known to themselves. There are men who hunt for fashion, or from force of earlier habit after their nerves are gone; or because it gives them social consideration among their friends; or because it seems to offer more ample scope for praiseworthy social aspirations; or because they have a superabundance of time or money, or of both. Riding is an invigorating exercise, and scarlet is becoming wear. The chase, as the immortal Jorrocks used to say, is the effigy of glorious war, with an infinitesimal percentage of its danger; and by insinuating the praises of their own gallant deeds they may come back from the hunt in a halo of glory. There may be honour of a kind in the cases of these jovial impostors; but their "sport" is far, indeed, from being all pleasure. In fact, we imagine that few voluntary martyrs go through more suffering in an unpretending way than the timid hunting man who holds to his little comforts. We do not talk, of course, of an occasional day with the Brighton harriers, or with some popular pack of suburban foxhounds or stag-hounds. Then the shirker on the screw from the livery-stable is in a crowd of congenial sympathizers, who avoid by consent each shadow of a risk save the risks that arise from the general awkwardness. The squadrons of cockneys go careering with slackened rein over the open downs, or play the hustling game of follow-my-leader along the lanes or through a line of gates. We refer to the men who really profess serious hunting in a regular hunting country. In their uneasy consciousness of not being all that they seem to be, they feel bound to affect a double portion of zeal. The evening before, in the company of the smoking-room, their flow of spirits and hunting anecdote is remarkable; and not a soul there is more jubilant over the expectations for the morrow. For the time, and under the influence of generous wine and brandy-and-water, they actually may be the dupes of their factitious enthusiasm. But look at one of our voluble friends the next morning, and follow him through the eventful vicissitudes of his day. He detests early rising at all times; and here comes his servant of a winter morning to rouse him from his slumbers in the darkness. Never does he remember his bath feeling more chilly; and, as he fumbles over his dressing with numbed fingers, he curses the folly that made him a foxhunter. He loves a leisurely breakfast, and likes to dally with that meal about the hour of noon. But when he descends, he finds he has but a short ten minutes to spare; and before he has swallowed his first cup of scalding tea he hears the hoofs of his horse on the ground under the windows. He may delay the start if he please, but he has ten or a dozen of miles to go, even should he succeed in keeping a tolerably straight course through a comparatively unfamiliar country. With the luxury of a hack he is comparatively well off; he can canter and set the blood in circulation. But if he have to save his hunter, nothing is more depressing than the dull jog-trot, with the animal perhaps pulling double, when the rider would gladly give him his head. The raw air is reeking with damp, as the bare trees overhead are dripping with moisture. The poached and sloppy strip of grass at the side of the road suggests disagreeable reflections as to the probabilities of the coming gallop. He puffs away abstractedly at his cigar, with occasional applications to his flask, and, as other horsemen begin to drop into his line, and an occasional vehicle comes rattling past, his spirits begin to go up a little. There will be something of a muster at the meet, and showing himself is what he hunts for. He sits an inch higher in the saddle as he is welcomed with a civil word from the master; he exchanges greetings with acquaintances, and raises his hat to some ladies. But there is no time for flirtations, were he predisposed for them, for almost immediately there is a move to draw the covers. Even the tiresome miles of road have hardly taken the edge off his horse's temper, and the fiery animal excites itself in the crowd. He is cold and damp, and the bridle seems to slip through his gloves, and he feels generally far less confident of the future than he would wish to do. Then a single eager voice owns a warm scent in the cover; the challenge is acknowledged, and answered from five-and-twenty couple of throats; and, in a merry crash of

melody, the hounds go streaming over the meadows. Our friend is well placed, as it happens, and many men would give much to be so favoured. For him it is only too much of a good thing; but the horse takes matters out of his control, even were he disposed to skirt or hang back. He is going hard in the foremost flight, a little in advance of the stragglers of the pack, and with every opportunity of distinguishing himself in the eyes of spectators behind. That fence before him looks formidable, but there are no creditable means of avoiding it, as he is riding for reputation. He steers for what seems the most practicable place, but the horse knows that the rider is anything but confident. However, the pair are landed somehow on the other side, with nothing worse than the temporary loss of a stirrup. Our friend has discovered that, what with the mud, the rain, and the flow of the land-springs, the taking off and the landing were even worse than he had feared. He has a presentiment that when the pace and the ground begin to tell nothing can save him from grief sooner or later. He is already bethinking himself, not how he may save his horse for the finish, but how he may quietly contrive to fall back into a less conspicuous position. And the horse begins to roll about on the heavy plough, and to extend himself with ever-increasing effort over the swelling ridges of swampy grass; and, should the pair still be forced to persevere, though long ago they have fallen back among the stragglers of the second flight, sooner or later the foreboded fall must come off. In any case, the nervous sportsman has had hairbreadth escapes, and lived through the apprehension of many catastrophes; and, indeed, if there was an actual collapse, it may have had no serious consequences, since the ground is soft enough. But measuring his length in mud, and rising caked in a coating of it from spurs to eyebrows, is as disagreeable a preparation as any gentleman need care to have for a long ride home, in the cool of the evening. On that ride home we may drop the curtain. It is a sore trial of temper and patience to the most enthusiastic and self-satisfied sportsman, so how it weighs on the spirits of our friend may be conceived. Nor can he find all the consolation he might desire in dinner and pleasant company in the drawing-room, since he feels that he is doomed by a hard fate to renew those sorrows of his *ad infinitum*.

THE MOVEMENT TOWARDS SPECIE RESUMPTION.

THE movement towards specie resumption is rapidly spreading. A few years ago most of the great nations were under the régime of inconvertible paper. The United States, France, Russia, Italy, and Austria, not to mention a host of minor countries, had all found themselves compelled to suspend payment; in other words, their Governments had been under the necessity of levying forced loans upon their subjects, and were not in a position to pay back. France, which had been the last to adopt an inconvertible paper currency, was the first to return to specie payments. Only under the stress of the German invasion had she made the notes of the Bank of France a legal tender; and as soon as peace returned her Government strained every nerve to pay off its debt to the Bank, and to re-establish a sound money as quickly as possible. The management of the Bank was so admirable that even in the very height of the invasion its notes depreciated only four or five per cent., and long before the forced currency came to an end they stood at par. The return to specie payments was therefore so smoothly made as to have attracted little attention except from those who specially study such subjects. The United States followed next. They maintained the régime of inconvertible paper from 1862 to 1879, but the example of France seems to have roused them to a sense of the obligation they had incurred, and two years ago they resumed specie payments. The manner in which they did so was peculiar, and the prosperity which has followed has recommended the example to other countries. Italy is now preparing to resume specie payments. The Italian Parliament has actually under consideration a Bill for that purpose, which is likely soon to become law; and other countries, as we shall presently show, seem resolved to imitate Italy.

The inconvertible paper currency of Italy is of two kinds; the notes issued by a "consortium" of banks, which are guaranteed by the Government, and are legal tender, consist of 37,600,000*l.*; and about 29 millions sterling additional, issued separately by the banks, and, though not guaranteed by the Government, are also legal tender. The two together amount to about 66½ millions, and, deducting the notes held by the banks as a reserve, about 60 millions sterling are actually in circulation. The Bill now before the Chambers proposes that the issue of the "consortium" banks shall be taken over by the State; that at dates fixed by royal decree the small notes up to five lire, or four shillings sterling, paid into the royal treasuries shall not be reissued, and that the outstanding notes shall become exchangeable for cash at the treasuries; that, further, the notes up to five lire—which amount to about 12½ millions sterling—shall be cancelled as they accumulate in the treasuries, and also notes of higher denominations, until the total cancelled amounts to 24 millions sterling; that the forced currency of the notes of separate banks shall cease in 1883; and that after 1889 the right to issue notes shall lapse for all banks not especially authorized. Thus it will be seen that, of the 66½ millions of notes now existing, the Government proposes to cancel 24 millions sterling, or nearly two-fifths, and that in two years' time the banks which issue notes separately shall be bound to exchange them for cash on presentation.

These, as stated above, amount to 29 millions sterling. Thus out of the total of 66½ millions, 53 millions are to become convertible, and to be finally cancelled not later than 1889. There will then remain 13½ millions sterling of State issue, which will be convertible at the royal treasuries, and against which the State will, of course, have to keep a reserve in coin. The plan, it will be seen, is of two kinds; the cancelling of the smaller notes, and rendering convertible the larger, which are to remain in circulation after the example of the United States. Italy is bound by the Latin Union Convention to withdraw from circulation the notes of less than five lire; and therefore, whether she resumed specie payments or not, she would have to carry out this part of the programme. Resumption in itself thus really involves the charge only of providing for the cashing of notes of higher value than five lire, which, as we saw above, amount to 54 millions sterling, and of these again 29 millions are issued separately by the banks, and have to be provided for by the banks themselves. That leaves only 35 millions sterling in reality with which the State has to deal as a part of this resumption plan. To do this the Bill proposes to borrow 25½ millions sterling, of which 16 millions sterling are to be in gold. We have often directed attention to this part of the plan and the consequences it is likely to have in increasing the value of gold and disturbing the money markets of the world, and we need not touch upon it now, the more especially as Italy belongs to the Latin Union, and will of course be represented at the coming International Monetary Conference, at which resolutions may be adopted leading to some modification in this regard. We mention it here only incidentally to complete our statement of the proposed resumption measure. As regards the main point, however, there can be no doubt of Italy's ability to carry out the plan. Her statesmen have at length succeeded in abolishing the chronic deficits under which the country suffered, and in equalizing revenue and expenditure. The new loan which she is about to raise to carry out resumption will of course add considerably to the expenditure. The interest on 25½ millions sterling in round numbers will be about 1,300,000*l.* a year; but, no doubt, she will be able to find new taxation to cover that, and, in any case, the existing revenue will be increased in value by resumption. Already the Italian lira has risen very considerably in purchasing power; and, when the great contraction of the currency now proposed is effected, the actual value of the lira may be expected to rise to par. The existing revenue will thus be largely increased in purchasing power. In addition to this, the country will gain in various ways by a stable currency. There can be no doubt, then, that the measure is wise in principle, and that it will prove in the long run beneficial to Italy.

Russia seems to be intent upon following the example of France, the United States, and Italy. A few weeks ago a Ukase was issued which has been correctly described as a first step towards the resumption of specie payments. Before the war with Turkey the Russian paper currency amounted to 716½ millions of roubles, having remained stationary at that figure for several years. The cost of the war the Imperial Government defrayed partly by loans and partly by new issues of inconvertible paper. The Bank of Russia, as our readers are no doubt aware, is really a department of the Government. It has no capital distinct from the Government funds, no shareholders, and no independent existence; but it is useful for Governmental purposes to preserve the fiction of a separate administration, and, accordingly, the rouble notes are treated as bank-notes and not as State paper. The Bank, therefore, issued fresh notes to defray a portion of the cost of the war. The amount so issued has fluctuated from time to time, but when the Ukase was issued at the beginning of this year it was just 417 millions of roubles. The Ukase directs the Treasury to repay to the Bank 17 millions of roubles, and to cancel an equivalent amount of the new rouble notes, thus reducing their amount exactly to 400 millions. It further goes on to enact that every year for the next eight years the Treasury is to pay to the Bank 50 millions of roubles, and that an equal amount of the new rouble notes are to be cancelled. At the end of eight years the additional currency issued on account of the Russo-Turkish war will thus be cancelled. Assuming that peace is preserved, that the finances are reduced to order, and that trade and population go on growing as they have grown in the past, it is hoped that the currency will then be no more than will be needed by the requirements of the country; in other words, that the 716½ millions of roubles which formed the circulation of Russia before the war will then have risen to par. It may be questioned whether the improvement of the country will be so rapid as this; but there can be no doubt at all that the contraction of the currency to the extent of one-third will enormously enhance the value of the remaining notes; and if Russia, in her present state of financial embarrassment, of social disorder, and agricultural distress, is able to effect the reduction proposed, she will be in a position at the end of eight years to adopt measures for the complete resumption of specie payments. This of course is always provided that peace is preserved and retrenchment enforced. It is not to be supposed that she will be able to pay off 50 millions of roubles every year out of surplus revenue, for, in fact, she is at present suffering every year from a considerable deficit. She will have, therefore, to borrow in order to effect this reform, and consequently to add further to her expenditure. But it is well worth her while to do so, if thereby she can enhance the value of the rouble and give stability to her currency. Her difficulty, of course, at present is to raise the great loan she needs to fund all

the obligations incurred in the course of the war; and, partly because of the Nihilist conspiracy, partly because of her inability to maintain competition with the United States in the wheat market, and partly because of the fear generally entertained in other countries that a large loan would encourage her to plunge again into hostilities, she has lost the credit that she once possessed in Western Europe, and finds it difficult, therefore, to carry out the financial reforms which are of urgent necessity. Her new Minister of Finance must, however, be supposed to see his way to raise the 50 millions of roubles a year, in some way or other, since he has induced the Czar to give his sanction to the plan we have been describing. Probably at first the money will be obtained by means of Treasury bonds, and will be hereafter funded when the credit of Russia revives.

If Russia is able to follow the example of Italy there will then remain of the Great Powers only Austria-Hungary under the régime of inconvertible paper. Already the Austrian press is beginning to urge upon the Government the desirableness of taking steps to remove the reproach which is involved in the statement that Austria is financially now on a level with Spain and Turkey. If Austria could be induced to adopt a single silver standard, it would have no difficulty in resuming specie payments. For some time the Austrian currency has been on a par with the silver florin; but the Austrians share the dislike generally entertained to silver, and, although there was a considerable amount of silver coined both in Austria and Hungary in 1879 and the early part of 1880, the new pieces have not remained in circulation. As was found to be the case in the United States, silver is considered heavy, inconvenient, and embarrassing, and consequently has not become current. It is doubtful, therefore, whether the Austrian Government in any case would adopt the single silver standard. To be sure, it may be argued that the people would soon become accustomed to silver, and that their present unwillingness to accept it arises much more from a want of familiarity than from any well-grounded preference for gold over silver. Even if that be so, there is another matter which must be taken into account by Austria. Austria is commercially the dependent of Germany, just as Italy is the dependent of France, and she is very likely, therefore, to follow the lead of Germany in the currency question. If Germany were to go back to silver, no doubt Austria would also adopt the silver standard. Or if Germany agrees in the coming International Monetary Conference to adopt bimetalism, Austria will make little difficulty as to doing the same. But if Germany maintains the single gold standard it will be a difficult thing for Austria to resume specie payments. Austria and Hungary both have every year very large deficits. To borrow considerable sums, therefore, for the sake of resuming specie payments is a serious matter. It would increase the existing deficit, and postpone indefinitely the prospect of an equilibrium between income and outlay. Besides, it is hardly possible that Austria could afford to pay for the amount of gold she would need in the intense competition that would thus arise for the metal. She would certainly be outbid by England, France, and the United States. And even if she were to obtain the gold she could hardly keep it. The French indemnity enabled Germany to buy as much gold as she required to carry out her coinage reform; but when she had obtained it she found it very difficult to keep. The general impression is, that a very large proportion of the new German gold coin has been exported, melted down, and recoined abroad. The same thing would very probably happen in Austria.

NOTE.—Our attention has lately been directed to the fact that a paper called *The Mining Monograph* has been quoting some extracts from an article in the *SATURDAY REVIEW* of December 25, 1880, headed "*Investors' Guardian Angels*," in a surprisingly laudatory sense. We are represented on the back page of *The Mining Monograph* as having seriously recommended that paper as a guide to intending investors, and it may be that some people, reading the carefully chosen extracts, have believed that they contained a serious recommendation of *The Mining Monograph*. Speculation and credulity sometimes go hand in hand, and specious advertisements have before now been made out of passages detached from their context. It seems time to point out that the quoted extracts to which we have referred bear, with their context, a sense very different from that which *The Mining Monograph* has put upon them.

REVIEWS.

THE HOUSE OF FORTESCUE.*

THE first edition (1869) of the *History of the House of Fortescue* was privately distributed, and it may perhaps be thought that so much biographical detail concerning a few distinguished and many undistinguished members of a fortunate family might still have been judiciously restricted to the attention of

relatives and friends. We are hardly of this opinion. The monuments of an historical house, whether carved in alabaster and shrined in churches or taking a literary form, as in the present costly volume, serve to recall many memories of more than private interest. In our hurrying intellectual greed it might be forgotten that such a man as Sir John Fortescue ever lived, or that his book on the laws of England claims yet a place in English literature. In the fierce battle of books that work has been driven out of the ranks; but it will not be his descendant, Lord Olermont's fault, if it remains altogether in the rear and neglected. Before touching upon its character, however, we may notice one or two of the more conspicuous members of the Fortescues whose divergent lines centre in their Norman ancestry. We cannot pretend to follow in detail the pedigrees of the many branches of the family, which comprise the Fortescues of Winstone, Preston, Spridleston, Cookhill, Buckland-Filleigh, Fallapit, Castlehill, Dromiskin and Ravensdale Park—which is Lord Olermont's—and several others, including Salden, the latest. To the average reader genealogical tables are no more alluring than tables of logarithms, but both save much trouble when a particular name or number is in question, and they must therefore be suffered. But with a feeling estimation of the painful labour involved in tabulating the sixteen sheets of descents here supplied, with the accompanying pages of explanation, we confess to a preference for the fuller biographies, and especially for the high-class illustrations, both steel and woodcut, with which the volume abounds.

As in the mere sound of the word "*Stonehenge*" there is something that impresses the mind with a notion of antiquity and material grandeur, so there is a ring of history in many of our old family names, of which that of Fortescue is an example. There seems no doubt that this is identical with *Fort-escu* or strong shield; but Lord Olermont, with commendable regard to historical accuracy, hesitates to receive the traditional account of its origin. It is related that his Norman ancestor, Sir Richard le Fort, acquired the increase to his name by having borne a shield before the Duke of Normandy, who at Senlac had three horses killed under him in the course of the fight. Hence the motto *Fortis scutum salus ducum*. William's least vice was ingratitude to his followers, and had so eminent a service been rendered him, we should have found in Domesday that Fort had not been overlooked in the partition of English lordships. A shield that had saved the life of the Conqueror would be worthy of as much commemoration as the shield of Achilles. The latter, let us hope, may yet be found by Dr. Schliemann, and added to the South Kensington relics; but we fear that the former is irrecoverably lost, for no one of the family, we believe, numbers it among his ancestral curiosities. Another knight at Senlac was Adam, Sir Richard's eldest son, who became the founder of the English Fortescues, his father having returned to Normandy, where the family, through a second son, flourished until the eighteenth century, their lineages being carefully traced in the present work. Sir Adam is reputed to have settled at Wymondestone or Winstone, in South Devon, which, with other lands, he is said to have received from the Conqueror. The Survey, however, is silent on the point; but a charter of King John granting or confirming lands to Sir John Fortescue, the sixth in descent from Sir Richard, is sufficient to connect the family with that place at a respectably early date. Winstone was their first seat in England, and it remained with the Fortescues until the days of Queen Elizabeth, when it was sold or otherwise alienated. During the course of the seventeenth century, the direct male line of the Winstone Fortescues became extinct; but these having in previous times intermarried with the De la Ports, the Beauchamps of Dorset, the Norreises of Norreis, and with members of other ancient families, the genealogical tree has continued to flourish. In the arts of peace, if not of war, the earliest distinguished member of the family was Sir John Fortescue, Chancellor to Henry VI. The place of his birth (c. 1394) is uncertain, but "was most likely Norris, near South Brent, in Devonshire." This belonged to his mother, who was daughter and heiress to William Norreis of Norreis, where her ancestors had been settled for eight generations. Having studied at Oxford, he was called to the Bar at Lincoln's Inn, where, according to his own account, everything good and virtuous was to be learnt. In 1425 he was appointed a Governor of Lincoln's Inn, and, a few years later, he was invested with the white silk coif as Sergeant-at-Law, at which time his bill for gold rings amounted to 50*l.*, it having been the custom of the Sergeants not only to celebrate their creation by a dinner worthy of a coronation, but to give a gold ring to every one present at the solemnity, from a prince of the blood down to the meanest clerk. About this time he married Isabella, daughter and heiress to John Jamys, of Philip's Norton, near Bath. In 1442 he was raised to the office of Lord Chief Justice, an office which Fuller remarks him to have fulfilled with "signal integrity." Through good and evil fortune Fortescue was at Henry's side, guiding him in peace and fighting for him in war. He was at the sanguinary battle of Towton, fought on Palm Sunday, 1461; and it must have been soon after this event, and during the flight of the King and Queen Margaret, with the Prince, to the Court of Scotland, that he was made Lord Chancellor. It is certain, from a letter here printed, that Henry carried with him a signet; and the very presence, as Lord Olermont remarks, in his retinue of "the venerable and famous Lord Chief Justice of England would in itself naturally suggest such an appointment." Chief Justice Flint, however, affirmed that Sir John Fortescue was never actual Chancellor of England, and

* *History of the Family of Fortescue in all its Branches.* By Thomas (Fortescue) Lord Olermont. London: Ellis & White. 1880.

that his office was simply titular, an opinion in which Lord Campbell and Mr. Foss agree. Lord Clermont has dispassionately considered the arguments on both sides the question; and we are inclined to decide with him that Fortescue at one time held the seal, though, owing to the troubles of the kingdom, he never practised at Westminster Hall. Henry, in his letters, calls him his liege Chancellor, and there is here given a copy of an ancient portrait in which the seal-bag is clearly pictured. Moreover—and this we think a strong argument, though Lord Clermont has laid no stress upon it—Fortescue, in his *De Laudibus Legum Angliæ*, always styles himself the King's Chancellor (*Regis Angliæ Cancellarius*), and the young Prince in the dialogue is made to use the like form. Sir John Fortescue's knowledge of the English Constitution would surely have enabled him to distinguish between the nominal and the actual office he claimed, and that one of so renowned integrity should falsify his position, and at the time when he was professedly teaching the King's son the rules of true and righteous polity should assert to himself a dignity to which he had no right, seems incredible. But he still held the sword as well as the seal; and when the Scottish chieftains, in the hope of plunder, had enabled Margaret to raise fresh troops, we find the Chancellor in the thick of the fights at Hedgeley Moor and at Hexham, in both of which conflicts the Lancastrians were defeated, with terrible consequences to many of their more illustrious supporters. The next seven years were endured by the Queen and Prince (Henry being in the Tower) in the duchy of Lorraine, where Margaret's father, René of Anjou, had granted for their refuge the castle of St. Michel in the rocky valley of the Meuse. In a letter of the faithful Chancellor, who attended them, it is said, "We be all in great poverty, but yet the Queen sustaineth us in meat and drink, so as we be not in extreme necessity. Her highness may do no more to us than she doth." No man, he adds, would lend them money, however great their want. In *Anne of Cœrstein*, indeed, we find "Great Albion's queen" accepting a silver piece in the disguise of a mendicant at the door of Strasburg Cathedral; but this, of course, is sheer fiction. We may be rather surprised not to meet with Fortescue in the trilogy of Henry VI. His constant presence at the Lancastrian Court, both at home and in exile, together with his being the chief adviser of the King and the instructor of the Prince, might, we imagine, have ensured him some mention in these dramas. Besides writing while at St. Michel his work on the Laws of England, he was busy in negotiating with foreign Powers for the restoration of his fallen master. The temporary success of Warwick and Clarence on behalf of Henry encouraged the return of Margaret and the Prince with Fortescue, but it was only to find that Warwick was slain and that Clarence had gone over to the Yorkists. At the decisive battle of Tewkesbury Fortescue dealt his last stroke for Lancaster, and though afterwards attainted, he was pardoned on condition that he would retract the arguments he had used in his treatise in favour of the defeated cause, and write another in defence of the successful dynasty. To recall what he had spoken against Edward, and prove the White Rose of York, which was dewed with the blood of his King and of a sweet young Prince and of others of his dearest friends, to be as stainless and irreproachable as the snow-white rose of Dante's vision, must have cost him some casuistical explanation. But it was useless to fight on for the dead, and he owed Edward a debt of gratitude for sparing his own advanced life. The "Declaration" in which he disproved all his former arguments against the King's title was first printed in 1869 by the editor of the present volume, who has here reproduced it. The only known copy of the *Defence of the House of Lancaster* perished in the fire at the Cotton Library. After all, a lawyer may be expected to plead on the side which last engages him, and though there was a change of client, Fortescue did not gainsay his political theory as put forth in the *De Laudibus*—that the King has no power but as derived from the will of the nation. The people had declared that they would have no King but Edward who now reigned, therefore let the will of the people prevail. The treatise in which his view of the English Constitution is expressed is full of sound and interesting argument, and of humane and generous sentiment. He denounces what he calls "the absolute regal government of France," and shows that the welfare of a people depends upon a limited monarchy. As in the human body, he argues, the members and even the head derive their activity from the heart, so the kingdom is a "mystical body" of which the King is head; but the will or intention of the people the heart or first principle of action. As the head of the natural body cannot change the nerves and sinews, or deny to the several parts their proper energy, neither can the king alter the laws which are the nerves and sinews of the State. It followed that the body politic, with its singly head under whatever name, was always in nature the same. After the accession of Edward, Sir John Fortescue retired from public life to his pleasant seat at Ebrington in Gloucestershire. Here he died at about the age of ninety, and his sepulchral effigy may be seen in the village church, of which a view is here given in connexion with a sixteenth-century manor-house that includes some portion of the older mansion. His only son Martin married Elizabeth Denzelle, heiress of Filleigh (now Castlehill), Weare Giffard, and Buckland-Filleigh, all in North Devon. Martin died before his father, and John, his son, inherited the estates both of his mother and grandfather. Weare Giffard, built by Martin Fortescue about 1460, yet stands, and is one of the most picturesque of manor-

houses. Of the family descended directly from the Chancellor, Castlehill is, however, the principal seat, of which Hugh Viscount Ebrington, who succeeded as third Earl in 1866, is the possessor.

Saints at the Court of Henry VIII. were scarce, and it is therefore interesting to notice in the present volume a remarkable full-length portrait, from a painting in the Collegio di San Paolo, Malta, of a tall man, with a halo round his head, a bowed and mortified face, and his hands tied together and grasping a cross, while a short sword is applied by unseen agency to his throat, from which the blood drops upon his cloak, which bears a Maltese cross. This represents Sir Adrian Fortescue, who, as a Knight, of St. John, suffered for denying the King's supremacy, being included with Margaret, Countess of Salisbury, her son, Cardinal Pole, and others in the Act of Attainder passed in 1539. More faithful to the supreme Pontiff than his Holiness's more professed servants the bishops and abbots, he refused to acknowledge the King's spiritual headship, and was executed accordingly without being allowed to make his defence. Such rare fidelity has not even yet been forgotten in his own Church, and so lately as in 1874 there was "a serious desire on the part of some Roman Catholics of high standing to promote him from the rank of 'Beato' to that of Saint, but it appears unsuccessfully." Sir John, the eldest son of Sir Adrian by the second of his four wives, was eight years old at the time when his father was beheaded. He grew into such favour at Court that he was appointed preceptor to the Princess Elizabeth, and afterwards master of the Royal wardrobe, which then contained the clothes that had been worn by our English sovereigns on high festivals. In his portraits he appears a true Elizabethan statesman, with a full, open, grave, and dignified countenance, and he looks such a one as we might expect would build for himself a lordly house. His mansion at Salden was the finest in the county of Bucks, and cost at the time the sum of 33,000*l.*, the attached grounds being of course laid out in the luxurious taste of his day, with terraced walks, fish-ponds, gardens, fountains, thickets, and arbours. The windows, many of which were emblazoned, were so numerous as to employ, it is said, one of the sixty servants to open and close. A bullock was killed daily to supply the house and maintain its lavish hospitality. In a field, still called Beggars' Mead, on the estate, the remains of the previous day's victuals were daily served out to the poor. Sir John Fortescue seems to have had a full conception of the grandeur of his own period, and in one of his speeches he magnifies his Royal mistress, who was, he declares, "able to match any Prince in Europe, which the Spaniards found when they came to invade us. Yea, she hath with her ships compassed the whole world, whereby this land is made famous throughout all places. She did find in her Navy all Iron Pieces, but she hath furnished it with Artillery of Brass, so that one of her ships is not a subject's, but a petty king's wealth." At this time, 1593, he was Lord High Treasurer, and three years later we find the Earl of Essex commending to his favour "the man Mr. Francis Bacon, a kind and worthy friend to us both." It seems a pitiable change in the relationship of parties that in 1600 the same Mr. Francis Bacon opened the prosecution against the Earl of Essex, and that Sir John Fortescue was one of the judges who condemned the fallen favourite. The last male descendant of Queen Elizabeth's Minister died in 1729, and Salden House was soon after sold for its materials, four years being allowed for their removal.

Lord Clermont's own branch was founded in the seventeenth century by Sir Faithful Fortescue, third son of John, of Buckland-Filleigh, by Susannah Chichester, his wife. Having followed Lord Chichester, his uncle on his mother's side, to Ireland, he there became Governor of Carrickfergus, and was granted a large tract of land in the county of Antrim, still called the Manor of Fortescue, although the lands do not now belong to the family. The troubles in Ireland were as great in his day as in our own, and one of his sons was killed by the rebels. Coming to England for supplies towards the reduction of the North of Ireland, he raised a company of horse and foot; but, before he could embark, the King's standard had been raised at Nottingham, and Fortescue's troops were draughted into the Parliamentary army and ordered to the Midlands, without regard to any Royalist feelings of officers or men. The effect was that a few months later Fortescue's troops were arrayed on the field of Edgehill in opposition to the King. Instead, however, of levelling their carbines against the Cavaliers, they fired them into the ground, and suddenly passed over to Prince Rupert, but not before twenty of them had fallen by the hands of their friends through not having thrown off the alien colours, and their intention being mistaken. Fortescue was imprisoned, but, on the whole, was leniently dealt with by the Parliament, and lived to fight at the battle of Worcester on the King's side. He died in 1666 at Carisbrooke, where the old manor-house may yet be seen, as well as his monumental tomb, lately restored by Lord Clermont, in the neighbouring church. His grandson, William of Newragh, was the father of Thomas Fortescue, by whom the fine seats of Clermont Park and Ravensdale, in County Louth, were arranged much as they are now. His son William Henry was raised to the Irish peerage in 1770 as Baron Clermont; in 1776 he was created Viscount and Baron Clermont, and in 1777 he became Earl of Clermont, a title probably suggested by his frequent visits with his Countess to the Court of Versailles, where their presence was very acceptable to Marie Antoinette. Earl Clermont was for some time "Father of the Turf," and his horse Aimwell won in 1785 the sixth Derby. More fortunate than some of the children of the Turf, "he enjoyed," we are told, "every hour of human

life," so we may conclude that his losses were not at any time grievous. On his death in 1806, the earldom became extinct, the viscounty passing to the son of his younger brother, who died unmarried in 1829. After some descents by collateral heirships, the estates came to Thomas, son of Colonel Fortescue of Dromiakin, in whom the barony was revived in 1852.

Had the limits of our notice suffered us to follow out the several lineages of the family we might, for the sake of his literary connexions, have mentioned the Honourable William Fortescue, Master of the Rolls, of the Buckland-Filleigh branch. Of the mansion and church at that place an engraving is supplied, the former being a mansion with a columned portico and pediment rising to the roof. In the landscape arrangements many improvements were suggested by Pope, the recesses of its pomp of groves being opened by several miles of drives being formed through them. But the master left no children to enjoy the grateful shades. Probably he did not himself much frequent them. London was the better Eden to the wits of his day, as Gay in his *Trivia* has hinted, in the Miltonian close of some lines addressed to Fortescue:—

Through the long Strand together let us stray;
With thee conversing I forget the way.

Some of his letters are preserved by Pope having characteristically used the blank pages for the early draught of his *Homer*. Fortescue was the author of the burlesque report of the case "*Stradling versus Styles*; or, the *Pyed Horses*," contributed to *Martinus Scriblerus*, "a witty and lively little piece, still much in favour with lawyers." Sir John Swale had six black horses, six white horses, and six pied horses; and in his last will he bequeaths to his friend Matthew Stradling all his "black and white horses." The question arose whether in this expression the pied horses were included. It was argued for the affirmative that by the word "black" all the black horses were devised, and by the word "white" all the white horses, and by the same words taken conjunctively and as a whole the horses that were black and white—that is to say, the pied horses—were devised also. For the defendant it was maintained that "a pyed horse is not a white horse, neither is a pyed a black horse; how, then, can pyed horses come under the words of black and white horses?" Judgment was, however, given for the plaintiff *visi causa*. But there was an arrest of judgment, as the pied horses proved to be mares. The Hon. William Fortescue, of whom a fine portrait by Thomas Hudson is given, does not sleep with his fathers, but near the Communion table in the Rolls' Chapel. He died in 1749.

This stately volume adds fresh honour to the ancient family it represents; and we hope that so monumental a history will not stand alone, but be imitated by literary members of other illustrious houses. The sumptuous proportions, Chiswick letterpress, and art embellishments are worthy to have set forth a Royal House. The literary style is clear and manly, without any attempt at fine writing or undue elevation of the family by the conversion of legend into historical fact.

HARTING'S EXTINCT BRITISH ANIMALS.*

WE quite agree with Mr. Harting in thinking that the space which intervenes between the end of Owen's *British Fossil Mammals and Birds* and the beginning of Bell's *British Quadrupeds* should be bridged over by a history of those species that have become extinct in historic times. In fact, the latter book begins too late and the former ends too early. This is the more unfortunate as it is calculated to make English readers—who naturally consult one or other of those convenient compendiums—lose sight of what is by some considered one of the fundamental truths of zoology—namely, the continuity of life on the earth. It is impossible to draw an exact line, and say, here paleontology ends and zoology begins. A geologist soon finds that he cannot understand the forms occurring in the strata, the relations of which to each other it is his primary business to expound, without constant reference to those that have survived to the present day; and a zoologist is equally at a loss to explain facts in geographical distribution and in morphology without reference to paleontology and to the specimens which have until lately been regarded as the exclusive property of geological museums. The study of extinct forms has of late years been rendered fashionable by the labours of Mr. Boyd Dawkins and others; and the fragments that used to be thrown away by workmen, or disposed of for a few pence to the "boneman," are now eagerly disputed by rival collectors. Zoology also, both vertebrate and invertebrate, has largely increased in popular favour during the same period. What is wanted, then, in our judgment, in order to enable students to appreciate the connexion of the two series of facts is a treatise which shall combine to a certain extent both the books above mentioned, together with the space between them. In method, at least, such a work ought to be a reproduction of the now classical *Ossemena Fossiles* of Cuvier. That eminent and original naturalist was too acute not to perceive that knowledge of recent forms was an indispensable preface to knowledge of those that had ceased to exist; and he therefore begins his investigation of the latter by a study, more or less exhaustive, of the former. If an author would take up the history of a given family of animals, or of the fauna of a given country,

and, having described the present conditions of its existence, trace it back through historic times into geological strata, with the modifications in size and structure that it has there undergone, not only would he have produced a most interesting work, but new light would have been thrown upon the important question above referred to. In the work before us, Mr. Harting has thrown together a number of facts bearing solely on the extinction in Britain within historic times of five species of what we prefer, at the risk of being thought pedantic, boldly to call mammals, instead of using the vaguely general expression animals. We wish that he had laid his work on broader lines. It is now generally agreed that the very existence of certain species here at all is due to the fact that these islands were once part of the mainland. Consequently, any treatise on species that have become extinct here should be prefaced by an exposition of the geological conditions under which they originally existed, and should be accompanied by a statement of their persistence, or the reverse, on the continent of Europe. Some day, we hope, the whole history of extermination by the agency of man will be taken in hand. No romance could be imagined of more thrilling, or of more melancholy, interest. Not only have the lower forms of the human species gone down before the superior, but wherever civilized man has appeared there has animal life gradually dwindled and finally disappeared. In such a work the persistence of certain species through stragglers down to a comparatively late period will form an interesting chapter. The collection of passages from classical and mediæval authorities that illustrate this subject is a field of research that we strongly recommend to students. We will quote one or two of the most obvious of the facts to which we refer. The wild boars of Calydon and Erymanthus that it needed, according to Grecian legend, the strength of a Meleager or a Hercules to slay, were probably the last of a race of which the former abundance is attested by remains discovered even so far south as Attica. The lions that Herodotus mentions as destroying the camels of Xerxes on the northern frontiers of Greece attest the abundance at that time of an animal which Xenophon was still able to include in his list of game, but which has since become extinct, and is now known only in a fossil form as the cat of the caves (*Felis spelæa*). The dragons of mediæval legend are probably not wholly mythical, for we have heard a modern zoologist of great eminence express his belief of the possible existence, even at this day, of an Ichthyosaurus. The largest of the horned cattle commemorated by Cæsar as plentiful in the Hercynian forest was still hunted near Aix-la-Chapelle by Charlemagne, whose escape from a wounded and infuriated bull is graphically narrated by the Monk of St. Gall. The identification of it with the urus is rendered certain by the stress that is laid on the vast size of the horns (*immensissima cornua*); and a similar reference to size shows that the same species was abundant in Eastern Tyrol when the Lombards invaded Italy.

The five essays that compose Mr. Harting's book relate to the bear, the beaver, the reindeer, the wild boar, and the wolf; and there is a supplementary essay on "Wild White Cattle." We are well aware of the difficulty of reducing into a readable form a number of isolated facts collected from various authorities; but we find Mr. Harting's method of arranging his materials by no means agreeable to the reader. The text is too much encumbered with references, all of which should have been relegated to the notes. Moreover, while we give Mr. Harting every credit for his industry, we cannot invariably commend his critical sagacity or his accuracy. Nor is he as careful as he ought to be in giving or in verifying references. However, it is always easier to point out mistakes than to avoid falling into them, and these are defects which can be corrected in a future edition. Meanwhile the book is a storehouse, in which students will find a mass of valuable information, which they can sift and verify for themselves. We have no space for a detailed review of the materials, but must content ourselves with noticing certain points and the general results. We will begin with the bear. The evidence of its existence in England during the Roman occupation has been proved by Mr. Boyd Dawkins by the discovery of its bones in a refuse-heap at Colchester associated with Roman pottery. Mr. Harting does not quote this decisive testimony, but he attaches much greater importance than we think justifiable to the single passage in which Martial speaks of the Caledonian bear; and to Camden's quotation from Plutarch (which none of his editors have been able to find) to the effect that the Romans imported bears from Britain. But, if we are to accept epithets used by poets as evidence, we shall have to extend the geographical distribution of bears to Libya on the authority of Virgil; and to assign a particular whale to British waters on that of Juvenal. We suspect the truth to be that the Romans used the epithets "Caledonian" and "British" merely to indicate remoteness, with not much more intention of definiteness than Shakespeare had when he spoke of "the farthest steppes of India"; and as for importation from Britain, it is far more likely that the Romans would get their bears from the Pyrenees, where they are still not uncommon, and whence the performing bears that delight our children and frighten our horses are still brought. We are also at a loss to understand the relevancy of the following passage:—

How these bears were captured, and in what way they were transported to the coast and shipped on board the Roman galleys, must, we fear, for ever remain matters of speculation. We do not even know the precise period at which these very hazardous consignments were made; but it may be assumed to have been probably about the same time that wolf-dogs were being exported to Rome, which we know was about the end of the fourth century. A Roman consul of that day, Symmachus by name, writing to

* *British Animals Extinct within Historic Times; with some Account of British Wild White Cattle.* By J. L. Harting, F.L.S., F.Z.S. With illustrations. London: Trübner & Co. 1880.

his brother Flavianus ever here, thanks him for a present he made him of some dogs which he calls *Canes Scotici*, and which were shown at the Circensian games, to the great astonishment of the people, who could not believe it possible to bring them to Rome otherwise than in iron cages. It was no doubt in iron cages that the bears were transported.

We need hardly remind our readers that Quintus Aurelius Symmachus, thus summarily dismissed, was one of the most prominent men of his time, and famous as the defender of the old religion against St. Ambrose. He was never consul, but quaestor and praetor. For the games which it was part of his duty to superintend in the discharge of the latter office his brother Flavianus, not Flavinus, sent him the present above-mentioned. Flavianus was Praetorian prefect of Italy and Illyricum, but there is no evidence that he was ever in Britain. Had Mr. Harting verified the passage and looked a little further into his author, he would have found in the preceding letter (Book ii. Epist. 76) a passage far more to his purpose; for Symmachus therein deplores the non-arrival of some bears that he had ordered. Nothing is said about the quarter whence they were to have been sent, but the fact of their exhibition at Rome in the fourth century is thus put beyond dispute. Mr. Harting shows that bears were in existence in England so late as A.D. 750; and in Wales to a later date, if we are justified in referring to the tenth century a passage cited by Ray, though with evident hesitation as to its value, in which three "baitable" kinds of beasts, to wit, the bear, the climbers, and the pheasant, are enumerated. In "The Hunting Laws of Cambria," which we are surprised that Mr. Harting does not quote, we find the matter thus amusingly set forth after the manner of the triads:—

Of the nine venations, three are common hunts; a stag, a swarm of bees, and salmon. There are three barking hunts; a bear, a squirrel, and a pheasant. And there are three clamorous hunts; a fox, a hare, and a roebuck.

The bear is a barking hunt, because her flesh is the best of the chase, and because the pursuit of her will be short, as she can only go slowly; therefore, there is nothing to do but to bait, bark, and kill her.

Beavers, as has long been known, were actually seen in Wales in 1188 by Giraldus de Barri, better known as Giraldus Cambrensis. Mr. Harting has not been able to add any fresh information, or to discover any other notices of their persistence in England, though the colonies of them must have been extensive. He gives some interesting particulars of Lord Bute's attempt—which appears likely to be successful—to establish them near Rothesay in the Isle of Bute. We should like to know whether the stock was obtained from Canada or from Europe, for the beaver is still to be found in Europe, a fact which we wonder Mr. Harting does not notice. It exists in the Rhône Morte, between Arles and the sea; in various parts of North Germany, and in a certain locality in the south of Norway, which, for obvious reasons, we feel bound not further to disclose. At the beginning of the seventeenth century it was to be met with in the moat of Augsburg; and from the way in which the flesh is mentioned as an article of food, it clearly could not then have been at all scarce. Dr. Marius, a physician of that place, writing about 1620, commends a certain cook that he once had for her skill in cooking beaver's tail, and prints her receipt for the benefit of posterity. The period of the extinction of the reindeer in England cannot be ascertained, though its abundance in pre-historic times is attested by its remains in gravel, and, to a certain extent, in peat also. Mr. Harting shows that it still existed in the north of Scotland in 1159, on the authority of the *Orkneyinga Saga*, where it is stated that the Earls of Orkney used to cross into Caithness nearly every summer, and "then go up into the woods to hunt Red-deer or reins." Wild boars are known to have been so scarce in England in the reign of Charles I. that he procured a pair from Germany, and turned them out into the New Forest, where they did so much mischief that the peasants exterminated them; but Mr. Harting shows from an account-book of the manor of Ohartley for 1683 that wild swine were in existence there at that time. Possibly a careful search through other account-books might give additional localities. Wild boars are still not uncommon in France and Germany. The extinction of the wolf is a subject to which Mr. Harting has given more care and pains than to any other in the volume. His account occupies eighty pages, and is exceedingly well done. The conclusions at which he arrives are the following:—

To sum up. So far as can now be ascertained, it appears that the Wolf became extinct in England during the reign of Henry VII.; that it survived in Scotland until 1743; and that the last of these animals was killed in Ireland, according to Richardson, in 1770, or, according to Sir James Emerson Tennent, subsequently to 1766.

We regret that we have no space for any of the exciting stories with which this part of Mr. Harting's book is filled; nor can we venture even to approach the essay on "Wild White Cattle," for the same reason. We hope that, if he has occasion to return to this subject, he will extend the self-imposed limit somewhat. We would suggest to him essays on the black rat, now all but extinct; on the roe—now extinct in England, and existing only by sufferance in Scotland; and on the red deer, once plentiful in many parts of England, but now wild only on Exmoor. It will be most interesting to trace the gradual diminution in size caused by restriction of range, and systematic destruction of the largest specimens. This will necessitate careful measurements of the bones and horns that have been disinterred from the peat, for comparison with the living examples still to be met with in Scotland and Devon.

MATRIMONY.*

PHILOSOPHERS tell us that metaphysically-minded man can learn nothing by "interrogating his own consciousness" and brooding over his own mental actions. Consciousness and the mental actions change their nature and become something different as sure as they are aware that they are being interrogated. Novels seem to us to change their nature in the same way, and assume something different from their true character as soon as they are examined with the eye of criticism. Novels are written for novel-readers, not for critics. The purpose of novels is to amuse. Now no man who is doing his daily work of reviewing is exactly amused by it. Interested and absorbed he may be, but not as the novel-writer desires to interest him. He is unable to yield himself freely to the movement and humour of the story. He has to stop to think of points and criticism. This is unlucky, both for reviewers and novelists, especially for reviewers when they come across so good and diverting a story as *Matrimony*. It is very hard not to be able to derive one's full share of unthinking amusement from *Matrimony*. But it is the miserable duty of the critic to make qualifications and deductions, and point out to Mr. Norris the places where he might have done better had he taken more care. In the biography of an intelligent and energetic man, lately dead, it is recorded that he could not even read a romance without making notes and an abstract. But the rest of the world has not this energy, and we confess that to criticize *Matrimony* is to take the bloom off the peach. The best advice we can give a reader is to order *Matrimony* at once from his circulating library, and to leave the rest of this review to the cold student of comparative criticism.

Matrimony has almost all the qualities that make a good novel—that is, a good man's novel. We have not at all the same confidence in recommending the book to ladies. Mr. Norris is a student of Thackeray, whose works ladies, as a rule, dislike, as Helen Penderennis could not endure Shakespeare. Mr. Norris has even adopted a part of Thackeray's method; and here we begin to find fault. It is not every body who can employ that method. For example, the story is told in the first person by a worthy man named Tom Knowles, who is a middle-aged bachelor, "having the wherewithal," and always ready to interest himself in the love affairs of young people. This excellent man is given to moralizing on the vanity of life and on the weaknesses of his own and the other sex.

Is it only old women who spread scandal, and whisper away characters, and find means of laying an extra coat of black paint on to the darkest reputations? I think I know certain persons of the other sex whose bald heads cover brains as small and as active, whose eyes peer through their spectacles at quite as many wonderful sights, and whose tongues wag no less pleasantly behind their false teeth. And if any one is of opinion that those who listen to backbiting are themselves in some sort backbiters, I beg to reply that I am a student of human nature, in which capacity I am compelled to put up with much that is disagreeable to me, and further, that I never believe a word that one man or woman tells me about another.

This style of writing, and many other passages in *Matrimony*, suggest comparisons with Thackeray, which are naturally to the disadvantage of Mr. Norris. His chorus of indolent, irresponsible backbiters—admirals, generals, and other provincial Club-men—is thoroughly natural; but the remarks of spiteful dotards are not more agreeable in the chorus of *Matrimony* than in that of the *Agamemnon*.

Here we say good-bye to fault-finding for the present, and congratulate Mr. Norris on the constant variety and vivacity of his scenes and events, and on the truth and humour of his drawings of character. The book is wonderfully rich in types of character. Even the young heroes have an individuality of their own which is rare. The first hero is Claud Gervis, a young fellow of excellent parts, who has been brought up in the course of a wandering youth by a father who rarely says a kind, and never does an ungenerous, act. He has the sense to appreciate and like this bitter old diplomatist, who is a fine gentleman first, and, in the second place, a human being who has been soured by a misfortune which would have injured any temper. As for Claud, he is eager to prove himself an Englishman, in spite of his foreign education, is ready to fall in love, and is the author, under the name of Gerard, of a volume of verse, composed both in French and English. It is not easy for any man to write the same verses well in two languages, and few people can rival Mr. Rossetti's feat of the double poem. In spite of Claud's cleverness, it appears that his little book was not favourably received by the *Saturday Review*—"Mr. Gerard has evidently bestowed much pains upon his work; and, if he will in future devote as great a measure of his attention to matter as he has in this instance done to form, he may," &c. In fact, as a poet Mr. Gervis has the fault of all the other young poets. As a cricketer, however, in spite of his foreign education, he was what Sir Andrew Aguecheek calls "a dog at a catch," and he could run up a very pretty score.

The interest we take in Claud Gervis is subordinate to that excited by his father, his mother-in-law, his sister, and the very frank young lady whom he marries. Old Gervis was married twice—Claud and his sister Geneviève were the children of the first marriage; the second wife was the Princess Varinka Ouranoff. On coming into the family estate of Southlands, near a babbling watering-place named Beechborough, Gervis père brought home his family in his yacht. This yacht is an excellent

* *Matrimony*. By W. E. Norris, Author of "Mademoiselle de Mersac." London: Smith, Elder, & Co. 1881.

device for shifting the scenes rapidly, and carrying the reader and the persons to the French coast at a moment's notice. Near Beechborough old Gervis and the Princess were not likely to amuse themselves. "Er 'Ighness," as the Princess is called by the natives, had lived a wandering life. Gervis was her third husband; her second had been a Pole, shot in an attempt to escape from the escort which accompanied him to Siberia. As soon as we hear this we readily understand why the Princess has to ask Gervis for such enormous cheques, nor are we surprised when a shabby foreigner named Hirsch arrives suddenly at Southlands. Before the seedy alien's advent a number of things had happened. The Gervises had made the acquaintance of two families, that of young Sir Frederick (or Freddy) Croft and that of Mr. Flemyng, of the Moat. Freddy is the type of the eternal but joyous undergraduate. He is not clever. Claud Gervis rescues him from a designing Miss Lambert (the whole episode is sufficiently amusing), and carries him away from temptation in the yacht. Here Freddy promptly falls in love with Geneviève Gervis; a young lady of great musical genius and devoted constancy of character. "In those whom I love," says Miss Gervis, "I believe I could pardon anything, any cruelty, wickedness, or neglect," and she needs all her store of charity. "No Croft was ever constant," says Freddy's mother, Lady Croft. However, Frederick is very seriously in love, and tries to improve his mind. But Scott is the only poet he can stand, and, among prose writers, his boast is that he "gets on very well with Macaulay." However, Geneviève has soul enough for two. Her brother Claud is also obliged to find soul enough for Miss Nina Flemyng, a lady of great beauty, agility, coolness, and frankness. Nina is a thorough flirt, who has one voice in which she addresses men and another reserved for her women friends. Nothing can be more naturally told than Nina's love affair. As Claud has no experience of life, and readily falls in love with her beauty, she never attempts to hide from him her coldness, her greed of admiration, her indifference to the moral discomfort of being in debt. When they become engaged (the scene is one of the best scenes of love-making in fiction), Nina calmly gives her lover to understand that love is a winged god, who cannot be expected to remain constant to any mortal pair. It is thoroughly natural that Claud should take all this frankness of speech as merely Nina's way. In the first place, he would argue, if he argued at all, she is maligning herself; and in the second, if she has a trace of these faults they will disappear after her marriage. But the course of the affair does not run smooth. Gervis has been vexed by the visit of Hirsch, who offers to sell him a secret which will enable him to get rid of the Princess his wife. This scene is very amusing and very melodramatic. The passion and fever of the swindler is contrasted with and cowed by the cool insolence of Gervis. He is not at all in a temper to let Claud marry Miss Flemyng, especially as that young lady's father is both poor and a bore. Among the many amusing minor characters in the tale, Mr. Flemyng is perhaps the most diverting. He is a stupid, pompous country gentleman, who has read Mr. Herbert Spencer, and fancies himself a philosopher. He talks eternally in the terminology, which is not curt, of Mr. Spencer. It is difficult to manage a bore in a novel. Often he becomes as tedious to the reader as in real life he would be to his unfortunate acquaintances. But Mr. Flemyng is not allowed to prose too long or too much, while his intellectual versatility is equal to that of his great master, and he could as easily have discoursed on the origin of religion as discovered two hundred faults in Raffaele's "Transfiguration." Here is an extract from the eloquence of Mr. Flemyng:—

"One can't tell what Gladstone may do, though, if he gets the chance," observed Claud. "I confess I don't understand Mr. Gladstone."

"It is a common thing in these days," said Mr. Flemyng, raising his voice, "to hear men complain that they 'do not understand' Mr. Gladstone. Just so the Papal consistory 'did not understand' Galileo, the Athenians of old 'did not understand' Aristides, and, to come down to our own era, the English people of twenty years back 'did not understand' the Prince Consort. I would ask those who thus bring what they imagine to be an accusation whether the fault may not be rather with their own comprehension than with the statesman whose intellect it fails to grasp. Of this they may rest assured, that when the history of the nineteenth century comes to be perused by generations yet unborn, the name of Gladstone will be seen written across it in letters of imperishable light, while those of many who now strut the world's stage, decked in the pride of a brief authority, will have passed for ever into those shades of oblivion whither pretentious mediocrity and self-seeking timidity inevitably tend."

If Miss Flemyng had been faultless Gervis could scarcely have wished to be connected with her father. So he lets Claud know that, if he marries, he will receive an income of 700*l.*, and no more. Miss Flemyng herself is only dowered with debts. She wisely refuses to hear of a long engagement, giving Claud to understand that, once engaged, she would flirt with every man she came across. So the pair steal away, Claud in the yacht, the lady in a steamer, and are married in France.

So far Mr. Norris has chiefly shown us English society—tattling provincial society, the society of large and rowdy country houses, where people bear-fight, and Freddy's sister, Miss Croft, gives an admirer a black eye. Now he takes us to Paris, where Nina is at first exceedingly happy, where Claud tries to write for the press and the stage, where the Princess Varinka is protecting Geneviève, where Hirsch comes and practises *chantage*. It is, we think, an error in art to make Hirsch as cool and sarcastic as Gervis himself. The two characters in the latter part of the tale are superficially alike, whereas in the earlier scenes Hirsch's coarse violence and passion were a foil to the icy repose of Gervis. In Paris the wolf comes to the door of Nina and Claud. The latter finds it hard to

get any work to do in journalism. His play is an almost absolute failure. The scenes of the story which are concerned with the play, with managers and dramatic authors, especially the famous and friendly Eugène Poinset, have a great and novel interest. Mr. Norris is at home in many varieties of life; his Frenchmen, men of letters, gamblers, and scoundrels, his barbarous Russian General, are almost as good as his rowdy, ill-tempered young lords and gossiping admirals and prosy Spencerian philosopher.

Love flits away, as Nina had prophesied, from the room up four pair of stairs. Claud's wife returns to the Moat, her father's house. The plot, as far as it is concerned with Hirsch and the Princess, thickens and is cleared. Nina's conduct in England—we do not mean to spoil the story by going into detail—brings Claud home, and there is trouble of the worst sort at Southlands and the Moat. Do the clouds blow off, or does *Matrimony* end in tempests and tears? The tender-hearted reader may read on in peace of mind. The tragedy, such as it is, is not of the sort that will break his heart. Besides, it is too common a tragedy to be noticed at all in this world of ours. We trust Mr. Norris will soon give us a new novel, as amusing as, and more consistent than this lively series of sketches and events.

ANOTHER ARCTIC VOYAGE.*

IN the summer of 1879, Captain Albert Markham, the well-known naval officer who sailed in the *Alert* with Sir George Nares, made a bold yachting voyage on the coasts of Novaya Zemlya. Of this an account has just been published, to which unfortunately either he or his brother, Mr. Clements Markham, who has seen the work through the press, has given a very ambitious title. The narrative is called *A Polar Reconnaissance*, whereas what Captain Markham has to describe is nothing but a yacht voyage along coasts which, in comparison with many other portions of the Arctic regions, have been very fairly explored. The success of another vessel, the *Willem Barrens*, which was making an Arctic voyage at the same time, confirmed Captain Markham in views which he previously entertained respecting the possibility of reaching a high north latitude by Franz Josef Land; but there was nothing in his own exploration to justify the title he has chosen. He was able to make collections of considerable value, and no doubt deserves great credit for the indifference which he showed to the most hideous discomfort, and for the courage he displayed in navigating a small and ill-equipped sailing vessel in Arctic seas. He did all he could with the means at his disposal; but those means were so limited that, as an explorer, he could only achieve little, and certainly cannot be said to have made a "reconnaissance" of the route to the Pole, seeing that his highest point was far south of what has been reached by others, and some distance south of what was reached by another vessel during the same season. The circumstances under which he started were peculiar, and he certainly showed that pluck and readiness which happily are still the strongest characteristics of English seamen. His friend Sir Henry Gore Booth, bent on the slaughter of walrus, had arranged for a trip to the coast of Novaya Zemlya, and asked Captain Markham to join him. The invitation, however, only arrived on Saturday, April 26th, and the start for Norway had to be made on Thursday, May 1st. Such attractions, however, had the Arctic seas for Captain Markham that he obtained leave from the Admiralty, and made all his preparations within the short time at his command, and sailed on the day named. In the prospective butchery of walrus he took apparently but small interest, his real desire being for the noble work of exploration, and he accordingly induced his friend to acquiesce in a stipulation that when their craving "for the blood, or rather the oil, of seals and walrus had been appeased," they should employ their time "in the more important work of the examination of the edge of the pack-ice, at a late season of the year, in the northern part of what is now generally known as Barents Sea." The understanding was well adhered to, and the exciting sport of sending bullets and spears into great masses of blubber was not apparently so zealously followed as to prevent Captain Markham from exploring to the best of his power, although unfortunately he was not able to achieve anything of note.

After describing the circumstances under which he started, Captain Markham arrests his narrative for awhile to give an account of the previous voyages on these coasts, and this is certainly the best part of his book. We are aware of no other volume which contains the same amount of information on this very interesting subject. The story is a singular one, as Englishmen, according to their wont, began the work of exploration, but, certainly not according to their wont, gave it up, while others persevered. In 1553 the first attempt at the discovery of a North-East passage was made by Sir Hugh Willoughby. He perished, with the crews of two ships; but this did not daunt other navigators, and expeditions sailed for the unknown region in 1556, 1580, and 1608. In 1676 two vessels were despatched by the Admiralty to attempt the passage to China. Nothing, however, was achieved; and, after this failure, Englishmen were content to leave the Novaya Zemlya seas alone for nearly two centuries. With other nations the case was very different. Dutch, Norwegians, and Russians made voyage after voyage to the

* *A Polar Reconnaissance*. By Albert G. Markham, F.R.G.S., Captain Royal Navy. London: C. Kegan Paul & Co

islands. These are carefully, and at the same time briefly, described by Captain Markham, who has evidently taken great pains with this part of his subject. The expedition to which he devotes most space is the famous one of Barents, who in 1596-97 wintered at Ice Haven on the east coast of Novaya Zemlya, and died shortly after the homeward voyage was commenced. As is well known, the house which Barents and his followers erected, and in which they passed the winter, was found standing in 1871 by the famous ice-navigator Carlsen; but it is not so well known that Ice Haven was reached and the house again examined in 1875 by Mr. Charles Gardner, an English yachtsman, whose dashing voyages through the Matyushin Shar and up the east coast of Novaya Zemlya are mentioned by Captain Markham. Mr. Gardner found a number of relics of the Dutch sailors which Carlsen had overlooked, and on his return he presented them to the Dutch Government, who were justly anxious to possess them. His remarkable voyage has scarcely attracted in England the attention it deserved.

After the historical chapters, in which the numerous expeditions to Novaya Zemlya, and into the seas which surround it, are described, Captain Markham's book terribly declines in merit. Like too many travellers, he has not learnt how to avoid unnecessary detail, and he has not that literary power which enables a writer to make trivial incidents amusing and even interesting. In an account of an ordinary voyage to Tromsø the reader gets an unpleasant foretaste of the prolix narrative in store for him, and sees that Captain Markham, like a Continental *cicerone*, is going to spare him nothing. At Tromsø the travellers found awaiting them the little cutter *Isbjörn*, which Sir Henry Gore Booth had hired for the Arctic voyage. The description of what happened after they took possession of her is curious, as showing how careless explorers sometimes are even in those matters which they understand best. The veteran Carlsen, whom Captain Markham met, was unable, he says, "to conceal the very poor opinion he had of our skipper Jorgensen, who had had no experience of the ice, and was not even a sailor." As this man was not only captain, but owner, of the *Isbjörn*, the travellers would doubtless have had great difficulty in getting rid of him; but, in any case, they might have insisted on his having good men under him. Apparently they did not trouble themselves at all, but contentedly went to sea with Jorgensen and his crew. In time they found that the foolish old man was ruled and guided by two harpooners, who apparently did all they could to mar the voyage, and that the other sailors were, with one exception, but poor creatures. Thus, ill commanded and ill manned, the *Isbjörn* sailed from Tromsø on May 18th, and reached, without more difficulty than was to be expected in the tempestuous seas which had to be traversed, the Matyushin Shar—that is, the strait between the northern and southern islands of Novaya Zemlya. Captain Markham desired to pass through this strait to the Kara Sea; but this was found to be impossible, so the *Isbjörn* proceeded along the western coast. The season was a good one; navigation was, for the Arctic regions, easy; and Cross Island, lat. 76° N., was reached on July 11. Here the travellers examined the hut in which Tobiesen, a Norwegian walrus-hunter, had passed the winter in 1873. It being found impossible to get further north, the *Isbjörn's* head was turned to the south on the 18th of July, and on the 21st she re-entered the Matyushin Shar. In describing this voyage Captain Markham expends 88 octavo pages. P. 117 of his book tells of the departure from Tromsø, and p. 205 of the second arrival in the Straits. As may be gathered from this statement, his prolixity is in parts almost intolerable, and probably many readers of a dull narrative of dull days will be strongly inclined to abandon the author when he anchors in the straits for the second time, under the impression that he has nothing to narrate which is the least worth attention. It is only fair to say, however, that such a proceeding, although natural, would be wrong. Without making a "Polar Reconnaissance" properly so called, or discovering anything new, Captain Markham achieved a good deal after his return to the Matyushin Shar, as he passed through it, and subsequently doubled the highest point of Novaya Zemlya. His account of the latter part of his voyage is therefore well worthy of attention.

For the passage of the Straits the explorers had to wait some time, and of course, respecting this time of waiting, Captain Markham is as pitiless as he is in the rest of his book. At length, however, the small barrier of ice which stopped progress broke up, and the *Isbjörn* sailed into the Kara Sea. That sea was found to be full of heavy ice, but the little vessel's head was turned in the one direction in which progress seemed possible, and she proceeded some distance along the eastern coast of the southern island, to the great dread of the cowardly crew, who, it seems, decided that they would immediately abandon the ship without consultation with the Englishmen if they thought themselves in any danger. The voyage to the south was stopped near Capo Hessen, pack-ice barring the way, and the *Isbjörn* returned to the Matyushin Shar, where she found the Dutch exploring schooner *Willem Barents*, which had been despatched for Ice Haven, but had been stopped by the pack, as the *Isbjörn* was. The Captain was determined to make another attempt, hoping to find the pack dispersed, and his example was courageously followed by Captain Markham and his friend, who resolved to see once more how high they could take their little vessel. In company with the Dutch schooner, she sailed back through the Matyushin Shar, but in the open sea outside the two

vessels parted. The *Isbjörn* again made for the north, and reached without difficulty the point where she had previously stopped. The water was now clear of ice, and after some delay, caused by a gale of wind, the boldly-sailed cutter went on, passed Ice Cape, and rounded the northern extremity of Novaya Zemlya. On this achievement Captain Markham prides himself, and with justice, for though ships belonging to other nations have made the same voyage before, the little *Isbjörn* was the first vessel which ever carried the British flag to the northward of this famous island. The voyage could have been prolonged for some distance, at all events, along the eastern coast, which was apparently quite clear, but the timorous crew struck work, after a little southing had been made, so a course had to be shaped for the north. Captain Markham strongly hoped to be able to sight Franz Josef Land, but this good fortune was denied him, as some distance south of it he was stopped by the ice. The *Willem Barents* was more fortunate, as, while the *Isbjörn* was off the northern extremity of Novaya Zemlya, she was taken as high as lat. 79° 40' N., and Franz Josef Land was distinctly seen by those on board her. As Captain Markham's vessel was absolutely stopped by the ice, there was nothing to be done but to shape her course homeward. A fair run was made, which Captain Markham is mercifully brief in describing, and on September 21st Tromsø was reached, where the voyage of the *Isbjörn* came to an end.

In making this voyage Captain Markham and his friend showed undoubtedly great courage and admirable indifference to discomfort and privation. The dangers of Arctic navigation are far greater for a sailing vessel than for a steamer, and in tempestuous seas life on board such a small craft as the *Isbjörn* must have been well nigh as miserable as anything that can be conceived. It is not wise, however, to claim for this dashing trip any importance as a voyage of Arctic exploration. Such knowledge as was obtained respecting the possibility of making Franz Josef Land was gained, not by the *Isbjörn*, but by the *Willem Barents*, and it is not easy to see that any substantial addition to geographical knowledge has been made by Captain Markham. He deserves all credit as an energetic English sailor, but not in this case as an explorer. Should his work reach a second edition, it is to be hoped that, in reviving it, he will bear in mind Sydney Smith's famous advice, and strike out every other word. His narrative, reduced to half its present length, may be readable, though it will still be a great deal too long. It is curious to compare the brief narrative in which Lieutenant Palander described the voyage of the *Vega* with this portentous account of a sail on the coasts of Novaya Zemlya in a very favourable season.

TROLLOPE'S LIFE OF CICERO.*

MR. ANTHONY TROLLOPE, who has plenty of good sense, was very unlikely to commit the mistake of ushering in his *Life of Cicero* with one of those sonorous *exordia* which his hero loved. On the contrary, he takes the earliest opportunity of signifying his wish that this work, after growing under his hands half spontaneously, should be regarded as quasi-posthumous; "should it," however, "appear" (as happily the gods and the booksellers have allowed it to appear) "during my life, I may have become callous through age to criticism."

So easy and genial a tone goes far towards disarming cavil; and yet, competent as Mr. Trollope undoubtedly was in many respects for the task which he chose to set himself, and admirably as in the execution of parts of it he has turned to account his literary gifts, we are unable to offer him our congratulations on the result of his labours. Unless Mr. Trollope seriously thought that the balance of opinion concerning Cicero had received a severe shock by the publication of Mr. Froude's *Cæsar*, and that he was bound to set the world right again, we cannot easily account for the appearance of his *Cicero*. He certainly had no secret evil design, such as, he reminds us, De Quincey imputed to Middleton; for, though room is found in this biography for a few mild jests against the bishops, the occasion was not a specially promising one for oblique satire; and Mr. Trollope, as we shall see, even in writing Roman history, writes all like an English gentleman of the most recent times. He cannot have merely intended to accentuate the placid candour of Mr. Forsyth, to whom he pays a compliment both merited and generous; while his excellent judgment has restrained him from trying more than a pass or two with so formidable a champion of the Personal as Mommsen. He modestly deprecates any pretensions to a critical scholarship which might have justified him in attempting a new selection or a readjustment of his materials, and in matters involving questions of genuineness either cheerfully depends on the guidance of others, or confidently requests to be allowed to hold his own view *quand même*. For minuter inquiries he manifestly has neither time nor inclination. He frankly owns that he does not read German, which, considering how much trouble Brückner has spared his successors, must be deemed no small inconvenience to have suffered under. But, unless we mistake, he likewise lacks that closer familiarity with the personages of his story, as pictured by themselves or their contemporaries, which is observable for instance in the work of M. Gaston Boissier. To be sure, it is manifest enough that this biography is not written for the small world of

* *The Life of Cicero*. By Anthony Trollope. 2 vols. London: Chapman & Hall. 1880

classical scholars, though in its circle, if only by virtue of the vigorous simplicity of his translations, Mr. Trollope might fairly claim to be included. Had his book been intended for such an address, the author would assuredly have purged his text, or directed his literary executors to purge it, from some of its more grotesque misprints. The *cella curulis* would have been reduced to its proper dimensions, and the *Canephra* would have recovered their due number of syllables. Cicero would not have repeatedly cried "*Cives Romanus*," and the most notorious of his hexameters would not have consistently been turned into arrant nonsense. We might have been spared some more or less interesting information as to the Roman practice of three names, ending with the curiously incorrect statement that, in Cicero's case, "the nomen, Tullius, was that of the family"; and in compensation might have become acquainted with the actual appellation of the "young nobleman" who accused Catiline of conspiracy, and whom Mr. Trollope rather loosely calls "Paulus Lepidus." There is something irritating in needless inexactness, even though its material importance be as trivial as in the instance of the funny little circumstantial flourish as to Milo eating *sardines* in his exile. The almost studied neglect with which Mr. Trollope has permitted such specks as these to remain, and to offend whoever is sensitive enough to be offended by them, shows that the class of readers contemplated by him cannot have been one which regards accuracy as a literary quality of cardinal importance. Manifestly, he has written for a public which likes to read rapidly, to see clearly, and to judge soundly.

No clever book written by a clever man is likely altogether to miss its mark; and some of the very faults of manner in which the author of this biography indulges may with some readers serve the purpose for which it was composed. Thus, the book is as full of repetitions as a novel, let us say, of Richardson's. There are many little excursions of shrewd sense and ripe wisdom of the world, into which our author knows how to lapse in a pleasantly unostentatious way, but which, all the same, only those whose reading is a mere pastime are unwilling to take for granted. Mr. Trollope is master of many other little arts, nor do we doubt that he will succeed in commending to many who, like himself, hate cant and love fair play, his new variation of a favourite theme. His general judgment of Cicero is, moreover, something more than specious; to our mind at least it is only an exaggerated presentment of a very reasonable view, and of one which prejudice alone can set down as altogether untenable.

Cicero, if Mr. Trollope's opinion be correct, was so much better than his contemporaries and countrymen, and his times were so much worse than ours (the late election disclosures notwithstanding), that he is deserving of praise which, if translated into the language of his own rhetoric, would leave far behind it the great orator's most exalted estimate of his own merits. Nor does he think this only, or mainly, because of those literary achievements on which Mr. Trollope dwells so enthusiastically. "He tells us" (says Mr. Trollope in a striking passage concerning Cicero's world-renowned "Dream of Scipio," which he has taken the trouble to translate in an appendix) "that we may not hope that our fame shall be heard of on the other side of the Ganges, or that our voices shall come down through many years. I myself read this dream of Scipio in a volume found in Australia, and read it two thousand years after it was written." For Cicero's philosophy in general, however, his most recent biographer has the quiet contempt of a practical man. It would have sufficed to say with the temperate Mr. Forsyth that, "as a philosopher, Cicero had no pretensions to originality." According to Mr. Trollope, he had as a philosopher no pretensions to be taken seriously at all.

It was with him a game of play, ornamented with all the learning of past ages. He had found the schools full of it at Athens, and had taken his part in their teaching. It had been pleasant to him to call himself a disciple of Plato, and to hold himself aloof from the strictness of the Stoics and from the mundane theories of the followers of Epicurus. It had been well for him also to take an interest in that play. But to suppose that Cicero, the modern Cicero, the Cicero of the world, Cicero the polished gentleman, Cicero the soft-hearted, Cicero the later, Cicero the lover, Cicero the human, was a believer in Greek philosophy, that he had taken to himself and fed upon those shreds and tatters and dry sticks, that he had ever satisfied himself with such a mode of living as they could promise to him, is, indeed, to mistake the man. His soul was quivering alive to those instincts which now govern us. Go among our politicians, and you shall find this man and the other, who, in after-dinner talk, shall call himself an Epicurean or shall think himself an Academician. He has carried away something of the learning of his college days, and remembers enough of his school exercises for that. But when he has to make a speech for or against Protection, then you will find out where lies his philosophy.

We quote this tirade (as we must take leave to call it) for what it is worth. True as it is that to Cicero philosophy was but the refuge of his last years, yet there is no reason but to believe that to him as to Bacon (to whom Mr. Trollope has in some respects not inaptly compared him) it was a refuge, not, as it was to Bellingbroke, a cloak. At least, however, Mr. Trollope is right in not seeking for the very Cicero in his philosophical disputations, and in coming near to him in those moral essays which—the *De Officiis* in particular—deal with the conduct of life and the sentiments that should animate it. For it is in sentiment and conduct that, as his biographer thinks, Cicero stood on a level far above that of his age and country, and came as near as a Roman of his time could to our modern standard of a Christian and a gentleman. This view, which Mr. Trollope announces at the outset, he again and again enforces, rising to the height of enthusiasm in declaring that the humanity displayed by Cicero in Cilicia (according to

his own evidence, which however we agree there is no reason whatever to reject) "is to me marvellous, beautiful—almost divine." After this, we are hardly surprised to find Mr. Trollope hazarding the conjecture, in connexion with Cicero's divorce from Terentia, He seems to have projected himself out of his own time into those modes of thought which have come to us with Christianity, and such a separation from this woman after an intercourse of so many years must have been very grievous to him.

Elsewhere it is incidentally stated that Cicero's "love for his wife was unbounded," till she committed the unpardonable sin of dishonesty in her accounts. At all events, he married again as soon as he could; nor are his relations to Terentia among those which we should have selected as illustrating his advance beyond normal Roman ideas. In general, however, it seems to us that we are justified in holding Cicero to have been a man of rare refinement, due to singularly assiduous self-culture and to a disposition naturally in harmony with what was best around him; and accordingly to have been, as his biographer phrases it, "of all the Romans the most humane." His love of peace was genuine, even though (if we rightly follow Mr. Trollope) he can hardly be said to have made a discovery ranking with those of Columbus and Galileo, when he foresaw the ultimate prevalence of the peaceful achievements of the mind over the bloody laurels of war. Much that Cicero divined, others—Roman contemporaries or Greek masters of his—doubtless divined together with or before him; and, indeed, we have no right to suppose that even in conduct—in the philanthropic administration of his province, for instance—none but himself could be his parallel. Mr. Trollope has very truly observed that it has been Cicero's hard lot to be judged more censoriously than others, because, as his biographer puts it, "Chance has given us Cicero in his night-shirt." On the other hand, as many propagators no doubt resembled Verres when in Sicily, so a few pro-consuls may have resembled Cicero when in Cilicia—only that they had no Atticus to preserve their letters. At the same time, there is reason for the mute indignation conveyed in Mr. Trollope's brief foot-note:—"Professor Mommsen says no word of Cicero's government in Cilicia."

For reasons already sufficiently indicated, we have preferred rather to touch upon the general characteristics of this biography than to discuss at length any special part of it. The tone of the book will have become sufficiently obvious from what has been said here; and Mr. Trollope's admirers will easily understand how distinct a series of impressions, unaccompanied by any disagreeable appearance of effort, he has in it contrived to convey. His skill as a narrator is particularly shown in graphically told episodes, like that of the case of the unlucky S. Roscius Amerinus, and his characteristic lucidity in admirable summaries such as that of the great Verrine case itself. The so-called "Philippics," too, and the circumstances which led to their successive composition, are brought before us with vivid brevity; for Mr. Trollope is quite capable of illustrating by the example of a style at once nervous and lucid the meaning of his paradox, that the "perfect orator" is at the present day "a person neither desired nor desirable." Nothing, again, could be more sensible than the way in which he once more lays the ghost (which we fancy has been walking again of late) of Professor Beesly's theories about Catiline and his conspiracy, or pricks the fancy concerning Caesar's preconceived idea of his own mission of beneficence. Nor should we omit to add that occasionally the biographer's knowledge of men has stood him in quite as good stead as his knowledge of books. Thus he professes in an early part of his book, that "of Pompey" (as he boldly chooses to call him) he has "but a vague conception." Yet it speedily appears that Mr. Trollope's conception of the great man, whose essential smallness it took so long a time for the course of events to expose, and in whom, as is here most truly said, may be recognized the evil genius of Cicero's political life, is a shrewdly correct one. But it is hardly necessary to say that want of acuteness is the last defect likely to be objected to the writer whom we are criticising. If, for all that, we adhere to our opinion that this biography of Cicero is superfluous, it is because it seems to us neither thorough nor sustained, nor balanced, nor careful enough to hold its own among a crowd of competitors. Should we prove to be mistaken, and should the skill shown in part of these volumes, and the kindly tone which pervades them, keep them alive as a popular biography, a pruning hand might do much to augment their attractiveness. In that case we should be the last to grudge the success of the book, if only for the reason that it seeks to vindicate for its hero the praise which is really his due, though it seems foolishness to so many critics, that of an unselfish patriotism. If this be allowed to Cicero, everything else may be forgiven him, including the egotism that was the source of nine-tenths of the abuse which has been heaped upon him, and which Mr. Trollope, like a prudent apologist, admits without further ado.

THE TEN YEARS' TENANT.*

THE short stories or *nouvelles* by Messrs. Besant and Rice lately issued in three-volume form do not suffer by comparison with their predecessors of the same kind, which it is hardly necessary

* *The Ten Years' Tenant and Other Stories*. By Walter Besant and James Rice. Authors of "Ready Money Mortiboy," &c. 3 vols. London: Chatto & Windus.

to say are among their most formidable rivals. The first story, *The Ten Years' Tenant*, which gives its name to the volumes, belongs to the same category as the weird and fascinating *Case of Mr. Jekyll*. The tale opens "twenty years ago" at an hotel in Scarborough, where the supposed narrator is staying. Some of the company in the house have got up private theatricals, which he attends, and in the course of which he observes the audience rather more than he does the actors. Among the spectators he recognizes many usual types, but his attention is chiefly caught by "a man between fifty and sixty years of age; his hair was 'grayed' but not white; his whiskers were grayer than his hair; his face was puffy and red; his nose was certainly swollen with good living and little exercise; his lips were rather thick; his eyes were bright; his forehead was broad; his chin was square. It was the face of a man who had lived and enjoyed all his fifty years." What is peculiar about this personage is the odd kind of attention which he pays to the play, which is of the fan and snuff-box period, with its "parade of musty epigrams and stale claptrap." He neither laughs nor sighs; but, whenever any "business" involving the management of a fan or snuff-box, or the nice conduct of a clouded cane, occurs, he shakes his head critically; and when a minuet is danced, gracefully enough as it seems to others, he appears unable to endure the sight. From these and other observations the narrator comes to the conclusion that the man whom he has been watching must be a London manager, who has gone to see the play "just as the attendants at one Turkish bath spend their little holiday in visiting rival establishments." This impression is changed, however, by a conversation which takes place afterwards in the smoking-room, when the unknown, calling for a brandy-and-soda, observes, "It is always advisable to fall in with the habits of the current generation. A hundred years ago—in 1760 for instance—gentlemen did not drink brandy-and-soda, nor did they smoke tobacco. Common people, country clergy, light porters, and the like took their pipes. But not gentlemen." These bald statements have, as the narrator observes, much the same effect as two or three copybook-texts would have; but the unknown's remarks rapidly acquire a curious interest. Falling foul of the manner in which one of the amateur actors has handled his snuff-box, he cries, "The true way to offer the snuff-box, the courtly way, is—thus," and he then "stood up and assumed an attitude which, in his frock-coat, seemed profoundly ridiculous." The rest of his conversation is marked in the same way by a strange air of being uttered by a person who has actually lived in and known the manners of a past age. It is brought to a close by his admitting that there is one thing by the abolition of which the human race has benefited, that thing being the tallow candle, of the horrors of which he gives an eloquent description. The same night the narrator has an opportunity of saving the unknown, whose name is Montagu Jekyll, from being suffocated or burnt in his bed, and in the agitation of the moment Jekyll makes an even more curious reference than before to the eighteenth century. Twice again the narrator falls in with him, once in 1870, once in 1880; and on the latter occasion he reveals his singular history, beginning it with this statement:—"I was born in the parish of Malvern, being the eldest son of a gentleman of good family, on the fourteenth day of August, in the year one thousand six hundred and fifteen." The rest of Mr. Jekyll's account of himself, and his subsequent fortunes, readers may be left to discover for themselves.

The second story in the volumes, "Sweet Nelly, My Heart's Delight," deals, and deals successfully, with the manners of the century for which Mr. Montagu Jekyll had so great a love. Nelly Carellia, the heroine and relater of the story, is the daughter of Robert Carellia, who was "a grandson of one John Carellia, who came to the province (Virginia) in the ship which brought the first company of Gentlemen Adventurers. There were, alas! too many gentlemen on board that vessel, there being fifty of that rank to a poor three of labouring men. They were too proud to dig, being all armigers and esquires, although younger sons. Some of them in consequence proudly perished of starvation; some fell fighting the Indians; a few, however, of whom John Carellia was one, survived the first disasters of the colony, and became lords of vast territories covered with forest, in a corner of which they began to plant tobacco." Then follows a curiously interesting account of Virginian life and manners at the date of the story, which has a commendable air of spontaneity that suggests its having been written by a person steeped in the knowledge of those times, as naturally Nelly Carellia was. On the death of her father Nelly is sent to London to be the ward of Alderman Medleycott, a rich merchant, who is a far-off cousin of the family. She is met on her arrival by the Alderman's chief factor, "a young man, soberly attired in a brown squeeze-out coat, with long calamanco waistcoat down to his knees," whose name is Christopher March, and who plays a most important part in the exciting story which follows. Before she has been long in the house Nelly discovers two curious facts about Christopher March. Jenny, the Alderman's daughter, confides to her a little love affair of hers. "Does no one know anything about it?" says Nelly. "No one," she answers. "Christopher March receives his letters and gives them to me privately. I send mine to Willie's Coffee House. It is like the novel of *Olarinda* or the *Secrets of a Heart* all in letters." This conduct on Christopher March's part was, Nelly reflects, "very remarkable in so good a young man." That evening cards are played, and Mrs. Medleycott gambles with great excitement and with very bad luck, and the next morning Jenny tells Nelly that "when my mother loses at cards she always

sends for Christopher March. He gives her money without my father knowing anything about it. What she does with the money which she wins I cannot tell." Then the girls go out shopping; and the next day go to church at ten in the morning, when Nelly is "astonished to see the ladies as they come in bowing to their friends in the pews. Nor did it seem to me becoming for gentlemen carrying their hats under one arm, and having their canes suspended from the button of their right sleeve, to take out little telescopes and look up and down the church, spying out their friends." Here Jenny points out her secret flame, whom she chooses to call Lyander, and who seems to Nelly to be a sufficiently mean-looking creature. Presently the plot begins to thicken. Christopher March first conveys some verses to Nelly (who is a great heiress), and then, when she sends for him to rebuke him, makes a formal proposal for her hand, which she meets with the dignified admonition which it demands. This is presently followed by an offer from Lord Eardesley, a handsome and gallant young man. His proposal is seriously considered by the Alderman, who knows that his father was a gambler, and has heard that the son has inherited his tastes. Thus the matter is left in suspense. Nelly hears first from her faithful old nurse, who has mysterious ways of finding out things, that Lord Eardesley is the steadiest young man in London, and then from the Alderman that he is a gambler and a profligate and must never marry her. It comes to the knowledge of Nelly and her nurse that Eardesley has been slandered by Christopher March; but the Alderman is hard to convince, and the nurse Alice makes up her mind that Nelly must herself see Lord Eardesley. Cloaked and hooded she and Alice drive off together to his lodgings, and find that he has gone to Dunton's in Covent Garden, whither they can, if they choose, his servant says, follow him without any apprehension of ill-usage or insult; for "ladies, especially court ladies, often put on a hood and mask, and so disguised, went to this house, or to Cupid's Gardens, or the Folly on the Thames, for a frolic—where they could see without being seen, and watch their lovers or their husbands." They procure the necessary pass-word, and go in:—

In the first room there was a band of music, which was playing a minuet as we entered. Four couples were dancing. I looked hurriedly to see if my lord was among them, but he was not. It was a foolish girl's jealousy. Why should he not dance, if the fancy took him? We passed on, my nurse and I, while many a curious look was turned upon us, to the next room. Here there was supper laid out, with bottles of Port, Malmsey, and Bordeaux in plenty, apparently free for all comers. But no one as yet was eating or drinking. Then we came to the third room, where there were tables set with cards and counters, and parties were sitting at them playing *hombre* and *quadrille*, just as madam at home, at that same time, was playing with her friends. Lastly, there was the fourth room. And this was crowded. For here they were gambling indeed. At a table sat one who held the bank: he played against all; a pile of gold was before him; a man stood on either side of him raking in the money and paying it out; round the table were clustered a group of players, men and women. Several of the women had discarded their masks and thrown back their hoods; one or two were young and pretty, most of them were old or middle-aged; but all alike, men and women, had stamped upon their faces the same eager look—that of the gambler. It is anxious, it is expectant, it is hopeful, yet it is despairing, because at heart there is no gamester but knows that in the end ruin awaits him.

Presently they see, "attired in a brave show of scarlet and silk," gambling desperately, Christopher March; and, in a conversation which ensues between the two women and Eardesley, they become convinced that it is March who has forged numerous drafts in Lord Eardesley's name which have convinced the Alderman of his profligacy and extravagance. Hard on this follows an attempt to murder Lord Eardesley, whose life is saved by Nelly's receiving the thrust intended for him; and shortly afterwards a catastrophe, the nature of which we will not reveal, changes the whole aspect of affairs, and hastens the unravelling of the plot. The story is full of spirit, and is remarkable as an instance of a feat often attempted, but seldom of late years accomplished with such success as is here reached, that of writing in the character of a personage belonging to a past century. One piece of description, we have already quoted. Here is another, of a shopping expedition, almost equally characteristic:—

There were wadded calico wrappers; a musk-coloured velvet mantle, lined with squirrel skins; falbalas; laced shoes with high heels; roundabout aprons with pockets; hoods; satin frocks; whalebone hoops; a gold-repeating watch, with a gold chain; a gold *étui* for needles and scissors; and all sorts of vanities, the like of which I had never before dreamed of; and yet they pleased me, Heaven knows, being a girl, and therefore by nature prone to love these worthless yet pretty things. Besides, as Jenny said, "You are a great heiress, my dear. It is fitting that you should dress so that no one will mistake you for a poor, penniless country maid." I wanted to present her with something to honour friendship, but she would have nothing except an ostrich egg, set in a rim and feet of silver, which took her fancy, together with a silver-gilt box for carraway comfits, to be taken during long sermons: the lid, I remember, was beautifully enamelled with a Cupid fishing for hearts. And one little thing she bought herself. It was a ninepenny-piece, bent both ways by no less a person than the great Lilly, the fortune-teller. Jenny bought it for luck at langster-a-loo. But I never heard that it brought her any, and I fear that the man who sold it was dishonest—perhaps Lilly never saw the coin, and the dealer himself may have bent that piece.

"Over the Sea with a Sailor" will probably be fresh in the recollection of many of our readers. It is perhaps less successful as a mere story than the other two in the volumes, because once the crisis is reached there is no kind of doubt as to what the end must be. It would be difficult for readers to forgive authors who allowed wickedness in the person of Captain Ramsay to triumph for more than a brief period. But there is not the less a very sufficient amount of excitement in the story, and it contains one character, Stephen Cobbledick, which is as well and humorously

drawn as anything which we have seen from the same hands. Possibly Captain Ramsay is no less true to life than Stephen, who looks up with touching admiration to his superior villany, but for artistic purposes a character marked off plainly as a villain is less valuable than a person with such mixed attributes as Stephen's.

SOME BOOKS OF GEOGRAPHY AND TRAVEL.*

MESSRS. LETTS'S Popular Atlas is planned on a very much larger scale than most atlases which have lately been issued in England—that is to say, though the individual maps are not of the largest size, they are to be exceedingly numerous. Something may possibly have been taken from the old Atlas of the Useful Knowledge Society, which, if we remember rightly, came into the hands of Messrs. Letts some years ago; but, at any rate, the plates have been worked up to the latest date, which is all that any one can demand. To show the magnitude of the enterprise we cannot do better than mention that the present volume, though it contains thirty-six maps, is merely a first instalment, a second series of forty maps being promised devoted exclusively to the British Empire throughout the world, a third of equal extent to the Continent of Europe, and a fourth to America, Asia, and the remaining continents. Even this does not apparently exhaust Messrs. Letts's enterprise, a possible series of English county maps and an historical series being hinted at. It would be difficult to speak too well of this plan, and as the price of the monthly subscription is exceedingly low, plenty of support ought to be forthcoming. Of course sovereigns are not to be bought with fifteen shillings, and cheapness has required some sacrifices. The actual size of the maps, fifteen inches by twelve, is, considering their great number, quite sufficient; but they are doubled across in the binding, always a thing to be avoided, if it can possibly be helped. They are also printed on paper rather too thin, we think, to stand the wear and tear to which an atlas is subjected. If Messrs. Letts would issue a superior edition on plate paper, and bound so as to lie flat, it would, we think, repay them. This, however, is the only improvement we can suggest. These General Maps are not perhaps so good a test of the execution of the task as those on a larger scale which are to follow. But, so far as they go, they deserve no little praise. Plans of towns and various other miscellaneous information are included, and the volume has a general index of places. If the whole scheme be carried out, the atlas will be a very useful one, more particularly if the county and historical series be added. But in this case we trust Messrs. Letts will give really new county maps, and not be content, as the majority of map publishers have hitherto been content, to stick a few railways, &c., into the old surveys of the last century. At present, the usual county map of England is probably the least creditable specimen of European cartography existing.

Mr. Mitchinson pleads in his preface that he has lived out of England nearly all his life, and that therefore he must be excused if any phrase "not strictly idiomatic" occurs in his book. We do not disallow his plea so far as it goes, though his style is execrable. But we do not think that such a word as "matitudinal" comes under the benefit of the Act; and we cannot see that long absence from England is an excuse for bestowing the pompous title of *The Expiring Continent* on a book which really deals only with an infinitesimal portion of Africa. Senegambia and the islands off the North-East coast were the scene of Mr. Mitchinson's travels as here given, and these we submit do not constitute a continent. This is one of the numerous instances of an author going out of his way to create a prejudice against his book for the sake of a catchpenny title. The islands have, indeed, been "done" often enough, and very much better than by Mr. Mitchinson. But in Senegambia he had a subject tolerably unhackneyed and of very great interest and importance. Manchester is at this very moment stirred to its inmost soul by the energetic attempts which the French are making to extend their possessions and influence in that quarter, and to prove to the poor African that the Norman Codlin and not the Lancashire Short is the ideal manufacturer of garments for him. Mr. Mitchinson has a good deal to say on this subject, and though his reasoning faculties seem to be as weak as his style (he asks, plaintively, "If Christianity really occupies the high position claimed for it, why are there fewer Christians than Mahometans?"—a sublime instance of belief in majorities) he has the advantages which any human being who will go anywhere and tell what he has seen has in speaking to those who have not had the opportunity of seeing. Moreover, he went some way into the interior, had some curious hunting experiences, and, in short, has a story to tell if he could only tell it. Unfortunately he has the greatest difficulty in telling it, and he has made it a much longer story than it has any business to be.

Captain Jones-Parry, according to the great principle of compensation which, according to some people, governs all things, has some advantages over Mr. Mitchinson and some disadvantages compared with him. The Captain simply "globe-trotted" by the most ordinary route. He stayed nowhere very long, and he did not see anything that hundreds and thousands of professors of the arts gaddative and scribative have not seen before him. Nor are Captain Jones-Parry's literary gifts great. He is given to the very feeblest and most imbecile puns that punster ever made. His arguments, when he makes use of any, are frequently as feeble as his witticisms, and his grammar occasionally shows signs of an almost equal feebleness. But he is one of the happy persons who, somehow or other, do manage to tell what they see and hear, which telling, inasmuch as no two human beings ever see and hear in precisely the same way, has its interest. The Red Sea and the Galle jewellers, the aspect of New Zealand, flower-boats and tea-girls and jinrickshas, San Francisco and Niagara itself, do actually bear being told over again in the rather aliphabod English of this Welsh country magistrate. It is very odd that it should be so, but so it is. Sometimes—as in relation to the Mormons, as to whom Captain Jones-Parry seems to have been very curious—he really gives a good deal of valuable, and even more or less novel, information. He is occasionally rather an indiscreet captain, but it is evident that he always means well, and that he held continually before him under the Southern Cross as under the Bear, the high standard of morals of a Carnarvonshire Justice of the Peace. We do not know that his book can be recommended to those who desire to know only the principal and master books on each subject, but for an idle half-hour it really will hold its own with a good many much more pretentious and far less faultily-written books of travel.

Mr. Mossman and Mr. Morfill have evidently both taken pleasure in their work on Messrs. Sampson Low's Geographical Series, but the result is sufficiently different. Both seem to have a good knowledge of their subjects; but, while Mr. Mossman's is thoroughly co-ordinated and well within his grasp, so that he has produced a neat essay which would do honour to a Frenchman, while it has a much more than French abundance and accuracy of fact, Mr. Morfill has produced a scrappy and rather chaotic book, awkwardly written, dealing frequently with details not suitable for such a work, and disfigured by curious flings at some wicked people called Russophobists. If Mr. Morfill had more of the wisdom of the serpent, he would have known that, not only was it out of his province to take notice of such criminals, but that the best way of reforming them would be to give a straightforward historical account of malignant Russia and let it have its effect. The very word Russophobist is a "polemical utterance," and as such not admissible into a work of this kind. It is fair, however, to say that Mr. Morfill seems to have gone to the best authorities, and he has, no doubt, got together a mass of useful information. Mr. Mossman's book, as might be expected from a writer who has already proved his skill, is a very good one of its kind. On two points Mr. Mossman seems to hold debatable opinions. He gives a higher estimate of Shintoism than most writers, and he seems to have undoubted faith in the present occidentalizing system, which, according to others, is impoverishing the country, undermining the national character, and preparing that most dangerous of states, the state where a highly educated but insufficiently endowed class struggle for livelihood in professional employment instead of acquiescing in manual labour. But he is not argumentative or partisan in his treatment of either of these points, and the information he gives seems to be on the whole accurate, well arranged, and full. Both these books are illustrated, and we think that the illustrations in both would be much better away. Reproductions of Japanese art in the conventional style of ordinary English woodcuts are neither ornamental nor instructive, while the illustrations of Mr. Morfill's book are altogether below the dignity of a treatise of the kind. We do not see that manuals of this sort require illustrations at all, and if they must have them, one or two of real merit and pertinence would be infinitely preferable to some dozens of illustrated-newspaper cuts, such as these.

If Mr. Blakiston has not hit on a new idea in the teaching of geography, which is probably impossible, he has revived and adapted an old one, with a good deal of skill. There used to be in our youth two volumes, in which a family of the name of Wakefield were taken first about England, then about Europe, and instructed in geography by an intelligent person of the Mr. Barlow pattern. This is not quite the plan of Mr. Blakiston's *Glimpses*, but it suggests it. In the *Glimpses of England* a small boy is walked about his native county of Kent on his own authentic legs, and then, with the aid of maps, is made to execute peregrinations in spirit about the remainder of England. The *Glimpses of the Globe*, of course, are confined to the latter mode of progression; but with some ingenuity Charlie Seaforth's home is made to supply examples of the chief features of physical geography, lying as it does on a small bay, close to the embouchure of a river, on one side of which is a steep hill, forming a promontory, and so on. The usual fathers and uncles play the part of Mr. Barlow for the benefit of Charlie and his sister, and not merely terrestrial geography, but the astronomical accompaniments of the science, are brought in with a good deal of ingenuity. There always has been, and always will be, much difference of opinion as to the merits of this kind of teaching. We shall own, though it is against the tendency of the day, that we

doubt the expediency not merely of playing at learning, but of all elaborate attempts to smooth the rough places. It is the roughness of the places which makes it worth while to traverse them. A child's mind has teeth just like his mouth, and it is much better that he should begin as early as possible to use both, and not rely on ready chewed and digested spoonmeat. The things which remain longest in the mind, and exercise most influence on it, are the hardest, the driest, the least explicable parts of the curriculum, elementary mathematics, Latin grammar, formal logic, and so forth. If a boy has a dog-seared Euclid thrown at his head to master, he may spend many hours, and weep many tears, over the fourth proposition; but when he has learnt it he will not forget it. A process of verbal elucidation and illustration, and what not, will take a whole class through, or apparently through it, in the most delightful manner in the world; and on five-sixths of them it will have made no impression whatever. This is heresy nowadays, of course, but heresies have an odd habit of becoming orthodoxies again when they have once been so. As for geography, its natural attractions to a boy or girl of any capacity are so great that it seems specially unnecessary to sugar it with the "dull sweets" of conversation and story-telling. All this, however, is matter of opinion, and Mr. Blakiston's first book, the *Globe*, by running through seven thousands, seems at any rate to have hit the taste of masters, or scholars, or parents, or School Boards, or all four.

THE CHURCHMAN'S LIFE OF WESLEY.*

MR. URLIN'S Life of his saint and hero differs from the sectarian biographies of the same man in its objective tendency, but in its hagiological tone and characteristic omissions it is exactly like them. He undertakes to exhibit John Wesley as a zealous and faithful Churchman to the end of his days; they undertake to exhibit John Wesley as the author of a movement which was inevitably doomed from the very first to end in separation from the Church. Both these views of Wesley and his work are true. The inconsistency between them is to be found where neither class of biographers are critical enough to look for it, in their hero himself. Wesley was a law unto himself, and to all who adhered to him, in a degree which no other equally prominent figure in Church history has ever exhibited. In this respect a parallel might be drawn up between him and George Fox, the author of Quakerism, as founders of sects. Every particle of the doctrine and discipline of Quakerism and of each of the Wesleyan sects can be traced backward to its source in the marked individuality, the peculiar culture, and the distinctly personal experiences, prejudices, and opinions of George Fox or of John Wesley. While Mr. Urlin demonstrates the Churchmanship of Wesley by emphasizing all the evidence upon this one point, he omits or slurs over the equally remarkable evidence upon the other side. It is unfair, as well as uncritical, to shift off the whole blame for the final schism from the shoulders of John Wesley to those of a certain group of his preachers. He had at least sown the seed of separation—whatever personal distaste he may have had for the plant. All his wiser ministerial friends and helpers—Charles Wesley, Perrouet, Grimshaw, Henry Venn, and many others—warned him from time to time that the Nonconformity which he was sowing and nurturing could not fail to develop at last into formal separatism or Dissent. Even his occasional outbursts of indignant anger against the manifestation of sectarian tendencies by some of his preachers had his own peculiarly *eigensinnig* individualism at the bottom. The lay preachers were his servants, they were his agents, they were to remain in the Church of England because he, John Wesley, commanded it. If they left the Church, he declared, they would leave him. They were not to presume upon baptizing or celebrating the Eucharist, or calling themselves "Reverend," or wearing "gowns." Why? Because he, John Wesley, prohibited it. But when he, John Wesley, "ordained" John Pawson, Joseph Taylor, and Thomas Hanby "to minister in Scotland," and others for the colonies, when he provided his ordained "deacons" and "elders" with his own "letters testimonial," he believed that they had amply sufficient mission and jurisdiction wherever he, John Wesley, might please to send them. Lord Mansfield told Charles Wesley, at the time of his brother's new departure as a sect-founder, that "ordination is separation." The ambitious Pawson was disgusted, on his return from Scotland to England, at being made to feel the hyper-episcopal powers of his ordainer. Pawson's mission, according to John Wesley's ruling, was limited to Scotland, because Wesley ordained him "for Scotland"; hence his clerical standing became dormant, as Wesley insisted, upon his return to England. Pawson groaned lugubriously at his degradation, but he was obliged to submit. When Joseph Taylor came back from Scotland to England he was appointed to the Nottingham circuit. While he was in Scotland he had worn gown and bands, had been addressed as "the Reverend," and administered the Sacraments; in England, as Wesley informed him, his orders ceased to be valid. "I desire," he wrote to Taylor, "you would not wear the surplice nor administer the Lord's Supper any more." John Wesley was too busy a man, and too intent upon the working of his organization at the actual moment, to share the contemplative foresight of his brother Charles. Hundreds of bystanders, for half a century long, saw clearly whither the Methodist ship was inevitably tending. The

only man who did not see it was the self-reliant, strong-willed pilot. "The preachers of a dissenting spirit," said Charles Wesley, after the troubled Conference of 1786, "will probably after our death set up for themselves, and draw disciples after them. An old Baptist minister, forty years ago, told me he looked on the Methodists as a seminary for the Dissenters. The great evil which I have dreaded for nearly fifty years is a schism." The sociological law, so to call it, which governs schism, and which had already been so fully manifested in England in the Puritan separations of the seventeenth century, is seen again in the evolution of the Wesleyan Methodist separations. A subjective dissent, or non-conformity, always precedes an objective dissent, or separation. The sect which finally goes out of the historical Church has first of all been and tried to remain a party within the Church. Non-conformity and separation are at first opposed forces. The Non-conformists under Elizabeth and James I. boasted that they had done more than all the prelates to controvert the Separatists, to preserve the Church of England from disruption, and to keep men within its communion. The early Methodist leaders made a similar boast. But the Independent and Anabaptist separatists under Elizabeth and James I. maintained that, if a Nonconformist logically followed out his own principles, he must become a separatist or formal Dissenter. John Wesley claimed a right to a very considerable degree of nonconformity. After his "ordinations" for America and Scotland, as late as 1789, he formally stated what he called "My two principles." "The one is," he wrote, "that I dare not separate from the Church, that I believe it would be a sin so to do; the other, that I believe it would be a sin not to vary from it in the points above-mentioned." The citation of these "points" is of no great importance; what is of importance is the pure, self-centred individualism both of Wesley's conformity and of his nonconformity. Mr. Tyerman unconsciously, but quite naturally, takes up the standing of the separatists of an earlier century in their opposition to the similar non-separating nonconformity of that period:—

There can be no doubt [he contends, speaking from the point of the modern Wesleyan sectary] that, as a minister of Christ, Wesley had as much right to ordain as any bishop, priest, or presbytery; but he had no right to do this as a minister of the Church of England; and, by acting as he did, he became, what he was unwilling to acknowledge, a Dissenter, a separatist from that Church. Wesley refused to acknowledge this; but, feeling the impossibility of the thing, he declined to attempt refuting it. With great inconsistency, he still persisted in calling himself a member of the Church of England. This was not surprising, but it was absurd. Great allowance must be made for Wesley; but to reconcile Wesley's practice and profession in this matter during the last seven years of his eventful life is simply impossible.

His lay preachers, at least those ambitious leaders amongst them who had no sympathy with the Catholic or with the national character of the English Church, claimed a right to develop a nonconformity which Wesley had taught them into formal dissent or separation, from which Wesley himself shrunk back, and which he had never intended.

Mr. Urlin's portraiture of Wesley is defective on account of its omissions. It is true that his picture is a small one, while the materials at the command of the painter of Wesley are truly enormous; but Mr. Urlin has made the mistake of turning away from the whole mass of adverse material, and has used only such material as glorifies his subject. No one needs to be told nowadays that John Wesley was a truly great, good, and wonderful man. But when Mr. Urlin, in his thirteen pages headed, "Portraiture and Character," cites passage after passage of contemporary laudation of Wesley, the reader will ask if Wesley had no contemporaries who did not undiscerningly admire him, and he will want to know what these more critical observers have said. Further, nearly all Mr. Urlin's witnesses bear testimony to the impression made upon them by Wesley in his triumphant old age, in those days which Denn Hook described as "his worst, for this plain reason—he was worshipped as something more than human." When we attempt to trace the impressions made by him upon a whole succession of his contemporaries, friendly and adverse, from his earliest days to his latest, we find that two dominant characteristics were attributed to him by all alike.

We may express these characteristics shortly as extraordinary self-dependence and extraordinary variableness. It is needless to say that Wesley was not selfish in the low sense of the word, for he was the very reverse; but the world has never seen a man in whom the I, Me, and Myself were more strongly marked. Mr. Tyerman meets the charge of ambition which has been so often brought against Wesley by owning it, by explaining in what sense it is true, and by glorifying his hero for possessing it in that sense. Wesley was self-centred and self-determining in an unusual degree; even when he asked or took counsel of others he made what they conferred upon him thoroughly his own before he acted upon it. Dr. Coke and the schismatic wing of the Wesleyans had to use him and his power exactly as the Jesuits are said to use the Pope and his infallibility; they had to persuade Wesley that their opinions were his own judgments. He was argumentative and opinionative from his childhood. He would do nothing, even while a boy, until he was thoroughly self-convinced. If the lad was asked to take a piece of bread or fruit at any time except the regular meal-times, he would reply with cool and self-centred independence, "Thank you, I will think of it." His father once observed to him, "Child, you think to carry everything by dint of argument; but you will find how little is ever done in the world by close reasoning." Wesley was egotistic, though he was not vain or conceited; he was confessedly autocratic, often to the extent of

* *The Churchman's Life of Wesley*. By R. D. Urlin, of the Middle Temple. S. P. C. K. 1880.

domineering. He claimed the very widest range of freedom for himself in his relations with his ecclesiastical superiors; but he would allow no similar liberty of thought or action to those who derived their mission and jurisdiction from him. They were always made to feel that they were "Mr. Wesley's preachers." Mr. Urlin has a glimpse of the central force in his character when he accidentally speaks of him as "this self-reliant man." The Rev. A. Tooke, an usher at the Charterhouse when John Wesley was a pupil, noticed that although the future "Pope of the Methodists," as Toplady always called him, was high in the school, he constantly associated with the boys of the lower forms. He used to gather a throng of the smaller lads around him, and harangue them. When Tooke once interrupted him in the midst of one of his orations, and asked him privately why he did not associate with the bigger boys, who were his equals, Wesley answered, "Better to rule in hell than to serve in heaven." He showed his individuality when he determined to wear his hair long, in opposition to the prevailing fashion amongst the clergy. Even Whitefield, who was far more openly opposed to the ways of the Church than Wesley was, wore an imposing wig. When Wesley declined to exchange his busy life at Oxford for the parochial charge of Epworth, and gave his father his reasons, the noble old rector wrote that the main consideration in choosing a course of life "is not dear self." He never took his son to be selfish in the lower forms of the expression; but he probably saw clearly the huge proportions of the "self-ness," so to call it, in his remarkable son. "Sir," said William Law to him, when he noticed Wesley's dejection, "I perceive you would fain convert the world; but you must wait God's own time. Nay, if after all He is pleased to use you only as a hewer of wood or drawer of water, you should submit." That keen physician of conscience laid his finger upon the spot. A few years later, Wesley's restless egotism burst forth with the famous declaration, "I look upon all the world as my parish!" This was after his "conversion" by Peter Böhler. In the very same year James Hervey wrote to Charles Kinchin (they both belonged to the original "Holy Club," or "Oxford Methodists," who were guided by the counsels of William Law and Wesley's father), "Why should they entice you from your parish? Sure we are that the Holy Ghost made you overseer of that little flock; but that He has released from that charge, and called you to another sphere of labour (the conversion of the whole world) is not so evident. There was a time when Mr. Wesley was a warm and able advocate of primitive institutions. I marvel that he has so soon removed to another opinion. This is a fresh conviction how variable his mind is, and though burning with zeal for God, yet given to change." "I remember the time," Hervey wrote to the same common friend, "when Mr. Wesley was fond of the mystic writers, read one of their leading authors over and over again, and commended what he read as the best book next to those that were given by inspiration; but within the space of a few months he saw his error, retracted his opinions, and inveighed against them as studiously as ever he had extolled them." Just such an impression as was made upon his strong and receptive individuality by a new book or a new acquaintance, in his earlier days, was made upon it afterwards by the "sighs, groanings, swoonings, screamings, of young and old" which had followed the preaching of the Moravians in Europe and America, and which began to follow his own and Whitefield's preaching. He at once took these, as William Law said, for proofs which "proclaim the two-edged sword that is in his mouth," and show that "God had set His seal to the truth and goodness of his preaching"; though, as the same critic adds, "all this is so far from being proof enough of the truth and goodness of his doctrine, that it is no proof at all. If it will do for him it will do for Mahomet." William Law has left on record that throughout his intimacy with Wesley he "judged him to be much under the power of his own spirit." "It was owing to unwillingness or inability to give up his own spirit," Law wrote, "that he was forced into that rash and foolish censure which he published in print"—Wesley's attack on the mystics—"a censure so false, and regardless of right and wrong," said Law, "as hardly anything can exceed it." Law's remarks were called forth by the extraordinary "Letter to the Rev. Mr. Law" (1756), which is only represented by an extract in Wesley's collected works, but which the uncritical Mr. Tyerman describes as his "castigation" of the teacher to whom he owed so much. Law's correspondents hoped that he would answer it. He replied, "If I knew of any kind of answer that would do Mr. Wesley any real good, I should advise it. It does not admit of a serious answer, because there is nothing substantial or argumentative about it; and to answer it in the way of ridicule is what I cannot come into, being full as averse to make a mock of him in a religious garb, as to doing the greatest possible injury to his person." He always retained a fatherly tenderness for Wesley, and after this impertinent provocation he wished that Wesley's "ever stirring of zeal, under whatever form it appears, whether in knowledge or ignorance, in wisdom or weakness, may be directed and blessed by God to the best ends it is capable of." He afterwards described Wesley's letter as "such a juvenile composition of emptiness and pertness as is below the character of a man who had been serious in religion but half a month." A year later Law (1757) wrote of Wesley's "Address to the Clergy" as "very longish," but yet so wrong as to be worse than no advice at all, and as "empty babble" from beginning to end. The next year, 1758, we find the gentle James Hervey complaining of Wesley's "waterproof literary manner and matter." "He is so un-
Mr. in his quotations, and so magisterial in his manner, that I had

no small difficulty to preserve the decency of the gentleman and the meekness of the Christian in my intended answer." Three years later Wesley imperiously expelled six men from his Methodist Society for the sin of "reading Jacob Behmen and Mr. Law." When Dr. John Byrom expostulated with Wesley on this piece of tyranny, he said that he had not excommunicated the offenders for reading their books, but for troubling others with their notions. "Wesley put the matter very magisterially, upon his own authority," says Byrom, "so that I used the expression *Pope John* to him and *Your Holiness*." It is certainly significant that such utterly different men as Law, Byrom, and Toplady, all of whom were exceptionally keen observers, should have agreed in the early and middle periods of Wesley's career in comparing him to the Pope, while Byrom in 1761 and Toplady in 1774 directly called him "Pope" and "His Holiness." In the later period of his career his own restive followers, chafing under his resolute grip, could find no fitter epithet. When the aged Wesley in 1787 compelled John Pawson, whom he had "ordained" for Scotland, to put off his gown and bands at his return to England, when he put "Mr." instead of "Rev." on the letters sent to Pawson, the unfrocked "Presbyter" wrote to one of his friends:—"Mr. Wesley seems more determined to abide in the Church than ever. He talked about it again and again in the public conference, in the society, &c., and in such a hot fiery spirit as I did not like to see. He talked of fighting with a flail, and of putting all out of Society who do not go to church. We are to be just what we were before we came to Scotland—no sacraments, no gowns, no nothing at all of any kind soever." After an attack on the "cursed prejudice" and the "furious bigotry" of the gentle Charles Wesley, and "the fire from hell that burns in that poor miserable man's breast," the amiable Methodist preacher and autobiographer pours out his complaint against the resistless papacy of John Wesley:—

There seems to be no prospect of doing anything, but just in the old way, while Mr. Wesley lives. Solomon says there is no new thing under the sun; but here we see something which I believe was never seen in the Christian Church before—that men, approved of God and their brethren, and that for many years, should be regularly ordained [this is the point which Charles Wesley denied, and on which John Wesley inconsistently varied] and act in the capacity of ministers, and yet should be deposed from that office by one single man. Even the Pope himself never acted such a part as this. What an astonishing degree of power does our aged father and friend exercise.

Wesley was then eighty-four years old; and it is an evidence of the combination of strong self-determination and variability in him to the very last that Pawson, "with much entreaty," as he says in this same letter, "got him to ordain Mr. McAllum and Suter. Two more were ordained; one for the West Indies, and one for Nova Scotia."

AMERICAN LITERATURE.

THE fourth volume of that *Popular History of the United States* (1) written by Mr. S. H. Gay, to which, for reasons of his own, the late Mr. Bryant consented to give the authority of his name, completes the work, extending from the treason of Arnold to the close of the Civil War and the assassination of President Lincoln. We need hardly say that it is not in any sense a book to be recommended to English readers. Americans are prepared from their earliest youth to make a large and liberal allowance for party spirit, and if they cannot equally be trusted to discount abuse and misrepresentation of foreign Powers, and especially of England, it is probable that no historian who showed himself scrupulous upon these points would have much chance of their favour. But it is not desirable that such portion of the English public as is likely to depend upon a "popular" history for its knowledge of American politics and American relations with this country should take its views of either from a work like this. Unhappily, few Englishmen are given to study the history of the United States as scholars study that of the ancient world, or politicians that of modern Europe. Still more unfortunately, most of those summaries or current histories from which in their boyhood our countrymen derive the vague ideas they do possess of the principal events of Transatlantic story—the settlement and early administration of New England, the revolution, the anti-slavery contest, and the Confederate war—are singularly one-sided, and with scarcely an exception are written from the American point of view by Americans, or by English sympathizers scarcely better informed or more scrupulous. All the current misrepresentations are reiterated in this as in the previous volumes of the work before us. Throughout the whole of the long political contest between North and South the true character of the issue is never made apparent. The fact that the North willingly purchased the Union by ceding all that the South demanded in respect of security for slavery and for State rights, and afterwards, clinging to the purchased privilege, strove to cheat her partner out of the promised consideration, is not merely not set forth, but is studiously suppressed. In truth, the political history is scanty as well as misleading—the pages given to the seventy years of peace being fewer by far than those in which the events of seven weeks of either war are described. There are hard-

(1) *A Popular History of the United States; from the First Discovery of the Western Hemisphere by the Norsemen to the End of the Civil War.* By William Cullen Bryant and Sydney H. Gay. Vol. IV. Illustrated. London: Sampson Low & Co. 1881.

ings in the table of contents which alone are sufficient to condemn the book. Every man who has studied with average candour the history of the Confederate war knows that the North owed at least as much to the patient wisdom, the organizing genius, the temper, the forbearance, the enduring good faith of General McClellan as to the daring and strategic skill of Sherman or the stern resolution and capacity for extensive command displayed by General Grant. But for McClellan the North would never have had an army; and McClellan's work was done at the most critical moment of his country's fortunes, in despite of a factious, spiteful, persistent opposition from nearly every member of the Cabinet. Opposed to the greatest General and the best army of the South in its prime, unsupported by his own Government, McClellan achieved at the head of a hundred thousand men, turned by himself into an army, almost as much as General Grant, with thrice that number in the field, accomplished, with the full confidence and eager support of his own Government, against the mere wrecks of the army of Northern Virginia. If English readers were, as a rule, familiar even with the outlines of American military history, we should not have to warn them against placing any reliance on a fact related by Mr. S. H. Gay; his own table of contents would suffice to demonstrate his utter unsuitness for the task he has undertaken.

The recorder for boys of the story of the United States navy (2) is entitled, of course, to be simply a panegyrist—to explain away every disaster, to exaggerate every victory. We may think that Dr. Lossing has somewhat abused this privilege, that his work would have been more interesting as well as more instructive had he told the simple truth about those victories of American ships of the line nominally rated as frigates, wherein, like his predecessors, he glories so loudly. Even boys—at least English boys—might chance to ask themselves how it happened that after successes so signal, generally involving the actual destruction of a British vessel and her crew with small loss to the victors, the result was so exactly reversed when the *Shannon* and the *Chesapeake* met on confessedly equal terms. The American commander was the hero of one of their most brilliant victories. He fought as desperately as any Briton. He refused at the last to surrender; and his flag was hauled down by British boarders. Yet his defeat was as signal and as sanguinary as had been his former triumph. The superiority of the *Shannon*, as proved by the loss inflicted and sustained, was as marked as the inferiority of the *Macdonian*. Again, it might occur, even to an American writer or American reader, how misapplied is any boast of the hundred thousand dollar cargo sent to the starving operatives of Lancashire. But Dr. Lossing's modest pretensions may reconcile even English readers to his obvious offences; those of Mr. Gay amount to a heinous violation of the fundamental principles of literary and historical morality.

Mr. Forney's memoir of General Hancock (3) reaches us not a little too late. In form a military biography, it is in fact, and even by the confession of the author, no better than a campaign pamphlet put forward in support of the pretensions of the Democratic candidate for the Presidency.

Mr. Knox's Boy Travellers (4) have, we perceive, continued their Oriental journey through Siam, Java, and the Malay Archipelago; and Dr. Bronson, lest his young pupils should run wild, continues at as great length as heretofore to improve every occasion with a geographical lecture, which, despite the fatigues they must have undergone, does not seem to have exercised upon them the soporific effect we fear it will generally produce upon stay-at-home readers of the same age. A certain amount of judicious skipping, not beyond the capacity of schoolboys, will, however, render the book quite as interesting as its predecessor, if not equal to some of those stories of boyish adventure in America itself, one or two of which, if we are not mistaken, and by no means the worst, we owe to the same pen. The illustrations are excellent and of a higher order than might have been expected; the text and paper are on a level with those of the best Christmas volumes, whose authors and publishers cater so carefully for the refined taste of the rising generation of to-day, and provoke year after year the envy of their less fortunate parents.

On the Rhine (5) savours much more of the guide-book, and neither the type, the double-column pages, the illustrations, nor yet the substance of the work redeem it from the dullness characteristic of all such volumes. It covers, however, some odd corners, not only of Austria, but of Spain, Italy, and Scandinavia, to which so full a guide-book is not usually to be found.

The life of Dr. Seabury (6), the first Bishop of the Anglican Church in the United States, will, we think, interest a wider public than the limited circle of mere students of ecclesiastical politics and history. It throws not a little light on the hardship, the injustice, the systematic persecution to which the Episcopalians

of America were subject during and after the war, and incidentally, moreover, reminds us of the similar persecution which the Episcopal Church of Scotland long underwent at home. The political separation of the colonies from the mother-country rendered necessary, not for ecclesiastical but for political reasons, an independent organization of the American Church. It was essential, of course, that the first bishop should receive his ordination from those who derived their own episcopal authority directly and legitimately from apostolic days. Dr. Seabury was selected by the clergymen of Connecticut to cross the Atlantic and seek episcopal ordination at the hands of the Archbishops of Canterbury and York. The difficulties raised by the Primates of England, the stupid indifference or more than indifference of the Government of the day—a Government consisting exclusively of professed Churchmen—are hardly intelligible to a more earnest generation. Provision had been made to enable English bishops to ordain foreign clergy without requiring the oath of allegiance. But the Act did not provide for the ordination of bishops; and the Primates neither dared to proceed without Parliamentary authorization to the exercise of their purely spiritual functions, nor cared to carry through Parliament a Bill to allay their scruples. It was, therefore, from the Primus of the Scotch branch of the Church that Dr. Seabury received episcopal orders, and it is from the Scotch, and not from the English, Church that the Episcopacy of America traces its immediate descent.

The American Government has what English agriculturists have so long claimed in vain—an agricultural department—and that department employs Mr. J. H. Comstock as official entomologist. In that capacity the latter has prepared a volume, equally remarkable for its scientific and its practical minuteness of investigation and detail, on the insects by which the cotton crop is infested, and particularly on that army worm which in some seasons is almost as destructive to the staple of the South as the Colorado beetle to the potato. The history of the Southern pest, though not practically interesting to English readers in the same degree, is not of less scientific nor perhaps of less practical and commercial moment, and the details of its natural history given in the Blue-book before us (7) are certainly curious and amusing.

The Department of the Interior has also an Entomological Commission, which has published a smaller bulletin upon the cotton worm (8), describing not only the worm itself, but the various enemies by which its propagation and extension are checked and its ravages to some extent limited.

Dr. Henry Boynton Smith (9) was by no means an undistinguished member of the Congregational Church, a professor in one of its principal colleges, a preacher and theologian of considerable repute. That the wife of such a man should think him worthy a biography of the usual American length and minuteness, filling more than four hundred large octavo pages and crowded with letters and other writings in somewhat close type, is only natural and becoming; that such a work should find a large number of readers to concur in the estimate of its biographical value or personal interest is perhaps hardly to be expected. It would seem as if every American not utterly insignificant must have his life written, and with such singular disregard to proportion that, if each work were to find a hundred readers, the public of the United States would have little leisure to bestow on any other kind of literature.

We cannot think that the *Sketches and Reminiscences of the Radical Club of Boston* (10) were worth collection and publication. The Club represents the so-called liberal religionists who in the last and present generations have sprung from the loins of Unitarianism, as Unitarianism sprang from one section of the old Puritanic body. The volume is full of second-hand infidelity, marked by what might have been twenty years ago regarded as somewhat daring, not to say blasphemous, distinctness of language, but what nowadays it requires much more courage perhaps to rebuke than to publish. We do not think that it contains anything that will either startle or enlighten the readers of the *Fortnightly Review* and the *Nineteenth Century*.

Dr. Ingraham's account of a Northern Governess's letters on her experiences in the South in the days of slavery (11) is written from a distinctly Southern, not to say pro-slavery, point of view. How far the letters are genuine or founded on fact we hardly know, and the uncertainty on this point deprives them of what little value they might otherwise have possessed. They deal with a bygone time, a state of society that has now none but a purely historical interest, and do not possess that stamp of historical authenticity which could have rendered them useful as evidence of the real character of Southern society.

It is scarcely needful to do more than mention the most recent

(11) *Not a Fool's Errand: Life and Experience of a Northern Governess in the Sunny South.* By the Rev. J. H. Ingraham, LL.D., Author of "The Prince of the House of David," &c. New York: Carleton & Co. London: Sampson Low & Co. 1880.

volume of a deservedly popular series, *The Travels and Adventures of Marco Polo* (12), adapted to the reading of young people. Those of the rising generation who are fortunate or sensible enough to read these neat little volumes will know a good deal more of some of the most interesting passages of history than many of their elders have acquired by years of laborious study devoted to worn-out books, written in antiquated style, and printed in that peculiar type which, however attractive to archaeologists, is rather repulsive to the public. In the meantime they will enjoy no little interest and amusement in a course of what they will never find out unless told to be valuable and till now somewhat rare instruction. Miss Feudge's *India* (13) may be called a popular or school history of India under native rule, with one or two chapters appended on the history of the British conquest and administration. Why Miss Feudge chooses to misspell Sepoy after a fashion of her own we cannot pretend to guess. It has nothing, we can assure her, to do either with the sea, or with the teapoy, perhaps more familiar to ladies. Mr. Allan Pinkerton offers to the lovers of sensational stories another heavy volume of his detective experiences, real or fictitious (14).

We have an almost alarming quantity of verse, mostly, we regret to say, of that character which neither gods, men, nor book-stalls will allow. Few of the volumes on our table can be called bad; most of them contain a few specimens which oblige us to feel that the writer, with care and with critical faculty, might have done better. Not one of them, however, shows power of the higher order; none of them could, under any circumstances, have been otherwise than third-rate.

Miss Rosa Jeffrey (15) has here and there poems not unworthy of a place in local or otherwise limited anthologies. Her "Love and Jealousy," for instance, is readable and amusing; her serious pieces, and especially those whose seriousness deepens into tragedy, are perhaps her weakest. *Under the Olive* (16) is stronger and more even, often good, never excellent, scarcely ever stirring. Mr. Fields (17) does not know when he crosses the line between comedy and farce, between the free and easy and the absurd. *The Coming of the Princess* (18) belongs chiefly to the last denomination; but even here there are pieces by no means so bad as that from which the volume takes its name. *The Wild Roses of Cape Ann* (19) might have borne cultivation, but even so would hardly win a prize in any but a local show. *The Vision of Nimrod* (20) is sometimes prosaic, sometimes extravagant. Mr. Winter has a power of versification, a command of language, which might have been turned to even better purpose (21). The "White Flag," for example, contains some good thoughts in language whose chief fault is a certain insufficiency of force. The poet forgets, by the way, that the white flag means truce, not surrender.

(12) *Young Folks' Heroes of History.*—Marco Polo: his Travels and Adventures. By G. M. Towle, Author of "Pizarro," &c. Boston: Lee & Shephard. London: Sampson Low & Co. 1880.

ADVERTISEMENTS.

THE GROSVENOR GALLERY.

WINTER EXHIBITION.

The GROSVENOR GALLERY Exhibition of Water-Colour Drawings, and Decorative Designs, by living Artists, NOW OPEN
Daily, Ten to Six.

Admission, 1s. Season Tickets, 5s.

DORÉ'S GREAT WORKS, "CHRIST LEAVING THE PRÆTORIUM," "CHRIST ENTERING JERUSALEM," and "MOSES BEFORE PHARAOH," each 35 by 25 feet; with "Dream of Philip's Wife," "Christian Martyrs," &c. at the DUKE GALLERY, 35 New Bond Street. Daily, Ten to Six. 1s

ART-UNION OF LONDON.—Subscription, One Guinea.
Every Subscriber receives an impression of an important PLATE by A. WILKINS, after OSWALD W. BRYERLY, "The Last of the Revenges," besides a chance of one of the numerous valuable Prizes. The LIST will CLOSE March 31. The Print is now ready.
LEWIS POOCK, EDWARD E. ANTHOUS, Hon. Secs.
112 Strand, February 1881.

OPEN SCHOLARSHIP WITHOUT EXAMINATION.—The HIBBERT TRUSTEES are prepared to grant, at their Meeting in June next, ONE SCHOLARSHIP of £300 per annum, for Two Years, to a Graduate of any University in Great Britain and Ireland, between the ages of Twenty-one and Twenty-eight, to enable him to study Theology and Mental and Moral Philosophy at Universities in Germany, Holland, or Switzerland (or elsewhere), subject to the approval of the Trustees. Full particulars may be obtained of the Secretary, to whom applications for the Scholarship must be forwarded before March 31, 1881.

University Hall, Gordon Square, London, W.C.

PERCY LAWFORD, Secretary.

HIBBERT TRUST.—ONE SCHOLARSHIP will be awarded on this Foundation after the next Examination, provided that a Candidate of sufficient merit present himself. The next Examination will be held at University Hall, Gordon Square, London, on three consecutive days in November 1881. Candidates must furnish satisfactory evidence of age, graduation, and other points, the particulars of which, as well as copies of the Scheme of the Examination, may be obtained on application to the Secretary of the Trust, and the names and addresses of all Candidates must be sent to the Secretary, at University Hall, on or before October 1, 1881.

University Hall, Gordon Square, London, W.C.

PERCY LAWFORD, Secretary.

CHELTEMHAM COLLEGE.—TWELVE SCHOLARSHIPS. Eight £40; Four £20. Election, third Tuesday in May.—Apply to the SECRETARY, The College, Cheltenham.

CLIFTON COLLEGE CLASSICAL, MATHEMATICAL and NATURAL SCIENCE SCHOLARSHIPS.—NINE or more open to Competition at Midsummer 1881, value from £25 to £50 a year, which may be increased from a special fund to £50 a year in cases of Scholars who require it.—Further particulars from the HEAD MASTER, or SECRETARY, the College, Clifton, Bristol.

STRATFORD-ON-AVON.—TRINITY COLLEGE SCHOOL. The Warden, RICHARD F. CURRY, M.A., is assisted by Seven Resident Graduate Masters. Special attention paid to Modern Languages. Classical and Modern Education. Department for Young Boys. Exhibition to the Universities. Large Playing Fields, Gymnasium, Five Courts, &c. Terms, 20 and 30 Guineas. Apply to the WARDEN.

ST. EDMUND'S COLLEGE, SALISBURY.—A HIGH-CLASS SCHOOL FOR SONS OF GENTLEMEN. The religious training is upon definite Church principles. Boys are educated with much care and thoroughness. They receive individual teaching and help wherever needed. Candidates for Matriculation at the Universities are specially prepared. Terms, £70 a year.—For references, prospectus, or any further particulars, apply to the Warden, Rev. G. M. BOURNE, D.C.L.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon. assisted by a Cambridge M.A. and competent Teachers, prepares PUPILS for the Universities, Woolwich, Sandhurst, and all Competitive Examinations. A few Vacancies.

CARSHALTON HOUSE SCHOOL, Surrey.—BOYS carefully prepared for Civil and Military Examinations.

SANDHURST and MILITIA EXAMINATIONS.—Mr. ALFRED TUCKER, Salamis, 16 Lee Park, Lee, S.E., in the year 1880 passed nine out of ten for the Preliminary; Four Pupils obtained Commissions in the Militia; four in the Sandhurst; Four Militia Officers qualified. Mr. TUCKER'S average number of Pupils is Twelve.

PREPARATION for SANDHURST, WOOLWICH, and COOPER'S HILL.—Individual Tuition. Special attention paid to the speaking of Modern Languages.—For terms, address Mr. E. VIAL, Rosville, Spring Grove, Surbiton, Surrey.

THE TRANSVAAL.

THE grievous disaster at the Majuba mountain near Laing's Nek can scarcely fail to put an end to negotiation. The demands of the Boers will now be increased; and the difficulty of an amicable compromise is greatly aggravated by defeat. The death of Sir G. COLLEY, who was charged with the conduct of the negotiation, will be an additional cause of interruption. The loss of a gallant soldier is attended with general regret; and, but for the insufficient number of men and the melancholy result, his latest enterprise would not have been regarded as a proof of rashness. The discovery of an unoccupied height which commanded and turned the line of the enemy's defence was creditable to Sir G. COLLEY's military skill; and the risk of being anticipated by the Boers in the occupation of the hill explains his apparent precipitation in bringing on an engagement while Sir EVELYN WOOD was in Natal, hurrying up the reinforcements to the front. Unfortunately, Sir G. COLLEY, not for the first time, miscalculated the force which was required to accomplish a special service. He evidently believed that six hundred men in a strong position could repel the attack of a much larger number. The perhaps unfounded report of a neglect to secure a due supply of ammunition offered some consolation to national susceptibility, at the expense of the general in command. It now appears that Sir G. COLLEY had, perhaps in consequence of the smallness of his force, only left twenty men to guard the access to the summit of the hill, and that the Boers were able to storm the position with an overwhelming superiority of numbers. Defeat was perhaps rendered more certain by the selection of detachments from several regiments and of a few sailors of the Naval Brigade to perform a service which required the strictest discipline and the most perfect confidence of every man in his comrades. Notwithstanding previous failures, Sir G. COLLEY seems himself to have neglected the warning not to despise the enemy which he had addressed to the army. Since his death in the field it would be ungenerous to blame severely the victim of his own imprudence.

It had long been known in the army that Sir GEORGE COLLEY relied too confidently on the quality of English troops, in comparative disregard of their numerical strength. He is believed when he was military secretary to the Viceroy of INDIA to have recommended the employment of an absurdly insufficient force for the invasion of Afghanistan. His three successive defeats in the Transvaal campaign may be attributed to the same peculiarity or defect of judgment. It is satisfactory to know that Sir EVELYN WOOD assumes the command until the arrival of Sir HENRY ROBERTS. Both officers enjoy the confidence of the army and the country; and, even if they were disposed to incur unnecessary risks, they may be trusted to profit by the recent lesson. The Government acts wisely in sending large reinforcements to the seat of war; and Sir EVELYN WOOD is now probably strong enough to hold Newcastle or Mount Prospect in safety till he is joined by the regiments which are already ordered to Natal. The only urgent reason for immediate action would be furnished by the precarious condition of some of the garrisons in the interior. The strange report that the Boers had taken Wakkerstroom or Wesselsstroom, and that the garrison afterwards re-

covered the place, requires confirmation. It has hitherto been supposed that none of the fortified posts were in immediate danger of assault; but their stores, and especially their provisions, must be in process of exhaustion. The first attack on Laing's Nek was at the time considered as an indication that the General believed one or more of the garrisons to be in danger, and in a curiously apologetic order of the day he gave his troops the same explanation of his abortive enterprise. Sir EVELYN WOOD will perhaps be able to obtain through native messengers accurate information as to the urgent necessity of relief. It is not at present known how far his movements may be regulated or hampered by the attitude of the Dutch population in the Newcastle district, and by the sympathy of the Orange Free State with the insurgents. In the conduct of the campaign it is necessary to trust the discretion of a gallant and practical officer.

The resolution passed by the Free State Legislature, though courteous in language, is menacing in substance. Only one side of the controversy is noticed, and the English Government is advised to make concessions which are equivalent to unconditional submission. The alternative, though it is not plainly stated, is suggested in intelligible language. The sympathies of blood and of customs between the two neighbouring communities are mentioned with the obvious purpose of explaining an impending alliance. A part of the active population has probably anticipated the action of the Government. It is not known whether volunteers from the Free State have taken part in the recent engagement; but it is generally supposed that the Boers have received reinforcements from the other side of the border. If ostensible neutrality is observed, the Government of the Free State will probably, while it avoids a declaration of war, place its territory and its resources at the disposal of the insurgents. A few guns now in the possession of the Boers are believed to have been obtained from the Free State. The same document contains vague threats of disaffection among the Dutch inhabitants of the English colonies. There is no doubt that the feeling which had replaced former antagonism of race and language has been perceptibly impaired by the unfortunate quarrel in the Transvaal; but thus far there has been no open display of disaffection at the Cape. ROBERTS' dream of a Dutch Republic, extending from the Cape to the Zambesi, is not likely to be realized; but there is no knowing what may be the result of a prolongation of the war. The agitation which has arisen in Holland is itself embarrassing; but Dutch patriots travel fast in political speculation. Some projectors have devised a plan for the transfer of the Transvaal to the Kingdom of the Netherlands in exchange for Borneo, which the English do not want, and which does not belong to the Dutch. Holland is immediately to concede independence to those parts of the Transvaal which are supposed to be fit for it, and apparently to retain the rest as a commission or reward for trouble. The substitution of Crete for Epirus in the negotiations on the Greek and Turkish question was a commonplace proposal in comparison with the Borneo scheme.

There is no reason to suppose that the renewal of the Basuto war will in any way affect the more serious conflict in the Transvaal unless it causes the overthrow of Mr. SPRIGGS' administration. There is reason to believe that the power and spirit of the insurgent natives are broken, though they are not yet prepared to accept without modifi-

cession the severe terms imposed by the Government. It may be said that Lord Kimberley was well advised in addressing to the Cape a measure or remonstrance on the harsh conditions offered to the Basutos. Three of the most obnoxious chiefs are to be subjected to trial, which, as all the facts are notorious, practically means conviction. It is not to be suspected that the Ministers of the colony would inflict capital punishment for a political offence which is scarcely a moral crime. The incriminated chiefs would, like CELEWAYO, be condemned to imprisonment; and, in time, when their country was quiet, their sentence might be remitted without inconvenience. It was a matter of course that the disarmament which was the cause or pretext of the rebellion should be enforced when resistance was suppressed. The justice of the fine which is to be paid as a result of defeat depends on the amount. It may be conjectured that the other terms of peace would not have been rejected if the Government of the Cape had waived the surrender and punishment of the leaders. The choice of accepting or releasing a peace probably rests with the chiefs who were personally interested in the demand of surrender. Lord KIMBERLEY may perhaps be justified in thinking the terms severe; but he has no means of giving effect to his independent judgment. Sir HERCULES ROBINSON, though he had received direct instructions from home, acted in the negotiation by the advice of his Ministers. The disapproval of the COLONIAL SECRETARY is not unlikely to confirm Mr. SPRIGG and his colleagues in their policy with respect to the Basutos. They from the first refused to solicit or to receive assistance in the war from the Imperial Government, for the reason, as they uniformly allowed, of retaining in their own hands the exclusive control of native affairs. As Lord KIMBERLEY is neither able nor willing to interfere with their practical independence, his comments on the unconciliatory spirit of the Government will only produce irritation. The Cape Ministers have falsified some of the predictions which were commonly uttered when the Basutos first were in rebellion. In a few months they have both repeatedly defeated the natives, and they have perhaps produced a stronger impression by depriving them on a large scale of their cattle. It is highly improbable that they should allow the Imperial Government to interfere in the results of the war. It would seem that the conflict has been mainly projected and sustained by the English part of the population. The Burghers who, like some of the Federal regiments at Bull Run, retired from the army in the midst of a battle, are not zealous in the war.

THE COURSE OF BUSINESS.

AFTER a curious period of vacillation at the end of last week and at the beginning of this, the Government at last made up their minds to adopt a course in reference to the business of the House which, although decidedly "complicated," as Sir RICHARD CROSS called it, and open to very serious objections from the practical point of view, at least relieves them from the charge of intended breach of contract which weighed so heavily on them up to Monday. The mysterious silence observed for some days may be thought to point to the suggestion that some such breach was at least considered, and the return of Ministers to a sounder mind has been accompanied by serious grumbings, not merely from the extreme Radicals, but from the newspaper which was once supposed to be the organ of the Conservative party. The extreme impropriety, from the point of view of party morality, of dropping the Arms Bill has been pointed out before now. The impropriety of dropping it, from the point of view of public policy, may be said to be sufficiently expounded in the speech of the HOME SECRETARY on Tuesday. It is sufficient for the present to point out that the days of interregnum in which it was not certain whether the Government were in earnest or not about the Arms Bill have been, singularly enough, marked by a return of the outcries which, since it was evident that they were in earnest about the Coercion Bill, had almost ceased. No better proof could be given of the danger of Governments playing fast and loose, if indeed any proof were needed of a thing so evident and indisputable.

Although, however, the introduction of the Peace Preservation Bill (to give it its proper title) is a matter for the sincerest congratulation, the arrangement which the Government have adopted in reference to the general pro-

cess of business cannot be considered satisfactory. It is sure to be, and indeed has already been, a source of complications; it is nearly certain to result in a great loss of time, and it has disclosed several new and unpleasant proofs of the awkwardness of the state of argument. According to the theory which was generally held, the House had voted itself into this state once for all, in respect not merely to the Coercion Bill, but to the Arms Bill. The Government and the SPEAKER, however, held a different view, and it was accordingly necessary, after declaring urgency to have ceased on Monday, to get it re-voted on Tuesday. The new condition of duress, however, is a sufficiently curious one. The House, according to the theory which has now been authoritatively promulgated, can give itself what used in old days to be called "day-rules," whenever it pleases. It can be urgent one day with one thing and not urgent another day with another, or it can be urgent with two things, but alternate the states of urgency. The Government have announced their intention of adopting this streaky arrangement as far as concerns the Arms Bill and the Army Estimates. Unluckily, however, urgency not having been voted for the latter, obstruction is still possible, and easy on the days when the fetters are unloosed, and advantage has not failed to be taken of the fact. It was indeed idle to suppose that the Irish members would be particularly grateful for the severe lesson they have recently had, or that they would abstain from reverting to their old tactics directly those tactics became applicable. They have not so abstained, and the immediate result was that Monday evening, when everybody was anxious that Mr. CHILDESS should make the statement which, under present circumstances, has an almost painful interest, was devoted to a discussion on Irish magistrates—a subject novel, practical, and important in about equal degrees. Very unfortunately, too, it happened that the HOME SECRETARY had, in Mr. FORSTER'S absence, to take charge of the introduction of the Arms Bill. The speech in which he performed that duty had several merits, but among those merits that of a conciliatory attitude was not included. Men much milder mannered and much more public-spirited than the scattered joints of Mr. PARNELL'S tail might well have resented Sir WILLIAM HARCOURT'S peculiar method of dressing wounds with vinegar and cayenne pepper. The consequence is that not merely may strenuous opposition, carried to the utmost possible limit, be expected to the Arms Bill itself, but that it is extremely improbable that much, if any, progress will be made with other business on the nights on which the Government propose not to take that measure. The outbursts of Mr. DILLON and Mr. ILIALLY on Thursday were directly traceable to the HOME SECRETARY'S provocation, inexcusable as they were in themselves. Considering the unvarying readiness with which the Opposition have given way to the demands of Ministers, they may perhaps complain, with some justice, that Ministers should go out of their way to make the progress of business difficult, if not impossible—first, by frittering away time through the division of urgency and not urgency, and, secondly, by needlessly embittering discussions which are bitter enough already. It really must have seemed to any bystander on Tuesday night that Sir WILLIAM HARCOURT was trying to cover the intention of the Government to back out of the Arms Bill by the violence of his attack upon undoubtedly guilty parties.

The most serious part of the matter, however, remains to be noticed. It was pointed out last week that the worst point of urgency in the present is that it involves urgency in the future. The House has got itself into the position of the narcotist who, having begun to take chloral or morphia to make himself sleep, finds himself unable to sleep without morphia or chloral. Urgency for the Estimates is perhaps as unconstitutional a notion on the face of it as can be conceived; yet without it is extremely hard to see how any money is to be got. Nor is it for a moment to be supposed that the ill will of the coerced members of Parliament will limit itself to supply or to the important branches of public business. Already on the rare occasions upon which minor measures have shown their faces in the House, they have usually met with cruel treatment from the Irish representatives on the well-known and constantly practised principle of relieving your feelings upon a small boy in the crowd. If urgency on Coercion Bills and urgency on Supply should be followed by urgency on Alkali Bills and urgency on measures intended to rescue infants from the cruel victimizer whom Mr. DOBSON loathes, it would be a capital

The new urgency rule, which has since fallen into contempt and disuse, and with which urgency is now regarded as being strengthened by the later developments and variations of its nature. It is, to say the least, not good for the authority of the SPEAKER that he should produce rules in the afternoon and withdraw them at midnight, and the inconveniences of continued urgency, which are to some extent in evidence, seem likely to be less than the evils of the new intermittent urgency. According to the decision to which we have already referred, not merely may urgency be taken off and on at pleasure, but the House can free itself from it by a simple majority. A little reflection will show that this throws much too great power into the hands of the Government of the day. They may obtain the original consent of the Opposition by combining good provisions with more dubious ones in the same measure, and when they have secured the latter, they may by the aid of their majority release themselves from urgency, and go to other business. It may be said, of course, that something must always be left to the operation of proper feeling and common sense. Unluckily, experience is hardly necessary to show that proper feeling and common sense are not the motives most powerful in party struggles, and if experience were wanted, it has abundantly been supplied of late. For the present the prospects of business cannot be said to look rosy, and the generalship of the Government has hardly been such as to inspire much confidence in their power to make them look rosier.

THE PROTECTION BILL.

THE Bill for the Protection of Life and Property has finally passed the House of Commons; and there was never any doubt that it would be favourably received by the House of Lords. It will be easy to taunt the peers with their alleged indifference to constitutional safeguards; but it is not surprising that a just and necessary measure should be approved by an Assembly in which the classes which opposed the Bill in the House of Commons are wholly unrepresented. The unanimity of the English and Scotch members in the House of Commons was scarcely impaired by the alliance of a dozen extreme Radicals with the Irish Obstructors. It is true that some moderate and respectable Irish members voted against the Bill, though they abstained from factious opposition; but some allowance must be made for natural deference to the prejudice or constituencies. The Home Rulers who declined to acknowledge Mr. PARNELL as their leader expressed in strong language their detestation of the crimes which the Bill is designed to repress. Parliament only goes a step further in the logical inference that the criminals ought to be deprived of the immunity which they have hitherto enjoyed. Their tender-hearted friends and patrons have secured for them lenient treatment in prison, and outdoor relief, in case of need, for their wives and children. In sterner times offenders who will, with few exceptions, be to the knowledge of the authorities guilty, would not have been allowed the comparative immunities of unconvicted prisoners; but in a doubtful case it is reasonable and right to incline to the side of mercy. If some of the ordinary perpetrators of outrage and assassination deem it prudent to seek the congenial society of Mr. DEVOY and Mr. DONOVAN ROSSA on the other side of the Atlantic, their presence may willingly be spared. It is to be regretted that they should escape punishment; but the most important point is that the country should be relieved of their presence. Non-professional amateurs who indulge in occasional persecution and intimidation of their peaceable neighbours will probably suspend their operations, since they can no longer rely on the fears or the sympathy of witnesses and juries.

In moving the third reading of the Bill Mr. FORSTER confessed that he would have been glad to obtain the powers which it confers on the Executive in November last, but he has persuaded himself that Parliament at that time would not have been prepared to do its duty; and the Government therefore thought it better to neglect its own. The consequence of the delay was a vast and rapid extension of the power of the Land League; and the temporary attainment through the greater part of Ireland of the objects of the conspiracy. Mr. FORSTER'S statement proves that the Government was in possession of evidence which would have justified immediate legislation; and

they had no new evidence known enough to confirm the same conclusion. It is possible that the House of Commons may have been more ready to act in January than in November; but it is scarcely the business of a responsible Government to depend on capricious changes of popular sentiment. The peaceable part of the Irish community had for some months before the beginning of the Session indignantly condemned the inaction of the Ministers. If they had proposed the Protection Bill earlier, they would have had no additional argument to encounter, for the conventional cant of repugnance to exceptional measures was as rife in the late winter as in the autumn. As the overwhelming majority of the House of Commons were content to swallow its scruples, it is not worth while to inquire whether they ought to have prevailed. In the course of the debates several opponents of the Bill enumerated the thirty or forty Coercion Acts which have been required by the condition of Ireland between the Union and the present time. It is a legitimate inference that more vigorous methods of repressing agrarian crime than those provided by ordinary English law are habitually required. It is but recently that remedies of financial paradox or commonplace have ceased to ball the Income-tax an extraordinary impost only justifiable in time of war. As it has endured for nearly forty years of almost uninterrupted peace, its place in the fiscal system begins to be recognized. In the same way it may be argued that Coercion Bills have almost become a part of the ordinary law of Ireland.

Of another motive which probably determined the policy of the Government Mr. FORSTER could scarcely be expected to speak; nor could there be any advantage in recalling past misadventures, if there was not reason to fear that they may be repeated. Mr. FORSTER, according to general belief, proposed that Parliament should be summoned before Christmas, and he is thought to have been overruled in deference to the objections of Mr. BRIGHT and Mr. CHAMBERLAIN. Both Ministers at the beginning of November declared, apparently in answer to Mr. GLADSTONE'S Guildhall speech, that they were opposed in principle to coercion; and they implied that their continuance in office depended on the acceptance of their decision by their colleagues. Mr. BRIGHT added the general proposition that force is no remedy for disorder; and indeed he raised a doubt by expressions used some weeks afterwards whether he wished the existing form of disorder to cease. In his letter to Lord CAMARON he exulted over the spectacle of landlords running for their lives, as if he deemed that their life and property were not entitled to protection. The same baneful influence seemed a few days ago likely again to prevail. The *Standard*, as the semi-official organ of the Birmingham Ministers, announced the probable postponement of the Arms Bill. Among other insufficient reasons for the delay, attention was specially called to the scruples of a certain section of the Ministry, or, in other words, of Mr. BRIGHT and Mr. CHAMBERLAIN. Their objections to restraint imposed on agrarian criminals were intelligible; and indeed they corresponded to the formula which is frequently recited and explained away in the House of Commons. The arguments against interference with the armament of the population are more difficult to understand. The conscientious opponent of war, which must include civil war, ought not to facilitate the acquisition by possible insurgents of rifles and ammunition. It may perhaps be a negative constitutional right to carry arms, as long as arms are not usually carried; but, as soon as danger is apprehended, the prohibition of the use or possession of deadly weapons is obviously expedient and just. It is universally admitted that the Ministers committed a blunder in not renewing, as their predecessors had intended, the Peace Preservation Act, which is principally directed against the supply of arms to the population. Their enemies assert that their refusal to revive the Act was the result of party considerations. That they had miscalculated is sufficiently proved by their introduction of a Peace Preservation Act, and also by the inclusion of the measure in the declaration of urgency. If they had abandoned the Bill they would not have been at liberty to defend themselves on the cynical ground which is suggested by some of their supporters. It has been argued that if, as Mr. Justice FITZGERALD said, every farm servant has a gun or a revolver, it is too late to prevent a mischief which is already complete. It is, indeed, difficult to discover arms which are easily concealed, but the power

of seizing them would in many cases be useful to the police; and if, as is generally believed, there is still a large importation of arms into Ireland, some good may be done by prohibition. The conscientious objection to proposals for intercepting instruments of murder deserves no respect. Lord HARTINGTON'S announcement that the Peace Preservation Act is to be passed relieved those who wished to support the Government from anxiety and embarrassment. Mr. DILLON has since informed the House of Commons that the arms in the possession of farmers under the influence of the Land League ought in his judgment to be used to murder landlords until the people were strong enough to engage in civil war. It is true that some of Mr. DILLON'S colleagues were shocked by his audacious defence of assassination.

The Ministers who took part in the recent debates have, with the remarkable exception of Mr. GLADSTONE, repeatedly endeavoured to reconcile the Radicals to the Protection Bill, by holding out the prospect of a comprehensive or confiscating Land Bill. Mr. BRIGGS can scarcely have intended to prepare the way for disappointment when he assured the House that the Government measure would satisfy politicians of his own opinions. Mr. FORSTER censured the obstructive party for delaying the introduction of a measure which, as he submitted, was to remove the great and legitimate grievances of the Irish nation. The mischief and the remedy have both been recently discovered. Only eleven years ago Mr. GLADSTONE carried a measure which, as he then thought, relieved the tenants from all risk of injustice. A mere proposal to correct casual oversights in the Bill of 1870 would be rejected by the agitators and by the excited population. If the widely spread belief in the moderation of Mr. GLADSTONE'S opinions on the subject is well founded, his colleagues have done him no service by any preliminary flourish of trumpets. The Irish tenants and the land theorists who are anxious to assail the system of landed property expect some large and indefinite concession. Neither class understands that the improvement of the permanent condition of the occupier is a more difficult and complicated task than the spoliation of the landlords. If the present holder were relieved of the whole or of a part of his rent, the next purchaser of his tenant-right would pay the full rack-rent for the land. Modern projectors attribute to legislation the unlimited power which Bacchanalian poets ascribed to good wishes sanctified by libations of wine—

We'll drink the sickly into health,
We'll drink the wanting into wealth—

but no law which has yet been proposed will secure the petty farmers of Connaught against periodical famine. It will also not be easy to provide against a renewal of the Land League agitation. Tenant-farmers will still be liable to pay rent, and they will be as able as now to withhold payment. It would have been judicious not to exalt beforehand the merits and the scope of the Land Bill.

THE ABANDONMENT OF CANDAHAR.

THE long promised debate in the House of Lords on the Candahar question had been preceded by so much discussion of the matter that few persons of any intelligence can have felt at a loss for the material necessary to come to a conclusion. On the one side, that which favours the relinquishment of the position, were to be found a few able, experienced, and impartial authorities, a few pledged advocates of the backward Indian policy, and a very large number of persons, with HER MAJESTY'S Ministers at their head, who had made up their minds to pay no attention to any reasoning on the subject. It has long been obvious that, of the considerable budget of principles and promises which was unpacked at the general election, the entire abandonment of Afghanistan was the one to which the Government clung most desperately. On other points they were compelled before very long to manifest once more the painful difference between "ins" and "outs"; but here, it was clear, they meant to stick. Their faithful followers, therefore, have no choice but to stick with them, and, to do them justice, they have done so. On the other side, the side of retention, were in like manner to be found a few advocates of the forward policy at any price, and a considerable number of qualified, and presumably impartial, experts. But while the rank and file of the partisans of the Government have had next to no

reasons to show for their partisanship, the great body of those who look upon the proposed abandonment of Candahar with regret, do so, not because of any *parti pris*, but simply because in the circumstances it seems to them that Candahar ought to be retained. The difference between the constitution and methods of procedure of the two parties was emphasized by the publication of the recent Blue-Book of military opinions. It was very noteworthy that almost all those officers who were in favour of retiring originally delivered their opinions before the events of last autumn. Some of them have changed those opinions since, some of them have apparently thought consistency a better thing than openness to new impressions. But it cannot be too often pointed out that the opponents of the abandonment of Candahar base their opposition solely on existing circumstances and the actual progress of events. The masterly memorandum which Sir BARTLE FRERE published on Thursday does not indeed deal with the whole question, but the principle which it inculcates, that of approaching that question only with a full appreciation of the facts, and not on abstract considerations, is the sound, and the only sound, one to go upon.

The debate itself exhibited with sufficient faithfulness the characteristics of the preliminary discussion. On Thursday night, in the House of Lords, as for many weeks past in the columns of certain newspapers, the advocates of the Government might be seen and heard discussing the abstract strategic capabilities of Candahar, the cost of its occupation according to the estimates of a pledged foe of that occupation, and many other things of the same interesting, but curiously irrelevant, kind. Even the celebrated opinions of the late Lord SANDHURST and the late Lord LAWRENCE, neither of whom lived to see the state of affairs which has to be considered, were once more extracted from their venerable scabbards and brandished in the face of the irreverent persons who prefer to judge the cases of to-day according to to-day's circumstances. On the other hand, Lord LYTON and Lord SALISBURY, the latter entirely, the former for the most part, confined themselves to arguments of the strictest actuality. Lord LYTON was indeed compelled by his position to give a kind of historical introduction to his speech, and his adversaries naturally fastened upon this. But Lord SALISBURY gave them no such handle, and Lord NORTHBROOK in his reply almost literally confessed and avoided the unanswerable exposition of the changed situation which was given by the late Foreign Secretary. It is certainly the very madness of political absorption in things that are past that any one should think that the well-worn jeer about Lord SALISBURY'S former affection for large maps is an answer to his argument. When Lord SALISBURY made that remark, there was a strong—as many people thought an impregnable—barrier between Russia and Afghanistan. The barrier is gone, and the largest map can only exhibit the Russian outposts on the borders of the province of Herat. It is better surely to approach the subject in the attitude of Lord DERBY, who frankly says that the constitencies have settled all questions about Afghanistan beforehand, and that the House of Lords is not likely to be attended to by the present Government, than to ignore facts in the absurd fashion of some of Lord SALISBURY'S critics. Lord DERBY'S position is not heroic, certainly it cannot be said to be dignified, and if it were adopted by the Peers the uselessness of the House of Lords would become sufficiently evident. It may give rise to curious reflections as to the mental idiosyncrasy of the man who maintains it; but, at any rate, it has the merit of not confusing the events of 1880 with the events of the year 1. Lord DERBY is almost the only defender of the abandonment of Candahar who seems to have appreciated anything which has happened since the year before last. He has heard of the general election, and it has produced a considerable effect on him. His associates in this business may have heard of the battle of Maiwand and the capture of Gook Tepe, but it has produced no effect upon them at all.

The idle, and in every sense of the word impertinent, attempts which have been made to discount the verdict of the Lords, need only be mentioned, not seriously discussed. Those persons who affect to consider the House of Lords as an unpractical debating Society are themselves perfectly aware that on such a subject as this it speaks with greater force than any popularly elected assembly can by any possibility do. A considerable num-

ber of the peers are men of actual military experience; a proportion far larger than in the Lower House consists of practised statesmen who have given their lives to the consideration of questions of public policy; many of the members have reached the Upper Chamber solely in virtue of their proved intellectual distinction; almost all are independent of the side motives which act so powerfully on most members of the Lower House. The attempt, however, to which reference has been made is on a par with the attempt to mix up the Candahar question with that of the original Afghan war, of Lord LYTON's designs on Russia years ago, and a hundred other things utterly irrelevant. The real question, which has been made sufficiently clear in the debate, is this. We are at Candahar, no matter how or why. If we abandon it, it can only be reached again by an advance, of the difficulties and expense of which we had bitter experience but six months ago. Retirement will assuredly create a bad impression in India; and it is at least unlikely that it will conduce to the establishment of a stable and friendly Afghanistan. Meanwhile, on the other side of the country which we are so lightly quitting another Power is making the most persevering advances. Against this, putting aside entirely irrelevant and out-of-date arguments, nothing can be said, or has been said, except that the occupation of Candahar would be very expensive, that it would serve as a kind of seton to keep the Afghans in perpetual irritation, and that for military purposes it is not the best or even a good situation. The first two arguments rest upon disputed facts; and even if the facts be granted, they are not decisive. The largest sum mentioned as likely to be expended on retaining Candahar would be a trifle to the expense involved in a fresh Afghan war—and perhaps something more than an Afghan war. The irritation of the Afghans would be powerless, while their good will has unfortunately been shown by experience to be a thing impossible to secure anyhow. As for the military merits of Candahar the question, as Sir BARTLE FRERE has well put it, is not shall we go to Candahar, but shall we stay there? and the events of the campaign of last summer have sufficiently proved the importance of the place as a matter of fact. The balance of argument thus seemed before the debate to lie altogether on the side of retention, and we do not observe that anything said on the other side has altered it. In face of the dogged and unreasoning resolution of the Government argument may of course be useless, but it at least liberates the souls of those who have patiently undertaken it. If a great calamity or a huge additional outlay of money results—as one or the other almost certainly will result in a few years—from the abandonment of Candahar, the blame of that abandonment, effected as it will have been in the face of light and knowledge, will rest on the heads of Mr. GLADSTONE and his colleagues without the possibility of evasion.

ARMY ORGANIZATION.

MR. CHILDERS had so many topics to treat, and had necessarily to deal with them in so brief a manner, that it is not easy on a first perusal of his speech to understand the general purpose of the changes he contemplates. But the elaborate and complicated details into which he entered may be arranged in a fairly methodical shape if they are taken in connexion with the mischiefs he endeavoured to remedy. The main defects in our present system of army organization are three. The men are not the right men, the officers are not sufficiently encouraged, and we have not in hand an adequate force for the emergencies of little wars. The men are too young, they are neither disciplined nor hardened before being subjected to the exposure and trials of difficult campaigns, and the large demand of India for acclimatized soldiers is most imperfectly met. The great grievance of the officers is that they are liable to be turned out of their profession in the prime of life, and at the moment when they have acquired a complete knowledge of their ordinary duties. Militia and Volunteer officers exist almost on sufferance, and with a very bare recognition of their merits. Non-commissioned officers are neither paid nor rewarded sufficiently to induce them to devote themselves to their calling with that persistency and energy on which the efficiency of the army largely depends. When a little war breaks out, or a disaster has to be retrieved, there is no complete force ready to be despatched.

The boys of one regiment have to be supplemented by the boys of another, the officers do not know their men, and the motley group which bears the name of a regiment is ill prepared for war, and totally unprepared for exposure. Mr. CHILDERS has honestly tried to grapple with these evils, and although his proposals do not go so far in some respects as might be wished, and it is difficult to understand in some cases how they will bear the fruits he anticipates, they are, on the whole, changes for the better, and, if imperfect, are in the right direction.

The system of short service at present in operation has two incontestable advantages; it attracts recruits and furnishes a reserve. The men engaged serve six years with the colours and six years with the Reserve. As the men on active service are not, under this system, sufficiently seasoned, the obvious remedy seems to be to extend the term for which the men are engaged; and Lord AIREY's Commission recommended that the term should be lengthened by two and a half years. But this change would, it is apprehended, check the flow of recruits; and men could only be induced to engage for the longer term by the attractions of higher bounties and of pensions, which would impose on the country an annual charge of a million and a half sterling. Mr. CHILDERS does not contest that the army would be a better army if this additional outlay were made; but he says that the country would not stand it, and that no Minister would dream of asking that it should stand it. It must be understood, therefore, that Mr. CHILDERS proposes that we should have, not the best army we can buy, but the best army we are willing to pay for. Accordingly, he falls back on a proposal which is only second-best, but which is practicable, and suggests that, while the term of engagement remains unaltered, the men shall serve seven years with the colours, and only five with the Reserve. In order to strengthen the numbers of the Reserve, he proposes that men after only a short service at home shall be allowed to pass into the Reserve with inferior pay, but with deferred liability to be called out. This would certainly strengthen the Reserve, but it would proportionately diminish the supply of trained and seasoned men at hand for active service. The main contribution of Mr. CHILDERS to the efficiency of the rank and file is the proposal that no one shall be allowed to enlist under the age of nineteen, and that every one who calls himself nineteen must in stature and strength have the appearance of the age he claims. The special needs of India are in some degree met by the suggestions that no one shall go out to India till he is twenty, that soldiers in India shall serve with the colours for eight years instead of seven, and that those who wish to do so may remain in India for two years longer. These are all improvements; but it will be observed that, when they are all carried out, the soldier who enlists at nineteen will leave India, at the latest, when he is twenty-nine. This is a very early age for India to lose the men best fitted to encounter the difficulties of an Oriental campaign; while, on the other hand, there was much force in a remark made by Lord EUSTACE CLICHL that, even under the new system, soldiers will begin their Indian life too early, and that it would be better if it could be arranged that no one should be sent to India until he was twenty-one.

Mr. CHILDERS drew a dismal but just picture of the present prospects of junior officers. As things now stand, out of one thousand officers who enter the line as second lieutenants, no less than 581 will be compulsorily retired as captains at the age of forty on 200*l.* a year. Only 216 have any chance of becoming employed as majors, and only 139 as lieutenant-colonels. In due time, as a consequence of these enforced retirements, there will be up and down the country nearly 4,500 captains, ejected from the army at the early age of forty, and costing the country 900,000*l.* a year, besides some five hundred more compulsorily retired as majors. Mr. CHILDERS proposes to guard against this absurd result by increasing the number of the higher officers and lessening the number of the lower. All regiments are to be henceforward double battalion regiments, and in the double battalion regiment of the future there are to be 4 lieutenant-colonels instead of 2, and 8 majors instead of 4; while, on the other hand, the 20 captains of the present system are to be cut down to 12 and the 34 subalterns to 30. The effect of this will be that the regiment will have six officers less than at present, and the pay of the six officers saved will be transferred to the maintenance of more officers of a higher grade. Whether the regiment as a

whole will benefit by the change is not entirely clear, but there can be no doubt that it is very much to the advantage of the captains. Instead of 216, no less than 516 officers out of 1,000 may now hope to reach the rank of major, and even those who do not attain this rank in the ordinary course of promotion will be allowed to go on a list of unattached majors, and to hope during an allotted time that an opportunity of acting as majors may be offered them. If no such opportunity offers, they must leave the army at the age of forty-three, with their 200*l.* a year as at present, but they will leave with the honorary rank of lieutenant-colonel. Even at the worst, therefore, disappointed captains will have the consolation of a well-sounding title, and a similar consolation has been devised to soothe the aggrieved minds of Militia and Volunteer officers. They are to furnish 4 aides-de-camp to the QUEEN, they are to have 25 ribands of the Bath thrown open to them, and, after a certain length of service, they are to be allowed to retain their rank and wear their uniform. Colonel WALTON, on behalf of the Volunteers, assured Mr. CHILDERS that the concession thus made to the Force would be most highly appreciated by it.

The third object, that of having an army ready for the contingencies of minor wars, is one that, as Mr. CHILDERS assured the House, has lately been much weighing on his mind, as indeed it has on the minds of many who do not hold so responsible a position. Mr. CHILDERS proposes to increase the army by nearly 3,000 men, and to have always ready for service twelve regiments at home and six in the Mediterranean, the former being, with their depôts, each 1,100 strong, and the latter each 1,000 strong. There would thus be in round numbers nearly twenty thousand troops of the line ready for immediate service, and there would also be three battalions of the Guards, six regiments of cavalry, and seventeen batteries of horse and field artillery. This is no doubt a most respectable force of its kind, and it will be a bright day for England when it exists anywhere but on paper. Reliefs for India are to be managed on a new plan. A battalion stationed there will remain no less than sixteen years, but both officers and men will be changed at the end of eight years, and this change will be made principally in the interest of India, which will thus escape a considerable portion of the heavy charges imposed by the present system of reliefs. Localization, instead of being abandoned, is to be intensified. Two battalions of the line and two battalions of Militia are to be formed into territorial regiments wearing the same uniform, with only a very slight distinction to mark the Militia from the line. Some intricate arrangements have been devised for the Highland regiments, so that they shall be grouped in pairs and have plaids and trews so appropriate as not to wound their susceptibilities. Lastly, very considerable things are to be done for the non-commissioned officers. They are to have an assured military career of twenty-one years ending with a pension. During the last nine of these years they are to have increased pay, and after fifteen or sixteen years' service sergeants may be transferred to the permanent staff of their Militia battalions. It may be hoped, therefore, that intelligent and well-conducted privates will regard the calling of a non-commissioned officer as one to which it will be worth their while to aspire, to which they may profitably and honourably devote their lives, and which will give them an opportunity of rendering a real service to their country by imparting coherence and efficiency to the domestic portion of the territorial regiments.

THE GREEK CONTROVERSY.

THE latest Blue-book adds little to the history of the Greek controversy; but it perhaps brings into stronger light the practical divergence of English and French policy. Lord GRANVILLE almost strains the forms of diplomatic politeness when he remarks, not without justice, that M. BARTHÉLEMY ST.-HILAIRE uses arguments against the Greek claims in which he had been anticipated by the Turks. M. ST.-HILAIRE to a certain extent admits the charge when he replies that his reasons were good, whether or not the Turks might have already relied on the same considerations. The English Government hesitated to concur in the abortive project of arbitration; and at last the Minister at Athens was instructed to abstain from any argument which would imply an intention of receding

from the decision of the Berlin Conference. He was, nevertheless, desired not to communicate the resolution to the Greek Government. It is possible that M. COMBON-DUROS may have been astute enough to observe the reticence of the English Minister, especially as it contrasted with the more unqualified language of his French colleague. Prince BISMARCK on more than one occasion expressed a general concurrence in the opinions of the English Government, though he consistently declined to take any course which might result in active interference. Baron HAYMERLE, though he was ready to join in the French scheme of arbitration, was still more reluctant than the German Government to run any risk of war. It is possible that almost all the Cabinets may have foreseen the failure of the arbitration scheme. As their consent was dependent on applications to be made by both the Greek and Turkish Governments, it was not difficult to understand that the French proposal would lead to no practical result. The English Government is not to be blamed for stipulating that, after the experiment had been tried and had failed, it should cause no incidental change of policy. The same reserve has in substance been maintained in the negotiations at Constantinople. There is not, perhaps, much practical importance in a verbal assertion of the continuing validity of the Berlin decree; but there is always a presumption in favour of withholding diplomatic concessions until they can be made for sufficient consideration. It is barely possible that the Turks may consent to a larger surrender of territory, because they have been warned that, if their offers are not sufficiently liberal, the title of Greece to Janina and Metzovo will be recognized by England.

The study of the despatches produces a curious impression of the unavoidable or self-imposed helplessness of Powers which might be deemed irresistible. All Europe wishes, or professes to wish, that Turkey and Greece should remain at peace, and yet the Governments are disturbed by well-founded apprehensions that war is imminent. The obvious reason of their inability to command obedience is the determination of the majority of Powers to abstain from the employment of force. For some years Mr. GLADSTONE has in many eloquent speeches affirmed that the obstinacy of Turkey could be easily overcome by the European concert which his political opponents were supposed either to have prevented or not to have invoked. When he succeeded to the direction of affairs, he seemed by assembling the unanimous Conference of Berlin to have proved the justice of his favourite doctrine. France at that time agreed with the policy of England, and the other Governments were willing that the Western Powers should settle the dispute by influence or by force. Germany and Austria were with difficulty induced to join in the naval demonstration, and they obstinately refused to go further. Mr. GLADSTONE had not overrated the collective force of Europe, but he had not appreciated the difficulty of setting it in motion. He now finds that the concert has resolved itself into neutrality, only disturbed by diplomatic representations. There is no reason to fear that his Government will engage in the unjustifiable enterprise of war with Turkey. The policy of Russia is imperfectly understood; but the other Continental Powers are agreed in their desire to confine the impending war within the narrowest limits. To effect their object, they have nothing to do but to keep the peace themselves and to urge on minor or dependent States the adoption of the same policy; yet M. ST.-HILAIRE is never tired of pathetically remonstrating against a possible convulsion which may profoundly modify the condition of Europe. It would be rash to say that his apprehensions are wholly unfounded; but there is a certain absurdity in the assumption that States animated by friendly feelings to another are at the mercy of events which might produce a general war. M. ST.-HILAIRE's fears were first communicated to the Greek Government, which would welcome a general commotion. The Great Powers are not likely to quarrel, except of deliberate purpose and for important objects. France, Germany, and Austria are bent on maintaining peace; and there is no reason to believe that Russia has any present intention of prosecuting schemes of aggrandizement. Italy has little interest in the Eastern question; and the English Government will assuredly not engage in war.

The language of the Greeks has not become less warlike, except that they have promised to await the issue

of the negotiations at Constantinople; but Sir CHARLES DILKE lately stated in the House of Commons that they have not called out their last reserve. In default of local knowledge, it is impossible to judge whether the postponement of the measure implies incomplete preparation for war. The Chamber has lately approved a Bill for admitting foreign officers into the Greek service; but it is not known whether the European Governments will allow their subjects to accept the offer. It would perhaps have been judicious to take the step at an earlier period. In the Greek army there can scarcely be an officer of high or low rank who has seen actual service. In consequence of remonstrance from the Turkish Minister at Athens, the Greek Government has issued a proclamation against brigandage or irregular fighting on the Northern frontier. If war breaks out, the invading army will probably be joined by a part of the population. Any hopes which may have been founded on the supposed disaffection of the Albanians to the SULTAN have been already dissipated. Some kind of understanding has been established with the League, which is now likely to join in the defence of North-Western Epirus against the Greeks. There will be a certain awkwardness in prosecuting a war of liberation against the inhabitants of a part of the territory to be annexed. Even if the regular Turkish troops were withdrawn, it is doubtful whether a Greek army could occupy Janina if the Albanians desire to defend it. It would be better for the Greeks to acquire without war a considerable accession of territory, and to wait for probable occasions of further aggrandizement. All the Powers, including France, profess general goodwill to the Greek cause; and some of them are sincere. A general disruption of the residue of the Turkish Empire in Europe would probably be disadvantageous to the Greek cause.

While some readers examine the published despatches for the purpose of calculating the chances of war and peace, many politicians are rather anxious to find evidence in support of their preconceived opinions of the sound or erroneous policy of the Government. If war is, as some of Mr. GLADSTONE's followers think, the greatest of evils, his Government cannot be acquitted on the charge of having brought Greece and Turkey to the verge of a rupture. The violent language which had been used in Opposition had some influence in deterring the Government from continuing the policy which had been the object of incessant vituperation. If the late Ministers had remained in office, there would have been no question of a Greek invasion of Thessaly; and it is possible that their successors might have adjourned immediate action if they had not been misled by the capricious policy of France. Mr. GLADSTONE had created difficulties for himself by his attacks upon Austria, which, as he ought to have known, was intimately allied with Germany. It is not surprising that he was encouraged to agitate the question of the Greek claims by the acquiescence of all the Powers in the Conference of Berlin and in the naval demonstration. Having, at last, gratified his fanciful enthusiasm for Montenegro, he hoped to achieve a similar triumph in the interest of Greece. The decision of the Conference, and the subsequent action of the Powers in the Adriatic, naturally caused the Greeks to arm. The English Government, which may have been rash in stimulating their ambition, perhaps deserves credit for its constancy to their cause; but statesmen are bound to succeed, as well as to be benevolent and generous. If a considerable territory inhabited by Greek Christians is liberated without inordinate sacrifices from the Turkish yoke, the English Government will have no reason to regret its hazardous diplomacy. The alternative result of a long and bloody war, and perhaps of a defeat of the Greek enterprise, will involve a heavy responsibility. It is not necessary to consider the remote contingency of a war in which England might be a party.

A SCHOOL BOARD FREAK.

THE strongest advocates of the compulsory clauses of the Education Act must have been moved to a momentary repentance by the appearance presented by the London School Board in the Wandsworth Police-court last Tuesday. It was obvious from the first that the application of the power of forcing parents to send their children to an elementary school

would be a matter of considerable delicacy. It was necessary that the School Board should possess the power, inasmuch as, without it, a large class of parents would continue to sacrifice the children's interest to their own; but as such an exercise of authority was likely to irritate those who had to submit to it, very great care was plainly required not to give the enemies of the Board any occasion to charge it with harshness. Nor was it only for the Board's own sake that this forbearance was required. To interfere between parents and children may sometimes be an inevitable, but it is always a very delicate, operation. There is no point upon which people are more sensitive, and none on which they have a clearer right to be protected against, than needless intrusion. The proceedings at Wandsworth do not merely reflect discredit on the discretion of the London School Board. Perhaps, as the object of their zeal has been a solicitor, and is now classical reader in a great printing office, the mass of the people who are summoned from time to time to appear before Mr. PAGET may be rather pleased than otherwise to find that "gentlefolk" come off no better than they do themselves. Even from this point of view, however, there is something to be said by way of caution. It will not answer for the School Board in the long run to have its cases dismissed with costs. If any considerable number of parents find that the School Board Superintendent is sharply censured by the police magistrate, and is told that the Board ought never to have dreamed of instituting proceedings on the evidence before it, the deference paid by the poor to the Visitors' warnings will be very much lessened. To hold out against his remonstrance will come to be regarded not as the certain prelude to the infliction of a fine, but simply as the first move in a game which two can play at. The larger the number of parents summoned before a police magistrate, the more indisposed he will ordinarily be to convict any large proportion of them. Vague fears of unpleasant consequences to arise from keeping children at home are by far the most efficacious means of getting them to school, and, as evidence to the tender-heartedness of the police magistrate multiplies, this fear loses its influence.

In the present case, however, the Board was not merely careless of its own interest, and, by consequence, of the interest of the ratepayers. Had its error ended here, it would have been sufficiently punished by the ridicule which the proceedings cast on the action of its visitors. But, in the process of making itself absurd, it went out of its way to annoy a man with whom, properly speaking, it was not at all concerned. The Visitor of a certain street in Wandsworth had observed, it seems, that when the children whom he could trace to the several houses had been seen off to school, there was one family left behind which apparently needed no education. This was so shocking an exception that he felt compelled to make an immediate investigation into the reason of it. Apparently, however, he approached the inquiry with a preconceived determination that it should have but one result. In that particular street—a street from which thirty-five children daily went forth to the nearest Board school—no plea could be held sufficient to justify the keeping of a child at home. When the mystery of iniquity had been sounded to its depths, it turned out that this misguided householder had presumed to think that his wife was competent to teach her own children. Whether the Visitor is of opinion that no limit should be placed to the interference of the School Board does not appear. Possibly, if left to himself, he would like to drag every child in London to a Board school. In practice, however, he no doubt recognizes that there is a point beyond which he must not go; but he was not of opinion that a mere solicitor—though he might also be a good classical scholar—could make good his claim to exemption. Had the father turned out to be the President of the Incorporated Law Society or a Professor at one of the Universities, the Visitor would probably have retired from the chase, but no lesser eminence than this could content him. What makes the whole case more extraordinary is that the defendant told the magistrate that he had offered to submit his child to be examined on behalf of the School Board, but that he had received for answer an intimation that he must send her to school. The School Board was resolved to rush upon its fate. To CÆSAR, in the person of Mr. PAGET, it appealed, and to CÆSAR it accordingly went. It is to be hoped that the result of its appeal will suggest to it

some elementary considerations of prudence which may serve to keep it out of harm's way another time. The intention of Parliament in passing the Education Act was not to give School Boards a summary power of searching for children in private houses, whether there is or is not any decent reason for supposing that they are being allowed to go untaught. The Legislature meant to remedy a patent and flagrant evil. Some millions of children were growing up in a state of ignorance which was certain to hamper them in earning a livelihood, and consequently not unlikely to lead them into crime. If the streets of London are at all a fair test of the success with which the Act has been worked, there is still considerable room for the exercise of the School Board's energies without its being necessary to touch a single child whose inability to read and write may not be proved by the application of the simplest test. Why it should please this well-meaning but wrong-headed body to wander into fields where success must at best be so doubtful as the one they have been working at Wandsworth is really past explanation. We say the field into which it has pleased the School Board to wander, because it is not merely in the selection of the particular case that the error lies. The street which this energetic Visitor chose for the scene of his labours is described as being made up of houses letting at average rents of 12s. 6d. a week. Whether the rent is put at so much a week by way of opprobrium is not quite clear; but, at all events, 12s. 6d. a week is more than 30l. a year. Now, the ability and willingness to pay a rental of this amount is pretty good evidence that those who pay it do not as a rule belong to the class for which educational compulsion is required. It is safe to say that the occupants of houses of this value are rather clerks than working-men, and that their notions of bringing up their children will commonly point to making them what they are themselves. Consequently, the commonest considerations of self-interest may be trusted to do the work of the School Board Visitor, and to do it far more efficiently than any such official can hope to do. A man who has to find 12s. 6d. a week for rent does not look forward to putting his children into employments in which it will be a matter of no importance whether they can read and write. For such occupations as he hopes to obtain for them the knowledge which they would obtain at a Board school is absolutely indispensable. A parent is subject to a form of indirect compulsion which is the more effectual because it is entirely self-acting. The unskilled labourer is under no such pressure, because the work to which he would send his child, if he were allowed to do so, needs no preliminary schooling whatever. But the work to which the clerk intends to send his child needs, at all events, an entire mastery of the rudimentary arts of reading, writing, and arithmetic. If the School Board Visitor had been properly instructed by his superiors, he would certainly have understood this as soon as he heard the rental of the houses. If he had had any real instinct for his work, he would probably have known it as soon as he saw the character of the street. As it is, neither he nor the School Board seems to have had any just idea of their functions; and we can only regret that the School Board should not have had to pay more dearly for its blunder. Had the costs been heavier, the motive for amendment might have been stronger.

THE GERMAN MARRIAGE.

THE marriage of the heir of the Prussian and German Crowns has been marked with every sign of general respect and popular sympathy. The bridegroom, Prince WILLIAM, has had to the full all the benefits of education which it is the custom of the Royal House of Prussia to secure to the future sovereigns of the country. He has learnt his trade as an artisan, he has done duty with the Guards, he has studied political economy and criminal law in a University. Further, he has had the best of all educations, the home education of a son whose father is a great military leader and whose mother is one of the most accomplished and high-minded women of any rank in Europe. The bride is the daughter of that unfortunate Duke of AUGUSTENBERG whose political fate was settled in an hour in a billiard-room. Prince BISMARCK was not by any means sure but that he would raise the DUKE to the proud position of lord of Schleswig-Holstein. The courtly jurists of Germany had been instructed to prove that he had an unimpeachable title to the dignity. But when the PRINCE,

in his casual chatty way, entered on the subject of his pretensions with the DUKE, he found that the plan would not answer. He intimated that, although the DUKE might have Schleswig-Holstein, Prussia must have Kiel, and instead of replying with grateful humility that this was a matter of course, the DUKE began to calculate how many square miles of water the harbour of Kiel contained. There was an air of haggling about this which the PRINCE disliked, and before they left the room the PRINCE informed the DUKE that his claim was a chicken which Prussia had hatched, and the neck of which Prussia was perfectly able to wring. Its neck was wrung immediately, and the jurists at once showed that, in some mysterious way, the King of PRUSSIA had the clearest of all titles to the duchies. The DUKE's chance was gone, and he retired to obscurity and poverty. Now, at last, his family has its stroke of good luck, and his daughter is raised to a dignity far higher than any to which he himself ever aspired. The bride has probably gained by having had to live a life of enforced simplicity and retirement, and the German people like her all the better because she has been lifted from low to high estate, and because they think that little but personal affection could have guided the PRINCE in his choice. In point of lineage, however, she is all that could be wished, and if her husband is the QUEEN's grandson, she herself is the granddaughter of the QUEEN's half-sister. Everything was done to give solemnity to the marriage, and to show how much it pleased the Royal Family and the people. Prince BISMARCK could not be induced to leave his home on the occasion, but he never goes out now unless he appears in some very special emergency to abuse his former or present colleagues. But Count MOLTKE was present, as he is quite unaffected, and always appears when it is expected he should do so. Berlin, or at any rate the well-dressed portion of Berlin, is intensely loyal, and entered into the festivities with an ardour which the bitterest weather could not cool. Lastly, when the young PRINCE had to speak, he spoke with much good sense and propriety, and expressed a modest hope that he might be found to walk in the strict path of duty which it is the tradition of his house to follow.

From the days when the Electorate was raised to the rank of a kingdom the Royal Family of Prussia has always treated the work of being a king as a very serious piece of business. It has pronounced that the first duty of a king is to fight, to learn the trade of war, and to know by rough practical experience the duties of a soldier. His second duty is to know the secrets of economical administration, to take care of land and money, and to be a decent man of business. The world is looked on in Prussia as a hard place in which even a king, to hold his own, must know how to push and save. Partly from the exhibition of these qualities, and partly from the lingering traditions of a patriarchal society, the Royal Family of Prussia has always been extremely popular. In the course of time, and from a variety of causes, of which the example of Prussia was not the least powerful, the Prussian conception of royalty and its relation to the people has become almost universal throughout Europe. In these days sovereigns are, with very few exceptions, carefully trained, hard-working, and really liked and respected. It is astonishing, considering how few sovereigns there are and how completely their position is dependent on their birth, that there should be at the present time so many sovereigns who are in one way or another especially eminent. The QUEEN, the German EMPEROR, the Emperor of AUSTRIA, and the King of ITALY are all remarkable instances of rulers who are proficient in the difficult art of ruling exactly as those whom they rule wish them to rule. The King of the BELGIANS is one of the best educated men of his day, and as a scientific geographer has a reputation with which professional experts might be content. The King of PORTUGAL challenges criticism or commands admiration by translating one play of SHAKESPEARE after another into Portuguese. The King of SWEDEN ventures on original composition, and has just published Flowers from his Journal. The Czar, whatever may be his shortcomings, has at least tried great experiments for the good of his people. Even the young King of SPAIN, whose domestic educational advantages were not very great, has shown a firmness, passing almost into audacity, at what he considered to be a critical moment in his short reign. This invention of hard-working royalty is quite modern, and is one of the best of modern inventions. It cannot fail to have a power-

ful effect on the political history of Europe. Democracy is at once checked and represented by the Sovereign when a king works in his sphere very much as the humblest labourer works in his. Whatever envy, too, royalty might excite must be in some degree abated by the discovery that the life of a king grows more and more every day to be a life, not of pleasure, but of toil. Unfortunately, it has lately been shown to be a life of constant exposure to the attacks of assassins; but attempts at assassination have at least the salutary effect, not only of awakening popular enthusiasm for the intended victims, but of giving occasion to admire the consistency with which royalty takes the chance of personal danger as part of its day's work, and, therefore, not deserving of any special consideration.

The continued existence in the Prussian royal line of the high qualities which have endeared it to the Prussian people may serve to support the sinking courage of those Germans who witness with dismay the latest eccentricities of Prince BISMARCK. If the PRINCE is one mainstay of the new German Empire, the character of the Imperial House is another, and the day must come when the PRINCE will be no more, and the House will live on. Prince BISMARCK has lately declared that he will never again talk of resigning, but will continue to hold office until the day of his death, and that he will do this to spite his enemies. He is indispensable, and he knows and says it. The EMPEROR cannot do without him, and Germany cannot do without him. What he orders to be done, whether it is bad or good, foolish or wise, is done, and must be done. But he no longer thinks it necessary to maintain even the decencies of behaviour which befit his high position. He has always been blunt and harsh, but now he has grown tyrannically insolent. 'To be his colleague is to lead the life of a dog, and even worse, for the most miserable dog expects not to be beaten when he does what he is bid to do. Count EULENBERG has just been forced to resign the office of Prussian Minister of the Interior by an act of the PRINCE which no man with the least glimmering of self-respect could fail to resent. As Minister the COUNT had approved a provision in a very unimportant Bill of which Prince BISMARCK disapproved. The PRINCE did not communicate with his colleague in any way, nor did he take the trouble to come himself to the Upper Chamber in which the Bill was being discussed. He merely sent a very minor official, who got up and read a written statement, in which the PRINCE instructed the House that the MINISTER of the INTERIOR was quite wrong, and that the provision in the Bill was a mistake. Count EULENBERG resigned at once, and then the PRINCE, by way of making things comfortable, attended, threw over his wretched dog of a minor official, who, he said, ought to have had the sense not to read, but to learn by heart and speak the statement entrusted to him, and finally voted for the provision he had denounced. This incident came directly after a violent scene in which Prince BISMARCK attacked his former Minister of Finance, Herr CAMPHAUSEN. The offence of this old colleague consisted in his having managed Prussian finance with great success for six years, and disapproving of the financial policy adopted since he left office, which, however much Prince BISMARCK may glorify it, has unquestionably landed the country in something entirely unknown in Prussia, an annual deficit. Nothing of this kind shakes Prince BISMARCK's position, for apparently nothing can shake it. But Prince BISMARCK is every day making it more and more impossible that he should have any successor, and preparing the way for a violent reaction against his measures when he is gone. There would be a very serious danger that this reaction would be fatal to the Empire were it not that, besides Prince BISMARCK, there is the Royal Family of Prussia to keep the Empire standing; and, if the CROWN PRINCE and PRINCESS have handed on the best traditions of their family to a worthy son, they have done very much to perpetuate the Empire which was won by the present EMPEROR and by Prince BISMARCK.

THE SMALL-POX HOSPITAL AT FULHAM.

THE managers of the Metropolitan Asylums Board have, as some of our readers probably know, a quarrel of long standing with the inhabitants of Hampstead. The managers claim, under an Act of Parliament, to have a right to distribute the small-pox patients of London where and how they think fit, and the plan they have adopted is

to bring them together in three or four large hospitals placed like detached forts in the suburban parishes. The inhabitants of Hampstead fall back on their rights at common law, and maintain that, in the absence of express words to the contrary, the Act of Parliament must not be taken to over-ride the ordinary principle of law—that if the community injures a man for the public convenience, it must give him compensation. It seems to be conceded that, if this contention can be established, the system of large hospitals must break down. The collection of a large number of small-pox patients into one place tends to depreciate property, if not to communicate the disease, and the claims for compensation arising out of this state of things would be so numerous and so uncertain, that the managers of the Metropolitan Asylums Board would be continually in hot water. As yet the managers have been worsted in the conflict, and this defeat has generated a large amount of wounded feeling. Now was the time for the ratepayers of London generally to come forward to pour oil and wine into these lacerated hearts. One parish after another should have come forward and begged the managers to place a small-pox hospital of the largest proportions their funds would allow them to build within the parish boundary. The managers would then have felt that all their children were not thankless, and that ignorance and selfishness were vices peculiar to Hampstead. Instead of this, the districts in which the managers have placed or proposed to place hospitals have with one consent begun to make excuse. The inhabitants of Kensington and Chelsea in particular have shown a painful indifference to the real issue. They have treated the matter as though it had to be decided with exclusive reference to the cure of the patients, the prevention of disease, and the relative obligations of London and its component parts. The sensibilities of the Metropolitan Asylums Board have gone for nothing with them. It is all in vain that the managers have dragged through the West End the pageant of their bleeding hearts. Kensington and Chelsea have remained entirely unmoved. They have gone on holding meetings, collecting subscriptions, and threatening legal proceedings, just as if the Metropolitan Asylums Board were not composed of flesh and blood.

Stated with that brutal plainness with which the controversy has been conducted on the side of the districts which dislike having a gigantic small-pox hospital set up in their midst, the case of Kensington and Chelsea comes to this. It is admitted that small-pox patients cannot in many cases be safely left in their own homes. Self-interest, if no more generous feeling, suggests that constant care is necessary to prevent the spread of the disease, and that this constant care is not to be had, except where there are careful nursing and proper appliances for disinfection. Among the poor these are unattainable advantages, and therefore among the poor there is no alternative but to get the patient as soon as possible into a hospital. Any danger that may arise from moving him will be less than the certain risk of leaving him at home. Common sense, however, would seem to suggest that the danger that may arise from moving him will increase in proportion to the distance he has to be carried. Moreover, the further he goes from his own home the less sense of neighbourhood there will be between him and those who live in the district to which he is taken. If a small-pox patient has to be carried from his house in one part of a parish to a hospital in another part, no one has any ground for complaint. The parish is a unit in itself, entrusted with the management of its own affairs, and competent to determine which is the best site for a small-pox hospital. But, if a small-pox patient has to be carried from his house in one parish to a hospital in a parish some miles distant, the case is altogether different. The parish in which the hospital stands acknowledges no tie of neighbourhood with the parish from which the patient is brought. It sees in the importation of small-pox cases a source of infection unaccompanied by any compensating gain. On the parish hospital system the district which suffers by one part of the process is also the district which profits by the other part. If poor patients were left to battle with small-pox in their own houses they would do more mischief to their own neighbourhood than they can do by being moved to a hospital. On the aggregate hospital system the district which suffers by the presence of the patient in the hospital does not, in the majority of cases, gain by his removal from his own house. As regards imported patients, there is nothing to set against the danger of which the hospital is

the centre. The parish which profits by the careful nursing that the patient receives is not the parish in which the hospital stands, but a parish perhaps five miles distant. Even the parishes which lie between the patient's house and the hospital may suffer by his journey across them; and here, also, the transaction is altogether one-sided. If the patient had been attended to in his own district, there need have been no distribution of infection along the road to a distant hospital. The parish in which the disease had its origin gets rid of him altogether, and parishes which have no connexion with it have to bear all the risk and annoyance. In point of fact, the aggregate hospital system is a premium upon carelessness in all parishes except those in which a hospital is actually placed. The moment small-pox breaks out they are able to cart it across the frontier, and thus one of the main inducements to take proper precautions against its appearance is entirely removed.

The districts which border upon the small-pox hospital which the Metropolitan Asylums Board have set up at Fulham are resolved not to submit to this inconvenience without seeing what they can do in the way of resistance. If the Hampstead case is finally decided against the managers, the aggregate hospital system may be taken as doomed. It will then be in the power of any district to rid itself of the burden by an appeal to the Courts, and where success is assured the means of undertaking this appeal will certainly not be wanting. If, on the other hand, the Hampstead case goes in favour of the managers, nothing further can be done in the way of resistance, unless Parliament can be induced to undo its own work. It is difficult to believe that, when the facts of the situation are laid before it, it will refuse to take this course. When the Metropolitan Asylums Board were empowered to set up a few large hospitals in the suburbs for the reception of small-pox patients from all parts of London, it was supposed that any dislike that might be felt to the neighbourhood of a small-pox hospital was merely sentimental. Unless a great number of witnesses have borne very inaccurate testimony, the dislike in question has a very much better foundation than this. It is not merely the number of ambulances or of funerals that offends those who live near the hospital, but the fact—which it is apparently beyond the power of the managers to dispute—that there are more small-pox cases in the houses near the hospital than there are anywhere else. A large hospital seems for some unknown reason to be in proportion to the number of its inmates more a centre of infection than a small hospital. Even if the objection were a purely sentimental one, it might have serious practical consequences. Health is to some extent, the value of property is to a very large extent, a matter of sentiment. Those who live in constant dread of catching small-pox are less likely to lead healthy lives than those who are free from any such apprehension. Those who want to sell their houses are certain to find the price injuriously affected by the fact that ambulances are constantly taking patients past the door, or that a funeral is seldom long absent from the area of vision. When those annoyances have to be endured for the sake of neighbours no nearer than the managers of the Metropolitan Asylums Board, even the most charitably disposed person may hesitate as to what it behoves him to do.

THE FRENCH ARMY AND THE CHURCH.

THE English public are indebted to Cardinal MANNING for a very clear statement of the present position of the controversy which is going on in France with regard to the exemption of ecclesiastics from military service. At the end of last year a Bill abolishing this exemption was introduced into the Chamber by a private deputy. The Government have since brought forward another Bill, making military service compulsory upon all ecclesiastics, but limiting the obligation, in the case of those pledging themselves to become parish priests, to a service of one year in a hospital or ambulance. The Committee to which the Government measure has been referred has accepted the limitation of service to one year, but proposes that this year shall be passed in the ranks, and not in a hospital. The first inquiry that suggests itself is, why it was thought necessary to move in the matter at all. It cannot be pretended that France is so short of soldiers that she

cannot afford to let even the ministers of religion go about their business unmolested. The only explanation is that the Radicals saw in the abolition of the exemption a safe means of annoying the clergy and injuring the Church. The majority of Frenchmen do not trouble themselves about ecclesiastical questions so long as the Church and the clergy retain their places in the social system of the country, and they are consequently very little concerned about the incidents of a priest's training. Provided that he is forthcoming whenever he is wanted, they are perfectly content. If the French bishops are right in their view of the effect which this measure will have upon the supply of clergy, its ultimate result will be that a priest will no longer be forthcoming whenever he is wanted. The question, of course, is largely one of degree; and, if the Bill should be passed in the form which the Government propose, it would be much less injurious in its action than if it were passed in the form first given to it, or even in that which it has received at the hands of the Committee. As regards the parochial clergy, the point of real moment is the nature of the interruption to which it is proposed to subject their training. It is difficult for Englishmen to take in the full importance of this preparation because they are accustomed to a clergy on whom a very different moral and social standard is imposed. Long and severe training is supposed to be required for Roman Catholic priests. All the proposals which have been laid before the Chamber of Deputies interfere with this training in some degree. The original Bill would have made every seminarist serve in the ranks for five years; the Government Bill, as introduced amended by the Committee, reduces this service in the ranks, in the case of seminarists undertaking to become parish priests, to one year. The Government Bill, as originally drawn, transfers seminarists giving this pledge from the ranks to hospitals or ambulances. As regards the first of these three proposals, the French bishops are probably guilty of no exaggeration when they say that, if it became law, French parishes would by degrees be left without priests. Five years spent in a camp or a barrack at a highly impressionable age would, in the majority of cases, take away all desire to become a priest. Even a year thus spent might be sufficient to effect this change; and the Church would thus have to depend for recruits upon the comparatively small number of men who do not conceive the wish to take orders till they have passed their first youth. If the time with the colours is spent in a hospital or an ambulance the case is different. Though the work to be done there is not ecclesiastical, it need not be altogether secular. Indeed, it would probably be found possible to reproduce to some extent the life of the seminary in the hospital without interfering with the primary duty of looking after the sick. It is on this very ground possibly that the Committee have insisted on the year's being passed in the ranks. What is the use, they may argue, of striking a blow at the Church and at the same moment taking measures to make it ineffectual? There can be no reason for extending the obligation of military service to ecclesiastics, except that it will interfere with the supply of clergy; and if service in a hospital can be so ordered as not to have this result, the motive for making the change disappears. A reasonable Radical would argue that, as a large number of Frenchmen want priests, and as priests cannot be had unless young men preparing for orders are exempted from service in the army, the business of a French Government is to hold them exempt, if on no other ground, at least on the ground of public convenience. But then a French Radical would think himself disgraced if he could be reasonable on such a question as this. It touches religion, and where religion is concerned he is bound to have no fellowship with common sense. To be reasonable in dealing with the Church is to be a reactionary of the worst, because the most insidious, kind. A fight with Catholicism is its own reward. It is not necessary in order to justify it to show that something is to be gained by victory. Indeed, it is not necessary even to show that nothing will be lost by it. There is no risk that the typical French Radical is not ready to run if he can but injure the Church. When, as in the present case, the risk is remote and uncertain, the temptation to inflict the injury is the more irresistible.

It is not, however, to the effect of this measure on the parochial clergy that Cardinal MANNING's letter has refer-

ence. He leaves it to the bishops of France to protest against the abolition of the exemption regarded from this point of view. But besides the parochial clergy there are the religious orders of all kinds, none of whom will be exempt, even under the mildest form of the proposed legislation, from service for five years in the ranks, or from becoming parish priests for at least ten years. The particular body in which Cardinal MANNING is interested is the great Missionary Society of France, the *Séminaire des Missions Etrangères* at Paris. The members of this Society "bind themselves by a solemn promise to live and "die as missionaries," and during the last fifty years "964 missionaries have been sent out from that house "into the far East. Of these 31 have suffered martyrdom, and 600 are still labouring in Japan, Corea, Tibet, "China, and the East Indies." The Bill now before the Chamber of Deputies would break up this Society. Its members would be compelled either to work for ten years as parochial clergy or to serve for five years as soldiers. In the former case they would not enter on their work until they were thirty-four or thirty-five years of age, with habits of body and mind alike unfitted for the hardships and dangers of a missionary life. "The greater part of those who laid down their lives have "been put to death in those early years when by this law "they would be detained in the parishes of France." In the alternative case, that of five years' service in barracks and garrisons, the disposition to a missionary career could only be preserved by a miracle. The natural and ordinary result of such an interruption would be to turn the thoughts of the Seminarists in quite another direction. It is needless to say that the authors of the proposed legislation have no care for missionary enterprise as such. They are probably of opinion that, as between one superstition and another, the superstition in which the members of the *Séminaire des Missions Etrangères* find their converts is preferable to the superstition in which they leave them. They will not see in the figures enumerated by Cardinal MANNING the yearly average of 10,000 adult baptisms, and the 700,000 native Christians now under missionary care, any reason whatever for modifying the Bill in favour of the Seminary in the Rue du Bac. But there is another light in which the question may be looked at, and though a French Radical of the purest water may obstinately close his eyes to this, it is just possible that the Government may not entirely refuse to consider it. The French nation has not hitherto been negligent even of its ecclesiastical reputation abroad. The part it has played in the protection of the Latin Christians in the East is a conspicuous instance to the contrary. A French missionary is an excellent instrument for spreading the knowledge of his country as well as the knowledge of his religion. In this respect he is an unofficial emissary of his Government as well as an official emissary of his Church. Throughout the distant regions in which the members of the *Séminaire des Missions Etrangères* spend their lives, the name of France is largely known by means of their labours. It is quite true that Frenchmen have no material interest in the name of their country being published in the farther East; but, if they are for this reason indifferent to it, they must be made of very different stuff to the Frenchmen who have gone before them. If the obligation of military service is extended to the inmates of the Seminary in the Rue du Bac, the missions in the East may not languish, for the Seminary can be transferred to the Channel Islands. But, if so, its members will go out, not as Frenchmen, but as exiles; and they will be animated with all an exile's indignation against the power which has banished him. It is hard to believe that the French Government will think the services of a hundred or two additional soldiers worth securing at this price.

FRENCH PROTESTANT SETTLERS IN AMERICA.

IN a paper contributed to the *Antiquary* for March Mr. Noel Sainsbury touches on an interesting episode of French and Colonial history, when he proposes to describe the "First Settlement of French Protestants in America." He tells us, however, little of its antecedents or surroundings, and his readers might find it difficult to understand how such a scheme came to be contemplated or why it so persistently failed. We are told, truly enough so far, that the design owed its origin to the exile of Soubise, Duke de Fontenoy, who finally took refuge in England after the ill success of his expedition,

aided by English ships under the Duke of Buckingham, for the relief of La Rochelle. The English fleet had, indeed, not long before been engaged, in alliance with the Dutch, in aiding Louis XIII. against his disaffected Protestant subjects under the command of Soubise. Mr. Sainsbury, by the way, speaks as though the Dutch were fighting on the side of Soubise. But an estrangement had since grown up between the French and English court, partly on religious partly on political grounds, and thus Buckingham was disposed to listen to the solicitations of Soubise, who was then lodged at Charlton House, to be near the Court at Greenwich, and spared no pains in exaggerating all the hostile acts of Richelieu. He succeeded in gaining English assistance for relieving the siege of Rochelle. The result proved disastrous to the fortunes of Soubise himself and of his party, and many of his followers are said to have gone over to the Spaniards, others to the West Indies, while some—to whom we shall return presently—sailed for America. Mr. Sainsbury tells us that there are still many noble families resident in America who are proud of claiming descent from the French Protestant settlers of nearly 250 years ago, little of a success as the settlement eventually proved to be. But it is hardly possible to look back upon its humble and casual beginnings, dependent as it was for what little it did achieve exclusively on foreign sanctions and support, without asking oneself how it was that French Protestantism so entirely and conspicuously failed to make good its position at home. The question is of course too wide a one to be discussed in detail here, but Sir J. Stephen throws out some hints in his *Lectures on the History of France* which go far towards suggesting a general reply. The Protestants formed at one time half, or more than half the entire population, which makes their speedy and entire collapse the more remarkable; yet they somehow never identified themselves with the nation. Protestantism became in England an integral part of the social and political as well as of the religious life of the people, as did Catholicism in Spain. But the Puritan and Calvinistic type which, unhappily for its own interests, Protestantism had from the first assumed in France was thoroughly alien from the national character. For a brief moment the hymns of Marot and the preaching of Beza became "the *mode* in a country where that capricious power has ever erected the chief seat of her dominion," but ere long the national spirit reasserted itself. A system which ignored ecclesiastical traditions and solemn ceremonial, which broke rudely with the past, and sought to bind on all consciences the iron spiritual yoke of the *Christian Institutes* of Calvin, had nothing in common with the prevalent tone of French sentiment, and this again helps to account for what was in itself another fatal weakness of French Protestantism; the Reformed Church almost from the first assumed the inappropriate office of a party in the State, and too often of a hostile party, which arrayed against it the patriotism as well as the orthodoxy of the rest of the nation. And hence again the Huguenots were yet more heavily weighted by what Sir J. Stephen calls "the sanguinary habits they contracted during many years of civil warfare," which led them to persecute, when they had the opportunity, to the full as ruthlessly as their rivals. We are inclined indeed to think that this persecuting temper was not wholly due to the bitterness engendered by years of civil conflicts, but had a close connexion with the peculiar spirit of their creed, which its founder had signally exemplified in the burning of Servetus. At all events it certainly existed, and the spirit of intolerance is all the more likely to discredit a sect which has the will to persecute without the power. To this day Protestantism, by the confession of its leading men, has never been a success in France. The first attempt to transplant it to the new world, however well intended, did not prove much more fortunate.

"Their first settlement in America," Mr. Sainsbury says, "took place in connexion with an intended plantation of Carolina nearly thirty years before any actual settlement took place," and forty years, we may add, before an English colony was established there under a grant of Charles II. in 1670. It was in fact entirely under English auspices that this French enterprise was undertaken. Neither then nor for a long time afterwards was colonization an idea at all encouraged in France. It was by foreign commerce that Venice and the Italian cities, as well as Amsterdam had thriven, and England since the sixteenth century had followed in their wake, while the wealth and power thus acquired had roused manufacturing industry at home. To this result the immigration of French Huguenots, which proved very prejudicial to their own country, had contributed. Colbert indeed perceived all this clearly enough, and proposed to compete with England and Holland in this peaceful rivalry, but his voice was drowned in the din of war. Nothing could be more antipathetic to commercial or colonial enterprise than the Government of Louis XIV., and to the last they ignored the advantages of colonial empire. In the negotiation of the Treaty of Utrecht the King showed himself more anxious to gain a village in Flanders than a continent beyond the sea. Meanwhile attempts had already been made in Elizabeth's reign by Martin Frobisher, Sir Humphry Gilbert, and others to found an English colony in America, the conversion of the heathen being always prominently put forward as a main object of the undertaking, or, as Sir Humphry expressed it, "the honour of God and compassion of poor idolaters captured by the devil, it seeming probable that God hath reserved these Gentiles to be reduced into Christian civility by the English nation." Two vessels were afterwards sent out by Sir W. Raleigh, and the Queen bestowed on the country they discovered the name of Virginia. But it was not till more than twenty years later that a regular settle-

ment was effected there, when a new Company obtained in 1606 a charter from James I. for the purpose. In 1624 the Crown resumed its grant, and the settlement became a royal colony. About the same time the Baron de Saneé, who was a devoted follower and secretary of Soubise, and had come with him to England after the disastrous termination of the expedition to Rochelle, conceived the idea of finding a permanent home for the French Protestant refugees in America. He was in the enjoyment of a pension of 100*l.* a year from Charles I., but he petitioned to have this sum doubled in order the better to be able to help his fellow-sufferers and compatriots, and also applied in the following letter, addressed to Lord Dorchester, then Secretary of State, for "letters of denization":—

MONSIEUR,

Le désir que j'ay de servir Sa Majesté et me retirer en ce pais icy avec ma famille et tout ce que j'ay en France ausy pour faire habiter des françois protestans en Virginie pour y planter des vignes, olives, faire des soyes, et du sel me fait vous supplier tres humblement d'obtenir de Sa Majesté qu'il luy plaise m'honorer de lettres de gentilhomme de sa chambre privée. Avec lettres de Denison pour moy et mon fils. Et qu'il luy plaise donner ordre à Monseigneur l'Ambassadeur qui ira en France d'obtenir comme ayant l'honneur d'estre son domestique, l'écrite et sureté pour moy avec la jouissance de mon bien afin que par ce moyen et sous la faveur de sa Majesté je puisse icy faire transporter ma famille et mon bien pour estre plus prest à servir sa Majesté et vous ausy mon seigneur.

SANÉE.

His object, like that professed by the English colonists, was primarily a religious one, not however for the conversion of the heathen, but for the quiet maintenance of the Huguenot religion, which had been banished from France. It was accordingly stipulated, as a *sine quâ non*, that every Frenchman who wished to join the expedition, should furnish a certificate from his pastor that he belonged to the Reformed Church, and "that none shall be willingly admitted or entertained into this plantation which shall not be of the Protestant religion." This provision, we may observe in passing, presents a striking contrast to the neighbouring settlement of Maryland, founded only two or three years later by about two hundred English Roman Catholic families, under the direction of Lord Baltimore, in which it was provided from the first that all who professed the Christian faith should be allowed the free exercise of their religion, an arrangement loyally maintained, as long as the Roman Catholic settlers retained their control of the colony, but no longer. The scheme proposed by De Saneé found favour with Charles I., and in 1630 articles were agreed upon between the King's Attorney-General and himself and instructions were drawn up for settling a French plantation in Carolina, and for the voyage. But in spite of these formal arrangements, and of the provision of 1,000*l.* for the expenses of their transit, the settlers did not reach Carolina. The *Mayflower* took them to Virginia, but for the time they got no further. It was forty years later, as we have already intimated, that Charles II. granted a charter to Lord Berkeley and others for the colonization of Carolina, and John Locke, who was then Secretary to Lord Shaftesbury, was requested to frame a constitution for it. This constitution, unlike that designed by the French settlers, established perfect religious equality among all sects, with the peculiar regulation that at the age of 17 every citizen should choose his religion and publicly enroll himself among its members. Whether any of the French settlers who had come over in the *Mayflower* to Virginia forty years before and had been afterwards reinforced by a fresh batch sent out by De Saneé in the *Thomas*, or rather any of their descendants, eventually found their way to Carolina does not appear. They seem at all events to have remained in Virginia and were thus the first French Protestants to settle in America.

Mr. Sainsbury indulges in some, to say the least, rather gratuitous speculations on the "fruitful results" to which De Saneé's scheme would have led, if it had been carried out to the end. The settlers, he observes, were men of high character who had fought under Soubise, and they would have had a rich and virgin soil to cultivate, but "their wishes were frustrated, and the settlement of a fine colony in America delayed for more than a quarter of a century," when Carolina was colonized not by French but English settlers. It is impossible of course to say what might have happened if things had turned out otherwise than they did, though we have heard of a sermon devoted to considering what would have happened if Abraham had actually sacrificed Isaac, one point specially dwelt upon being what Sarah would have said when she heard of it. But without presuming to dogmatize on hypothetical contingencies, it is not so clear to us as to Mr. Sainsbury that the cause of civilization has been greatly the loser by the frustration of De Saneé's original design for colonizing Carolina. The French had not, at that period, as was observed before, shown any peculiar aptitude for work of the kind, and though the Huguenot refugees undoubtedly carried off with them some of the best life blood of the nation, it does not follow that the handful of settlers who went out in the *Mayflower* would have displayed all the energies and resources requisite for a confessedly difficult and unaccustomed enterprise. In one point at all events it may be feared that their administration would have been less commendable than that eventually organized under the advice of Locke. We have seen what stringent measures were adopted to exclude any but Protestants from taking part in the settlement, and with such a commencement the colonists would have only too probably learnt to emulate the conduct of their Puritan co-religionists the Pilgrim Fathers of New England, both towards heathen nations and European misbelievers. How the Pilgrim Fathers

treated those "tawny pagans," "rabid wolves," "grim and bloody salvages," the unhappy Indians, whom they regarded as "so many devils," their own admiring historian Mather has told us with a jubilant candour which leaves nothing to be desired. Nor is he less explicit in describing their faithful dealing with "Quakers, Adamites, and other accursed sects," who after some preliminary flogging were first to have their ears cut off, then their tongues bored through, and if finally recalcitrant were put to death. Whole households were banished simply because their head was "a dam-ned Quaker," or because they had privately celebrated the Service of the English Prayer-book. Now the French Calvinists did not at all fall short of their English coreligionists in narrowness and intolerance, and it is very probable therefore that Carolina may have thus been spared a repetition of the atrocities which disgraced New England till a peremptory order from Charles II. at length brought the reign of the saints to a close. Be that as it may, it is remarkable that the first design of founding a French colony, and the first actual landing of French settlers in America, should have owed its origin so entirely to religious controversies at home, and should only have become capable of realization under English patronage, and with the aid of English gold.

IRELAND IN AND OUT OF PARLIAMENT.

WE do not quite know whether it is a subject of congratulation or not that the interminable Irish question has been rather more lively of late than has for some weeks been the case. Under ordinary circumstances there could be no doubt about the matter; but the characteristics of Irish liveliness are unfortunately such as to make unmixed rejoicing over them impossible. The murder, or attempted murder, of Mr. Hearne; the outrage on the house of Mr. Scott, at Crossmolina; the reappearance of bands of armed ruffians, who were doubtless under the impression that the English Radicals had prevailed, and that his gun and his pistol were not to be taken from the poor Irishman, are things not to be laughed at. We could willingly exchange such a period of bustle even for the terrible quiescence of two or three weeks ago, when the oratory of Mr. Sexton and the Messrs. O'Connor was almost the sole symptom of life that Irishmen showed. Luckily, however, their renewed activity is not all of this kind. Tenants are paying their rents, to the horror and disgust of the champions of dishonesty. The little game of mock auction has been interfered with by the energetic persons who organized the Boycott expedition, and—the Government at last affording reasonable protection—the friends of defaulting tenants find, to their intense disgust, that they must either buy in distrainted stock at fair prices, or else that the abhorred Orangemen get very nice little bargains, which are promptly carried away out of the reach of houghers and stabbers. The simple truth that the Land League is perfectly powerless against a little pluck and a little counter-organization, and that its members are in many cases rather glad to get out of its clutches than otherwise, may be thought to have been rather long in forcing itself upon the minds of loyal Irishmen. But it is fair to remember that, until very recently, they were not merely as sheep without a shepherd, but as sheep who have an unpleasantly shrewd idea that the shepherd is on the side of the wolves. Now that this impression has been removed by the passing of the Coercion Bill and the pushing on (better late than never) of the almost more important Arms Bill, there ought to be no fear of a relapse into the evil condition of panic terror which early in the winter encouraged scoundrels to crime and discouraged honest men from resistance.

London and Paris, however, rather than Dublin have been the centres of the revival of Irish liveliness. Mr. Parnell, though he has since returned, has been in abscondence, being apparently anxious to establish, with the help of Mr. Stephens, a new general maxim that had Irish agitators, when they are found out, go to Paris. It is uncertain whether the somewhat Judas-like duties incident upon bearing the bag or an exaggerated fear of the Coercion Act, or the pleasures of M. Rochefort's society, or anything else, determined the last flight of the member for Cork. His experiences do not seem to have been quite so cheerful as those of his first visit, for indeed the French are a fickle people, and but too apt to change their idols. Part of Mr. Parnell's duty appears to have been to perform the operation which his countrymen call "making his soul," by calling on the Archbishop of Paris, and so cleansing himself of the stain of M. Rochefort's company. The interview must have afforded the Archbishop an opportunity of displaying the well-known diplomacy of the hierarchy to which he belongs, but does not seem to have been fertile in any moving incidents or lively speeches. Indeed, if the *Télégraphe* may be believed, Mr. Parnell has not been chary of utterances which are not likely to conciliate the Church, even going the length of disparaging the authority of the Holy Father. This same interview, however, at least resulted in one pleasant *mot*. Mr. Parnell is reported in the *Times* to have made the somewhat superfluous statement that the Irish were not "claiming the right to pay in their own way." Then Mr. Parnell went to see Marshal MacMahon, who expressed himself in affectionate terms towards the country of his ancestors, but declined to say anything concerning the land agitation, whereby the Marshal may be said to have proved himself an old soldier in

the fullest sense of the word. But the most curious *déboire* which the member for Cork has experienced was in connexion with the Victor Hugo festival. The story has been told in singularly different ways, and though there is something not very credible about all the forms of it, they agree so far that it is not easy to refuse credence to their point of agreement. It seems that Mr. Parnell's name was put down on the Committee of the occasion, which, considering the way in which he has been taken up by the great writer (in spite of the protestations of that sincere Radical whose identity is known only to the *Daily News*) does not seem improbable. Now President Grévy's name was also on this Committee, and while one story has it that the President insisted that he or Mr. Parnell must go, the Committee bravely but improbably choosing the Exile of Erin and snubbing the chief of the State, the other says that they regretfully drew their pen through Mr. Parnell's name, and not through that of M. Grévy. The odd thing is that both stories seem to insinuate that the proceeding was due, if not to representations of official English persons, at any rate to the desire of French officialism not to offend England. Mr. Gladstone and his Government have always shown themselves remarkably thin-skinned, but it is hardly credible that such a foolish thing as this was actually done at their instance. A great many people in England think very badly of Mr. Parnell, and some people think very meanly of him. But why a Government such as that of England should object to a subject of the Queen, as yet unconvicted of any offence and enjoying the position of member of Parliament, figuring by the side of the President of the French Republic on the occasion of a purely private and non-political festival is more than we can understand. Possibly French "interviewers" have put their own construction on the matter; but, however this may be, it does not appear that Mr. Parnell has had altogether a happy time of it in the chief of what a gentleman in difficulties recently called the three centres of pleasure. "Pleasure has been my ruin," said this person, who had made some mistakes in connection with his master's till; "I've been working Paris." Mr. Parnell has been working Paris, too; without, it would seem, very successful results.

Meanwhile the deserted sheep—with Mr. Justin McCarthy for deputy-shepherd, and Mr. Labouchère for chief sheep-dog—have been doing their best to withstand those ravening wolves the Government and the Opposition. Mr. Labouchère, to do him justice, has discharged his functions to admiration, displaying all the activity and faculty of bark which a good sheep-dog ought to display. A pleasanter picture has not recently been presented to Parliament than the little glimpse which the senior member for Northampton gave it the other day of his religious creed and practices. The curtain of Mr. Labouchère's oratory was lifted up and he was discovered paying his devotions to his "two patron saints Mr. Gladstone and Mr. Bright." It is true that at the moment of speaking the devotee appeared to be minded towards his saints much as the traditional Portuguese sailor is when wind or calm does not reward his orisons. But still the fact of the two statesmen being Mr. Labouchère's patron saints is on record not to perish. Northampton no doubt thinks him and his colleague only less saintly than Mr. Bright and Mr. Gladstone, and in that case it must be allowed that a quainter communion of saints has rarely existed. Hagiologists should really take note of the conjunction. Nor ought the remarkable effort of eloquence in which Mr. Macdonald indulged on the same night and in the same connexion to be left unnoticed. The image of the Liberal party attending as deaf mutes at the funeral of the liberties of Ireland has deservedly attracted attention. By the side of these efforts of the Land Leaguers' English allies, the helpless bleatings of the victims themselves sound rather feeble. Mr. Sullivan has indeed frequently aired his impressive oratory. But Mr. Sullivan should bear in mind a criticism once allotted to Campbell's *Lochiel*:—"There is a superabundance of blood in the picture." The picture of the Government reposing on their epithet laurels was vigorously touched in, but was certainly open to the objection just quoted. The palm of the week's oratory concerning Ireland, however, certainly rests with the Home Secretary. Even Sir William Harcourt has rarely produced a more remarkable monument of combined taste and judgment than the speech which ushered in the Arms Bill. To commend Mr. Dillon by way of insulting Mr. Parnell would have been all very well if Mr. Forster had not done exactly the same thing a few nights before. But when the leader of a great and victorious party taunts the leader of a small and beaten party on his absence in his absence one really begins to lose one's way in bewildering computations of the relative valour displayed. It is not heroic to run away; but, at any rate in civilized countries, it is not heroic to hawl insults after the fugitive. It may be admitted to be hard that when a man has got up two good quotations from the *Anti-Jacobin* and the works of Shakespeare he should not be allowed to fire them off, but surely the former at least would have kept till Mr. Parnell's return. However, this was of course a matter for Sir William's own consideration, and if he wished to show how he himself was a person "in battle much delighting," especially in battle where the enemy has run away, the opportunity was certainly a good one. Conciliation is, after all, out of place when you are going, like Ben Jonson with Marston, to "beat a man and take his pistol from him." That is exactly what Sir William was going to do with Mr. Justin McCarthy and his followers, and he let them know his intention quite after the fashion of a Homeric, Arabian, or Ojibbeway warrior. But it is

not surprising that the Home Rulers were but little pleased with the frank and cheerful manner in which the new lash was cracked before being laid on their backs, and though there might have been much frothy and aimless talk in any case, Sir William is probably responsible for having made it more aimless, more frothy, and, above all, more than it would otherwise have been. Mr. Justin McCarthy might have been happier than in his parallel between Sir William Harcourt and Cicero; but Mr. Labouchère was again well to the fore with a complaint of the artful wickedness of the Tories, who were "humbugging" the guileless Government. Considering the usual attitude of Mr. Labouchère's friends towards the intellects of their political opponents, it may well be imagined that to be humbugged by a Tory represents to them the lowest pitch of possible degradation. That his patron saints should suffer this must certainly be heartrending to a pious man. As for Mr. Dillon's frankness on Thursday, he has received so much praise for his outspoken language, both from Sir William Harcourt and Mr. Forster, that he naturally craves for more. Altogether, the eloquence of the week, if sometimes a trifle irrelevant, has been much livelier than any we have had for a long time, especially if Mr. John Devoy's terrible telegraphic threat of "stamping out" the Home Secretary be included in it. Nature has made Sir William Harcourt very difficult to stamp out, and when the stamping match comes on we are prepared to put our moderate "pile" on the Home Secretary.

ENGLISH TACTICS IN SOUTH AFRICA.

ONE would suppose from reading some remarks in certain newspapers that our forces are so weakened by the last defeat that Sir Evelyn Wood will be unable to effect anything until the arrival of reinforcements. Now 300 men represented the fifteenth part of the troops which Generals Colley and Wood might have gathered immediately either for attack on Laing's Nek, or in combination for feint against that position, and flank movement by Wakkerstroom. General Wood is *minus* one-fifteenth of the force available a few days back. What is really deplorable in the military sense is, firstly, that we should have deserved defeat; secondly, that we got what we deserved. There is no reasonable room for doubt that the last disaster, like the two previous ones, was entirely the result of our own action. Colonel Gordon, discussing in the *Army and Navy Gazette*, shortly before the fight on the Majuba Hill, the best way of going to work when regulars are called upon, encumbered as they necessarily are with *impedimenta*, to campaign against irregular levies, protests against the mistakes we British so frequently make at starting. The gallant officer—than whom perhaps none living is more qualified to speak about what he writes—observes that we rush into a war on the *vedi, veni, vici* principles. We begin with employing an insufficient force; that force we provide with huge encumbrances which swallow up half our numbers in escort duty, and then we wonder that an enemy ten times more numerous, and capable of rapid movement because unencumbered, wins an occasional success. A writer in a military weekly paper assures us that the double defeat at Laing's Nek and Ingogo was due to the poor quality of our soldiers under the short service system. "We shall see," he prophesies somewhat unfortunately, "what those two remaining grand old regiments, the 92nd Highlanders and the 60th (Indian battalion), will do when they come on the field." And we have seen that not even soldiers of a "grand old regiment" can succeed when placed in hopeless situations. The 92nd, by all accounts, fought at the Spitzkop as became their antecedents; but the 58th fought equally well, and with like ill-success, at Laing's Nek. It is amusing to see how after each of our defeats at Isandula, at Maiwand, before Oabul in the Candahar sortie, at Laing's Nek, at Ingogo, at the Majuba Hill, every one with a hobby rides off at a gallop proclaiming far and wide "You see how right I was!" And in nearly every case it has turned out that the cause of our disaster lay, not in any shortcomings on the part of young troops, but in the shortsightedness, over-confidence, absolute temerity of those charged with their conduct. Each of the defeats above-named we judge, by a very simple process of logical deduction, to have resulted from some cause utterly beyond the control of the troops engaged. When their ammunition is exhausted, and they are separated from its reserves by a raging multitude of foes, they succumb as at Isandula; when, as at Maiwand, they are drawn up in full face of a powerful artillery, and, after being pounded for hours, are hemmed in by ten times more numerous enemies, and assailed with surprising valour, it would be miraculous did they not succumb. When, again, a small and gallant band was sent out on that mad and miserable sortie from Candahar, it was so contrived that every element of failure should be enlisted on their side; and it would be absurd, and beside the mark, to stay and inquire if they were old soldiers or short-service men who were defeated in that enterprise. Eye-witnesses of the attack by the short-service men of the 58th at Laing's Nek all attest their excellent bearing under a devouring fire; but when the handful of brave men had executed their mission, and seized a point of vantage, and looked for the necessary support to hold what was won, not a scrap of support was forthcoming. What would it have benefited Sir George Colley had he commanded the services of Wellington's Peninsular veterans if these, like the troops he actually disposed of, were left high and dry on the Ingogo height to be

otted at leisurely by excellent marksmen under cover? And now as regards the last of the three defeats experienced between January 28 and February 28. It may be a little early to condemn, as has so freely been done by some of our contemporaries, the original enterprise as planned in the mind of the commanding General. It is quite possible, and not at all improbable, that he may have been in possession of information showing that one or more of the beleaguered garrisons would be unable to hold out beyond a certain very limited period. At the same time, his reconnaissances had shown him that the Majuba Hill commanded the Boer line of defence, and indeed took it in reverse; moreover, he was aware that, important to the enemy as it was to hold this point, its occupation had so far been neglected. To the General's appreciation the question doubtless presented itself whether it was advisable to wait till his force had closed up from the rear, and, so to speak, "chance" the Boers leaving this important point unoccupied meanwhile; or if it was better to seize, even with small means, the opportunity which presented itself. He decided, as we know, on the latter alternative. And, all other questions apart, it seems to us that it is very difficult to blame him for so doing. Whatever may have been his previous errors of judgment in this campaign, we are certainly inclined to think that his plan of forestalling the enemy at the palpably decisive point by a bold and rapid dash was the true course to pursue. We know how instantly the Boers perceived the magnitude of their error; and how, but for energetic intervention on the part of their leader, they were prepared to make off at once, abandoning the scene of their former triumph, and the one position in the country which gave them a fair chance of contesting our advance to the Hooge Veldt, or table-land of the Transvaal.

It is when we come to the consideration of the measures adopted for carrying out the plan that we find occasion for calling the General's action in question. We have sufficient information now to enable us to pass a pretty definite opinion. "Military operations," as the late excellent soldier and historian Major Charles Adams has observed, "all resolve themselves into questions of time and distance." In the present instance, it was indispensable that the distance to be traversed should be surmounted in time to enable the advancing party to get to their destination, and make themselves secure against counter attack before that attack could be delivered. But we read that, on account of the ever-recurring obstacles on the way, the force moving from Prospect Hill did not reach the Majuba Hill till seven in the morning, after a wearing night's march, during which the way was lost, and much ground had to be retraversed. Once arrived, it would only be in accordance with all recent precedent that shelter trenches, or entrenchments of some kind, should be at once prepared. But it was too late. The men were breathless and tired out with their exertions; and, before any work of digging or throwing up protection of any kind could be proceeded with, the Boers had opened fire. There could be no question then of doing more than utilizing available natural cover, and this, as is generally the case, proved wholly insufficient. Perhaps the General had calculated on the moral effect of the unexpected arrival of his troops; and, to a certain extent, this calculation was justifiable. He may have anticipated that the Boers, seeing their position had become untenable, would, after a show of fight, abandon it. And, as we see, their first impulse was to do so. He certainly could never have looked for an assault delivered with a determination rarely equalled, and with a skill which would have reflected credit on the best European leadership. If we are to believe the impressions of the *Standard* Correspondent, who, when he picked himself up after his nasty tumble, was in a good situation for judging, the number of Boers actually taking part in the hand-to-hand-combat did not exceed five hundred. So we fear it must be confessed that the foe did not win in virtue of overwhelming numbers. It is true, the Correspondent adds, "there were perhaps five hundred more on the hill side"; but these took no part in the fighting on the actual plateau, neither could they well have fired when their friends were engaged at close quarters. We are unable to take refuge in the theory of overwhelming numbers; we cannot make it a complete excuse that there were some of one regiment, some of another, present, when all fought well; we have nothing for it but to own that, on this occasion, if our people fought well, the enemy fought better. His fire throughout was more accurate; and when it came to the last resort on both sides, ours went to the wall. Attacked fiercely in front, flank, and rear, it was to this triple onslaught our troops yielded. It is no wonder they imagined themselves assailed by the whole mass of Boers. It is impossible now to say what might have been the result had there been time to fortify the acquired position. The first element of success—that of surprise—had been enlisted on our side. The plan fell through, first because the time had been badly calculated; secondly, because evidently no one expected so admirably executed an attack. With a better adaptation of means to an end, the capture and subsequent retention of the Majuba Hill might have brought about an early termination of the war; and for ever in that case would have been cited as a daring and consummate piece of generalship. There is no need to speculate on what would have followed consequently on the Boers discovering their inability to retake the post in General Colley's hands. Sir Evelyn Wood was not too far distant to be able to make immediate profit by his coadjutor's success. A point on which we have long insisted—namely, that rifle instruction does not in our army receive half the attention which it is of the very

essence of modern war that it should receive—has obtained signal illustration in every one of these combats.

It seems to be accepted so far that the Boers must be ousted from Laing's Nek by direct attack. We have yet to see what alternative may present itself to the new Commander-in-Chief. It had been surmised, before the collapse of the late enterprise, that General Colley meditated moving a portion of his force by the road leading to Wakkerstroom, towards which place Sir Evelyn Wood pioneered the way on Saturday week; and that the remainder would be used in occupying the attention of the enemy at Laing's Nek. The army which the two generals disposed of for field operations represented a total of no more than 3,000 infantry and 1,000 cavalry, with 18 guns. This force seems very small considering its division, and that one wing would be committed to a long roundabout march in a broken country. Sir Evelyn Wood is in a difficult position. On the one hand, delay will not only encourage the Boers, but will be interpreted as a sure sign of weakness among peoples outside the range of present hostilities. It is exceedingly likely, whatever the authorities of the Free State ultimately determine on as their safest line of action, that every encouragement short of official sanction will be given to volunteers to join the ranks of the enemy. Moreover, the invested forts cannot hold out indefinitely. That of Wakkerstroom seems to have had on February 20 only provisions for three weeks more. It is the one however which, from its proximity, and from the fact that the road to it from Newcastle trends widely away from the Boer main position, might be the most easily reached by a convoy. As for Pretoria, we might expect to hear that strong efforts were being made to subdue it by direct attack, if Sir Evelyn Wood maintained a purely defensive attitude. Doubtless with the recollection of three successive unsuccessful actions fresh in their minds, the Home Government has not failed to counsel prudence to the commander *ad interim*; but we greatly mistake if the latter does not contrive to keep the main body of the enemy within close proximity to their present stronghold. Their withdrawal from the Biggarsberg before our reinforcements coming up country may be taken as a pretty certain sign that their numbers are too small to allow of their undertaking the offensive on any scale. Nothing, indeed, could be wished better than they would "come out and fight." Once we got to fighting in open country, it is probable the Boers may find reasons for no longer desponding, as they told the Correspondent of the *Standard* they do, our infantry. The value of our cavalry and guns, and preparations generally, will tell, and tell quickly, when once we begin in earnest. It cannot be said that so far we have allowed ourselves a chance in engaging desultory actions with forces too feeble to resist attack, and, if attacking, too weak to follow up a success. We are unable to agree with the *Daily Telegraph* that the Government is to blame for not having foreseen the need of further reinforcements, and for not having sent these in the first instance. The necessity, in our opinion, was not up to recently such as to call for the despatch of any more troops. No one could have anticipated that the actual army on the theatre of operations would not have been allowed a fairer development of its fighting power.

THE VICTOR HUGO FESTIVAL.

THE honours which were paid to M. Victor Hugo in Paris on last Sunday, his eightieth birthday, made an interesting event in themselves; they were perhaps even more interesting, at least to us, when we consider the way in which newspaper accounts of them have been received in England. Many thousands of Parisians defiled in bad weather for five or six hours last Sunday before the poet's house. There were bands, flags, all the apparatus which is reserved in England for a review or a meeting of Foresters. Movable printing presses took part in the procession and struck off copies (regardless of the hero's well-known views as to copyright) for the benefit of the crowd. Hundreds of babies were carried before the poet's balcony to blow kisses to him as if he were a popular candidate at an election. Wreaths and branches of laurel and oak wrought in the precious metals were presented to him by the Government, the municipality, the Comédie Française. Students came in deputations; clothes-baskets full of congratulatory cards and letters and telegrams were collected at the door. Nor even in the red-hot atmosphere of French political animosities was much noise of a discordant kind raised against all this homage. Except the extreme Clericals and Bonapartists, all parties can claim something in Victor Hugo; and those who do not count him in their ranks as a present ally may assert, truthfully enough, that some of his best work has been done under their colours in the past. Meanwhile the average Englishman, even the average newspaper Correspondent on the spot, looks at all this with a mixture of perplexity and contempt, a mixture in which the perplexity prevents the contempt from being thorough and comfortable. If he is a sympathiser, he is likely as not to impute all the reverence paid to the author of *Les Châtiments* to political motives—a miscalculation of the most glaring kind. If he does not sympathize, he takes refuge in the well-known theatricality of the French nation, and assures himself that a nation of phrasemakers is naturally enough at home in praising the chief of all living makers of phrases. The attitude of Prince Bismarck's *Büchlein*—is that of such good persons, an excellent representative of whom

speaks his opinion, though not directly *à propos* of the celebration, in *Macmillan's Magazine* for the present month. Some Englishmen have even gone further, and in their quest for allies have ejaculated *Acheronta movebo*. They have discovered that there is a man of great genius in France itself who will none of M. Victor Hugo. His name is M. Emile Zola, and though he has certainly written some sad novels, his sentiments about the author of the *Légende des Siècles* are not to be poohpoohed. The truth is, as those who are a little more behind the scenes know, that Providence, wishing to punish M. Zola for his bad novels, has for some time past set him upon writing worse criticisms.

It is not very easy—this may be readily allowed—to put Englishmen into the exact position for appreciating such a display as that of Sunday. But, to do them justice, it is not the display which seems to stick in the throats of most of them. Given a certain literary estimate of Victor Hugo, they could grant the expression of the popular feeling as a merely characteristic and legitimate translation of that estimate into other terms. But it is exactly this estimate to which they demur. They cannot bring themselves to admit that Victor Hugo is, as his admirers assert him to be, the chief literary figure of Europe since Goethe's death. Yet this is what the enormous majority of the French nation firmly believes, and what, let it be added, at least some persons who have not a drop of French blood in their veins, who have not the slightest sympathy with Victor Hugo's political or religious ideas, who are quite ready to admit many grave, and even ludicrous, deficiencies in him, believe as firmly as the most enthusiastic of the *lycéens* who had a holiday on Sunday night. A great deal of nonsense has of course been talked about the author of the *Châtiments*. His chief English admirer is not remarkable for measure or moderation of language, and political sympathies—which have, properly speaking, nothing to do with the question—have combined to put measure and moderation out of the question with Mr. Swinburne. It is not very common, again, to find Englishmen who have any knowledge of the actual state of French literature when Victor Hugo's works first appeared, so that they are not in a position to judge what he has actually done. But what—we must say it delicately—is rarest of all is to find an Englishman who has really read the works of the man whose literary position he effects to criticize. Everybody—that is everybody who pretends to some knowledge of literature—has read some of the vast *œuvre* which sixty years of literary labour have accumulated; some people have read a good deal of it; very few, it is safe to say, have read all, or nearly all. Yet there are few persons who need to be judged by their whole work so much as Victor Hugo. His merits and defects are in one sense singularly uniform, but the cumulative evidence of the former which his works afford is extraordinarily strong. To begin with, if his claims to consideration depended only on the remarkable ambidextrousness which he shows—if there were a word for three-handedness we should certainly use it—in poetry, drama, and prose, they would be irresistibly strong. This very quality of his genius, however, has perhaps helped to rob him of his due meed of praise. Many persons who prize his dramatic talent highly care little for his prose romances, and nothing at all for his poetry proper; a still larger number of those who read his romances neglect the novels and the poetry; and some at least of the smaller band who out of France are familiar with the marvellous series of his poems know little of his work in drama, or in narrative and miscellaneous prose. Those who do know all three, and who yet think not very much of him, may be asked to name an author who rivals him in this capacity of turning his hand to anything. The master of literature has left us no pure prose. Milton, a sufficiently powerful and far-reaching talent, has left next to nothing properly to be called drama. Voltaire and Goethe, indeed, may, in this point of aptness for any of the three tasks, challenge some comparison; but we are not instituting a trial of the relative merits of Goethe and of Hugo, or of Hugo and of Voltaire. All that in this way has to be pointed out is that, taking proficiency in each of the three divisions, no one for a full half century has matched the hero of Sunday's triumph in the literary history of modern Europe.

This is mere matter of fact, and cannot seriously be contested. But the exact value of the individual works which make up this marvellous total—that is the point where the rub lies. When (we are afraid the limitation has to be made) an Englishman is found who, having got over the initial objection that French poetry is generally good for nothing, denies the value of the particular poetry of Victor Hugo, either dramatic or non-dramatic, it is rare that any other serious objection can be got out of him than the charge of "extravagance." It might stagger a reflective person of this kind to remember that this was exactly the charge which the French of the last century brought against Shakespeare, who to us seems about the least extravagant of writers. The coincidence is curious, and though we disclaim the slightest idea of evening the two poets, which would be simply absurd, we may suggest that in each case an inability to get the range may probably explain the difficulty. The truth is that Victor Hugo is the poet, and, for the matter of that, the prose writer too, of the more exalted moods of passion. He is not good on the ground (*ses ailes de géant l'empêchent de marcher*), and the perfect poet is as much at home on the firm ground as on the misty mountain tops. He cannot reason, and the perfect poet reasons as if Baroko and Dekardo had been his study from his youth up. He has absolutely no humour, whereas the perfect poet can dance the perilous sword-dance between the blades of the ridiculous without the least

danger. All these are drawbacks, no doubt, and they disable Victor Hugo from even attempting the impossible rivalry which incompetent admirers claim for him. So also the balloon is an instrument fitted for comparatively few uses. But, if you like, it will take you higher than anything else; and so will Victor Hugo. In the department of work which, if he began it latest, he deserted earliest, the drama, his actual technical proficiency is probably far greater than his detractors allow. But the fact is that, if the defects of *Hernani*, of *Lucrèce Borgia*, of *Le Roi s'amuse* were infinitely worse than they are, the faculty of carrying the audience off their feet at the crisis of the play would save the author a dozen times over. The quivers of a dozen generations of critics have been exhausted upon his first acted play. The motives are insufficient, the action is preposterous, and so on. Let it all (for the sake of argument) be granted. But as it is a notorious fact that the famous *cor d'Hernani*—most preposterous and unreasonable as some of its critics declare it to be—never fails to produce the tragic shiver in any spectator or reader who has given his attention, all this criticism falls to the ground. The dramatist has done what it is his business to do, and adverse criticism is useless. So again of the poems. They are wordy, they are pitched in too few and too high keys, &c. Take the same test again. Give any man who has a sufficient knowledge of French and a sufficient feeling for poetry *Gastibelza* or the *Chasseur Noir*, and ask him to read them at his leisure and confess honestly the effect on himself. Or take a more dangerous test, such as the "Sultan Mourad" of the first *Légende* or the apocalyptic epilogue of the second. These, we say, are dangerous tests. The pig is not a sublime animal, and the advantages of the moral of "Sultan Mourad" are dubious; the vastness of the conception in the epilogue tasks the ordinary reader even to follow it, and inclines him to think of a too familiar maxim about vaulting ambition. Yet here, too, always supposing the conditions of a fair trial present, there is no doubt of the result. If the reader, indeed, be unable to scan an Alexandrine or have a rooted idea that all good lines come to an end when they have reached their tenth foot, why, the touchstone will probably fail. But, if the roc's talons fairly get hold of him, and he can follow the flight, there is little fear of what his verdict will be when he reaches *terra firma* again. A good deal of this transporting power is of course lost in the prose works, yet it is to be felt there also, notably in the *Travailleurs de la Mer*, in the better passages of the *Shakespeare*, and in parts of *Quatre-vingt-treize*. It may be added, in spite of the derision which the statement may raise, that even in the crude and amazing *Han d'Islande* it is not infrequently present. But it is as a poet that Victor Hugo is honoured, and as a poet that he is to be judged. One of the soundest critics of the last hundred years has fixed on the power of transporting as the special poetic differentia; and we venture to think that no poet of that time has had this power more fully—that all but two or three have had it less fully—than Victor Hugo. There are plenty of things which he cannot do; any tiro in criticism can run you off a long list of them. But a poet is to be judged, not by what he cannot do, but by what he can. What Victor Hugo can do on the stage, in poetry proper, and in prose romance is by working on the simpler and directer passions—love, pity, terror, awe, admiration, sense of the vast and vague—to lift the hearer or reader far out of himself, and further out of the dim common thoughts and feelings that usually occupy him. He who can do this, and in such a measure, is a great poet, and of the greatest next to the throne.

THE MURDER AT BROMPTON BARRACKS.

AMATEUR detectives have a great many mysteries to occupy them at present, but the murder of Lieutenant Roper will probably offer them the widest and safest material for conjecture. The *Spectator* has observed that the suspicious of persons who have read the reports of the inquest in a daily paper will naturally tend in a particular direction. We have read the reports, but we confess that we cannot even imagine what our contemporary means. This is doubtless the result of pure stupidity, and we may as well confess at once to a want of aptitude for the labours of the detective. The evidence may, however, be arranged and examined, not in the hope of throwing any light on the event, but merely with a view to showing how thick is the darkness which obscures it.

Lieutenant Roper, who was shot on the staircase of his rooms on February 11th, seems to have been a gentleman of the highest character and of cheerful disposition. The medical evidence at once and completely disposes of the idea that he could have shot himself, whether by accident or design. The man of the most cheerful appearance may be hiding sorrows or difficulties which, at last, drive him to find refuge and release in a voluntary death. No *a priori* reasoning on the subject is valid. But professional evidence is unanimous that Lieutenant Roper did not end his days by his own hand. How, then, did he die? There is a space of about twenty minutes or half an hour to be accounted for. At twenty minutes past eight Mrs. Gallagher, the wife of one of the barrack servants, had left Lieutenant Roper's rooms in an orderly state. She had hung up, or put away, his clothes. At that time Lieutenant Roper was dining in the mess-room, which he left shortly afterwards with the intention of "finishing a letter,"

and of afterwards joining Lieutenant Davidson at an entertainment of some sort. This point is proved by a note which Lieutenant Roper wrote to Mr. Davidson during dinner-time. Mr. Davidson had asked his friend to accompany him, and Mr. Roper replied, in writing, "I want to finish a letter, but will be glad to go a little later." Soon after dinner, and, as we conjecture, soon after half-past eight, Mr. Roper left the mess-room. When next seen Mr. Roper was lying mortally wounded on the stairs leading up to his room. The best evidence as to what must have occurred is given by Mrs. Gerside, wife of one of the servants. "About twenty minutes to nine she heard the sound of a scuffle on the stairs, like feet knocking against the bath-tubs, followed by a fall, or like a double fall." Mrs. Gerside took no notice; but she afterwards heard moans, and the dogs began to bark. Mrs. Gerside then went upstairs, and found Mr. Roper lying as we have described. Mrs. Gerside summoned Gallagher, Mr. Roper's servant, and, on her return, found a poker lying on the landing of the staircase. The sound which first attracted her attention was like that produced, first by the fall of a heavy body, then of a piece of iron. The former noise was doubtless caused by the fall of Mr. Roper, the latter by the poker, or the revolver, also found, as it struck the stone staircase. The evidence of other witnesses, especially of a woman who was outside of the house, proved that "a crack" was heard about a quarter to nine, and that the sound was followed by moans. The extraordinary thing is that no one appears to have heard the murderer of Mr. Roper go upstairs, or come down again, and no sentry saw any such person leave the barracks. Mrs. Gerside must have been very near Mr. Roper's rooms, near enough to hear the fall of iron on his staircase; but it does not appear that she heard footsteps on the stairs more than once, before or after the incident.

The condition of Mr. Roper's rooms must now be considered. They were left neatly arranged at twenty minutes past eight. The witnesses who carried the wounded man back at a quarter to nine found them in disorder. The clothes in the room had been hung up on pegs, or folded up, and placed on the drawers by Mrs. Gallagher at twenty minutes past eight. Between half-past eight and a quarter to nine James Sharp, a sentry, heard "a crack" proceed from an open window of Mr. Roper's rooms, and, looking up, "he noticed a bundle of something on the sill of the window." Clothes had been rolled up and placed there since Mrs. Gallagher left the room. William Gallagher, however, says that he saw no such bundle there when he was called to attend the wounded man, and he adds that the window was shut. Gallagher, however, found the drawers pulled out, and the cover had been taken off a box which Mr. Roper was in the habit of keeping locked. A little money—three or four pounds—was discovered in the drawers, and a watch, with some rings, had not been removed. As Mr. Roper was about to start for Germany, it is supposed that he must have had more money in his possession, and it would be interesting to know the exact facts about this part of the subject. Mr. Roper's own statement that "he had a letter to finish" was corroborated by the discovery, on his table, we presume, of a letter only just begun. Now it seems exceedingly improbable that Mr. Roper had himself opened all his drawers, and tossed about his own clothes. It is hard to suggest any motive for such a proceeding. He was not engaged in packing for his projected journey to Germany. He had returned to his room merely to finish what seems to have been a short note, and this note he could scarcely have found time to touch, for it was begun before dinner, and only three lines were written when it was discovered after the shooting. All these facts, taken together, make it probable that Mr. Roper, as soon as he returned from mess to his rooms, found some one there who was opening his drawers and rolling up his clothes into bundles. Mr. Roper would then seem to have seized the poker, and placed himself on the stairs. Perhaps he closed with his visitor, and, after a short scuffle, was shot. The revolver and some cartridges were found on the scene of the murder; and it was proved that the shot must have been fired at close quarters, as Mr. Roper's clothes were burned.

So far we have not reached the most mysterious part of the affair, and that which possibly is least unlikely to afford a hint as to the motives of the murderer. This revolver was also a stolen article. Gerside, the servant of Lieutenant Stotherd, whose rooms adjoined those of Mr. Roper, and who was in the card-room at the time of the murder, "had no doubt" that the pistol was a prize one which hung on the wall of his master's room. Gerside left the mess at nine, went to Mr. Stotherd's rooms, and there "missed the revolver and pouch from behind the door." Mr. Stotherd himself deposed that "he believed the revolver and case were his property, but he could not swear to them." There is a close family resemblance between revolvers of the same make, and Mr. Stotherd's, though a prize one, bore, it seems, no plate or inscription. Mr. Stotherd had never fired the revolver in his life, and had never possessed any cartridges which fitted it. Now it is an extraordinary thing that the person who took the revolver from Mr. Stotherd's room stole nothing else, though there were plenty of things there to tempt a thief. There were articles of jewelry, clothes, and money in an open drawer. What possible reason could induce a thief to arm himself in one room, and neglecting opportunities to rob, go off to another room and there, apparently, make preparations for carrying away clothes? The murderer must have been well acquainted with the qualities of Mr. Stotherd's revolver, for he had purchased cartridges to fit it. Mr. Stotherd himself had no cartridges. The murderer must

therefore have provided himself with ammunition, then stolen the revolver, and, lastly, gone to Mr. Roper's room, and then began by making preparations for theft, and ended by homicide. We may suppose either that he from the first intended to murder, and merely disarranged Mr. Roper's room to make it seem that his purpose was theft, or that both theft and murder were inspired by personal hatred of Mr. Roper. It is possible to imagine a scoundrel who, wishing to rob, preferred to rob a person he hated, and to kill him if an opportunity presented itself. Only thus can we account for his neglect to steal any of Mr. Stotherd's property except his revolver, which, again, was probably left on the scene of the crime as a piece of misleading evidence calculated to draw inquirers off the scent. But we do not know that Mr. Roper had any enemy in any rank of life, still less one capable of such a combination of crimes.

The whole affair is only made darker and more unaccountable by the fact that a person described as a "gentleman" and a "military man" bought on the day of the crime, and in the High Street of Rochester, cartridges which exactly fitted the bore of Mr. Stotherd's revolver. Unluckily, the shopkeeper does not think he could certainly recognize this person, and, even if he were found, it is plain that any one, in these days of burglars and Fenians, might be innocently purchasing cartridges for a pistol of very common size and make. The bore .450 is the Government bore, and must suit the majority of military revolvers, like that of Mr. Stotherd.

Here there are perplexities enough, but the greatest of them, doubtless, is the fact that no one was seen to come out of the house where Mr. Roper was murdered. Mary Cruth, who was outside and heard the shot, the moanings, and the barking of the dogs, said, "If any one had come out of the house, she must have seen him." Yet, if any stranger remained in the house, how could he escape detection, even in the hurry and confusion which must have followed the detection of the murder? Could he have entered and escaped by the trap-door in the ceiling, close by Mr. Roper's door? The trap had frequently been opened for the passage of workmen. The only apparent conclusion is that the murderer had a minute acquaintance with the barracks, and with the contents of the officers' rooms.

TWO DAYS WITH THE GRAND JURY.

A SPIRIT of thoroughness has been recently awakened among overseers and those who draw up lists; names long neglected have been newly inscribed upon the vestry roll; responsibilities long forgotten have been laid at last upon reluctant shoulders; and many of us who have hitherto escaped the clutches of that Grippeminaud, the Sheriff of Middlesex, who would claw and drag all into his net, are now experiencing the joys of a visit to the Court of Sessions by pressing invitation and a reminder that if we fail to keep the appointment the assistant-judge will mark his disapprobation by asking us for ten pounds. Up to the present time our admiration of the British Constitution in general, and in especial of that great shield of liberty, trial by jury, has been from an outside point of view; we have had our jury—like our policemen, our soldiers, our beadles, our School Boards, our vergers, and our House of Lords—found for us. The glorious machine has gone on without the least assistance from us. Long years of immunity had brought us to believe that we were no more called upon to take part in the government of the country and the city than if we had been so many Merchants of the Steel-yard, who once enjoyed the protection of laws which they neither made nor maintained. It was therefore a rude awakening from a fool's paradise to feel that one must turn out on a cold morning, and make one's way by an early train to that domed edifice, formerly known as Hicks's Hall, which stands by the famous green, once the London *pro aurum clerici*.

Most of us arrive before our time; and at the outset a surprising thing happens—we all know each other by sight. Four-and-twenty men collected by chance out of all these millions recognize each other. After this one may almost believe that the round world, and all therein is, may be, after all, only a fortuitous concourse of atoms. And it is a little disappointment when the thing is explained. For not only do all our names begin with the same letter—which proves the thoroughness of the overseers—but we all come from the same district. Presently the assistant judge appears, the roll is called, swearing begins, and those who have the courage stand up with one consent to make excuses. One man hands up a paper, and says mysteriously that "we" have lately been incorporated with her Majesty's forces. Is he a deputy-assistant-commissary-general, or a lieutenant of Volunteers? It matters not; his excuse availeth nothing, and he is fain to sit down abashed. Another is the secretary of a Society. Without a blush he says that he likes serving on a jury, and, in fact, would rather serve than not, but he has a committee meeting, and his Society will be brought to confusion if he is absent. The judge allows him to depart on conditions. A third has sent his clerk to say that he is ill and cannot come. The judge, accustomed to this kind of thing, discovers from the unhappy clerk that his master, though "very ill indeed," is actively engaged as usual at his business. A fine of ten pounds will convey to that Grand Jurymen a lesson in constitutional law. Another says that he has served within the last two years, but, as he looks a promising jurymen, the judge asks him to be good enough to serve once

more. Two or three do not come at all, and send no excuse. Ten pounds is the least that must be paid by each and every such offender. In one case the officer who delivered the summons testifies that he gave it to a servant, who said she would give it to her master "when he came home." Mark what followed. "A lady came to the door and said that her husband was in India." This is truly remarkable; and the judge, in order to let the gentleman who can be in two places at once clear up this mystery, imposes the fine. An old gentleman claims exemption on the ground of being seventy-three and stone deaf. He is snubbed, however, and told to stand up, kiss the book, and do his duty. Then we are briefly charged, and we go down the stairs, filing through the dirty and disreputable crowd which always collects about a London court of justice into the chamber set apart for the Grand Jury.

Our foreman, whom we elected by the advice of a jurymen who knew him of old, turned out to be quick and intelligent. It depends entirely on the ability of this functionary whether the work is despatched in a day or two, or whether it shall drag on for a week. It must be remembered that the business of the Grand Jury is only to decide whether there is sufficient evidence to connect the prisoner with the crime, not to hear the defence; there is, therefore, no cross-examination; and it cannot be said that the Grand Jury are needless, because at every session they throw out cases which would otherwise go before the Court. Three cases were thrown out by our own collective wisdom. In one of these we saved the accused, who appeared to us quite innocent, from the misery of a trial which would not have been otherwise than full of pain and shame, whatever the result; in the other two the prisoners were perhaps guilty, but there was no real evidence, and we therefore reluctantly restored two habitual criminals to the bosom of their families. There were seventy cases in all. For the first forty or so we went on merrily, even indulging in the hope that we might get through in a single day. The hope was illusory; some of the witnesses were stupid; some were slow; the jury began to disagree; and, worse than all, they kept us waiting for indictments.

The second day showed a marked change in the temper of the jury, discipline was relaxed, questions began to be put independently instead of through the foreman; a capacious spirit was abroad; everybody was anxious to get through the work, yet the cases took longer time; temper was exhibited, and the usher had to endure plainness of speech. Yet with us, as happens on all occasions when men form a council or parliament, the business presently fell into the hands of one or two; the greater part awaited patiently the moment of decision, and voted in dumb show; one drew heads on a paper; another took notes laboriously, but it is not known what he did with the notes; two or three sat back in their chairs, gazing into space, and not even pretending to follow the proceedings; the deaf gentleman took a chair by the fire, and fell fast asleep; the foreman alone seemed to enjoy himself. His utterances became more judicial; his tone in addressing the rest of us became persuasive and condescending, as of one who lays down explanations for our guidance; his language grew forensic; in imagination he was transformed into a judge indeed.

The general impression produced by two days among the criminals is not so depressing as might be expected. There are few cases which call for any kind of pity; most of them present a certain dull uniformity of routine and professional crime. A man who has had any number of previous convictions, and is, therefore, perfectly well known to all the policemen in London, passes a pair of boots hanging outside a shop. They detach themselves from the hook, and he moves on, carrying them in his hand, with a little increase of speed. The shop-boy, however, has seen him, and starts in pursuit; there is a hot race; the thief imitates the tactics of Hippomenes, and drops the boots; unlike Atalanta, the shop-boy disregards the bait, and finally lauds his man. This is the kind of history of half the cases brought before a Grand Jury. A London shopman, where his property is concerned, is a bull-dog for courage and tenacity. The professional thief seems to be drawn as by a magnet towards boots; he is not above stealing other garments if he is quite sure that no one is looking, but boots he cannot resist; he steals them under the very eyes of their owner, and when he must know that his only chance is a run for it. Not that all our "cases" turned upon boots. In one or two other and very surprising things were stolen. Who, for instance, could feel mistrust when a lad came from a friend to borrow a pair of steps, and with what indignation would one hear that the steps had not been borrowed at all by that friend, but had, on the contrary, been obtained under false pretences, and had now "gone in"—that is to say, been pledged—for "the price of a pint"? And when the station-master at a certain station arose on a certain Monday morning, how could he expect to hear that the station clock was stolen—a clock so large and so respectable?

The drivers of vans, shop carts, and carriers' carts seem to be continually assailed by temptation; it is so easy to drop something on the way; there are always plenty of confederates to be had for the asking, and it seems so very unlikely that a policeman will be able to find out the particular pawnbroker who took the things in pledge. Yet the robberies were clumsily conceived in every case and most stupidly executed. A common trick, at the present moment fashionable among the profession and beautiful in its simplicity, is to wrap a brick in a piece of paper, carry it to a house, and demand three and sixpence for the parcel. And, next to boots, bacon seems the most tempting article.

As for the witnesses, they, like the criminals, may be divided into classes. The policeman makes his statement with professional accuracy, aided by notes; if there has been a fight in the capture of his man, he mentions it as part of the case, and as if some one else, with whom he had no concern, had given and taken those kicks and blows; his weak point is that he cannot bring himself to consider anybody who has been once charged as innocent; and his theory of punishment is that for every offence the term of years should increase by geometrical ratio. Tradesmen who have been robbed state their facts clearly and plainly, but with great *animus* against the thief; it must have been through the influence of the London tradesman that shop-lifting was declared a capital offence. Girls who give evidence are always anxious to show that they behaved with propriety under the trying circumstances; at the proper moment they shrieked; if fainting were still in fashion they would have fainted; the language they used towards the pick-pocket or constable was at once dignified and firm; they are greatly excited by the event, and not altogether displeased to play for once a prominent and public part. As for the women who have been assaulted, it is hard to believe that the arrangement of the dirty handkerchief round the place where he with the chopper "it me awful on the 'ed," is not adjusted with some view to effect. The evidence of these women is, however, the saddest part of the whole business; they will not be repressed; they are determined to tell their story right through, with details which have no bearing on the case, and they reveal an existence, manners and customs, language, behaviour, and general views of life which make one ask in wonder and terror how far down has our civilization penetrated.

Lastly, the most common witness is the pawnbroker's assistant. He has always the same story to tell; he is a pasty-faced young man, who seems to take no pride in his profession—as, indeed, how can he? He states his facts without nervousness or excitement; no cross-examination can shake him; it is a simple link in the chain which he has to establish; he swears to that one fact and goes back to his shop. There was one exception to the general rule; a pawnbroker's assistant appeared who was very young, and had not had time to become ashamed of his work; he was still rosy-checked, and perhaps this was his first case. He had learned it all by heart, and repeated the lesson with his hands folded and his eyes turned upwards like a boy at school, without pause or stop, until he broke down. "On Friday evening the prisoner came to the shop and offered the clock and Mr. Tucker he say you may have more than ten shillins if you like and he say yes I will have fifteen and I give him a ticket and he went away on the following day—" Here he suddenly stopped. "On the following day"—he looked round helplessly; he had broken down. "Well," said the chairman, "on the following day?" "On the following day," he repeated, trying to recover the lost thread, but failed. Then an inspiration seized him. "On the following day," he added, triumphantly, "nothink 'appened." What he was instructed to say, what really did happen, will never be known to any of the members of that Grand Jury.

WINTER AFTERNOONS.

THE climate of the British Isles does not appear to be increasing in popularity with those who are not reconciled to it by their devotion to field sports or out-door pursuits generally, and are not bound by any social or other ties to remain in England during the winter. The number of annual migrants grows larger every year; and many who would formerly have looked upon an occasional visit to Italy or the South of France as a great undertaking, to be carefully discussed beforehand, and to be remembered long afterwards as an exploit of considerable daring, will now make their preparations for spending the winter abroad as a matter of course. There are many, in fact, who have by regular annual residence established ties and associations abroad which have come by degrees to be as binding upon them as any in their native country, and who have thus become as much at home in one place as in the other. And, indeed, this state of things is not to be wondered at; for, putting aside the special charms of British sports or British rural life, there is nothing particularly attractive about the prospect of an ordinary winter in England; and when compared with the sunny skies and balmy atmosphere of the Mediterranean coast, it is not surprising that the fogs of London or the heavy damp of the midland counties should have rather the worst of it.

And yet, as there is hardly any state of life, however deplorable, that cannot be found on close examination to possess certain compensating advantages, so even those who are debarred from following the swallows to the sunny South, and are compelled to put up as they best can with the gloom and damp of an average English winter, may, if they care to look at the matter from a moderately rose-coloured point of view, be rewarded by the discovery of certain not altogether unpleasant accompaniments of their position which are only compatible with such a climate as our own. And not last amongst these comes that peculiar charm which is associated with a fine afternoon during the late autumn or winter months. We would not now refer to the dreamy afternoon of the lotus-eater, but rather to that state of atmosphere and general surroundings indicated by Dickens in describing an afternoon that might induce a couple of elderly gentlemen, in a lonely field, to take off their greatcoats and play at leap-frog in pure gaiety and lightness of heart. Whatever other influences may attach to the

atmosphere and glorious colouring of an afternoon or in more genial climes, it could hardly be asserted with any degree of confidence that there was anything about them suggestive of leap-frog, or indeed of any other exercise involving a certain amount of violent physical exertion. Such ideas are only consistent with a more bracing, if less luxurious, atmosphere; but they are ideas that come home to the hearts of most Englishmen, for the very reason probably that they are essentially connected with some of the most popular and old-fashioned characteristics of their native country.

There can be no doubt that there is something associated with the very idea of afternoon that is apt to convey a soothing impression of ease and repose. The day is by this time thoroughly well aired, so to speak; we have come to an understanding with it; and, however unpleasantly it may have begun, the chances are—speaking, of course, of an average uneventful day—that we have got over the worst part of it, and can see our way pretty well to its conclusion. And, should circumstances admit of the day's work having been completed, the feeling that duty may now be cast on one side and well-earned recreation may begin is a very pleasant one. There is a subtle charm about an afternoon atmosphere which it would be difficult to describe, but which it is impossible to associate with any other period of the day. Without attempting to institute comparisons with the delicious freshness of the air of early morning, and the pleasant sense of self-satisfaction that is generally one of the results of early rising, especially with those who are not habitually given to it, there can be no doubt that to most people the afternoon—provided, of course, that the physical energies have not been already overtaxed—brings a feeling of vigour and a freedom from languor that would not be experienced earlier in the day. Many, indeed, whom any physical exertion in the morning would only render sleepy and useless for the rest of the day can take and enjoy strong exercise in the afternoon. There are few cases in which, weather and other circumstances permitting, the afternoon would not be preferred to the morning for any species of outdoor recreation. In hot summer weather the advantage of so doing is obvious, as the coolest and most enjoyable time of day is thereby secured; but, even in the short days of winter, the afternoon has its own peculiar charms. Somehow or other the afternoon fox is generally the best; and the most agreeable recollections of a day's hunting will usually be found to be associated with the latter end of the day. The mind will fondly recall that afternoon when the hounds were whipped off in the dark, with only three up besides the master and the first whip, or that day when, after a long hunting run, the fox got to ground in a strange country just as a reddening sky and a feeling of crispness in the air foretold that recollection and anticipation would be all that the hunting appetite would have to feed upon for some days to come. And although a long ride home on a tired horse, with a steady downpour of rain, or a snowstorm driving in one's face, is not perhaps the most exhilarating performance in the world, there are times when, provided the weather is favourable, this part of the day is by no means the least enjoyable. There are few pleasanter sensations than that of joggling home quietly in the gloaming after a fairly successful day, with the satisfactory reflection that both you and your horse have held your own, and with the comfortable anticipation of a good fire and a good dinner awaiting you. What, again, can be more delightful than a ramble with a gun, especially in a wild or rough country, on a calm winter afternoon? There may perhaps be no very great probability of a large bag; but the mere exercise in the bracing air brings with it a delicious feeling of exhilaration; and a very moderate amount of sport, especially if requiring some knowledge and exercise of woodcraft, will on such occasions be sufficient to make the *chasse* very enjoyable. Nor are the delights of a winter afternoon by any means reserved for sportsmen alone. Is there any old public school football-player who can recall without a thrill of pleasurable regret that delicious feeling of absolute happiness and perfect freedom from care as, emancipated from "bill" or "calling-over," he hurried down to the football-field on a dull November or January afternoon, and while still some way off could see the ball rising against a grey sky, followed by the well-known thud which in the still air could be heard half a mile off? And, to say nothing of the pleasure of skating and other seasonable pastimes, there is no time when the ordinary pedestrian will find himself able to get more enjoyment out of a walk, even if only undertaken for the purpose of a constitutional. If he is anything of an artist, moreover, his eye will be as gratified with the cold greys and subdued tints of winter as with the rich luxuriance of summer or the glorious colouring of autumn. It is surprising, indeed, that more attention is not devoted by British artists to winter scenery. The French and Belgian schools of the present day abound with works of this description; and the increasing number of winter landscapes, generally, moreover, with afternoon or evening effects, that may be seen in any gallery where foreign pictures are exhibited, would appear to indicate that these quiet studies are readily appreciated.

But, although a winter afternoon in the country has charms of its own which are of course unattainable in a large city, there are many occasions during the winter months when the dweller in London may find this period of the day very enjoyable. In some respects, indeed, he has the advantage over his country cousin; for as soon as it really gets dark in the country, the romance and sentiment of the thing are gone, and the wayfarer, if a stranger in the locality, speedily becomes alive to the inconvenience of groping about by-roads or blundering into holes and quagmires; whereas

in London the approach of night is merely the signal for an additional demonstration of life and cheerfulness. There is something very homely and reassuring about the glow of even a common street lamp, as it springs into light on a darkening afternoon; and the music and poetry of the muffin bell are justly dear to all true-hearted cockneys. It is, however, more of the remaining hours of daylight that we would speak than of the period of absolute darkness; and when there is neither fog nor rain, and it is tolerably dry under foot, an afternoon walk in London at this time of year is far from being devoid of enjoyment. The streets are seen at their best, for the busiest and most jostling period of the day is over, and there is not the same hopeless block of carriages as in summer, so that it is possible to move about with a certain degree of freedom. And on a fine winter's afternoon a walk in the London Parks is almost as healthy and invigorating as a walk in the country. We are of course speaking of an average winter, and not of such abnormal weather as we have recently experienced. But even when, as has been the case lately, the metropolis is under the dominion of snow and frost, the cleverly arranged combinations of wood and water, which certainly reflect great credit on their designers, present in many places the most complete illusion of rural scenery. When the snow lies deep, and locomotion away from the footpaths becomes inconvenient, it is easy to find untrodden spots in Kensington Gardens where the exercise of a very little imagination is sufficient to carry one in fancy to the outskirts of some remote woodland. And what could be more picturesque in its way than the view of the frozen Serpentine, or the water in St. James's Park, and the ever-moving crowd of skaters and idlers of every kind? The scene is one that would have delighted a Dutch master of the old school; and, as dusk creeps on, and the lurid glow of the "all hot" chestnut vendor's furnace lights up the snow around, while torches begin to flit rapidly in every direction, it is difficult to believe that we are in hum-drum and commonplace London.

And, although travelling in really cold weather is decidedly a thing to be avoided, especially when there is the prospect of being snowed-up for an indefinite period, without even the consolation of a refreshment-room bun, there are times when a not too long journey on a winter's day is by no means unpleasant. There are few things, for instance, that are more thoroughly appreciated by a man of business, whether public or otherwise, especially if a sportsman, than an occasional escape from London during the winter months. The visit to the Hall or the Grange is looked forward to for months, and imagination is busy with delightful anticipations of forthcoming enjoyment, mingled with certain sensations of anxiety, which may very probably be uncalculated for, but which are not the less certain to intrude themselves. There are sure to be one or two good meets of the hounds while we are there, and if that new purchase of ours turns out as good as he promises, we rather think we may show some of them the way. But fancy if it freezes hard the whole time! Or if the young horse, about whose mouth we are perhaps not quite as certain as we could wish, takes it into his head to be nasty, and bolts into the middle of the hounds, what a fearful nuisance it will be! Or we have perhaps been asked for a shooting party, and have reason to believe that some of the best coverts will be shot for the first time. Ah! if we can get a good place, and manage to shoot as well as we did last year, what fun we shall have! But then, again, the old Squire is rather fond of asking too many guns, and we may find ourselves next to some jealous shot whose only idea of sport is to blow everything to pieces the moment it gets up. Or it may rain every day and spoil the whole thing. But the looked-for day comes at last, and the weather promises well for sport of all kinds. And as our friend gets into a hansom on a dull, grey afternoon and gives the order for his particular railway terminus, he experiences a delicious sensation of casting care behind him that it is worth a very considerable amount of hard work to have earned. There is a pleasant bustle and importance, moreover, about the starting of the afternoon express that is decidedly inspiring; and as the train glides out of the station, and our traveller settles himself into his corner, he feels as if he had got the whole world before him. Having, of course, encumbered himself with various newspapers, magazines, and other light literature, he at first tries to read; but when the suburbs are cleared and the open country appears, his outdoor instincts get the better of his literary tastes, and he takes to looking out of the window. If a hunting man, he amuses himself by scanning the fences as they meet him in quick succession, and thinking where he would "have" them. And how easy they all look, and how the young horse would fly over that country! Or if a shooter, he eyes each copse and spinney, and wonders whether there is ever a woodcock there; or thinks how nice it would be to stand in the hollow at the end of that big wood, with rocketers coming over your head down wind. Now a vast stubble appears, and his practised eye glances along it for the little round excrescences that denote a covey of partridges on the feed. Or, as the line skirts a bend of a river or reed-bordered sheet of water, he strains his eyes to see whether those are ducks out in the open or only waterhens. But gradually the soft grey afternoon light merges into a dull red on the horizon, while each hedgerow and coppice becomes more and more indistinct, till at last the landscape is nothing but a vague outline of light and shade. Encouraged by the fitful glimmer of the lamp overhead, our friend now perhaps resumes his attempts at reading. But the endeavour is not very successful, and he very soon gives it up as a bad job. The motion of the carriage, more-

over, coupled with the gradually approaching darkness, has the effect of inducing a feeling of drowsiness; and it is pleasanter to light a cigar, and, lying back in the corner of the carriage, to look out lazily at the pale streak of light still left on the horizon, and give the reins to imagination. In this half-waking half-sleeping state, he is disposed to take a comfortable view of existence generally, mingled with indistinct, but pleasurable, anticipations of the next few days in particular. The regular beat of the train has a soothing effect, and even the whistle of the engine, beginning in a low key and ending in a shriek, as the train rushes by station after station, has a not altogether unmelodious sound. But just as he is dropping off into a sweet slumber, a longer wail than usual, and a gradual slackening, arouse him to the fact that he is approaching the junction where he has to change on to the little branch line that is to convey him to his journey's end. Here he may possibly fall in with others bound to the same hospitable roof as himself, and on the strength of a common destination may commence an agreeable acquaintance. And, however enjoyable his visit may turn out, it is quite probable that not the least pleasant recollection connected with it will be his journey on that winter's afternoon.

THE MONETARY CRISIS IN NEW YORK.

THE past ten days have furnished striking proof of the unwisdom of a legislature endangering the success of the main object it has in view for the sake of a paltry advantage. In the current year the United States bonds bearing 5 and 6 per cent. interest fall due; and it was recommended by the Secretary of the Treasury, in his report to Congress last December, that these bonds should be refunded in two forms—that a portion should be replaced by bonds redeemable in five years, and payable in twenty, bearing interest not higher than 3½ per cent., and that the remainder should be replaced by Treasury Notes running from one to ten years. Congress, however, was of opinion that the credit of the United States is good enough now to permit of borrowing at 3 per cent.; and accordingly the House of Representatives decided that bonds bearing not more than 3 per cent. interest should be issued to the amount of 80 millions sterling, and that Treasury Notes, bearing the same rate of interest, should be issued for 60 millions sterling. When the Bill went to the Senate, Mr. Sherman had an interview with the Finance Committee of that Chamber, and he again urged his own views, and pointed out the objections which he entertained to the Bill passed by the House of Representatives. His arguments were enforced by Mr. Knox, the Comptroller of the Currency; and the Committee accordingly reported in accordance with Mr. Sherman's recommendations. But the Senate itself overruled the decisions of its Committee, and adopted the House Bill with but few and unimportant amendments. The Bill went back to the House for its assent to the amendments; but circumstances soon occurred which prove very conclusively that Mr. Sherman was right and the two Houses of Congress wrong.

In addition to what we have stated above, the Bill provides that the new bonds must be offered for public subscription for thirty days before they can be awarded to any Syndicate; and it further enacts that the bonds must be sold at not less than par, and that the total expense of placing them must not exceed one-fourth of one per cent. These provisions are very distasteful to the banks of the United States. When the great funding operation was carried through a couple of years ago, its success was rendered certain by the co-operation of the banks. A Syndicate of American bankers and European capitalists took the loans in large amounts, and then placed them on the home and European markets. The new Bill is designed to prevent a repetition of this operation as far as possible. Congress in effect says that the former bargain made by Mr. Sherman was a wasteful one, and that if the banks are to take the new bonds, they must take them on the same conditions as the rest of the public. To people ignorant of financial matters this seems a very reasonable decision. But it should be borne in mind that the Syndicate which took the great American loans in fact incurred a very great risk. For several years the United States Government had been unable to place these loans, and it was by no means certain that the public would buy as freely as they actually have bought. The Syndicate being composed of exceedingly clever, experienced, and far-seeing men, perceived that the discredit into which State loans of all kinds had fallen during the long depression in trade was passing away, and that we were on the eve of a revival of business and they took these loans in vast amounts in dependence upon their provision. But if the revival in trade had not come, and the loans had been left upon their hands, it is quite evident that the capital of all these great houses would have been locked up to an inconvenient amount, and would have crippled them very seriously. The jealousy shown by Congress to the Syndicate was thus neither wise nor just. In another point, too, the provisions of the Bill are not very favourable to the banks. Under previous funding Acts a certain latitude was left to the Secretary of the Treasury as to the bargain he made with the Syndicates. When they took a large amount of the bonds he was enabled to make them a discount; but by this Bill the whole expense which he is authorized to incur must not exceed one-fourth of one per cent., and as the unavoidable expenses approach very close to that fraction, it follows that if the public should fail to take the loans, he can hold out no

inducement to the capitalists of America and Europe to help in placing them on the market.

But Congress went still further in its action against the banks. When Mr. Chase was providing means for carrying on the war against the South, one of his great plans was to create a vast network of banks all over the Union, which should supply a market for the bonds he was issuing. Accordingly, he made it compulsory on the banks to lodge with the Treasury of the United States bonds of the United States security for their bank notes to the full amount of those notes and 10 per cent. over. In other words, if a bank wished to obtain the right to issue 90,000 dollars in notes, it must lodge in the Treasury of the United States 99,000 dollars. When this system was first introduced the bonds of the United States bore 6 per cent. interest; but, by the refunding processes that have since gone on, a great part of the debt now bears only 4 and 4½ per cent. interest. The remainder, bearing 5 and 6 per cent. interest, falls due this year, and to refund this remainder is the object of the Bill which we are describing. The proper and businesslike course would have been to have left the banks to replace their Fives and Sixes by the new Three per Cents.; but, instead of doing so, the Bill makes it compulsory on the banks to hold only Three per Cents. as security for their note circulation, and also for money deposited in them by the Treasury; with this proviso, however, that as the Threes are paid off by the sinking fund Fours and Four-and-a-Halves may be purchased in their stead. In the first place, only Threes can be lodged by the banks. It has been urged that this is a breach of faith, and even an act of confiscation; but it is not so. As we have just stated, the very motive for founding these national banks was to provide a market for the bonds of the United States, and Congress is merely following up the idea of Mr. Chase in what it is now doing. But although the Bill is neither a breach of faith nor an act of confiscation, it is very unwise, and not scrupulously just. It compels the banks, for instance, to get rid of all the Fours and Four-and-a-Halves which they now hold, and to replace them by Threes. But to throw a mass of property of any kind in this manner in the course of a few months upon the market is inevitably to depreciate that property. Naturally, therefore, the banks have protested against this portion of the Bill, and, as we shall presently see, have taken steps to defeat the purposes of Congress. One other provision, however, is still harder upon the banks. As the law now stands, a national bank desiring to surrender its right to issue notes can simply lodge in the United States Treasury either gold or legal tenders, when it gets back the bonds it has lodged there, and the Treasury undertakes to redeem the notes outstanding. The law upon this point has been, as we now describe it, since 1874. Previously a bank desiring to surrender its right of note issue had to collect the identical notes issued by it, and to return them to the Treasury before it could obtain its bonds lodged there. It was found in practice extremely difficult to do this. The notes are paid out by the banks in discounting bills and making loans to customers. They pass from hand to hand, often into distant States and Territories, and the banks could get them back only by offering a high premium. Sometimes they failed to get the whole amount back by any amount of exertion. To insist, therefore, upon the banks collecting their notes before returning to them their deposited bonds is, in effect, to compel them to retain their circulation whether they like it or not, and, consequently, as we have already said, seven years ago the law upon this point was changed; but the Bill which we are now considering actually proposes that the repealed provisions of the law shall be revived, and that the later law shall be repealed. In other words, Congress is not only desirous to compel the banks to take the new Three per Cents. as security for their note issues, but it is desirous also of compelling them to keep those Threes whether they like it or not, and whether their note circulation is profitable or unprofitable.

Naturally the banks have rebelled against a measure so obviously conceived in disregard of their interests, and they have taken steps to prove that they can effectually retaliate upon Congress. As soon as the Bill passed the Senate the banks decided to surrender their circulation rather than take the new Threes. To do this, as we have said, they must lodge either gold or legal tenders in the Treasury, and accordingly they proceeded to call in all their short loans, and to refuse discounts and advances to their customers. The result was an alarm throughout the whole commercial community of the United States, approaching at one time very closely to a panic. In New York the interest upon "call" money—that is, money repayable on demand—at the end of last week actually exceeded the rate of 300 per cent. per annum. That rate prevailed of course only for a very short time; but all through the present week the crisis has been intense. Prices on the Stock Exchange fell from 10 to 17 per cent., and the New York exchanges upon London and Paris dropped in a similar manner. In a single week the sterling exchange fell about 7 cents., or 3½d. in the pound, or almost 1½ per cent. At times, indeed, it has been found impossible to sell exchange in New York. In consequence, gold has been taken from London and from Paris for export to New York, and a tremor has been sent through the money markets of Europe. This action of the banks and the loss it inflicts upon the whole business community of the United States is the best commentary on the unwisdom of the course adopted by Congress. But we do not think it likely that the banks really intend contracting their note circulation. The United States law is extremely favourable to them. Here in the United Kingdom the Bank of England has to keep

—upon which it earns not a penny, and which costs it in the way of storage and other charges—against every it issues in excess of the 14 millions which it is authorized sue against the Government debt. So again, all the provincial and Irish and Scotch banks have to hold gold against every note they print in excess of their authorized issue. But the banks of the United States are not required to hold a single penny in gold. The security which they have to lodge with the Treasury, on the contrary, will yield them interest, even under this new Bill, at the rate of 3 per cent. per annum, and in the past the interest was considerably higher. No doubt there is a tax levied upon the circulation of the banks, but it is very much less than the interest on the bonds. They have also, and very properly, to pay the charges of the Treasury in connexion with the bank note circulation. But when all expenses are deducted, they still receive a handsome amount upon the bonds lodged in the Treasury, and this is over and above the interest which they receive on the employment of their notes. It is hardly likely, therefore, that the banks will seriously persist in contracting the circulation. But they have shown most effectually that they can ruinously disturb the business of the whole country, and can defeat the funding operations of the Government. It is suicidal folly on the part of Congress to drive them to such a course, and it is scarcely credible that the House will persist in passing the Bill.

RECENT MUSIC.

MR. CHARLES HALLÉ'S Orchestral Concerts at St. James's Hall have obtained the great success which they deserved, but which could not have been completely foreseen. The first concert, though presenting no novelties, was looked forward to with much interest, principally because of the wide range of the programme. Beginning with Weber's *Oberon* overture, which was very finely rendered, it passed to the Andantino in Spohr's Symphony, "The Power of Sound," and ended the first part with Goldmark's so-called Symphony, "A Rustic Wedding." Although "A Rustic Wedding" has been heard before at the Crystal Palace, it was the only number in the programme which approached to novelty. Symphony, indeed, it is not, and as a piece of programme music it cannot be said to be of the highest rank; nevertheless, its quaint opening march, for violoncelli and contrabassi in unison, suggestive slightly of the old hymn tune "O Come, all ye Faithful," and the thirteen variations that follow, were received by the audience with evident appreciation. The numbers of the piece which seemed most worthy of notice were the Scherzo and the Andante "In the Garden," which, though somewhat incoherent in construction, gave evidence of considerable melodic power in the composer. The second part of the programme on the 12th of February opened with the great C minor Symphony of Beethoven. This favourite work was rendered by Mr. Hallé's fine orchestra in a magnificent manner, and we may safely say that the conductor's reading of it can hardly be surpassed. After an entr'acte and aria from Schubert's opera of *Rosamunda*, the concert ended with a masterly rendering of the *Tannhäuser* overture. "A Rustic Wedding" seems to have found so much favour with the audience that it was repeated at the second concert "by desire"; but the chief interest was centred in the Triple Concerto of Beethoven and Mozart's Serenade in D. In the first of these Mr. Hallé took his place at the pianoforte, leaving Herr Hecht to conduct, and Mne. Norman Neruda and Signor Piatti completed the trio. The Concerto is a work which has been given more than once at the Crystal Palace and elsewhere, and, although it is not perhaps one of Beethoven's happiest efforts, yet it deserves, and on this occasion received, a most respectful hearing. From the hands of the three leading executants, supported by the splendid orchestra, it is unnecessary to say that it received the best interpretation that could be given. As for the Serenade, written by Mozart for the wedding festivities of the daughter of Ilufiner, a burgo-master of Salzburg, we must confess it was a trifle tedious. Coming immediately after Beethoven's Concerto, a piece like this, consisting of eight movements, many of which are minuets and trios, and not in the best style of its composer, is hardly calculated to excite the interest of an audience, added to which it took the immoderate time of one hour in performance. The exquisite introduction to *Lohengrin* followed, in which Mr. Hallé's orchestra showed that it was worthy of the high esteem in which it has been held in Manchester. Svendsen's Norwegian Rhapsody closed the concert.

Last Saturday Berlioz's *Childhood of Christ*, which Mr. Hallé has already produced in Manchester, was given for the first time in London. The second of the parts into which it is divided was the first written and produced by Berlioz, under the title of the *Fuite en Egypte*. The story goes that, fearing the adverse criticism which was so freely bestowed upon him by his contemporaries whenever he placed a new work before the public, or perhaps even wishing to perpetrate a practical joke upon his enemies, Berlioz gave out that the *Fuite en Egypte* was the work of a composer of the seventeenth century little known to fame, of the name of Pierre Ducré, and that he had recently had the good fortune to discover the manuscript score of this little sacred cantata. The almost violent feeling exhibited against his works was thus avoided, and the *Fuite en Egypte* received not only a respectful, but an encouraging, hearing. The critics set themselves to discover

whether there were any other works of this long-forgotten genius, and the excitement became intense. When the sensation was at its height, Berlioz, with an assurance which never failed him, declared himself the composer; and later on, as if to show that he spoke the truth, he added the other parts of *Herod's Dream* and *The Coming to Sais*. Heine, upon hearing the *Childhood of Christ*, wrote to Berlioz to say how sorry he was that he had ever said he was no musician, upon which Berlioz answered that he rejoiced to hear Heine was sorry for having talked upon a subject that he did not understand.

After a short recitation by the Narrator we are introduced to a street in Jerusalem, the Roman guards patrolling to the music of a "Night March," a movement characteristic enough. The second scene shows us Herod, who is ill at ease concerning a vision he has lately seen, and in an air, which does not strike us as particularly pleasing, he enlarges upon the fact that he feels it "dreary to reign." Upon the advice of a friend Herod summons the magicians who agree to solve his dream for him. This gives occasion for some incantation music which puts Berlioz at once in his natural element. Certainly this incantation music is as weird as the *Faust* music, and the effect produced by alternating the time of every other bar from triple to common time is as uncanny a one as could be desired. After this Herod is advised to slay all the children born within a certain period of time, which he determines to do without hesitation. We are then taken to the Stable at Bethlehem, where a very tender duet is sung by Joseph and Mary, which was very finely rendered by Mr. Santley and his daughter, and this is succeeded by a chorus of unseen angels, who warn the parents to take their child instantly to Egypt. The effect of this chorus was unfortunately marred by the fact that its intonation was, to say the least, uncertain, if not positively untrue; but this may have arisen from the chorus being placed in the room at the back of the platform, whence the sound of their voices reached the audience under great disadvantages. The second part opens with an overture in the fugal style, intended to represent the assembling of the shepherds at the stable at Bethlehem, and is followed by an uninteresting "Farewell of the Shepherds," which might have been written for the latest edition of the *Hymns Ancient and Modern*. This part closes with "The Repose of the Holy Family," a rather colourless tenor solo, in which Mr. Lloyd, as the Narrator, gave a curiously and unpleasantly whining effect to the words "Behold a shadowy bower" which occur in the piece. The third part is, taken as a whole, the least satisfactory. It seems as if the composer was tired of his subject, and was at a loss how to bring it to a conclusion. Opening with a solo for the tenor Narrator, which is followed by a characteristic duet for Joseph and Mary, who implore the people of Sais to give them shelter after their journey, it continues with a chorus of Ismaelites, led by a benevolent "Father of the Family," who welcome the pilgrims. To this succeeds a quick movement, supposed, as we are told by the stage instructions, to represent "the servants bringing wine and food with alacrity," after which the father of the family bids his household to take the harp and flute and gently entice the strangers to slumber. A "serenade" ensues for harp and flutes as ordered, which would be pleasant if it were not too long, and after another chorus and "Amen" the work comes to an end.

L'Enfance du Christ, though by no means one of Berlioz's best efforts, is still far from being a failure. Its chief interest, it is true, arises from the fact that Berlioz set himself the task of writing a work within the then acknowledged limits of musical construction and with what success he did it is shown by Heine's letter to him after he had heard it. That there are many people of Heine's opinion amongst the public of the present day is amply evidenced by the fact that the insipid "Farewell of the Shepherds" was the only piece redemanded at this performance.

Miss Santley, who has a sympathetic soprano voice, sang the part of Mary with artistic feeling, showing in many ways that, with further study, she has a successful future before her. Of Mr. Santley and Signor Foli it is only necessary to say that they sustained their parts with the success which they always command. Messrs. F. Leigh and F. A. Bridge sang their portion of the music with credit. To Mr. Charles Hallé as a conductor is due the highest praise. Throwing aside the fussy obtrusiveness which is the bane of modern conductors, he has adopted that calm composure that we have before noticed as a characteristic of Herr Richter, which leads his audience to depend upon him as an interpreter rather than as a mere metronome beating the time for the orchestra to play to.

On Thursday last the Bach Choir gave its first concert for this season. The programme was full of interest, and, as is the intention of these concerts, some pieces were given that one has a rare chance of hearing. Bach's church cantata, "Ich hatte viel Bekümmerniss," with Mlle. Brudenstein, Miss Hope Glon, and Messrs. Lloyd and Santley to sing the leading parts, opened the concert, which was followed by an unpublished eight-part anthem by Sir W. Sterndale Bennett, which the choir have given before. The motetts of Palestrina and Vittoria, "Adoramus Te," and "O quam gloriosum," we consider the best performed pieces in the first part of the programme. Unquestionably good amateur choir as it is, the Bach Choir needs, we think, more practice with its orchestra than it appears to have to bring it up to the mark. This was specially evident on Thursday night; for, in the unaccompanied pieces, such as the two motetts above mentioned, and the part song in the second part by Pearsall, "Light of my soul, arise," the singing

of the Choir showed a marked change, and the lights and shades of choral singing were perceptible. The orchestra, it is true, were rough in tone; but even this does not exculpate the Choir from the fault of redundant noise in the pieces they performed with orchestral accompaniment. For instance, the "Gloria" from Cherubini's Mass in D, were it not for the exquisite solos performed by the leading singers, would have been unbearable. Mr. Goldschmidt's orchestra was far from perfect, and this may account for the faults referred to. The second part of the programme began with Schumann's lovely "Requiem for Mignon," which was sung in German, and the concert closed with the finale from the first act of Mendelssohn's unfinished opera of *Loreley*, a beautiful piece of dramatic writing which only makes us regret that the gifted composer did not live to finish what must have ranked as a great opera had it been completed.

English music has during the last month, we hear, scored a success on the Continent. We refer to the opera of *The Veiled Prophet of Khorassan*, by Mr. Villiers Stanford, the organist of Trinity College, Cambridge, which has been produced with great applause at the Court Theatre at Hanover, and is to be given at other important German houses. Perhaps we may hope to hear it some day in its composer's native country. Through a curious mistake, it has been stated by a contemporary that Mr. Stanford is the first living English composer whose work has been performed on the Continent. Balfé lived to see the *Bohemian Girl* a success at more than one theatre on the Continent, and Henry Inigo Pierson, who was more appreciated in Germany than in his native land, lived to see his opera *Contarini* produced at Hamburg in 1872.

PICTURES BY MR. MILLAIS.

THE Directors of the Fine Art Society have made a very interesting collection of some of Mr. Millais's most celebrated and popular pictures. Out of the seventeen examples now exhibited to the public there is not one that does not possess a distinctly representative character. It would, of course, have been possible to have added largely to the number without exhausting the resources at their command and without incurring any danger of inducing in the minds of the spectator the sense of weariness or monotony. Mr. Millais's talent is of a kind that easily bears the trial which such an experiment involves. His productions have always a remarkable freshness of impression, and the successive stages of his career exhibit a striking variety of aim and method. In the labours of thirty years he has powerfully reflected some of the dominant movements of artistic taste and style; but he has never so far pledged himself to any particular school as to give to his work the perishable stamp of a passing fashion. But although the selection might have been extended with advantage, it is large enough to afford a fair measure of the painter's accomplishments. It displays in just proportion both the strength and the weakness of his talent, and it allows us to trace the gradual development of an extraordinary technical gift, and to mark the growing devotion of the painter to those forms of art in which this gift finds the fullest opportunities of powerful expression. A review of Mr. Millais's performances from his earliest youth to mature manhood will, we think, tend to strengthen the conviction that the essential excellences of his style are seen at their best in the departments of portrait and landscape. If we compare his later pictures with the compositions produced under the influence of the pre-Raphaelite movement, we shall perceive that an over-increasing prominence is given to that element in painting which springs out of a keen perception of the truths of individual character. He has not, it is true, abandoned the study of dramatic incident, and he still preserves a full command over certain realities of sentiment and passion, but his later experiments in this kind recall in their aim the subject pictures of Reynolds, where the poetic or historic interest is obviously grafted upon the more congenial study of the facts of individual face and form. His success in works of invention is for this reason partly dependent upon the fitness of his model to serve the particular idea which he is seeking to illustrate. The young "Princess Elizabeth" (11), a canvas just fresh from the artist's studio, may be regarded as a fortunate example of this later style. The chosen type does not perhaps very strictly accord with the idea of an imprisoned child whose failing health is speedily to end in death, but the pensive and pathetic expression has been very skillfully rendered, and in the enjoyment of the technical merits of the picture we are ready to concede that enough has been done to justify, if not exactly to explain, the title which it bears. In the "Princess in the Tower" (13) we have drawbacks, with scarce any of the attractions, of this particular method. The faces are in themselves uninteresting, and they have evidently not inspired the painter. The historic costume is worn without grace or distinction, nor is there any special charm of colour or magic of execution to divert attention from the intellectual insufficiency of the design. That Mr. Millais has really no need to "burden himself" with these suggestions of dramatic interest is proved by the far superior attractions of a picture like "Cherry Ripe" (15), which pretends to be nothing more than a portrait. Here, as in the "Yeoman of the Guard" (17), he relies altogether upon his powers as a painter, and he proves himself in each case strong enough to assume this independent attitude. He can give us all

the pleasure that we have a right to seek from such work by the skill and ease with which he renders the facts before his eyes, by the keenness of perception which enables him to detect and record the most subtle and significant truths of gesture and expression, and by his extraordinary sympathy with the most opposite and varied types of character. In the attempt to add to these ample attractions the interest that belongs to illustrative art he ventures upon more disputable ground, and labours with less assurance of success. As an inventor, Mr. Millais cannot always completely subdue the material that he borrows from nature; and such power as he at one time displayed in this direction has lost something of its original strength, perhaps because it is now less constantly employed. In this respect we are inclined to take exception to a remark made by Mr. Lang in the interesting and appreciative sketch of the artist's career which serves as a preface to the catalogue. According to Mr. Lang, Mr. Millais has been to English painting very much what Mr. Tennyson has been to English poetry, and in respect of the unrivalled popularity enjoyed by poet and painter alike this is doubtless true enough. But the resemblance can scarcely be said to go further.

It is unquestionably true that in Mr. Millais's youthful essays the faculty of invention is more strongly developed. "The Carpenter's Shop" (5) and the "Isabella" (3) illustrate in a delightful manner the modesty and earnestness of the painter's studentship. They prove to us that the dexterity of his more mature style was won by much hard and patient toil; and they afford evidence of a sensitive artistic temperament which yielded readily, and even enthusiastically, to the influence of a powerful artistic movement. But it would be a mistake, we think, to assume that Mr. Millais has not been true to his highest instincts because he no longer labours in the spirit which produced "The Carpenter's Shop" or "The Vale of Rest." He showed no feverish haste to assert his own individuality, and he had power sufficient even at that time to produce works of admirable quality in a manner that was not to be permanently retained. And yet even here it is possible to recognize the ultimate tendency of his art. In the "Isabella," though the outward form tells of the study of Florentine models, the essential qualities of the work remind us rather of the early Flemish masters. The sentiment of beauty is already hardly pressed by the stronger passion for absolute veracity in the treatment of the individual heads, and for minute realism in the rendering of the details of costume. It is, in fact, the work of a born realist, but of a realist restrained by a phase of sentiment that belonged rather to the movement than to the individual. An artist of Mr. Millais's genius must be measured, not by what he casts aside, but by what he retains. If he has changed since those youthful days, it is because the permanent attributes of his art have since then more completely asserted themselves, and because, in common with all men of high endowment, he is incapable of reverting to a style that was associated with the imitative period of his career. Other men working under these same influences have developed a power of inventive design which has led them in a direction far removed from that which Mr. Millais has taken. They have found in the example of Florentine art an impulse that has proved to be in accord with their own intellectual bias and with a native gift of design. But Mr. Millais's art speedily gave signs that it was destined to take a different form. In the "Order of Release," following close upon the "Huguenots," he struck out into the realm of modern sentiment; and in later works, like the "Boyhood of Raleigh," he added to the study of character new evidence of his ability to render the beauty of outward nature. At this time, too, he began to exhibit increasing facility and technical resource, and these qualities reach the highest point of expression in the head of the old man in the "North-West Passage." In all the later works from his hand the technical aspect of his art gains an ever-increasing importance. It is possible now and again to object to his choice of subject or to criticize the slender intellectual interest which he deems sufficient to justify the choice of a poetic or historical title, but as a master of the brush he has stepped into a foremost place in our school, and it is unlikely that while he lives his supremacy in this respect can be seriously questioned.

In a room adjoining that in which Mr. Millais's pictures are displayed there is to be found a series of very interesting studies in pastel by Mr. Whistler. The contrast offered by the work of these two artists is in many ways sufficiently striking, and yet their aims in art are not altogether dissimilar. Mr. Whistler is also a realist who takes his impressions direct from nature, and who concerns himself scarcely at all with the problems of illustrative design. As in the case of Mr. Millais, the kind of beauty that he can command is in its nature inseparable from the technical modes of its expression. But the truth of effect that Mr. Whistler seeks to secure is not so readily identified by the experience of an ordinary observer. By a process of selection he reduces the varied realities of his subject to a simple impression, which he interprets by artistic means that are suggestive rather than complete. His peculiar talent has rarely been displayed to greater advantage than in these spirited sketches of modern Venice. A refined power in draughtsmanship has been recognized as the characteristic excellence of his work in etching, and in many of his painted landscapes he has exhibited as keen a perception of certain truths of colour and tone. The material which he now employs enables him to combine these distinct qualities in a form that will render the beauty of his work accessible to a large number of persons who have hitherto been repelled by the strangeness of his style. The colouring in many of these sketches has a brilliant

quality that is rarely to be found in his work in oil, and it is associated with a definiteness of design that recalls some of the most delightful of the earlier plates from the Thames. It is of course to be understood that the execution is still far from complete in the general and popular sense of the word. In many instances the tone of the brown paper upon which the drawings have been made is left as an important element in the chosen scheme of colour. We may observe however that, even in the slightest examples of the series, there is always evidence of distinct artistic intention. To do justice to Mr. Whistler, it must also be said that in those cases where he has carried his work to a more finished result he has shown an equal mastery over his material. The labour that is added to the first impression is never thrown away, which is more than can be said of a vast number of artistic productions with a greater pretence of careful elaboration.

REVIEWS.

LORD ELLENBOROUGH'S DIARY.*

THERE is perhaps no precedent for the publication of Memoirs, consisting mainly of notes of Cabinet meetings, made from day to day by a Minister; but, after the lapse of half a century, continued reserve is needless; and there are in the present book no revelations of political secrets. The relations of members of the Duke of Wellington's Government to one another and to their contemporaries are now only matters of historical or biographical interest. The embarrassments which attend coalitions are curiously illustrated by the statement that at the first Cabinet dinner after the formation of the Government, Huskisson made a slight and cold bow to Lord Ellenborough, "Dudley looked as black as thunder," and "the courtesy was that of men who had just fought a duel." It appears from many subsequent entries in the Diary that, during their short continuance in office, most of the followers of Canning and the Duke regarded one another with jealous dislike. After the breach caused by Huskisson's East Retford vote, the Canning section was bitterly hostile to the Government, with the exception of Lord Dudley, who never voted with the Opposition. It was already known that Lord Grey was, in consequence of his antipathy to Canning and his adherents, for some time disposed to an alliance with the Government. It was unfortunate that the Duke discouraged his overtures, partly in deference to the prejudices of George IV., and also in consequence of his anxiety to reclaim the allegiance of the extreme Tories who seceded from his party on the introduction of the Catholic Relief Bill. The entire absence from the minds of all men of any anticipation of the approaching catastrophe of the Reform Bill has in it an element of what has been called tragic irony. Like an audience at a theatre, posterity is in the secret of the destiny which impends over the unconscious performers. The natural tendency to impute culpable blindness to those who failed to foresee the future is corrected by constant experience of similar want of prescience; but there are cases in which miscalculation amounts to wilful and culpable stupidity. The overthrow of the Duke of Wellington's Government by the union with both the Whigs and Canningites of the followers of Cumberland and Eldon was a suicidal gratification of foolish spite. The malcontents had the means of knowing that the Duke of Wellington, who had always been lukewarm on the Catholic question, was on other points a staunch and inveterate Tory. Lord Ellenborough's Diary confirms the impression that the Duke had meditated a settlement of the Catholic claims for some time before the production of the Bill. In the previous year Lord Lyndhurst had spoken of the matter with his usual freedom from prejudice; and Peel himself, though he then intended to retire from the Government, recognized the necessity of concession. The Duke hoped to carry the Bill without breaking up his party; but his main difficulty was to obtain the consent of the King, who was, to a great extent, under the sinister influence of the Duke of Cumberland. In those days it was still possible for the King to dismiss his Ministers, and the formation of an anti-Catholic Government would have been extremely dangerous. Lord Ellenborough, who had been a consistent advocate of the Catholic claims, fully appreciated the sagacious firmness of the Duke and the self-sacrificing patriotism of Peel.

Notwithstanding defects which prevented him from attaining the highest rank as a statesman, Lord Ellenborough was a considerable man. He had laboriously cultivated his natural gift of oratory; and in his later years he was perhaps the most eloquent speaker of his time. As he never addressed the House of Lords without preparation, or on any subject except those in which he took a special interest, he had the advantage of being always in earnest. His tall figure, his graceful and dignified bearing, and his powerful and musical voice, added to the effect of his polished style and impressive declamation. As his opinions were seldom popular, and as he had no strong party connexion, his influence in the country bore but a small proportion to his rhetorical power. Those who acted with him may have admired his genius, but they never implicitly relied on his judgment. During his Indian Viceroyalty his eccentricity was sometimes regarded as an approach to madness; and his bombastic proclamation about the gates of

Ghuznee deserved the ridicule which it provoked. Both in his early administration of the Board of Control, and during his residence in India, he was often described as a wild elephant who needed to have tame ones by his side. He had himself first applied the phrase to an Indian judge whom he was at the time providing with two steady and unambitious colleagues. A private letter which announced the appointment was accidentally published, and the comparison took the popular fancy as descriptive of Lord Ellenborough and the cautious authorities of the India House. The Diary, though it is written in a simple and unambitious style, contains a few passages which indicate a wild and eccentric fancy. The victories of the Russians in Armenia disturbed him because, he says, "they are in Asia, and Asia is mine." He talks of his hope on some fit occasion of conquering Egypt from India, and he mentions as the dream of his life an imaginary battle in which he was to defeat the Russians on the banks of the Indus. The more rational apprehensions of the effects of the advance of Russian aggrandizement in Central Asia will be impaired in their effect on the controversies of the present day by his occasional extravagance. Some readers will be puzzled by his repeated anticipations of the Russian conquest of China. The editor has allowed the name of the great Empire to be in several passages substituted for the more intelligible designation of Khiva. In those days there were, as now, apprehensions that in certain contingencies the Russians might occupy Cabul, and disturb India, not so much by actual or threatened invasion as by intrigues with native States. There was also in 1827 and 1828 a Russian war with Turkey, which Lord Ellenborough watched with anxiety, and for a long time with unfounded hope. At the end he seems almost to have agreed with the Duke of Wellington that it would have been better if the Turkish Empire had then been finally overthrown. For the Greeks and their cause Lord Ellenborough felt a strong distaste; yet their atrocities, which might explain his antipathy, were rivalled or exceeded by the Turks. His judgment was, in truth, founded on political and not on sentimental grounds. Like almost all English statesmen of his time, he thought the maintenance of Turkey indispensable to the interests of England in Europe, though his discouragement at the Treaty of Adrianople almost induced him to despair of the possibility of saving the Sultan. Long afterwards Lord Ellenborough vindicated the policy of the Crimean war on the express and exclusive ground that it was in his judgment politically expedient. During his incumbency of the Board of Control he satisfied himself of the expediency of transferring the government of India from the Company to the Crown. He nevertheless took some pains to maintain friendly relations with the Chairs, as the Chairman and Deputy-Chairman were called, who then represented the Board of Directors in its communications with the Government. On one occasion he justly complains of an objection which the Directors had raised to the expense of establishing steam communication with India by way of Suez. "They never will remember," he indignantly remarks, "that they govern a State." He considered that the discipline both of the civil and the military service was dangerously relaxed; and he attributed much of the blame to Lord William Bentinck. Like other heads of departments, he was subject to the authority of the Duke of Wellington, for whom he had a genuine and profound respect. Almost his only criticism of his chief on which he ventures is to the effect that the Duke is much under the influence of his early associations. It is surprising that the Duke was less eager than Lord Ellenborough to repress some insubordination which had been displayed by the officers of the army.

Those who take an interest in the politics of fifty years ago will find Lord Ellenborough's authentic details both amusing and instructive. His admission into the Cabinet is a proof of the reputation which he had already acquired by his eloquence and general ability. At that time the conduct of business in the House of Lords possessed much practical importance, and without Lord Ellenborough the Government would have been weak in debate. "There are only three of us," he said in 1830, against ten or eleven; and of the three the Duke of Wellington could only be called a debater because his authority and vigour supplied the place of oratory. The remaining two were Lord Ellenborough himself and Lord Lyndhurst, who was alone a match for many opponents. After nearly two years of office the diarist records with complacency a remark of the Duke of Wellington that Ellenborough was perhaps too eager, but that he was always ready. His discretion may perhaps not have been equal to his ability. He boasts that by one of his speeches he had drawn Lord Grey into avowed opposition, when perhaps the possibility of conciliation might not have been wholly exhausted. Even able men are sometimes deluded by the fallacy that an open enemy is better than a neutral or a doubtful friend; but in public or private it is judicious to make the least of differences and the most of points of agreement. A waverer may in the end incline in the desired direction, while a professed antagonist could not, if he would, pass the dividing chasm. In the particular case probably no harm was done, as Lord Grey had already made up his quarrel with the Whig supporters of Canning. The Duke would probably at an earlier time have made greater efforts to win him over, but for George IV.'s insurmountable dislike to the friend of his youth. Even if an alliance had been formed, it is doubtful whether the Duke and Lord Grey could long have acted together. Brought forward by Parliamentary reform, which Lord Grey would not have in principle opposed. In 1829, and even after the accession of

* *A Political Diary, 1828-30, by Edward Law, Lord Ellenborough.* Edited by Lord Colchester. London: Bentley & Son. 1881.

William IV. in the following year, the principal danger of the Government was supposed to be the disaffection of the Brunawickers or Eldon Tories. Some of the Ministers nevertheless thought that the Duke would do well to retire into the office of Foreign Secretary, leaving the place of Prime Minister to Peel, whose pre-eminent ability and courage were fully recognized. Others objected, not without sagacity, that Peel would be a Radical Minister. He would assuredly not have committed the fatal error of pledging the Government against all reform. On the eve of the election of 1830 hopes were entertained of securing Lord Palmerston's services as Chancellor of the Exchequer, and on the King's accession a great Court place was offered to the Duke of Bedford.

Lord Ellenborough was born in 1790. He entered the House of Commons in 1813, and succeeded his father in the peerage in 1818. Having married a sister of Lord Castlereagh, he generally supported the Government until the appointment of Canning, whom he disliked and distrusted. During the Administration of Canning and Lord Goderich he was allied by common enmity with Lord Grey, and more intimately with the Duke of Wellington. It is not a little surprising that, having neither held office nor acquired a great Parliamentary reputation, he should have been admitted into the Cabinet as Privy Seal. Young, vigorous, and ambitious, he was naturally dissatisfied with a sinecure office, and he had also the good taste to feel that his rank and precedence were above his pretensions. He consoled himself for administrative idleness by taking as active a part in foreign affairs as his opportunities allowed. Lord Dudley often allowed him to correct his drafts, and sometimes to compose despatches; but the Duke, who was real Foreign Minister, was always treated by Lord Ellenborough with loyal deference. When Lord Dudley, much against his will, resigned with Huskisson and his colleagues, Lord Ellenborough hoped to be his successor. Lord Aberdeen, for whom he had a profound contempt, was preferred; but the Duke partially gratified his wishes by making him President of the Board of Control. The Privy Seal was some time afterwards given to Lord Roslyn, the only Whig recruit, with the exception of the Attorney-General, Sir James Scarlett, who joined the Wellington Administration. When Lord Ellenborough kissed hands as Privy Seal the King addressed him civilly; but during his whole term of office he never spoke to him again, and he omitted his name from the invitations which he from time to time sent to the Ministers. The probable cause of offence was a vote which he had given against the Queen Caroline Pains and Penalties Bill. Lord Ellenborough bore the slights to which he was exposed with temper and dignity, though he from time to time expresses a strong and just opinion of the King. The Diary, on the whole, places Lord Ellenborough's character in a favourable light. The commanding position and indefatigable activity of the Duke of Wellington are strongly illustrated; and in one passage Lord Ellenborough records with elaboration that the Duke found leisure to extract the secrets of Opposition from the great Whig ladies. For Peel Lord Ellenborough seems to have had little personal liking, but he appreciated his great ability and his force of character. His friendship led him to overstate the respectable qualities of Sir Henry Hardinge, with whom he was nearly connected with marriage. Lord Colchester, though he has employed a careless reader to correct the press, has earned by his publication a place among those benefactors of mankind who relieve the tediousness of life by the publication of biographies, memoirs, and diaries.

CELTIC SCOTLAND.*

MR. SKENE completes with this volume his learned work on the early history of Scotland. Of all European histories, there is none in which the historian has greater difficulties to contend with, especially in its earlier stages. This difficulty is attributable to two causes—firstly, the very fragmentary and meagre character of the materials at the historian's command; secondly, the mass of fiction which has been presented and received as history to fill up the blanks left by the absence of authentic fact. Hence the greater part of the historian's task is to expose the fallacies which by dint of frequent repetition are at last accepted as truth. This sort of labour seldom meets with the thanks which it deserves, especially when these fallacies are the foundation on which rests some monument of national or family pride. Mr. Skene has had a great deal of this apparently ungracious, but most praiseworthy, work to do in his new volume. It is devoted to an examination of "the early land tenures and social condition of the Celtic inhabitants of Scotland," and extends over the period beginning with the death of Alexander III., and coming down to the final extinction of the clan system in the Highlands. As the historian of Celtic Scotland, Mr. Skene confines himself to treating of the social peculiarities which lingered so long in the mountainous region, the original Scotland, whose inhabitants, proud of being the only genuine Scots, looked down with contempt on the Saxon, who had taken from them both king and nomenclature, despising equally his industry, his civilization, his language, and his laws.

The better to account for and to explain the tenure by which the Highlanders held the soil and the peculiarities of their social organisation, that clan system which has outlived the tribal

system in any other part of Europe, Mr. Skene traces the various legendary accounts of their origin to their source. He divides these legends into three classes—the ethnic, the linguistic, and the historical. The ethnic legends belong to a period later than the introduction of Christianity; for they all trace the origin of the people to a biblical source, and describe them as immigrants from some Eastern land. The linguistic legend has been invented to account for a similarity of language between two peoples. It usually sets forth that a colony of soldiers have taken wives from the people they have conquered, having first cut their tongues out to prevent the women transmitting their own language to their children. Of the historical legends, some contain an element of truth—as, for example, those that relate to the first settlement of the Scots in Britain—while others are entirely untrue. It is to this latter class of wholly fictitious legends that Mr. Skene considers the whole legendary history of Ireland to belong. After citing all the several legends which purport to account for the origin of the race, Mr. Skene goes very fully into the question of the origin of the tribe. He examines in detail the tribal system as it existed in Ireland and in Wales. Mr. Skene considers that the clan system of the Highlands was neither "territorial nor purely patriarchal, but that it was based on the community or tribe." The "original social unit" among the people of Gaelic race was the *Tuath*, a name which, though it afterwards was applied to the land of the clan, meant originally the tribe itself. But as with the language so with the tribal system. The first stages of its growth are prehistoric, so that it is nowhere to be seen in its primitive form. Two leading features, however, Mr. Skene assumes as certain. The one is that private property in land was unknown till a comparatively recent period; the other that, although the members of the tribe all traced their origin from the *qonygnus*, whose name they bore, yet that the "social unit was not the individual or family, but the community or tribe." Thus the land was held by the tribe in common. Personal property in cattle existed, and was acknowledged, and led to differences of rank, regulated by the amount of this property; but the land on which the cattle were pastured was the common property of the tribe, and after the cultivation of land was introduced, the occupation of the arable land was decided by lot. The head of the *Tuath* was the *Toisech*, who gradually changed into the *Thane*, holding his land from the Crown, and paying a share of the produce as rent. Out of the *Tuath* or tribe the sept or clan developed itself. The tribe was held together by the tie of communal feeling, the union of the clan was maintained by the feeling of personal devotion to the chief. Mr. Skene here indicates the period of this transition:—

But while the more ancient tribal forms had thus undergone a process of change and modification—similar to that which characterised the Irish tribe, and left merely its shadow behind it in the geographical district and the function of the "Toisech"—it is in the reign of David the First that the sept or clan first appears as a distinct and permanent feature in the social organisation of the Gaelic population, and owing to the light thrown upon the ancient state of the earldom of Buchan as a Celtic *Mac tuath* by the Book of Deer only. During the period of the Mormaer of Buchan prior to Garraid and Colman, who were Mac tuaths in the reign of David, we find the *Toisechs* mentioned generally as occupying the lands of land; but in the time of these two Mormaers a grant of land is made by Comgil mac Chuanraig, Toisech of Clan Comor, and Colman, Mormaer of Buchan, and Ebor, daughter of Garraid, his wife, and Donnachaidh mac Fhargh, Toisech of Clan Mozan, mentioned all the previous *clannach* to God, Drostan, Cluainche, and Ebor, that is to the monastery of Deer, and this grant is witnessed, among other, by the two sons of the Toisech. The Toisech of the *Tuath* had thus by the time acquired a subject "Drostan" to form a sept of his kin and dependants, of which he now appears as the head.

We have here the first beginning of the clan, and the chapter ends with a picture of what the clan was by the first quarter of the last century. The same principle which had developed the clan from the tribe was at work in the clan, and tended to divide it again into smaller septs. The kinsmen of the chief, as they acquired land, founded families, of which they were the head, and often rivalled in riches and power the real head of the house, the representative of the oldest branch.

After entering very fully into the origin of the clan system, Mr. Skene turns to the genealogies of the several clans. He here shows how the use of surnames, in the proper sense of the term—that is, as a means of distinguishing persons bearing the same Christian name from one another—was unknown among them. The whole clan bore the personal name of the common ancestor from whom they were all supposed to descend. These personal names were of several kinds and made up in different ways. The oldest Gaelic names are composed of two monosyllables—a root with a terminal syllable added to it, as "Artgal," "Dulhrail," "Fingal," and a host of others. Christianity brought with it another class of names, in which are found the words "maol," or tonsured, and "giolla," a servant, now transformed into "gillie." Some of these names are now so completely altered in form that the source of their origin is forgotten. Thus Giolla-chrisod, the servant of Christ, has become Gilchrist, and Gillespuir, the servant of the bishop, Gillespie. Frequently the syllable Mac has been prefixed to them, and then they are still more difficult to recognize. Who could ever find out, unaided, that Maclean is MacGiollacoin, the son of the servant of St. John, or that the son of the servant of the saints is the meaning of MacCallum. The Norse invasion added yet another element to the names generally known as Highland. From these Norsemen came the names Ranald and Gregor and Malcolm, and others that are constantly met with in the Highland genealogies. Besides the names derived from the sources already mentioned, there were

* *Celtic Scotland: a History of Ancient Alban.* By William F. Skene. Vol. III.—Land and People. Edinburgh: David Douglas. 1880.

Other clan names of yet another class taken from the districts in which the clans lived, as the Buchanans, the Rosses, and the Monroes, and some of foreign descent, the bearers of which, on becoming owners of estates in the Highlands, adopted the Highland customs of their dependents, who, after the Highland fashion, took the chief's name. Hence it comes that we find large clans bearing such unCeltic names as Stewart, Fraser, and Menzies. Sometimes a clan was distinguished by a nickname, descriptive, perhaps, of some personal peculiarity of the chief. Thus Campbell, a name that has absorbed a whole host of queer-sounding Macs, dwellers on the lands that the Campbells have gradually acquired, is simply Cabel, or the crooked mouth. The first of the race who bears the name appears in a charter of Alexander III. in the thirteenth century. The name is also found in the Irish genealogies, where the father of this Gillespie Cabel of the charter is pointed out as the ancestor from whom the clan was named. It may thus be taken for granted that he was the possessor of the mouth so remarkably crooked that the whole clan has ever since perpetuated its memory. The ease with which Campbell may be turned into Campo Bello has led to the invention of a fictitious Norman descent. This could never have held its ground if the original spelling of the name Cabel had been adhered to, or if it had been borne in mind that, as Mr. Skene makes clear, the name of the Norman family was not Campo Bello, but Bello Campo, and this name, following the general laws that have regulated the formation of modern French, is in its modern form, not Campbell, but Beauchamp.

Intimately connected with the nomenclature of the clans are their pedigrees. The pride of the Highlanders in their pedigrees, and the length and transparent lying of many of these same pedigrees, have long been laughed at. But this love of genealogies, though it has now become ridiculous, originated in a much more serious intention than that of gratifying vanity. The proving of the pedigree was essential for the preservation of property. As Mr. Skene says:—

In considering the genealogies of the Highland clans we must bear in mind that in the early state of the tribal organization the pedigree of the sept or clan, and of each member of the tribe, had a very important meaning. Their rights were derived through the common ancestor, and their relation to him, and through him to each other, indicated their position in the succession, as well as their place in the allocation of the tribe land. In such a state of society the pedigree occupied the same position as the title-deed in the feudal system, and the Sennachies were as much the custodiers of the rights of families as the mere panyrysts of the clan.

This system prevailed as long as the ruling power was Celtic; but when feudalism was introduced, and the King, in spite of his Celtic lineage, surrounded himself with Norman barons, and adopted their manners, the pedigree ceased to have any value as a title-deed, and became merely an instrument for attaining social distinction. It is at this point in the history of the clans that the spurious pedigrees begin. The native Sennachies fell into disfavour, and were replaced by Irish Sennachies, who drew largely on the Irish genealogies for the early pedigrees of the chiefs, thus linking them on to the legendary heroes of Irish history. Mr. Skene examines in detail several of the best known and most generally received of the Highland pedigrees, and shows how thoroughly artificial they are. He proves beyond the possibility of doubt

that none of them can in fact be pushed further back than the reign of Kenneth MacAlpin, the oldest link in many of them being contemporary with him, while others fall short of that period. Between the oldest link of those which reach that date and the Dalriadic king of the race of Iorn with which they are connected there is a complete blank, and it is thus plain that the same process of manipulation and artificial construction had taken place with these pedigrees which had perverted the genealogy of the kings of the line of Kenneth MacAlpin. . . . They may then be regarded as trustworthy only in so far as they show the links of the descent of each clan from its eponymus as believed in the fourteenth and fifteenth centuries, and the grouping of certain clans together where a common ancestor within the historic period is assigned to them.

The Act passed in 1597, requiring "That the inhabitants of the Isles and Heilands show their holdings"—that is, produce the titles by which they held their lands—gave an impetus to this sort of invention, for many of the chiefs had no parchments, or, as they called them in contempt, "sheep-skins," to show. It was to supply this want that the spurious written histories of some of the clans began to be compiled. The form of fiction preferred in these is to make out the eponymus of the clan a Norse or Norman hero. All this class of pedigrees Mr. Skene sweeps aside as entirely worthless tissues of falsehood, notwithstanding that they are so persistently cherished by the families for whose advantage they were invented. Some of these spurious pedigrees he examines carefully, exposing the impossibility of the links on which they are hung. Of them all, that of the Mackenzie is the most remarkable. It was first produced by the first Earl of Cromarty in his "Genealogie of the Mackenzies" in the seventeenth century. He traces the clan to an ancestor, one of the Geraldines who came to Scotland and played a distinguished part in the battle of Largs in the reign of Alexander III. To support this story a charter of Alexander is produced. But on examination it is found that none of the witnesses to this charter were alive in the reign of that king, and further that the lands of Kin-tail, which the charter erects into a barony, were not held at all from the king, but from the Earl of Ross, and were not made into a barony till the reign of James IV. This story is but a sample of the way in which these fabulous genealogies were made, and of the ease and certainty with which their impostures can be detected and exposed. It is surprising that they should

have been so readily accepted by a people naturally so incredulous as the Scotch, but vanity has ever been the ruling passion of the Celts, and they have always been ready to cherish any lies, however ridiculous, that tended to their exaltation. It was this vain-glorious spirit that led to the adoption as history of the tissue of fable put forth by Boece and Buchanan.

Mr. Skene's book concludes with an interesting chapter on the tenure of land in the Highlands and Western Isles subsequent to the sixteenth century. This chapter contains an account of some of the townships in the Hebrides, where the system of holding the arable land in runrig and the pasture land in common, still prevails. This account is most valuable, as giving a clear idea of the system formerly prevalent in the Highlands, a system founded on, and still showing, many of the characteristic features of the old tribal communities. In the appendix are translations from Irish and Gaelic MSS. containing the genealogies of the clans, and an examination into the letters patent purporting to have been granted by William the Lion to the Earl of Mar. In conclusion, we cannot say more in praise of Mr. Skene's book than that it is quite equal in value and interest to the two volumes which have preceded it, each of which we have noticed as it appeared.

SUNRISE.*

THE heroes of Mr. Black's novels have been in the habit of belonging to Clubs more or less distinguished, the names of which have in most cases been more or less veiled. In *Sunrise* the hero and his accompanying "Charles, his friend," boldly avow that they belong to the *Century*, but make up for this openness by also belonging to a vast and omnipotent Secret Society. The name of this Society is for a considerable time wrapped in the mystery which befits a modern Vehmgericht, which is more powerful than all the recognized Governments of Europe put together; but at a certain stage of the story its title is suddenly revealed to us (in capital letters) as THE SOCIETY OF THE SEVEN STARS. Mr. Black appears to believe, or rather perhaps he appears to wish his readers to believe, that the riddling of Europe with Secret Societies suggested by an even more distinguished novelist is an accomplished fact. But he does not compel belief much more than did the unhappy writer who not long ago compiled a history of such Secret Societies, and gravely included in his list the Society called Les Treize, which he justly said had been celebrated by Balzac. Mr. Black's Society is a more possible one than Balzac's, because the members know comparatively little of each other and of each other's doings, going, in fact, more or less upon the principles which are known to govern the oldest Secret Society which has an actual existence. But it is perhaps not much more probable, and is certainly far less attractive. It is not unlikely that Mr. Black has got, naturally enough, tired of working on and on in the same groove, and has wished to strike out a new line. In his latest work there is evidence that he is far from being a writer who has only one groove, but it must at the same time be admitted that his choice of a motive for his story has not been completely fortunate. On the other hand, the very novelty of the undertaking may excuse such shortcomings as there are. These shortcomings are due, we cannot help thinking, to the author's own want of belief, already hinted at, in his device. We know of only one completely successful account of a secret and powerful Association in modern English fiction. This is found in Lord Beaconsfield's beautiful romance, *Contarini Fleming*. It occurs only as an episode; and the Association, after a series of brilliant and thoughtless exploits in highway robbery, goes to pieces from precisely the causes which would naturally send it to pieces. Mr. Black's "Society of the Seven Stars" is a much bigger and much more successful affair. It has agents and officers all over the world. It exacts blind obedience, even to a command to murder by stealth a person whose existence the Society considers undesirable; it makes conditions with princes and rulers; it has stages and degrees of initiation; its members have a slavish faith in the edicts of its Council; it maintains its appointed officers in luxury even when its coffers clamour for replenishment; its object is to bring about a kind of millennium which is vaguely described by enthusiastic brothers; and it has a dingy office in Lisle Street, Soho. Here the hero is initiated, in the presence of various people whom he did not expect to see there, by signing his name in their presence to a formal and pedantic document, which afterwards compels him to undertake a vulgar murder against which all his feelings revolt. It has not occurred either to Mr. Black, or to the hero, or to any of the people concerned, that the oath taken is in its nature one to perform illegal acts and therefore not binding. Mr. Brand, the rich cosmopolitan Englishman, who is oddly enough enticed into joining the Association, might, one would have thought, have had knowledge of this not very surprising fact, and it is certainly astonishing that Lord Evelyn (Charles, his friend) did not think of it when he was bent on bringing forward every conceivable argument against a thing which was, if possible, more revolting to him than to Brand, because it was mainly through him that Brand had joined and taken an active part in the affairs of the Society.

* *Sunrise: a Story of These Times.* By William Black. 3 vols. London: Sampson Low & Co.

In describing the conduct of these affairs the author has seemingly aimed at a weird mixture of the mysterious and appalling with the commonplace. When a murder is on hand three or four people meet quietly in a little room in Soho over coffee and cigarettes. The chief personage among them announces that the Council has ordered this murder to be done; and that they are assembled to draw lots for the honour of carrying out the Council's decree. They draw lots, and quietly break up, the bad number having naturally fallen to the hero, who goes away filled with misery, but convinced that there is nothing for it but to fulfil to the letter the obligation which he has undertaken. One writer of wild fiction—Hoffmann—could succeed and has succeeded in producing an almost appalling effect by the incongruous mixture of the terrible with the trivial—witness the scene in which Major O'Malley raises some undefined and awful spirit of evil by reading sentences from a boy's French grammar; but this is a *tour* which not everyone who wishes can accomplish. Mr. Black's apparently commonplace and really deadly gatherings fail, it must be confessed, to carry any conviction with them, and leave one with a strong impression of the extraordinary foolishness of the people chiefly concerned in them. Unluckily, the book as a whole depends upon one's being made to believe while one reads it in the existence of the illimitable and almost omnipotent Society which has ramifications all over the world, and head-quarters in Lisle Street. If one could be made to believe in this, the machinery invented by the author to hasten, change, or defer the events which would seem to follow inevitably on the Council's decrees would appear skilful and well worked out. As it is, reality is wanting, and the general effect may be compared to that of a conjuring trick for which the main apparatus is defective, and in which the operator is compelled to ask the spectator's admiration for what he might have done if only his prepared pack of cards or his inexhaustible bottle had been properly made. There are the obvious objections to a bold attempt which we trust may be followed by one equally bold, but more fortunately directed. That the book has merits it is hardly necessary to say; but these are to be found in the episodes, and especially in some charming love scenes between the hero and heroine, than in the bowl and dagger part of the story. From one of these scenes we may make a quotation. George Brand, the hero, and Natalie Lind, the heroine, are left alone for a few moments in an opera box, from which they have been seeing *Fidelio*:—

"Natalie!" he said, in a low and hurried voice, "I am going away to-morrow. I don't know when I shall see you again. Surely you will give me some assurance—some promise; something I can repeat to myself. Natalie, I know the value of what I am asking; you will give yourself to me?"

She stood by the half-shut door, pale, irresolute, and yet outwardly calm. Her eyes were cast down; she held her fan firmly with both hands.

"Natalie, are you afraid to answer?"

Then the young Hungarian girl raised her eyes, and bravely regarded him, though her face was still pale and apprehensive.

"No," she said, in a low voice. "But how can I answer you more than this—that if I am not to give myself to you I will give myself to no other? I will be your wife, or the wife of no one. Dear friend, I can say no more."

"It is enough."

She went quickly to the front of the box; in both bouquets there were forget-me-nots. She hurriedly selected some, and returned, and gave them to him.

"Whatever happens, you will remember that there was one who at least wished to be worthy of your love."

Natalie Lind, whose character is, to our thinking, one of the most attractive things in the book, is the charming daughter of Ferdinand Lind, a very clever and unscrupulous man, who holds a high office under the bogey-like Council of the Seven Stars Society. There is a mystery about Natalie's mother, which we shall not reveal, but which leads to some pretty and poetical scenes that are a welcome relief to the strange doings of the "Seven Stars" people. The beginning of the book is the introduction of Brand, a rich coal-owner, to Lind by his invalid friend Lord Evelyn, whose boyish enthusiasm for the Society and for Lind Brand's common sense gently rebukes. Brand, however, presently falls in love, first with Natalie, then with the cause to which, without knowing anything definite about it, Natalie is heart and soul devoted. One result of this is found in the pretty love scenes, from one of which we have made an extract. But there are, of course, other results of a different kind. Brand becomes an active worker in whatever vaguely suggested work the Society is engaged in—work which we are led to infer is, barring the occasional murder of a person whose crimes the law does not recognize, of an excellent kind. Presently he makes his proposal in due form for Natalie's hand, a proposal which, for reasons which we never clearly understand, Lind regards with extreme dislike. He is, however, by way of being "a politic gentleman," and he attempts with but moderate success to play a fast-and-loose game with Brand. On the one hand, he suggests to him to give up the whole of his fortune to the Society, becoming a sort of Poor Knight of the Order, and with this suggestion is coupled a carefully veiled hint that Natalie might in this case become his wife. On the other hand, Lind remarks, apparently quite apart from this suggestion, that some one is wanted by the Society to spend his whole life in Philadelphia, and that the selection of a person to enjoy this honour rests with him. The reader is for some time carefully and skilfully kept in doubt as to whether the estimate formed of Lind's character by Evelyn, who completely believes in him, or the less amiable conclusion arrived at by Brand, is the

true one. Here, again, one is struck by the odd difference between Brand's common-sense on many occasions and his extraordinary folly in thinking himself bound by every law of honour to keep a grossly and criminally illegal compact. But possibly the same view of the duties of members to the Council was held by the Home Rule M.P. who was "the most brilliant and amiable of diners-out," and the "Oxford don of large fortune and wildly Radical views," who figure early in the story as members of the Society. If, however, that was so, how was it competent for members to resign, as we learn later on that it was? However this may be, when Lind's commands are distinctly defied by his daughter and Brand, he comes out as the real stick-at-nothing villain which he is, and contrives, by some well-meant but strangely imprudent trickery, to get Brand chosen as the assassin of a certain Cardinal whose proceedings are not approved of by the "Seven Stars." The state of mind produced in Brand by this business is described with considerable force, and would be really moving but for the considerations already suggested. Anyhow, the author has got his chief characters into a commendable tangle. Brand, who has just reunited his promised bride to her mother, and whose heart is filled with the prospect of happiness, suddenly finds himself posing in the character of a sneaking cut-throat. How he is got out of the difficulty we do not propose to relate. In some ways this is the most exciting part of a story which is told with Mr. Black's well-known grace of style, and is illustrated by many pleasant episodes, but which has a radical defect.

AN AMERICAN VIEW OF THE COPYRIGHT QUESTION.*

THE essay now reprinted by Mr. Richard Grant White comes to our hands with a certain opportuneness at this moment, though it does not appear that the condition of actual negotiations between this country and the United States on the establishment of international copyright can yet be described as satisfactory. Mr. White's object is partly to explain the real position of American men of letters in this matter, partly to set forth his own opinion on copyright in general. That opinion is one which has been maintained at various times by several eminent judges, and is now maintained by several eminent men of learning and letters—namely, that by natural justice copyright ought to be absolute and perpetual. We mean copyright in the exact sense, or what is called "copyright after publication"; the right of an author to the absolute control of his work before it is published having never been seriously disputed. What, on general principles of justice and convenience, a law of copyright ought to be is perhaps one of the most difficult questions in theoretical jurisprudence; and accordingly opinions are expressed upon it by those who contribute to the controversy with a truly daring and splendid confidence, and the rather because they are mostly innocent of legal training. Mr. White is no exception to this rule. He thinks the rights of the case as plain as the sun at noonday. Perpetual copyright is a manifest ordinance of natural justice, and it was "that accursed statute of Queen Anne" which did all the mischief:—

What man of common-sense and single eye does not see that the assumption of the lawyers is absurd, monstrous? . . . That a man's thoughts are his own cannot be disputed, and, like the plainest truths, it can hardly be proved. But they cannot be even possessed by or come to the knowledge of another, unless he communicates them. Does he lose his right of property in them by putting them upon paper? This is not a question of opinion; it is a question of fact.

And so on through several pages of vigorous, not to say vehement, writing. Unhappily the case is not so plain to everybody. Once allow that copyright is property like any other property, and the argument is irresistible. But the use of the word property begs the question—which is, in truth, whether copyright be a kind of property, and, if so, how far like other property. So lately as 1852 it happened, through a peculiar combination of circumstances, that the existence of copyright at common law became the subject of judicial discussion in the House of Lords. As the reports entitled *House of Lords Cases* are not familiar to the literary public, we shall make no apology for citing a paragraph or so from the opinion of one of the judges, by no means a mere technical lawyer or an enemy of letters:—

If such a property exists at common law, it must commence with the act of composition or creation itself, and must, as it seems to me, be independent of its being reduced into writing; it must also be independent of whether the author is willing to furnish copies at a reasonable price. . . . If it is the author's property he may give or withhold it as he pleases; he may communicate it to the public with a liberal or a niggardly hand, or withhold it altogether. And the same principle must be applicable to every other creation, invention, or discovery, as well as a poem, a history, or any other literary production. It must apply to every other offspring of man's imagination, wit, or labour; to discoveries in science, in the art and manufactures, in natural history; in short, to whatever belongs to human life. An ode composed and recited by an ancient bard at a public festival is as much the creation of his genius, and is published by the recitation, though not in the same degree, as the poem of a modern author, printed and sold in Paternoster Row. The speech of the orator, the sermon of the preacher, the lecture of the professor, have no greater claim to protection, and to the foundation of exclusive property and right, than the labours of the man of science, the invention of the mechanic, the discovery

* *The American View of the Copyright Question*. Reprinted from the "Broadway Magazine," May, 1868. With a Postscript by Richard Grant White, Secretary of the Executive Committee of the Copyright Association. London and New York: Routledge & Sons. 1880.

of the physician or empiric, or indeed the successful efforts of any one in any department of human knowledge or practice. And it is difficult to say where, in principle, this is to stop; why is it to be confined to the larger and graver labours of the understanding? why does it not apply to a well-told anecdote, or a witty reply, so as to forbid repetition without the permission of the author? And, carried to its utmost extent, it would at length descend to lower and meaner subjects, and include the trick of a conjuror, or the grimace of a clown.

The same point was made more briefly by the then Chief Justice of the Common Pleas:—

I see nothing [he said] to distinguish the case of the author or owner of a book or manuscript from that of the inventor or owner of a complicated and highly useful machine. Each is the result probably of great talents, profound study, much labour, and it may be of great expense; but as the inventor of the steam engine would at the common law have had no exclusive privilege of multiplying copies of his machine for sale, I see no reason, from the peculiar nature of the property, why the author of a treatise to explain the action of the steam-engine should have at the common law an exclusive right of multiplying copies of his work.

These opinions are not exactly directed, it is true, to the point of general policy; but they are suggestive on it. Are the champions of perpetual copyright prepared also to do battle for perpetual and exclusive property in inventions? If they say yes, the consequences become rather startling. We should now be paying an indirect contribution, every one of us, to the successors of those nameless benefactors of mankind who invented table forks, blacking, the corkscrew, and the common pump; or, to take a more specific instance from a hint unconsciously thrown out by Mr. White himself, some lucky representative of Pascal's next of kin or assigns would at this day be *dix fois millionnaire* with royalties on every wheelbarrow sold in the civilized world. But, if the answer be no, how is any distinction made out to justify it? Property in ideas being granted, it might not unreasonably be said that the ideas of the inventor are, as a rule, more original, better defined, more fully his own creation, than those of the author. Why, then, should his rights in his invention be less than those of the author in his book? It may likewise be observed that the argument from property is itself double-edged. In the case we have referred to another of the Judges said that the restraint on republication of a book already published which is meant by the term copyright in its more common use, so far from arising from the nature of the thing, "is rather in derogation of the natural right of an owner of a copy of a published book to make what use he will of his own property by copying it or otherwise."

Mr. Grant White adopts the ingenious theory, put forward as a legal argument a century ago, that the author of a published book never really parts with his original property. He "sells to each buyer a certain use only of the book. He sells the paper, the print, and the binding absolutely, but the book conditionally—that is, he sells the volume and the use of it, but not the copy." On this argument Mr. T. H. Farrer has aptly remarked that "a chattel going about the world with an implied covenant by every one who with or without consideration gets possession of it that he will not imitate it would certainly be a legal novelty." And again, as Mr. Farrer has also pointed out, the theory of absolute property necessarily breaks down in those very cases where, on the supposed principle of natural justice, it should be most applicable. "In those productions of the human mind which are most essentially original, and which are, at the same time, the most useful to mankind, in such things as the moral doctrine of the Sermon on the Mount, the intellectual theory of gravitation, of evolution, or of the conservation of energy, there is and can be no exclusive right." Once more, if it be said that the alleged property is not in ideas as such, but in the particular arrangement of words, is the property in the signs only—that is, in the "copy" of the words as printed on paper—or is it in the thing signified, the articulate sounds themselves? If the author's natural property does extend to the words themselves (and, on the principles and arguments relied on for perpetual copyright, we cannot see why it should not), then natural justice requires, not only that unlicensed reprinting, but that unlicensed reading aloud should be strictly forbidden. But, considering to what lengths the law of copyright in musical compositions has gone as it is (with results of gross hardship and annoyance to many persons who have done no wrong and deprived the copyright-owner of no penny of profit), we should not be much surprised if something of this kind were to be seriously proposed as an amendment.

Mr. Grant White's general conclusion is beautifully simple; he would like to repeal all the Copyright Acts both in the United States and in those kingdoms, whereupon he thinks it would follow, by legal consequence too clear for argument, that authors would be remitted in both countries to their original perpetual copyright at common law, and their property, like any other property, would be protected equally and perfectly by both British and American courts of justice. We fear Mr. Grant White has overlooked a certain case before the Supreme Court of the United States in 1834, where the following points among others were resolved by the majority of the Court. That, whatever may be the merits of the argument from natural right of property (which was left doubtful), there is no such thing as a common law of the United States, but only a sort of common stock of English law which has been adopted in various degrees and with various modifications by the several States of the Union. That the author's perpetual copyright at common law, whether or not it once existed in England, never existed in the State of Pennsylvania. That the article of the Constitution of the United States which gives Congress the power of "securing for limited times to

authors and inventors the exclusive use of their respective writings and discoveries" distinctly excludes the supposition that authors, any more than inventors, have an antecedent common-law right not limited in time. This decision is of course binding on all Federal courts, and, though not binding on the municipal courts of any particular State of the Union, would have great weight in all of them. Thus the application of Mr. Grant White's remedy would almost certainly leave the American author entirely without protection. Here there has been no positive decision; but in the case in the House of Lords above mentioned three out of the judges and Law Lords who took part in the discussion expressed opinions in favour of the common-law right; six, including Lord Brougham, himself a copious author, were against it; and four did not commit themselves. It is evident, therefore, that for British authors and publishers the experiment of simply repealing the existing Copyright Acts would be precarious in the extreme.

This, however, does not affect the soundness of the more general principle maintained by Mr. Grant White, that a satisfactory international copyright law would consist in the mutual extension by the two countries to each other's citizens of all the advantages conferred by the copyright law in either of them. But that would require, among other conditions, an assimilation of the term of copyright in the two countries. If this and other difficulties could be got over, the advantages are obvious; and in the case in hand they would probably be greater for the American than for the English public. "We should have," says Mr. Grant White, "the works of British and other European authors in a better form than that in which they are now, almost of necessity, presented to us. The American book-buyer, as well as the author, would profit by the act of justice; for the original publisher, having such an immense market thrown open to him, would publish for a large instead of a small sale, and would in the style of his issues and the proportion of his profit consult the tastes and the pockets of his new customers."

But here is just the worst part of the difficulty. The obstacles on the American side come, not from the authors, but from the makers of books. As the Copyright Commissioners have said, the most active opposition in the United States arises from the publishing and printing interests; and particularly, according to Mr. Grant White, from the manufacturers of the various materials of books. Apart from copyright, the British manufactured book would undersell the American one in the American market, even after payment of freight and duty. What the American manufacturing interests really want, and practically have under the existing state of things, is "the protection of American labour at high wages against British labour at [relatively] low wages." Hence the requirement persistently made, as one of the conditions for any copyright convention between the United States and England, that in order to obtain American copyright an English book shall be not only republished by a citizen of the United States, but remanufactured in the United States. The difference between American and British cost of production would ultimately be paid, upon this plan, by the buyer of the book. Apparently there is no chance of Congress being persuaded to enter into any arrangement save on this footing of taxing the American consumer for the benefit of the American manufacturer; and if no better terms can be had, perhaps these are worth considering. It seems to be thought that, if they are accepted, the authorized American reprints of books first published in England should be excluded from these kingdoms. But we incline to think, with the Board of Trade, that there is no sufficient reason for this. Suppose that an American publisher brings out with the author's consent a reprint of a popular English work in a cheaper form than the original English edition. Either there is a demand in England for a cheap edition or there is not. If not, the importation of the cheap reprint from America will be a failure, and the British publisher needs not to be protected or to protect himself against it. But if there is a demand, the remedy is in the British publisher's own hands. For the foundation of the American contention, and the knot of the whole difficulty, is that if both alike have to pay for copyright the British publisher can undersell the American even in the American market. How much more then could he do so in his own, where not he but the American would have to pay freight and charges? He would simply bring out his own edition, as good and cheaper, or as cheap and better, or possibly both better and cheaper, than the American one. Protection of dealer against cheaper production is bad economy for the community, but intelligible for the producer. English publishers seem now to be taking an alarm that their cheaper production will want protection against the dearer production of the United States. If it indeed be true that the English book trade is in so pampered and artificial a condition that it cannot stand foreign competition on its own ground, and with cost of production in its favour, why then the sooner this can be put an end to, by the dread of foreign competition or otherwise, the better for the English public. But perhaps it is rather idle to discuss the details of a possible agreement before we have a right to consider it probable that a settlement of any kind will come of this more than of various former attempts.

FORSTER AND DANIELL'S LIFE AND LETTERS OF
BUSBECQ.*

UNDER the Latinized form of Busbequius, Ogier Ghiselin de Busbecq is not wholly unknown to the ordinary English reader. His name is embalmed in Bacon's essay on "Goodness, and Goodness of Nature"; he has been cited and laid under contribution by historians from Robertson to Motley; Gibbon has reflected upon him, perhaps too severely, for some half-serious proslavery inclinations; and the curious in old-fashioned Biblical commentaries may now and then light upon some illustration of Oriental manners given on the authority of "Busbequius." Horticulturists may remember that to him we are indebted for the introduction of the tulip and the familiar lilac, which last we now look upon as indigenous in villa gardens, and peculiarly characteristic of an English spring in the suburbs. Lovers of classical antiquity should know that for him is claimed the honour of having been the first to give a copy of the *Monumentum Ancyranum*, and that manuscripts and coins of his collection enrich the Imperial Library at Vienna. But in the seventeenth and eighteenth centuries the Lord of Busbecq came as near being a popular author as was possible to a man who wrote in Latin. More than twenty editions of his letters, including translations, were published in Antwerp, Paris, Basle, London, Oxford, Glasgow, and others of "the literary capitals of Europe." Within the last twenty years the revival of the irrepressible Eastern Question has caused, in France and Belgium at least, a revival of interest in one who knew so well "the Turk as he was when he dictated to Europe instead of Europe dictating to him." Unfortunately the interest taken in Busbecq does not seem to be always "according to knowledge." Messrs. Forster and Daniell have headed a section of the present biography "Removal of the Rubbish"—to wit, the errors and misstatements of ancient and modern date with which Busbecq's history has been gradually overlaid. No English reader, certainly, will be in danger of believing the assertion or suggestion of an eighteenth-century translator, De Foy, that when Busbecq came to England on the occasion of Philip and Mary's marriage, Henry VIII. tried to inveigle him into his service. But there are other myths not so glaringly false; and the most recent guides seem to be the most dangerous. "The present biographers make an onslaught upon M. Rouzière, who has apparently—no only repeat what we are here told—put forth a history of his own invention about Ogier Ghiselin's boyhood, attaching the story to an old house at Comines, which since 1800—the date of M. Rouzière's treatise—has been shown as Busbecq's birthplace. Neither must the inquiring tourist put his faith in M. Huysman's "striking picture," "Sullyman fait arrêter Busbecq, diplomate Flamand, Constantinople, 1555," though it has been bought by the Belgian Government, and now adorns the Hôtel de Ville at Comines. The incident, alas! never happened at all. Busbecq was for some time confined to his house by the Turkish authorities, and in speaking of his detention, De Foy used the expression, "une étroite prison"—a phrase which has given rise to a legend that the ambassador was confined in the Seven Towers. If Busbecq was imprisoned, it stands to reason that he must have been first arrested; and here you have the subject of M. Huysman's picture, to which the Belgian authorities have given the weight of their official sanction. Thus history is made.

So much for legend; now for facts. Ogier Ghiselin de Busbecq was born in 1522 at Comines, though there is no evidence to connect him with the house which now claims to be his birthplace. The district from which he took his best-known appellation lay on the river Lys, about two miles from Comines, and is now within the modern French frontier. Its name, now spelt Bousbecque, in which we may recognize our familiar word *beck*, comes from that of a tributary of the Lys, still known as Becque des bois. In the fifteenth century the seigneuries of La Lys and Bousbecque passed by marriage into the noble house of Ghiselin, whose history is here carefully worked out, and made much more interesting than ancestral history usually is. Though sufficiently distinguished in their own day, the Ghiselins of Bousbecque would now be forgotten, were it not for the fame of Ogier, the illegitimate son of George Ghiselin II. by Catherine Hespiel, who is said to have been a servant at the château. Though Ogier was not, as has been fancied, the sole offspring of the Lord of Bousbecque, who in fact had three legitimate children, he seems from his earliest years to have been treated as a son of the house, and to have been brought up under his father's roof; and on his leaving the University of Louvain in 1540, a patent of legitimation was obtained for him from Charles V. Long afterwards, he bought a life-interest in the seignury of Bousbecque, which had by that time passed to a female line.

The authors permit themselves a flight of imagination as to the influence probably exercised upon young Busbecq by his father's connexion and neighbour, George Halluin, Seigneur of Comines. Halluin, the friend of Erasmus, and the adviser and critic of the grammarian Desputères, is an interesting character; but we could have dispensed with the long and avowedly imaginary discourse, beginning "My boy," and going on to "my dear young friend," which is here put into his mouth. What is certain is

that the lad was sent at the age of thirteen to Louvain, and that after five years' study there, he went the round of the Universities of Paris, Bologna, and Padua. His next appearance is in Winchester Cathedral, as one of the witnesses of the marriage between Mary of England and Philip of Spain, his position being then that of what we should call an attaché to Don Pedro Lasso, the ambassador of Ferdinand King of the Romans. If, as is said, Busbecq acted as secretary, it is possible, the biographers suggest, that "his despatches from England may still be lying among the archives at Vienna to gladden the heart of some future discoverer."

Only a few days after his return home in the autumn of 1554, Busbecq received a summons from Ferdinand to undertake the duties of ambassador at Constantinople. These duties are serious even now; but they are light compared to what they were at a time when "it is no exaggeration to say" that Ferdinand and his kingdoms "lay at the mercy of the Sultan, who might any day annihilate his forces, and take possession of his dominions." Nor was the post, though honourable, much coveted. "The Turks regarded an ambassador simply in the light of a hostage"; and had carried out this view by flinging Busbecq's immediate predecessor, Malvezzi, into a dungeon, from the effects of which confinement he never recovered, and by selling his servants for slaves. However, Busbecq—to judge by the speed with which he posted to Vienna—jumped at the offer; and, though he was more than once kept under restraint and surveillance—in his second letter he says that he and his colleagues had been little better than prisoners for the last six months—and though it was once intimated to him that he was in a fair way to be sent home noseless and earless, he came unharmed out of the lion's den, "bringing with me," he says, "as the fruit of eight years' exertions, a truce for eight years." It is to this period, from 1554 to 1562, during which he once revisited Vienna, that Busbecq's Turkish Letters, the most popular of his writings, belong. These four letters, of which we have a translation in the first volume of the present work, were written in Latin to an old fellow-student, Nicholas Michault, Seigneur of Indevelt, without any thought of publication. It was not till 1581 that the first Turkish Letter was sent, without its writer's sanction, to the press.

Although Busbecq, on his return from his second embassy to Solyman, felt, or at least professed to feel, a desire for a peaceful country life with his friends and his books, and though he moralized upon the miseries of Court life, where an honest man was as "an ass among monkeys," his services were too highly valued by Ferdinand, now Emperor, and his son Maximilian, for him to be allowed to retire. In the capacity of *écuyer tranchant* or sewer he accompanied the boy Archduke Rudolf, the future Emperor, and his brother Ernest to the Court of Philip of Spain; and though he soon left that post—perhaps because, as his present biographers suggest, he was too thorough a disciple of the school of Erasmus to be a *persona grata* to Philip's Jesuits—the liberal-minded Maximilian showed his undiminished confidence in him by appointing him governor and seneschal to his remaining sons. From 1570 Busbecq's employment lay in France, first in the service of Maximilian's daughter, the wife of Charles IX., and finally in acting at the Court of France as the Emperor Rudolf's ambassador, though, as our authors think, without being formally accredited. There is something pathetic in the story of his end. Though, as far as appears, he had never revisited the home of his youth since he left it for Vienna and the East, he still cherished the hope of one day returning there. He had bought the seignury, and restored the château; and a tradition still lingers at Bousbecque of his beautiful garden filled with tulips and lilacs and other rare plants. At last the veteran diplomatist, then seventy years of age, set out to take possession. Near Rouen, at a hamlet called Oailly, where he halted for the night, he was seized and carried off by a band of marauders, professedly in the service of the League. Though Busbecq bore himself bravely, lecturing his captors on ambassadorial privileges with such effect that they repented and brought him and his baggage back to Oailly the next morning, the shock killed him. He died at a neighbouring château, October 28, 1592, expressing a last wish that his heart at least might be laid in Bousbecque church.

The letters which Busbecq wrote from France to Maximilian, then King of Hungary, and to his son the Emperor Rudolf, are much less known than the Turkish Epistles. Indeed, the present translation seems to be the first in our language; and even in the original Latin the series addressed to Maximilian, dating from 1574 to 1576, as well as the last five letters to Rudolf, written during the wars of the League, have, we understand, been printed only in one scarce book, the second edition of Howart, published at Brussels, 1632, and "appear to have altogether escaped the notice of historians and biographers." The last of these almost unknown letters, dated from Mantes, August 27, 1590, describes the operations of Henry of Navarre before Paris, the approach of Parma and Mayenne to its relief, and the general expectation of an engagement, together with some curious details of Parma's preparations to receive the French cavalry—his musketeers behind ropes and stakes, well supplied with double bullets linked with copper wire, "very effective against horses," and his masked batteries of cannon loaded with chain-shot. The whole series of letters to Rudolf is of the highest value, not only for the history of France, but also for that of the struggle in the Netherlands, with regard to which Busbecq's testimony on some important points seems to have been overlooked by historians. But ordinary readers will probably find more entertainment in the discursive

* *The Life and Letters of Ogier Ghiselin de Busbecq, Seigneur of Bousbecque, Knight, Imperial Ambassador.* By Charles Thornton Forster, M.A., late Fellow of Jesus College, Cambridge, Vicar of Hinxton; and F. H. Blackburne Daniell, M.A., late Fellow of Trinity College, Cambridge, Barrister-at-Law. 2 vols. London: C. Kegan Paul & Co. 1881.

and gossiping Turkish Epistles, in which the whole of Busbecq's many-sided nature is revealed. We learn how he was always on the look-out for coins, inscriptions, and new plants; how it surprised him to receive in mid-winter nosegays of wild narcissus, hyacinth, and the flowers "which the Turks call Tulipan"; how he had a dead camelopard dug up for his examination; with what interest he questioned two Goths from the Crimea about their language, and took down a list of words "the same as ours, or only a little different." We hear all about his private menagerie at Constantinople, how the Assyrian lynx pined to death on being separated from a servant to whom it had taken a fancy; and how the tame stag turned savage, and was killed with difficulty. We learn how he disported himself, first bolting his gates, in shooting kites with a crossbow—though he knew it was wrong. Here too we have the original version of the story cited by Bacon of the Christian who got into trouble "for gagging in a waggishness a long billed fowl"; in truth the bird was a goatsucker. Busbecq, like Bacon, seems hardly able to commiserate a goatsucker; but he is loud in praise of the Turks' gentleness with horses, so unlike the rough ways of Christian grooms. Or, to take less trivial incidents, he brings before us the piteous sight of waggonloads of Hungarian boys and girls and long strings of chained men on their way to the Constantinople slave-market, "quæ cum viderem vix lacrymas tenebam." Still more grievous was it to see the Spanish prisoners who had been taken at Djerbeh in 1560 marched into Constantinople, staggering from weakness and fatigue, insulted and hustled. Busbecq did all he could to relieve the immediate wants of the unhappy men, besides advancing money and standing surety for ransoms to an extent that frightened him. But he was unable to harden his heart against gallant gentlemen who appealed to him to save them from the galleys; and he could only hope, with some qualms, that they would have the means and the will to repay their benefactor.

The present biographers have translated Busbecq's Latin into flowing English, and have produced a most readable book. The ease indeed of the style suggests that the translation must be a free one; and, as far as we have examined, this is so. We are not quite sure that we like the occasional amendment or Anglicizing of Busbecq's Turkish; for instance, jackals and yoghoort (sour milk) where he wrote *ciacales* and *Jugurtha*; Pasha instead of the older form Bassa; or the substitution of Aga in some cases where he wrote *prefectus*, and of Houris where he was content with *virgines*. In one place mention is made of Roustem's *dragouns*—a word which we do not find in any form in the corresponding passage of the Oxford edition of 1665; but it is possible that the translators may have followed some other text. With a similar reservation, we also question the propriety of the introduction of "Protestant disturbances" where our Latin text speaks of disturbances "propter novitatem religionis." Nor was it necessary to bring in the French expressions *à propos* and *canards*—some English equivalent could surely have been found for *cujus rei occasione* and for *fabula*. But we have neither space nor wish to be minutely critical. Mr. Forster and Mr. Daniell have worked out their subject with loving care; they appear to have hunted up every attainable fact, date, and document relative to their hero; they have elucidated his letters by frequent notes and a useful summary of Hungarian history; and we feel grateful to them for adding so much to our knowledge of a very remarkable man. In Busbecq, liberal-minded, enlightened, religious, a diplomatist, a scholar, a linguist, keenly interested alike in classic antiquity, in Teutonic philology, or in natural history and botany, we see the man of the school of the Renaissance at his best.

THE STUDENT'S HELMHOLTZ.*

THE interest taken in the modern theory of music has greatly increased within the last few years. The great discoveries and brilliant speculations of Helmholtz may be said really to have been the beginning of the subject, and already its importance is so far recognized that a paper in acoustics is now part of many of the University examinations for musical degrees. And this has happened in spite of much antagonism, for at first the support given by scientific results to those few musicians who were opposed to "equal temperament" caused the subject of musical acoustics to be looked on with dread and horror by all musicians, who, being content with the system, feared to see it cleared away, and pianos and organs with twenty or thirty keys to the octave, and other frightful mechanical difficulties of the same class introduced into their art. Of course text books are a natural result of examinations, but as a complete knowledge of this subject requires both a physical and musical training, the number of writers competent to produce works on musical acoustics is limited, and the number of books produced has been small. Many of them have great merit, but hardly one of them could be put into the hands of a student of music with any hope of his getting a clear idea of his subject; and up to the present time a student would probably do best by undertaking the somewhat alarming task of reading Helmholtz's gigantic work, for there, thanks to the great physicist's clear style and great grasp of

his subject, it is almost impossible to misunderstand him. Yet, as a beginner's difficulties are great in this subject, one of the titles of the present work, *The Student's Helmholtz*, is most attractive. Were an experienced teacher to take Helmholtz and mark passages in it as he would do for a pupil's reading, extract them and connect them by a few simple words, he would make a really useful text-book. This was what we hoped Mr. Broadhouse might have done; but we are disappointed. It is less a Student's Helmholtz than an attempt to write a partly original text-book and eke it out with quotations from Helmholtz, Sedley Taylor, Pole, Tyndall, &c. Within its covers may be found almost everything necessary to form a sound knowledge of the subject in the same sense that all the elements of a meal are to be found in the air, a glass of sea-water, a piece of chalk, a box of matches, and an old nail; but the chances of getting mental nourishment from the one are about the same as those of getting bodily refreshment from the other.

It has always appeared to us to be an error of judgment in writers on acoustics to spend so much time and space on the discussion of the crest and hollow waves of waters cornfields, &c., before passing on to the consideration of the air sound-wave of condensation and rarefaction. This course seems to us to be likely to confuse the ideas of the student, and there are other ways of clearly demonstrating the fact that a wave can move forward without any actual translation of the particles of the medium through which it passes. Whether this habit of other writers has confused the mind of the author of the work which we are now considering, or whether he has not the power of correctly describing physical phenomena, we cannot guess. But never have we seen such hopeless confusion as is to be found in the first few chapters of this book. Crest and hollow waves and air sound waves are inextricably entangled, and out of the jumble of ideas the author evolves the hope that the student may be able to mislead another by imparting to him the idea of "*Wave motion in the air by the rising (condensation) and falling (rarefaction) of air in a direction perpendicular to that in which the sound wave is travelling, be the latter what it may.*" The italics are the author's.

The author in discussing air-waves boldly makes use of the sinuous curves which are actual diagrams of the crest and hollow waves, without any warning that they are in this case the result of a mathematical artifice, or any attempt to show the relation between the curve and this form of wave. And even quotations from different authors follow each other without a word of explanation, the one dealing with crest and hollow waves, and the other with sound waves, and so on, for more than half the book. The extracts from other writers are made in full, no attempt being made to cut out irrelevant passages which refer to former chapters, and to figures which have not been reproduced in the text. What is a student to make of this passage (from a quotation from Airy) suddenly presented to him without a word of explanation?—

It has been seen in Article 48 that in a divergent oscillating wave of air such as we may suppose to be caused by the vibrations of a string, the motion of the particles is of the order $1/r$, whose first term varies as the distance raised to the power -4 .

And this appalling passage is quoted twice in the course of the present work, which is not intended as a book to refresh the memory of teachers, but as a text-book for musical students, who, as a rule, have no physical or mathematical training at all. With reference to the want of explanation of the curves representing waves noticed above, we must point out that the author's failure to explain the simple process of analytical geometry by which they are produced gets him into great difficulties in his chapters on compound tones, in which, in attempting to expound Ohm's law and Fourier's theorem, he actually speaks of adding two curves together.

There is one curious omission common to almost all the elementary text-books on this subject which we have read. They all discuss what they call Helmholtz's theory of consonance and dissonance; but the writers as a rule content themselves by pointing out that the "roughness" or "smoothness" of an interval when both notes are sounded together depends on the greater or smaller number of the partials of each tone which produce beats with each other of certain frequency. Why this beating should produce roughness, and why, if the beats are slower or faster, no roughness is produced, they none of them explain; and yet it is that very explanation which is Helmholtz's theory of consonance and dissonance. As he himself points out, this theory holds good in most cases without his speculations on the functions of the organ of Corti being at all insisted upon. All that is necessary is to point out to the student that an intermitting excitement of a nerve always produces a more intense sensation than a continuous excitement, when the intermitteances are faster than a certain rate and slower than a certain other rate, and that what holds good of nerves of touch and sight also holds good of nerves of hearing, and that hence comes the difference in kind of the sensations produced by the steady vibrations of a consonant chord and the fluttering vibrations of a discord. Perhaps as the majority of those who read Helmholtz are musicians who make themselves physicists for the purpose of studying the work, rather than men of general scientific education who are fond of music, this physiological point, one of the foundation-stones of Helmholtz's work, has partly escaped the attention even of careful readers, the musician being more inclined to read and remember the chapters on temperament and the many devices for playing keyed instru-

* *The Student's Helmholtz—Musical Acoustics; or, the Phenomena of Sound as connected with Music.* By John Broadhouse, Author of "Henry Smart's Compositions for the Organ Analysed," and "Violins Old and New," &c. With more than 100 Illustrations. London: W. Reeves. 1881.

ments in an approximation to the exact scale. In spite of his title of *The Student's Helmholtz* Mr. Broadhouse does not touch upon this point, though, as we may remind him, the title of the parent work is *On the Perceptions of Tones as a Physiological Basis for the Theory of Music*, and that it is quite as much to the clear explanation of the probable physiology of the ear as to his physical researches that Helmholtz's reputation as the scientific explainer of music is due. Even the functions, or presumed functions, of the organ of Corti ought not to be beyond the explanatory powers of a good text-book writer; and though these functions are still somewhat matters of discussion and speculation, yet great light has lately been thrown on the probability of there being some apparatus in the ear to select particular vibrations by experiments showing that such an apparatus does exist in even very low animals, a fact which has been proved in the case of certain shrimps by the simple device of playing the French horn to them.

Bad though this book is as an elementary treatise on sound, it nevertheless has good points in it, and Mr. Broadhouse may be congratulated on the calm musicianly spirit in which he discusses the relative merits of the tonic sol fa and the "staff" notations, and in the course of the discussion he shows himself a sincere lover of his art, and one who feels how much may be done by elevating the system of musical teaching. We may quote one passage of his defence of the staff notation as bearing on this point:—

"The 'average young lady' of course knows nothing at all about key relationship, but that is not because the system of notation from which she plays or sings is defective, but because she has never been taught all that the system is capable of doing. The flats, sharps, and naturals of that system, which are usually the *bête noire* of the said 'average young lady,' would not be enemies to reading at sight, but friends, if she had only been taught what purpose they served, and that, in fact, they are indispensable in any system of notation.

A similar largeness of mind is to be found in Mr. Broadhouse's treatment of the question of equal temperament. He shows that strictly equal temperament is so unbearable that it is never really used in practice, and that though an approximation to the exact scale is used by good musicians who are free to choose their tones, yet the exact scale is never thoroughly carried out. It is pleasant to find this subject discussed in such a spirit. We too often find writers, on the one hand, asserting that strict equal temperament of twelve exactly equal semitones to the octave is quite perfect enough, and that no difference is perceptible between harmonies played in such a scale and harmonies with perfect intervals; or, on the other hand, saying that chords in equal temperament offend every refined ear; that not only ought all music to be performed in the strictly exact scale, but that all violinists and vocalists worthy of the name of artist always do use their favourite method. Both classes of fanatics are of course beyond reason and argument. It is matter for regret that an author of Mr. Broadhouse's generally clear mind and impartial views should have attempted a task so unsuited to his powers as that of preparing a scientific text-book obviously is. But a bad text-book is a very bad thing, tending to hinder students in their progress, disheartening them, and disgusting them with their subject, and therefore can never be dealt with tenderly.

RABBI JESHUA.*

THE title of the book *Rabbi Jeshua: an Eastern Story*, is disingenuous, leading one to expect something quite different from the real contents. The uninitiated reader who expects to find an Oriental tale or apologue will be disappointed, and perhaps not unreasonably shocked, at being entrapped into a disquisition on themes which he has been accustomed to approach in a very different spirit. On the other hand the initiated, or at least the reader who has a smattering of Hebrew, will be prepared to find the life of Our Lord treated from a purely Jewish standpoint, and a glance at the preface will lead him to look for valuable illustrations of that life from Talmudic and other Hebrew lore. These expectations are also doomed to disappointment; for, although the work contains a vast amount of such learning in a highly concentrated form, it is not new and not always very obviously apposite; while the whole plan of the composition is in questionable taste. A learned Jew who, boldly proclaiming himself as such, should conscientiously set about compiling a treatise on the life and teaching of the Founder of the Christian Faith, would deserve and meet with a respectful reception. A Christian, who chose to adopt a secular and rationalistic view of all or part of the same subject, and brought learning, eloquence, and honesty to bear upon it, would also, as we know from at least one brilliant example, be justly appreciated, however much antagonism his views might provoke. But one who, with scholarship and eloquence at his command—for we must own that the book bears evidence of both—pretends to ignore the whole Christian fabric, assumes the very transparent disguise of an impartial inquirer, and travesties the characters of the New Testament history by giving them Hebrew names, will hardly gain much sympathy from a Christian public even if he escape the suspicion of profanity and pedantry. We are sorry to be compelled to make these disparaging preliminary remarks, for we feel that had the anonymous author not committed the initial fault of disingenuousness, his words and arguments would have been listened to with attention and respect.

Rabbi Jeshua commences with a description of the valley, of the Hasaya, or Therapeutæ, and other Jewish all more who frequented its wild solitudes, and dwells particularly on the work and character of St. John the Baptist. The local colour that is exact; the mysterious figure of the forerunner of the Messias is sketched with a masterly hand; but why speak of him as "Hanani of Bethania, the Hebrew Prophet of the Jordan Valley" and dispose of his mission to "baptize with water unto repentance" by asserting that "as a member of the sect of the Hasaya he inculcated the duty of washing in cold water as conducive to chastity"? We are glad to see that the author shrinks from the ultimate consequences of this assertion by speaking of it later on as "the initiatory rite of ablution." That the public profession of a prophet and wonder worker may be traced in an unbroken chain from the school of the Prophets in Samuel's time down to the fanatical dervishes of the present day is, as the writer suggests, an historical fact; but this proves little more than what is already accepted on all hands, that the constitution of society in the East has undergone scarcely any change; and it needs something more than mere implication to shake the faith of eighteen centuries in the mission of the Baptist and of his Divine Master and disciple. The New Testament narratives of the life of Jesus are thus spoken of:—

One chronicle is often attributed to Rabbi Saul, pupil of Gamaliel, and a native of Asia Minor. A second breathes the spirit of a narrow pharisaic sect of Shammai. A third, written by an Alexandrine Jew, is full of cabalistic lore and of Egyptian mysticism . . . but the following pages are based on a short but succinct account of the life of Rabbi Jeshua, which was written by one of his first disciples, Simeon has Saddik.

These names are easy enough to identify, but we fancy that a Jew would designate quite a different person by the last-mentioned title of "Simon the Just." The great objection, however, to the constant reference to "the pages of Simeon has Saddik" the authority of "Rabbi Saul," and the like, is that the author not only dogmatically assumes the truth of one view of moot and much-disputed points, but conveys to the unlearned reader the impression that contemporary records exist and materials are to be found in the Talmud and elsewhere for throwing clear light on the obscure portions of the narrative; and, worse than all, it conveys the utterly unfounded imputation that such illustrations have been willfully suppressed or kept in the background. Of course this implication is absurd, and may, no doubt will, be disclaimed; but such a book as the present may find its way into the hands of many to whom theological literature of the critical sort is perfectly unknown; and such a false suggestion, unintentional or not, is fraught with much danger. The fascinating style of a great portion of the volume makes this danger all the greater, and is one of the unfortunate results of that disingenuousness with which we are forced to charge the work. This is an age when scepticism is allowed fair play, and Christian advocates no longer fear to face it or to discuss its propositions and objections. It is therefore all the more unfair to inculcate sceptical opinions under an insidious disguise, and to endeavour to entrap listeners by a specious discourse. The man who could write *Rabbi Jeshua* ought to have the courage of his opinions; if he belong to the rationalist ranks, he need fear no persecution, and has no cause for concealment. If he be a traitor in the camp of the other side, he has good personal reasons for remaining a mere *nominis umbra*, but he justifies our oft-repeated accusation.

Having, as was our duty, called attention to the real nature and tendency of the book, and so removed the possibility of misunderstanding it, we may point out its most salient features. As a memoir on the life of Our Lord when stripped of all supernatural attributes and circumstances, it is not only a clever sketch, but a powerful testimony to the mighty influence on humanity which the mere human element of Christianity has exercised. The stores of Oriental myth and legend on which the author draws throw great light upon the surroundings of the central figure of the narrative, and enable us to understand much which before seemed vague and uncertain. But the most remarkable feature in the whole book is the life and movement which is thrown into the word-pictures which the author paints. Take, for instance, the following, conjectural certainly, but showing a deep insight into Oriental life:—

One scene alone we are able to picture to the mind's eye. It is the interior of a squalid building rudely constructed of stone, with a domed roof and whitewashed walls, a wooden desk or cupboard on one side, and an inscription in Hebrew over the door. From the building as we approach comes the hum of many children's voices, repeating the verses of the sacred Torah in unthinking and perfunctory monotone.

The aged teacher sits silent in the midst. As we look in, we see his huge turban, his grey beard, and solemn features appearing over the ruddy faces of the dark-eyed boys who sit on the floor around him. The long row of tiny red slippers extends along the wall near the door. The earthen water-bottle stands on the mat beside the Khazzan, or synagogue teacher, and in the cool shade of that dingy room the ceaseless murmur of the humble scholars of the village goes forth in the silence of the hot Eastern noon.

They are children of the richer members of the village community: of the Batlanim, or "men of leisure," who form the representative congregation at every synagogue service; of the "standing men," who go up yearly with the village priest for a week to Jerusalem, to fulfil similar functions in the Temple ritual. The poor cowerd may gaze from the door (standing in the scorching sun as his goats wander past) at the cool room with its chattering scholars: but he has no money to pay the Khazzan's fee, and must live and die like his forefathers, ignorant of even the letters of the alphabet.

Alone among this little crowd, we mark the noble and beautiful child, who is hereafter to be Rabbun Jeshua has Saddik. We note how the glorious words of the old Hebrew poets go home to his heart. We know

* *Rabbi Jeshua: an Eastern Story*. London: C. Kegan Paul & Co. 1881.

and responds over the comments of the teacher, and treasures the assurance that these old prophecies refer not to a long departed and glorious the Messiah, and the triumph of the faith of Jehovah. In those eager and hyacinthine features, the enthusiasm of a great nature is already manifest. In the lessons of the village school in Galilee, the foundation of a world-wide fame is laid.

The narrowness of the law, not as promulgated by Moses, but as taught by the hair-splitting and bigoted Rabbis of the time, is very well set forth, and much light is thus thrown upon our Lord's attitude towards it, as well as his relations with the despised and down-trodden peasantry of Judæa. The religion of Jerusalem was the profession of the rich and learned, and not the faith of the masses. "Their tongue was that of the Canaanite, their worship was that of the high places; and, save through the medium of a translation, the scriptures were unintelligible to the peasantry. The altars of local deities still stood (and still stand) on the mountain tops in Palestine; the shady trees and groves of the aboriginal cultus were still preserved; the stone heaps of Mercury were still built up, the mourning for Tanmuz still annually observed in Bethlehem. Thus, by religion, by language, and by race, the peasant was separated irrevocably from the richer student in the city." Add to this that they were ground down by the tax-gatherer, decimated by malarious epidemics, and could look nowhere for either sympathy or help, and we can understand how the poor country folk hailed with joy the Master who felt for and comforted their sorrows, and why they saw in Him their one and only hope, the Messiah who should save Israel. The question of the Messianic idea is gone into very fully by the author of *Rabbi Jeshua*, though many will demur to the statement that it was first developed among the disappointed patriots of Jerusalem when the House of the Hasmonæans fell: he is, however, constrained to admit that Jesus himself "firmly believed in his claim to be considered the future Messiah."

We need not dwell upon the rest of the narrative as given here; it follows in the main the lines of the gospel story, stripping it, however, of its supernatural element, and embellishing it with a good deal of fine writing which seems singularly out of place. The question of the miracles and their testimony he solves by saying that mysterious healing arts were part of the practice and profession of the Hasyna, and attributing most of the cures to "the unstudied yet undoubted influence which we have degraded by the names of mesmerism and electro-biology." The last assertion he supports by quoting our Lord's words, "Thy faith hath made thee whole." The raising of the dead to life he denies altogether, only admitting the case of the damsel of whom Jesus declared "she is not dead but asleep." We quote these instances only to show the tone of the writer, and the weak arguments to which he is compelled to descend in support of his theories, when once he travels off his proper line of local and mythological lore. There is one suggestion in the book, which, if not exactly proved, is a very striking one, and will be new to most readers; namely, as to the real nature of the charge of blasphemy which formed the ostensible ground for Christ's condemnation and crucifixion:—

The charge of false doctrines appears to have entirely broken down, and the trial turned finally on the pretensions of Rabbi Jeshua to the office and dignity of Messiah. The high priest demanded categorically an answer from Rabbi Jeshua on this point. "Art thou Messiah, the Son of the Holy One, blessed be He?" demanded Joseph. And the answer was equally definite, though to it Rabbi Jeshua added a quotation from the Book of Daniel, which illustrated his views as to the career of the Son of God.

It is astonishing to read that for this answer Rabbi Jeshua was condemned as a blasphemer. There was nothing blasphemous in the assertion that he was Messiah, nor was the title "Son of God" connected in those days with any claim of a supernatural character. Every son of Israel was a son of God, and Messiah, pre-eminently, was called by this title in the Psalms. Blasphemy among the Jews consisted, as has already been pointed out, in the utterance of the Divine Name, and the Mishna states clearly that the blasphemer was not guilty until he expressed the Name, "which, when the judges heard, they were instructed to stand up and rend their garments, which might never again be sewn."

How, then, are we to understand the fact that after the simple answer "I am" had been given by the prisoner, the high priest arose at once and called the Sanhedrim to witness, by the rending of his garments, that the Divine Name had been uttered, the pronunciation of which, according to its letters, condemned the prisoner to death? There is only one explanation possible, and this we find in reading the chronicle in Hebrew: for the word "I am" was the ancient and original form of the Holy Name, by which Jehovah Himself had made Himself known to Moses.

This is certainly ingenious, and gives a distinct reason for the vindictive action of the Jewish authorities and mob. A chapter on the "Sayings of Rabbi Jeshua" is merely an attempt to show that all the most divine and best accepted utterances of Our Lord are but iterations of certain well-known maxims of the Talmudic Rabbis. This sort of thing has been essayed several times of late years, and the Talmud has been repeatedly held up as the source of all the eloquence and morality of the Gospels. Canon Farrar, in his preface to Hermon's *Talmudic Miscellany*—a work from which the reader may judge of the Jewish secondary law for himself—has given a complete refutation of this hypothesis; and it may be useful to quote one passage from his able introduction:—"I venture to say that it would be impossible to find less wisdom, less eloquence, and less high morality, imbedded in a vast bulk of what is utterly valueless to mankind—to say nothing of those parts of it which are indelicate, and even obscene—in any other national literature of the same extent. And even of the valuable residuum of true and holy thoughts I doubt whether there is even one which had not been long anticipated, and which is not found more nobly set forth in the Scriptures of the Old and New Testa-

ment." Another chapter on Jewish superstition, and on the remnants of still older forms of demonology which survived in it, is both useful and instructive. But here, too, the author must have an occasional side-shot at some cherished belief or observance, as, for instance, when he says:—"In the death of Tammuz the nation annually mourned the approach of winter: in the joyful exclamation of his priests, who, on the 25th of December, used to proclaim 'Behold the virgin hath borne a son!' they welcomed the return of spring." The last chapter in the book deals with "England and Rabbi Jeshua," and is, in our opinion, its weakest part. It has a mixed flavour, something between works of the *Ginx's Baby* class and Mr. Monseur Conway's *Earthward Pilgrimage*, but without the force of either. It chiefly aims at proving, what no one denies, that there is a great deal in popular ritual, popular science, and popular aesthetics in the present day which is out of accord with the teaching of the Saviour. That *Rabbi Jeshua* is a remarkable book must be confessed, but it is scarcely a satisfactory one; and, although we would not place it in an *Index Expurgatorius*, we think that it is only fair to the public that they should be told beforehand what it contains.

THE WARDS OF PLOTINUS.*

BEFORE we enter upon a criticism of this *Story of Old Rome*, we must protest against the appearance it presents on the outside. Binding had indeed previously been carried to so great a height of extravagance that we did not think it at all likely that there was any variety of it left which could give us a shock. We find ourselves mistaken, however; and we have to own that what had hitherto seemed the very summit of folly has been itself over-topped. Should it be the ill fortune of our readers to have all three of these volumes lying on their table at the same time, and all with the same side uppermost, they will see a view of one side of the Forum at Rome. High up will rise before them a column with a statue on the top, and close to it they will see, printed in large letters,

THE WARDS OF PLOTINUS. *A Story of Old Rome.*

MRS. JOHN HUNT.

Should they, in very weariness of seeing the same staring view thrice repeated, turn the volumes over, then their patience will be tried by an equally staring view of the other side of the Forum. If they set the books on their edges, even then there will be no escape, for on the back of each volume is given the centre view, containing another column, and another statue on the top of it. Disagreeable as these bindings are to look at, they are almost worse to hold. They have a kind of sticky feeling about them which suggests oil and printer's ink. If the reader will follow our advice, as soon as he receives these volumes from the circulating library, he will at once get an old newspaper or a piece of brown paper, and provide each of them with a temporary cover. Should they be widely read, it is a melancholy reflection in what a miserable state these pictorial bindings will be when they come into the hands of those who read them last. They will, however, perhaps, represent more fitly than now the fallen glories of the Forum of Rome.

We cannot say, however, that the outside of this story does not in a certain sense fitly represent what will be found within. There too we come across a good deal of show, but the effect that is produced is not altogether pleasant. In fact, long before we had reached the end, we had become almost as heartily tired of the tale as we had been of the cover. It belongs to the class of historical romances. History is a good thing, and romance is a good thing; but when we find them so mingled that no one but the learned can tell which is one and which the other, we then feel inclined to parody a well-known saying, and at each striking incident, to cry out to the author, "If this is history, why then confound your romance; if it is romance, why then confound your history." We can easily believe that Mrs. Hunt has spared no trouble to give an accurate account of old Rome. She has had, she says, the constant assistance of her husband. In fact, in her preface she states that, "to his affection for the divine Plotinus, whom he has spoken of in some of his books as pre-eminently his favourite among the truth-seekers of the world," her story is due. The result, however, is very disappointing. So far from this book reading like a tale of men as they were in the third century, it does not read like a tale of men in any century whatever. The figures are all lifeless, and move about with as much ease as would the models at a wax-work show if they were fastened on to the ends of long poles and made to advance and retire at the will of the showman. We do not go so far as to say that the story does not contrast favourably with the descriptions given, in many of the most popular novels, of the people of the present age. Our author's old Romans are, we willingly admit, somewhat truer to nature than either the sinners or the saints of such a writer, for instance, as Ouida. But, after all, such praise amounts to very little. It is not more than if, in criticizing a signa-

* *The Wards of Plotinus; a Story of Old Rome.* By Mrs. John Hunt. 3 vols. London: Strahan & Co.

post on a village inn, we were to say that the lion is truer to nature than the unicorn. Both likenesses are equally ill-drawn, but in one the rustic artist has tried to paint what has existed and does exist; in the other he has wished to represent what never has been and never can be. It is in vain that our author throws in little scraps of Latin, and at each turn of the tale introduces some custom of the ancients. She does not for a single moment make us forget how thoroughly artificial and unnatural is her scenery. We can see nothing that is gained by her making her characters travel in a *rheda* and a *lectica* instead of a carriage and a litter. Nine out of ten of the young ladies who read her story aloud—for such stories always are read aloud, since they are of a very improving nature—will be sure to make an error in quantity and give the *i* in *lectica* short; while the tenth, fresh from the local examinations, or from Girton College, will triumphantly set her elders right, and so will give great offence. If it is maintained that *carriage* and *litter* raise a wrong picture in the mind, scarcely less wrong surely is the picture raised by the words *Appian Way* along which they are made to travel. An English way is almost as unlike the great *Appia Via* as the modern carriage and litter are unlike the *rheda* and *lectica*. What, moreover, is gained by making the characters when they meet and part use *salve* and *vale*? “*Salve, what ails thee, O Laberius?*” reads too much like the Irishman’s “*Parlez-vous français, monsieur?* Will you lend me the loan of your gridiron?” At all events, if these two words are to be admitted, they must not always be kept in the singular number, no matter to how many people they may be addressed. We come across such a sentence as the following:—“*Salve, O my friends!*” he exclaimed, in the most affable of voices.” The last glimpse that we are allowed to catch of the Christian martyr Fabian is when the aged man is being hurried to his death. “*Vale! vale!* true and faithful friends,” he exclaimed.” Perhaps at so trying a moment an excuse may be found for him if he thus breaks Priscian’s head; but the “*Salve, O my friends,*” of the man who spoke in the most affable of voices is past all forgiveness.

There is one fault above all others which should be most carefully avoided by the author who attempts to describe the life of the ancients. Nothing can be more unlike the present ridiculous art of word-painting, as it is called, in which the descriptions of scenery are carried to the utmost of extravagance, than the simplicity of the face of nature as it is drawn by a Greek or a Roman. No who would write a classical tale, let him abstain for many a long year from the novels of, at all events, the present half of the nineteenth century. If he must seek among the moderns an example which he should strive to follow, let him turn to the pages of Walter Savage Landor. Our author, unhappily, has tried to embellish her story by some passages of that kind of writing which is absurd everywhere, but is doubly absurd in a tale of classical life. There, at all events, we might have reasonably hoped to escape such a description as the following:—

The beauty of the Campagna was glorious in the morning sunshine. The storied plain of Latium gleamed with an emerald light. The temple on the Alban mount touched the blue heavens with a golden roof, and the Tyrrhene sea scintillated like crystal. Brilliant new-born flowers dotted the Latin vale with all the tints of the rainbow, and the long circular ridge of mountains in the background shadowed out a boundary, gleamy, hazy, and majestic.

This has, no doubt, a very pretty sound; but, when we come to put it together, and to try to raise the landscape before us, with its glorious beauty, its morning sunshine, its emerald gleaming, its blue, its gold, its crystal scintillations; its rainbow tints, dotted by brilliant new-born flowers; and the gleam, haze, and majesty of the boundary that was shadowed out by a ridge of mountains that was long and circular, our mind is struck by hopeless confusion. In another passage we read that “some drops of water scintillated in the golden hair” of a girl. What, we may ask, does a writer gain by changing the good old word “sparkle” for this modern favourite “scintillate”? What, too, is gained by that other favourite “sheen”? We read here of a diadem of unbroken sheen that rested on the topmost barrier of the amphitheatre, and was at the same time a great halo. In another passage we read of a circle of sheen that crowned every object. The diadem and the circle were both the effects of moonlight. Now we have been in Italy, and seen there the moonlight; but these diadems and circles of sheen were never seen by us, nor, we undertake to say, by any one else.

Mixed with these descriptions of what by courtesy only can be called nature are sentences to be found that are not unworthy of Mr. G. P. R. James himself. Thus a dissolute youth calls out to his comrade, who had taken a turn towards temperance and was skimming him,

“Seriously, man, so much abstinence, such an abundant contemplation of the infinite, will kill thee. It is a vampire for sucking out the strength. Away, away for a draught of Falernian! I have a right ancient vintage in my cellar just now, and it is long since thy lips kissed cup of mine. Nay, give me no excuse; I will not let thee perish; I have caught thee, thou truant, and I will keep thee to-night. A feast will strengthen thy weak body for to-morrow’s fast.”

Scarcely less James-like, though in a different way, is the description of a soldier setting out for war. “Dashing out of the peristylum, nodding his waving plumes to the martial sound of his rattling armour, he sprang upon his snorting horse, and spurred with fury in the direction of Rome.” It must not be supposed that such descriptive passages as these make up the chief

part of the three volumes. Abundant though they are, still more abundant are the philosophical discussions and the sermons. Whether all the philosophy and all the theology are sound, that we do not pretend to say. To fitly criticise such a book as this would require, not only an ordinary man of letters, but an antiquarian, an historian, a theologian, and a philosopher. Nay, even a poet, or at all events a student of the poet’s art, would be needed, for the volumes are interspersed with scraps of original verse. To our imperfect knowledge of this divine art they read uncommonly like the works of the unlettered muse as displayed in a country churchyard. For instance, we come across such lines as the following:—

Upon her grave the flowers we strew,
Where she has gone we too shall go,
And, palms of victory in our hands,
Shall stand where now our sister stands.

We must, by way of conclusion, do our author the justice to admit that there is no want of incidents in her stories, and that these incidents, perhaps, are not more improbable than those which we come across in the novels of society. A good many virtuous people die of disease or violence. A dissolute hero is reformed, becomes a Christian, and marries the heroine. A venerable physician, who at least eight times in the course of the three volumes—perhaps many more—smoothed his snowy beard, at last ceased to smooth it, and dies calmly. Plotinus also dies, and with equal calmness. With his death the Story of Old Rome comes to an end, and he and his reader at the same time find a not unwelcome release.

FRENCH LITERATURE.

M. LENORMANT has undertaken a work (1) likely to be of equal interest to classical students, to the general reader, and to Italomaniacs. The latter class of persons have for the most part confined themselves to Northern and Central Italy, with which the associations of their favourite period, the Renaissance, are more specially connected. Magna Græcia, despite its natural attractiveness and the abundance of its classical and mediæval story, has been comparatively neglected. M. Lenormant’s plan is a combination of actual description and of history. He takes the famous places at the foot of the Peninsula one by one, sketches their actual appearance, and then unfolds their historical claims to attention. The result is a *mélange* equally instructive and amusing. The author has given himself plenty of space—Tarentum has more than a hundred pages to itself, and the pages are roomy and well filled; Sybaris and Thurii, eighty; Metapontum, fifty, &c. The chapters on Tarentum and on Sybaris may be selected as particularly good examples of the method which the author has adopted. It ought, perhaps, to be mentioned that, though M. Lenormant touches on almost all parts of the history of his subject, he seems to write with a special reference to the later Byzantine period, in which he regards a new Hellenization of the Italiote towns as having taken place.

The scholars of the Renaissance have of late years received a great deal of attention, and this attention has produced some remarkable work. Mr. Pattison’s *Isaac Casaubon* has been followed in England by Mr. Christie’s almost more remarkable *Étienne Dolet*, and M. Gauthier, though his work (2) is on a more modest scale than these two, has fairly earned a place for it beside them. This volume deals with the early fortunes of the University or rather College of Nîmes and its organization by Claude Baduel, in accordance with the principles championed at the same time by Sturm and somewhat later by the Jesuits—that is to say, the principles of an almost purely classical education. It so happened not merely that Nîmes was an early and remarkable instance of this scholastic reform, but that Baduel and his half successor, half rival, Bigot, were remarkably typical examples of two classes of scholars of the time. Baduel was a quiet and domesticated person with an ardent love of the theory and practice of education, a sincere belief in the reformed doctrines, and (apparently) a disposition at once amiable and public-spirited. Bigot, a friend of Dolet’s, had not a little of the character of that unlucky firebrand. His particular department was not pure scholarship, but a kind of neo-scholasticism, and he obtained considerable reputation as a teacher of philosophy. But his quarrelsomeness invariably brought him into difficulties, and he passed his life in a vagrant fashion, wandering from one university to another throughout France and Germany, always being greeted with a flourish of trumpets, and too frequently being driven out with as hearty a manifestation of general dislike. M. Gauthier has sketched the history of Baduel’s reforms and of Bigot’s disturbance of them very pleasantly, and his book, which has a good bibliographical appendix, is not merely interesting in itself, but has value as throwing incidental light on the causes (such as quasi-Republican constitution, an early introduction of the new learning, &c.) which made the southern cities of France rather than their northern neighbours the home of the Reformation.

M. Cochin, it is probably safe to say, is known to the generality of English readers chiefly by certain complimentary references which Mr. Matthew Arnold once made to him. Such persons will be not sorry to find in *Le manuscrit de M. Larsonnier* (3) at once

(1) *La Grande-Grèce*. Par F. Lenormant. Tome 1. Paris: A. Lévy. London: Dulau.

(2) *Claude Baduel*. Par M. J. Gauthier. Paris: Hachette.

(3) *Le manuscrit de M. Larsonnier*. Par H. Cochin. Paris: Plon.

an explanation and a justification of the compliments which Mr. Arnold has paid to his French compeer. The book is a curious one in plan, and to very prosaic persons may seem a trifle extravagant. It purports to be the diary of a *professeur* who, when far advanced in life, is, owing to failing health and past troubles, afflicted with a kind of hallucination or monomania to the effect that time is going backwards instead of forwards with him, and that all the events of his life are thus recurring. There being no connected story, the awkwardnesses, or rather impossibilities, of this theme are avoided; and the detached fragment of autobiographic meditation exhibit the speculations of the *intellectus sibi permixtus* very strikingly. M. Larssonier's hallucination, or whatever it is to be called, connects itself easily with certain passages of Pascal, which readers of that author will readily enough recollect, and gives occasion to M. Cochin for some exceedingly careful and exquisite writing, destitute of the slightest attempt at preciousness, and so capable of serving as a very useful model and warning to certain English writers who aim at style. Nor is the sentiment and thought unworthy of the form. *Le manuscrit de M. Larssonier* is not a book likely to attain a wide popularity, but those who do read it will almost certainly read it more than once. From the merely literary point of view it is an extraordinary relief to come across so pure and academic a style after the literature of housemaids (and very badly brought up housemaids, too) which is represented by too many of the volumes which come before us on French even more than on English bookshelves.

A bolder man than M. Louis Jacolliot (4) we have seldom known, nor one possessed of more remarkable and novel information concerning England and India. How Sir John Lawrence massacred thirty thousand unoffending sepoy in the Punjab; how the Cawnpore proceedings of Nana Sahib were only reprisals for this brutality; how the entire Indian army is divided as to its officers into two parties—"les saints" and "les politiques," and how "les saints" greased all the cartridges with the deliberate and formal purpose of discarding idolators; how native shikarris consider it wise to introduce ambitious young English officers to rabbits in the first place to try their nerves, but always unearth the largest royal tigers at once for the heroic Gaul; how young English girls who are sent out to marry missionaries retire to the harems of casual native princes, and remit ten thousand a year home by way of a provision for their old age—all these things M. Jacolliot knows, partly at first hand, and partly on the authority of a certain surprising "M. de Warren, ex-officier de l'armée anglaise." The author's bravery in making these disclosures cannot be fully appreciated until it is mentioned that he has quite made up his mind as to the probable consequences. *Atqui sciebat que sibi barbarus.* It appears that at each apparition of M. Jacolliot's books "les journaux de la Cité l'injurient comme des cokneys ivres," because he shows up the innumerable crimes of our "nation d'écumeurs de mer." Persons are hired "à deux pence la ligne dans les bas fonds de la rédaction" for the purpose of throwing mud at the heroic M. Jacolliot. It will be observed that there is an evident touch of national vanity here. The cowardly editors of the City journals may content themselves with the penny-a-liner for ordinary dirty work, but when a Jacolliot has to be tackled the price rises. Even sheltered by the *bas fonds de la rédaction* the vile Saxon bravo demands twopence a line as wages for such an emprise. For our part, nothing is further from our intention than the notion of injuring M. Jacolliot. A survival of the fine old Anglophobe of the past is much too interesting a spectacle to excite any feeling but gratitude. We could indeed wish that M. Jacolliot had exhibited signs of a more perfect acquaintance with the language of the "race lymphatique et scrofuleuse" which exists under the foggy sky of Albion. The young woman whose career and sentiments "caractérisent admirablement la femme anglaise" is named Ketty, an appellation which seems to show that M. Jacolliot is not so intimately acquainted with our tongue as with the works of his compatriots. She addresses to him, "in the purest accent of the Thames," these words:—"Gentleman, I have the honour to wish you a good day." The accent may have been purely that of a bargee, and "wish" may be the fault of the wicked printer; but unluckily the phrase rather resembles French rendered into English with great blows of a dictionary than any actual turn of words likely to have escaped from a born Englishwoman, even of the most flagrantly lymphatic and scrofulous nature. Thus it would appear that M. Jacolliot's opportunities of acquainting himself with the facts of the Sepoy rebellion, &c., must have been somewhat limited. However, he was a magistrate in one of the French colonies (which, unaccountably enough, perfidious Albion has had in her possession half a dozen times and has given back as often), and he occupied, or occupies, his holidays in travelling about other parts of India, enjoying the hospitality of its "dominateurs féroces," and joining with the natives, who welcome him with tears of joy, in hoping for the expulsion of those fiends. His revelations as to English rule help to season his books in one way, as do anecdotes about Bayadères, descriptions of juggling, &c., in another. Let us hope that, though he seems to have written half a dozen voyages *aux pays de quelque chose* or other, his budget is not exhausted, for he is really a pleasant specimen of the weaker side of *das empy-françaises*.

By the side of the voluminous edition of M. Thiers's speeches now appearing it was but fair that the political utterances of the other *libérateur du territoire* should find a place. These two

volumes (5) give M. Jules Favre's speeches up to 1865. A short biographical introduction does no more than justice to his memory, and a portrait commemorates a very remarkable presence—one which deserved to be done justice to by a portrait-painter of the Brescian school. M. Favre would not have taken it as a compliment that his outward man should be described as singularly un-French. The description, however, has nothing in it which is offensive. The face is that of a Scotchman of the better type, and, with a little trimming of the hairy fringe which the nineteenth century allows so freely, might have made a typical countenance of the sixteenth century, one in which the "melancholia which transcends all wit" conflicts with evidences of capacity at once for thought and for business.

The sixth volume of M. Elisée Reclus's great geographical work (6) is entirely devoted to Asiatic Russia. It is as full of maps, views, and other assistances to comprehension as usual. Perhaps some fault may be found with the smallness of the space allotted to a portion of the vast district considered which is now of the highest political interest—the region between the Caspian and Afghanistan. But it is difficult to adjust the conditions of a work of reference to the particular demands of the moment.

M. Muntz's work on Raffaele (7) is an excellent example of the *livres de luxe* which still issue from the Parisian press in numbers quite disproportionate as compared with the numbers which appear with the impress of other cities and countries. The illustrations are extremely numerous, very well selected, and admirably executed. Not merely the famous pictures which all Europe knows, but the drawings preserved in such precious collections as those of Oxford and Lille are fully represented, and the author's critical attitude is a happy mean between the exaggerated appreciation of Raffaele common in the last century and the depreciation which has set in in some quarters since the discovery of the undoubted merits of elder and less conventional masters.

One of the greatest difficulties of the critic of to-day is to know what to do with the volumes which issue every six months with the name of M. Alphonse Karr upon them. They are, to put it plainly, leading articles reprinted, and the leading article, no matter in what language it may be composed, is a commodity which bears "perishable" written on the face of it. The preface which M. Karr has prefixed to this book (8) contains an assertion, which we have no difficulty in admitting—the assertion that the author simply claims the proverbial advantage of the bystander without affecting superior genius or greater experience in the game than the players possess. We can go further and say that, as a rule, it is easy to sympathize with M. Karr's point of view. But just as the most spirited diatribes against Lord Beaconsfield or Mr. Gladstone, written from day to day or from week to week, would, if they were republished in a body, have a singularly lukewarm temperature to the critical thermometer, so M. Karr's attacks upon M. Gambetta and other persons somehow lack vivacity. The telegraph and the daily newspapers have killed the Draper and Junius. Gentlemen of the press can only claim their day or their week, even though they were—which not many of them are—worthy to rank in the same class with the author of *Les Guêpes*. However, M. Alphonse Karr seems to find publishers, and therefore presumably readers. *L'encre verte* contains many lively touches, a good deal of just criticism, ample evidence of its author's continued mastery over his pen, evidence ampler still of his superiority to the manias which carry too many Frenchmen hither and thither, according to the set of the political current. More than this we cannot say for it.

French literature has always been distinguished for the excellence of its monographs on individual characters and incidents of history, and with some allowance for the facility of modern work, and the too frequent decadence of modern style, it continues to deserve the distinction. The second volume of Captain Bourrelly's *Maréchal de Fabert* amply sustains the excellence of the first, and the author may congratulate himself on having written a book (9) which will always be necessary to historian or student of the singular and momentous episode of the Fronde. M. Giraud, who has proved his armour before now in this field, has produced an interesting book (10) on the *Maréchale de Villars*, the wife of the famous general who alone of the boasted commanders of France succeeded in making some head against Marlborough, who proved himself superior to Eugene, and who, in settling the Camisard outbreak, probably postponed the French Revolution for nearly a century. M. de Saint-Amand's work, like the rest of his series, is of a much lighter kind than these two useful and solid contributions to history (11). But the abundance of citations of contemporary documents compensates for a certain unnecessary brilliance and crackling of style. The same can hardly be said of M. Adolphe Dupont's *Souvenirs de Versailles* (12).

(5) *Discours parlementaires de Jules Favre*. Tomes 1, 2. Paris: Plon.
(6) *Nouvelle géographie universelle*. Par Elisée Reclus. Tome vii. Paris: Hachette.

(7) *Raffaël, sa vie, son œuvre et son temps*. Par Eugène Muntz. Paris: Hachette.

(8) *L'encre verte*. Par Alphonse Karr. Paris: Calmann-Lévy.

(9) *Le maréchal de Fabert*. Par J. Bourrelly. Tome 2. Paris: Didier.

(10) *La maréchale de Villars*. Par Ch. Villars. Paris: Hachette.

(11) *La dernière année de Marie Antoinette*. Par Imbert de St. Amand. Paris: Dentu.

(12) *Souvenirs de Versailles pendant la Commune*. Par L. Dupont. Paris: Dentu.

(4) *Voyage au pays des fakirs chérmeurs*. Par L. Jacolliot. Paris: Dentu.

A deplorable lack of appreciation of the gravity of the facts is manifest throughout. M. Dupont does not seem to have mastered the great proposition *res ineplo nulla res inepior*, and while he cracks jokes about the size of M. Rochefort's cigars, and expatiates on the polished demeanour—"on n'est pas plus régence"—of the mushroom functionaries of the Commune, he does not seem in the least to perceive that matters of the most serious kind are at stake. "Embrasser Mlle. Louise Michel et la trouver charmante," as a description of the present situation, is a very pretty *mot* no doubt. But the history of France makes one a little doubtful of the efficacy of *mots* as political weapons.

M. Gossot, with the best intentions, has somewhat "spoken himself" by the title of his book (13) on Marivaux. Any attempt to consider the moral side of a writer exclusively, especially of such a writer as Marivaux, is doomed to failure. But the volume, however faulty it may be in plan, deserves at least the passing attention of the student of French literature.

M. Evellin has produced a learned metaphysico-mathematical treatise (14) on the infinite. To any one who has once interested himself in questions of the kind books of this sort have the attraction of forbidden fruit, and at the same time the repulsion which that fruit exercises on the prudent man who has outgrown his youth.

If there were a French Dialect Society, M. Baissac's book (15) would be a welcome contribution to its publications. Whether, indeed, the lawless adaptations which "niggers" make of European languages lend themselves to anything like a grammatical reduction may be a question, but it is a question too large to enter upon here.

The series of popularized travels which M. Dreyfous has undertaken now includes a volume (16) devoted to M. Paul Soleillet, the great promoter of the Trans-Saharan Railway which is to make all North-Western Africa French, *pourvu que Dieu lui prête vie*. It is certain that the French, despairing of colonies elsewhere, have now founded all their hopes on Africa. Unluckily for them, they have to quarrel with Spain and Italy for the Mediterranean seaboard, to dispute the Senegambian and Guinea littoral with England. What will come of it we cannot pretend to say, but there is no doubt that M. Soleillet is a stout and determined voyager.

We have received the seventh volume (1887) of the useful *Année politique* (17), which M. A. Daniel edits and M. Charpentier publishes.

The only objection that we can find to Mr. Colbeck's edition of M. de Bonnechose's *Life of Hoche* (18) is that there are so many capital works of French literature and history as yet unedited for school use that it seems a pity to devote attention to what can hardly be called a classic from the point of view either of matter or of form.

Messrs. Hachette's new Atlas (19) bids fair to be an excellent one. The third fascicule which we have now before us contains maps of England, of Scotland and Ireland, and of the *Orbis veteribus notus* before Alexander. The execution of the maps is as admirable as might be expected; but perhaps it may be pointed out that the inclusion of Scotland and Ireland in the same map wastes almost more room than it saves.

M. Albert Delpit is a prose writer who stands in no need of praise by allowance; his verses (20), however, are thrown somewhat into the shade by the admirable lines which M. Victor de Laprade has written in commendation of them. M. Delpit's intentions are always excellent, but it is desirable to rebuke the Philistine forcibly if he is rebuked at all.

The dramatic monologue in verse of moderate compass is a recognized variety of French dramatic literature. If, however, the usual examples of it were not stronger than *Le vin gai* (21), we are inclined to think that it would cease to hold its position.

The publication of the late François Victor Hugo's translation of Shakespeare (22) in M. Lemerre's *Petite bibliothèque littéraire* has reached its sixteenth and last volume, which contains the Poems. There is no doubt that a better version has seldom appeared in any language.

In the same series, but, the author being "modern," without the attraction of Dutch paper, the third volume of M. Aulard's *Léopardi* (23) has also appeared.

The novels which come under our notice this month are few, nor are they of the first importance. In *Madame de Froumi* (24) M. Edgar Monteil continues his polemic against the clergy, *dans un but de propagande philosophique et démocratique*. His own description will probably suffice as a criticism. The Princess Olga

Cantacuzène has written a book (25) which is not devoid of pathos, but which handles a somewhat hackneyed subject, the self-sacrifice of a woman who, separated from her lover by accident for years, finds that on his return he has fallen in love with her younger sister. M. Ferdinand Fabre (26) also confines himself to the highway in the act of going out of it, taking for his subject the life of a curé in the South of France, a subject handled more than once latterly by romance-writers. His book, however, is carefully done, and does not by any means lack interest. Mme. d'Artigues is a lady who keeps abreast of the time. Her *Lettres de femmes* (27) between a fantastic young woman of the upper classes and a schoolfellow who belongs to the virtuous bourgeoisie (and who, to tell the truth, writes horribly vulgar French) have some merit of conception. When, however, the virtuous bourgeoisie undertakes to show how good a thing it is that religious orders should be turned out of their houses, *l'abbé*, to use a delightful phrase of M. Emile de Girardin's, *ne s'amuse pas franchement*. The English *abbé* in particular feels how unspeakably awful it would be if the average English novelist felt bound to take a side on political matters. We may come to that perhaps in time. M. Monchanin's book (28) is of the historical kind, dealing with the Paris of the Concini and with contemporary Madrid. It is well written, and not uninteresting, though it has a certain lack of the "go" which of late years few historical novelists have succeeded in communicating to their books.

(25) *Le mensonge de Sabine*. Par la princesse Olga Cantacuzène Altieri. Paris: Calmann Lévy.

(26) *Mon oncle Célestin*. Par F. Fabre. Paris: Charpentier.

(27) *Lettres de femmes*. Par Mme. Alix d'Artigues. Paris: Charpentier.

(28) *Don Manuel*. Par A. Monchanin. Paris: Ollendorff.

NOTICE.

We beg leave to state that we decline to return rejected Communications; and to this rule we can make no exception.

THE UNITED STATES.

The Annual Subscription to the SATURDAY REVIEW, including postage to any part of the United States, is £1 10s. 4d., or \$7 58 gold, and may be forwarded direct to the Publisher, Mr. DAVID JONES, at the Office, 38 Southampton Street, Strand, or to Mr. B. F. STEVENS, American Agency, 4 Trafalgar Square, London. International Money Orders can be sent from any office in the United States, and Subscriptions, payable in advance, may commence at any time.

PARIS.

Copies of the SATURDAY REVIEW may be obtained every Saturday of M. FOTHERINGHAM, 8 Rue Neuve des Capucines.

The SATURDAY REVIEW is duly registered for transmission abroad.

The publication of the SATURDAY REVIEW takes place on Saturday Mornings, in time for the early trains, and copies may be obtained in the Country, through any Newsagent, on the day of publication.

Nearly all the back Numbers of the SATURDAY REVIEW may be obtained through any Bookseller, or of the Publisher, at the Office, 38 Southampton Street, Strand, W.C., to whom all Communications relating to Advertisements should likewise be addressed.

Copies of the SATURDAY REVIEW Bill of Contents will be forwarded every Friday Evening by post, prepaid, to any Newsagent in Town or Country on application to the Publisher.

THE SATURDAY REVIEW

OF

POLITICS, LITERATURE, SCIENCE, AND ART.

Price 6d.

CONTENTS OF No. 1,328, MARCH 5, 1881:

The Course of Business. The Transvaal. The Abandonment of Candahar.
Army Organization. The Protection Bill. The Greek Controversy. A School Board Freak.

ADVERTISEMENTS.

THE GROSVENOR GALLERY.

WINTER EXHIBITION.

The GROSVENOR GALLERY Exhibition of Water-Colour Drawings, and Decorative Designs, by living Artists, NOW OPEN
Daily, Ten to Six.

Admission, 1s. Season Tickets, 5s.

DORÉ'S GREAT WORKS, "CHRIST LEAVING the TOMB," "CHRIST ENTERING JERUSALEM," and "MORE BEFORE PHARAOH," each 35 by 25 feet; with "Dream of Pilate's Wife," "Christian Martyrs," &c. at the DORÉ GALLERY, 35 New Bond Street. Daily, Ten to Six.

EXHIBITION of PAINTINGS by SWISS ARTISTS, instituted by the Cercle des Beaux-Arts of Geneva, 108 New Bond Street, will OPEN March 14. Admission 1s.

UNIVERSITY of LONDON.—NOTICE is hereby Given, that on Wednesday, 27th of April next, the Senate will proceed to Elect EXAMINERS in the following Departments:

Examinations.	Salaries.	Private Examiners.
ARTS AND SCIENCE.	(Each.)	
Two in Classics	£200	James S. Reid, Esq., LL.M., M.A.
Two in the English Language, Literature, and History	£150	Prof. Henry Morley, LL.D.
Two in the French Language and Literature	£100	Prof. A. W. Ward, LL.D., M.A.
Two in the German Language and Literature	£50	H. P. Bullock, Esq., M.A.
Two in the Hebrew Text of the Old Testament, the Greek Text of the New Testament, the Evidence of the Christian Religion, and Ecclesiastical History	£50	Prof. Cassel, LL.D.
Two in Mental and Moral Science	£50	Prof. Althaus, Ph.D.
Two in Political Economy	£50	Prof. Schiele, Ph.D., M.D.
Two in Mathematics and Natural Philosophy	£50	H. Lubbock Denby, Esq., M.A.
Two in Experimental Philosophy	£150	Rev. W. F. Moulton, D.D., M.A.
Two in Chemistry	£50	James Sully, Esq., M.A.
Two in Botany and Vegetable Physiology	£75	Herbert S. Foxwell, Esq., M.A.
Two in Comparative Anatomy, and Zoology	£100	Prof. J. E. Thorold Rogers, M.A., M.P.
Two in Geology and Palaeontology	£100	J. H. Wilkinson, Esq., M.A., F.R.S.
		W. T. Thirlson Dyer, Esq., M.A., F.R.S.
		William Garnett, Esq., M.A.
		Prof. Dobson, Ph.D., F.R.S.
		Prof. Dewar, M.A., F.R.S.
		W. T. Thirlson Dyer, Esq., M.A., F.R.S.
		Kennedy H. Vines, Esq., Ph.D., M.A.
		Prof. E. Ray Lankester, M.A., F.R.S.
		Prof. A. Milnes Marshall, D.Sc., M.A.
		Prof. F. M. Duncan, M.D., F.R.S.
		H. Davis Roberts, Esq., D.Sc., M.A.
LAW.		
Two in Jurisprudence, Roman Law, Principles of Legislation, and International Law	£100	Prof. W. A. Hunter, M.A.
Two in Equity and Real Property Law	£50	T. Waraker, Esq., LL.D.
Two in Common Law and Law and Principles of Evidence	£50	W. H. G. Bagshawe, Esq., B.A., Q.C.
Two in Constitutional History of England	£25	J. M. Solomon, Esq., M.A.
		Arthur Charles, Esq., B.A., Q.C.
		Rev. H. H. George, M.A.
		Prof. Edmund Robertson, M.A.
MEDICINE.		
Two in Medicine	£150	W. H. Dickinson, Esq., M.D.
Two in Surgery	£100	C. Hilton Fagge, Esq., M.D.
Two in Anatomy	£100	Prof. John Wood, F.R.S.
Two in Physiology	£100	Prof. Redfern, M.D.
Two in Obstetric Medicine	£75	Y. H. Fre-Smith, Esq., M.D., B.A.
Two in Materia Medica and Pharmaceutical Chemistry	£75	Prof. J. M. Duncan, Esq., M.D., LL.D.
Two in Forensic Medicine	£50	Henry Gervie, Esq., M.D.
		Prof. E. B. Baxter, M.D.
		Prof. F. T. Roberts, M.D., B.Sc.
		Thomas Stevenson, Esq., M.D.

The Examiners above named are re-eligible, and intend to offer themselves for re-election. Candidates must send in their Names to the Registrar, with any attestation of their Qualifications they may think desirable, on or before Tuesday, March 7. It is particularly desired by the Senate that no personal application of any kind be made to its individual Members.

University of London,
Burlington Gardens, W.
March 1, 1881.

By Order of the Senate,
ARTHUR MILMAN, M.A., Registrar.

MATRICULATION of the UNIVERSITY of LONDON.—ST. BARTHOLOMEW'S HOSPITAL and COLLEGE.—A CLASS, in all the Subjects of this Examination, will begin on Monday, March 7, and continue until the Examination in July. The Class is not confined to Students of the Hospital. For particulars, apply to the WARDEN of the College, St. Bartholomew's Hospital, London, E.C.—A Handbook is forwarded on application.

CHELTEMHAM COLLEGE.—TWELVE SCHOLARSHIPS. Eight £40; Four £50. Election, third Tuesday in May.—Apply to the SECRETARY, The College, Cheltenham.

FETTES COLLEGE, EDINBURGH.—EIGHT OPEN SCHOLARSHIPS. Two of £50, Two of £30, Two of £20, Two of £10. Examination in July. Candidates residing in England may be examined in London.—For particulars apply to HENRY MARTIN, Fettes College, Edinburgh.

CLIFTON COLLEGE CLASSICAL, MATHEMATICAL and NATURAL SCIENCE SCHOLARSHIPS.—NINE or more open to Competition at Midsummer 1881, value from £25 to £50 a year, which may be increased from a special fund to £50 a year in cases of Scholars who require it.—Further particulars from the HEAD MASTER, or SECRETARY, the College, Clifton, Bristol.

ST. EDMUND'S COLLEGE, SALISBURY.—A HIGH-CLASS SCHOOL for BOYS of GENTLEMEN. The religious training is upon definite Church principles. Boys are Educated with much care and thoroughness. They receive individual teaching and help wherever needed. Candidates for Matriculation at the Universities are specially prepared. Terms, £75 a year.—For references, prospectus, or any further particulars, apply to the Warden, Rev. G. H. BOURNE, D.C.L.

THE TRANSVAAL ARMISTICE.

THE decline or eclipse of national spirit could not be better shown than by the comparative apathy with which the news of the armistice in Natal has been received in England. In face of the indistinct accounts which have so far been given by the Government of the origin of this arrangement, it is still possible to suppose that the idea of soliciting a cessation of hostilities as a consequence of three disastrous defeats was not due to Sir EVELYN WOOD's own judgment. The theory that the armistice is but a following out of instructions given to Sir GEORGE COLLEY would give some colour to an attempt to prove that the last act of that unfortunate officer was committed in the endeavour to save his country from humiliation. Speculation, however, on the causes which have induced Mr. GLADSTONE to order or to assent to such a proceeding is idle in the face of the proceeding itself. It has been sought to defend it on the plea of the original injustice of the war—a plea which it is not necessary to examine on the merits. The causes of the war, its justice and injustice, were perfectly known to the home Government before the first shot was fired at Laing's Nek, and nothing except the defeat of the English forces on three separate occasions has since happened to increase their knowledge. Not the least surprising part of the matter may seem to be that the Boers, who are aware of the great preparations made for their subjugation, should consent to a suspension of hostilities which will give time for reinforcements to arrive. This surprise, however, would probably be unreasonable. After undervaluing the courage of the Boers, it would be well not to undervalue their shrewdness. They have never attempted to execute forward movements beyond the territory they claim, and they probably calculate on being able to strengthen the pass against any force that may be brought against it. But the immediate advantage of an armistice is rather the moral effect which it produces in their favour on the other South African States. Mr. JOUBERT and Mr. KRUGER are not likely to be under the delusions of Radical speakers and writers at home. They know that the blow dealt to the reputation of England by this armistice must be a great help and stimulus to the Afrikaner feeling. That it has already proved to be such a stimulus is asserted by trustworthy information and cannot be doubted.

As to the immediate and local effect of the armistice it would probably be unwise to attach great weight to the various rumours which have been set afloat with regard to encroachments on the side of the Boers. As no stores other than provisions are allowed to be passed to the English garrisons, and as the release of the wounded from these garrisons is dependent on the good pleasure of individual Boer commanders, the advantages obtained by the revolted inhabitants of the Transvaal are perhaps sufficiently great as it is. That Mr. JOUBERT should have harried the people of Utrecht is not impossible, and such an act would show that the Boers, satisfied with having humiliated their enemy, are indifferent to the prolongation of the suspension of hostilities which the Government are ready to grant. The reported plundering of the Wesselsroon convoy might admit of a similar interpretation, and would not be inconsistent with the admitted scarcity of all provisions except fresh meat in the Boer camp. But neither of these reports, though the first comes

from numerous sources and in various forms, can be accepted without stronger corroboration than it has yet received. Not the least strange part of the affair is the irregular mediation which is said to be going on through the channel of President BRAND and Mr. DONALD CURRIE. The good offices of the PRESIDENT of the Orange River Free State have been accepted by the Government; but the selection of Mr. CURRIE as an additional intermediary is not known to have received any official sanction. There is, however, so little precedent for the whole negotiation that eccentricities of detail hardly require much comment.

Sir EVELYN WOOD had a difficult duty imposed upon him in the drawing up of a general order in reference to the defeat at Majuba Hill. The numbers of the troops engaged as well as of those who fell have been somewhat reduged by detailed accounts of the struggle, but no satisfactory account of causes of the disaster has yet been given. Sir EVELYN WOOD thinks it best to content himself with saying that Sir GEORGE COLLEY himself was the only person who could give such an account, and that Sir GEORGE is not alive to give it. The fact is indisputable; the inference scarcely satisfactory. Probably Sir EVELYN WOOD felt this, and therefore added his conjectural explanation to the effect that a small body of men, exhausted by a long night march, were attacked in an extended and unfavourable position, from which they were driven by overwhelming numbers. The evidence on the last point is not clear, and the rest of the statement amounts to a severe censure of his predecessor by the General who so speaks. It is, however, certain that by the conclusion of the armistice Sir EVELYN WOOD will have a considerable force with him, and he is said to have informed the Boers that, in the absence of their assent to such preliminary conditions as he has laid down, he will then attack at once. The notice appears to be superfluous, and if the report which states that the General assured his enemies in the course of negotiation that he already had with him all the men necessary for the attack, it seems unfortunate that it was not delivered before instead of after the action which is said on the spot to have placed the QUEEN's sovereignty in South Africa in jeopardy. President BRAND appears to have solicited a prolongation of the armistice about which the Boers themselves are for the reasons just given probably indifferent. Their reported and probably real confidence in their cause, and the contempt which, as the result of three victorious engagements, they feel for the English forces, together with the hope of support from the Dutch inhabitants of the States to the South, are probably stronger motives with them than any fear either of General WOOD or General ROBERTS. The latter officer, if he comes on the scene to negotiate and not to fight, will have an awkward and uncongenial task. In the absence of any trustworthy information as to the basis of negotiation it is difficult to come to a conclusion as to the possibility of securing the object to which the Government have made an at least apparent sacrifice of the honour of England. One suggested plan, that of marking out a kind of Boer reservation and retaining the principal part of the Transvaal under English sway, is hardly likely to be satisfactory to the insurgents. Elbow-room and arbitrary power over the natives are the two chief points of attraction in his present life to the Dutch inhabitant of the late South African Republic, and the acceptance of the plan proposed would endanger, if not destroy, his enjoyment of both. There is no one in this country who would not

would be an honourable settlement of the question, but the initial action which the Government have enjoined or sanctioned seems to render such a settlement impossible. It is a secondary, but still a grave, objection to that action that, by encouraging the Boers to be extravagant in their demands, it renders any settlement, whether honourable or dishonourable, that can be acceptable to other than extreme Radical opinion in this country unlikely, and thus increases the probable expenditure of blood and money while involving a certain loss in any case of reputation. The action of the Government has brought them into this dilemma, that, even if a settlement should be brought about by the present negotiations, they cannot, on their own showing, escape the charge of having gratuitously waged an unjust war; while, if it is not brought about, the honour of the country will have been dragged in the dust for nothing. Except in the improbable event of a considerable surrender of Boer pretensions, the failure of the negotiations and the vigorous and immediate prosecution of hostilities, with better skill and success than heretofore, is all that can be hoped for. Even this would leave much to regret behind it.

THE PRESIDENTIAL MESSAGE.

GENERAL GARFIELD'S first Presidential Message is scarcely open to criticism. Having no secrets to reveal, and scarcely any disputed propositions to maintain, the PRESIDENT has the good sense and good taste to address the people of the United States in an unpretending and simple tone. Almost the only disputable part of the document is an incidental recognition of the supposed expediency of a protective tariff. The PRESIDENT says that more than half of the population is engaged in agriculture, and that American manufactures make the country independent of foreign supplies. Few of the PRESIDENT'S adherents will draw the obvious inference that the larger part of the community is unjustly taxed for the benefit of a small minority. As no considerable section of the dominant party supports Free-trade, it is a matter of course that the Republican incumbent of the highest office in the Union should retain the opinions which he and his supporters professed during the election. It may be conjectured without disrespect that General GARFIELD has never carefully studied economic science. On questions relating to the circulating medium he has acquired a right to be heard by active participation in debates on metallic and paper currency. His Message, perhaps prematurely, congratulates the country on the resumption of specie payments, which cannot be really re-established as long as the holders of Government notes are not legally entitled to payment of the amount in coin. The PRESIDENT enunciates the sound doctrine that a promise to pay is not equivalent to payment; and he revives the constitutional doubt whether the issue of inconvertible paper money was within the competence of Congress. As greenbacks have long since been at par, there would be no practical difficulty in providing that they should be convertible on demand. The questions relating to the silver currency are, in consequence of recent legislation, more embarrassing, for the Treasury has been required to coin large amounts which cannot be pushed into circulation at their nominal value. The new SECRETARY of the TREASURY was a supporter of the Silver Bill, which was flagrantly, if not intentionally, unjust. The PRESIDENT expresses a hope that the proposed International Congress may provide means securing a bi-metallic currency in the States which may think fit to accept its resolutions. As it is certain that no such system will be introduced into England, it is not undesirable that foreign countries should at their own risk try a doubtful experiment. General GARFIELD agrees with his predecessor, and with Mr. SHERMAN, on the error committed by Congress in its late funding policy. Mr. HAYES'S last official act was to place a veto on the Bill, and, after the panic of last week, the mistake will probably not be repeated.

The PRESIDENT discusses at some length in temperate language the relation between the white and black races in the Southern States. It was a perhaps unavoidable misfortune that it should be necessary to place the emancipated slaves and their descendants on the same political and legal level with white American citizens. As Mr.

GARFIELD truly says, American institutions allow of no intermediate condition. The slave, as soon as he was liberated, became not only a freeman, but, under the constitutional amendment, one of the sovereign people. The inconveniences which have resulted, and which are not yet overcome, have probably had the effect of preventing the revival of schemes of conquest and annexation. The people of the United States have no machinery for ruling subjects, and the Southern communities are not inclined to admit inferior races to absolute equality. With the negroes within their borders they were compelled to deal, and the consequence has been a chronic disturbance of political equilibrium in the South. For several years after the war, Northern adventurers misgoverned some of the Southern States by the aid of coloured voters. Afterwards, the iniquities of the carpet-baggers, as they were called, produced an irregular but successful reaction. The negroes were coerced or intimidated into conformity, or into abstinence from voting; and the States were accordingly restored to the control of their former and natural rulers. The result was attained by evasion or violation of the law, sometimes with attendant circumstances of oppression amounting to cruelty, and up to the present time by a certain exercise of intimidation. It is apparently unjust to prevent electors from voting; but there can be no grosser violation of natural justice than the subjection of men of European descent to the dominion of negroes. Under the American Constitution a coloured majority has a right to exercise powers which cannot be practically tolerated. The supremacy of the unfittest is extending over the world under the form of universal suffrage; but democracy only maintains itself by mutual strength; and the negroes in a Southern State, even when they are more numerous than their neighbours, are essentially weaker. General GRANT made several ill-judged attempts to readjust the balance of power by the employment of Federal troops at State elections. His successor more wisely abstained from interference; and consequently the Democratic party, which has always leant on Southern support, commanded all the Southern votes at the late Presidential election.

General GARFIELD to a certain extent justifies the refusal of the Southern whites to concede political equality by dwelling on the ignorance of the negro voters; and he adds they are not the only uneducated part of the population. There seems to be no doubt that freedom has done much to elevate the character and condition of the coloured race; and the rising generation, with the advantage of schools, will attain a higher cultivation; but there is no reason to expect that the superior race will waive its claims when every negro can read and write, and when some of them have received a liberal education. There is hitherto no approach to social equality in the South; and marked physical differences tend to perpetuate separation. Wise statesmen will perhaps connive at a practical limitation of constitutional rights which happen to contravene natural order. The coloured citizens may find the fittest preparation for future political equality in co-operation with their former masters. Their votes will not be rejected by fraud or by force, if they are given for the right candidates; but it is idle to expect that democratic constituencies will allow the election of Republican representatives or officers by negro majorities. It is natural that the coloured electors should show their gratitude to the party which, for its own purposes, and by its superiority in war, effected their emancipation; but it is not for their interest to be Republicans while the dominant race professes Democratic opinions. The easiest road to power lies through alliance with its actual possessors. The Parliaments which sanctioned the despotic caprices of HENRY VIII. earned the right of being consulted on all legislative and administrative questions, which their successors used in opposition to weaker sovereigns. There can be no objection to General GARFIELD'S urgent desire for the extension and improvement of education. An illiterate rabble is the worst depository of power.

In undertaking to lay before Congress measures for conferring permanence of tenure on some members of the Civil Service, the PRESIDENT follows the example of his predecessor; and perhaps he may be more fortunate in attaining his object. Disinterested Americans are unanimous in their opinion that subordinate office ought to be independent of political considerations; but they have no power, and Senators and Representatives are pledged to the existing system both by their own inclinations and

by the influence of the election managers who return them to Congress. General GARFIELD himself holds his high position by means of contributions levied for party purposes on all the office-holders of the Union. He would probably have preferred a less objectionable machinery; but he could not reject the necessary condition of success. Even if the Civil Service was reformed, the vicious system of election would still be applicable to members of State and Federal Legislatures; but democracy and universal suffrage assume in the United States their most favourable aspect. It is much better that elections should be determined by intrigue, or even by corruption, than that they should be controlled by fanatical demagogues. No popular election has produced a more satisfactory choice than the Presidential contest. It may be added that the Democratic candidate also bore a high character. General GARFIELD presents a favourable specimen of a class which is justly popular in the United States. A part of his early life was employed in manual labour; he afterwards contrived to give himself a comparatively liberal education; and he served with credit as a volunteer officer in the Civil War. Of late years he has been known as an active and intelligent member of the House of Representatives, and he has had the more questionable merit of manipulating elections with skill and success. His elevation to the Presidency caused neither surprise nor dissatisfaction, though it had not been generally foreseen. The list of his Cabinet seems not to have excited any strong feeling. According to modern custom, the PRESIDENT has considered local and personal connexions as well as fitness for office. Of the new Ministers, Mr. BLAINE is generally known in England as a political leader and an orator. It is not certain whether he has paid special attention to foreign affairs, but American diplomacy varies little in substance or in tone. In common with his colleagues, Mr. BLAINE is a zealous opponent of Free-trade. The nomination of Mr. ROBERT LINCOLN proves that even in the United States hereditary pretensions are sometimes, though rarely, recognized.

IRELAND.

THE powers granted to the Government by the Coercion Bill have already been exercised, and a considerable number of obscure agitators, arrested in all parts of Ireland, have been lodged in Kilmainham Gaol. It is not clear what has induced the Government to leave Mr. DILLON and Mr. BRENNAN, the most active and prominent of the disturbers, so long at liberty to continue their work of agitation. Though some of the lower members of the conspiracy have used language of a coarser and cruder kind than their chiefs, few more definite incitements to resistance have been uttered than Mr. DILLON'S. It is possible that a misplaced tenderness for the position of a member of Parliament may have influenced Mr. GLADSTONE'S Ministry. Certainly Mr. DILLON has been of considerable use to them already, and they may reasonably think that he will continue to justify their conduct. Unhappily the need for the application of the powers granted, or in course of being granted, continues to be shown. The murder in Westmeath was deliberate and well-planned, and outrages of one sort or another continue to be committed, though it is evident that the strength of the revolutionary movement is for the time broken. Payment of rent, the best of all signs of this, is becoming more and more common, and in cases of persistent refusal the seizure and sale of stock has become a reality instead of a farce. With characteristic boldness the HOME SECRETARY remarked on Wednesday afternoon that the experiment of his Government in endeavouring to govern Ireland by the ordinary law had failed, and had shown that they were not justified in attempting it. The apology would be more acceptable if nothing but loss of credit to the Government in respect of statesmanship had resulted from their fancy for the experimental method. The relatives of the dead men who would be alive had the Government taken advice, the families who have been wholly or partially ruined in the course of their experiments, may not perhaps be fully appeased by the frankness of Sir WILLIAM HARCOURT'S testimony to his colleagues' incapacity.

The second measure necessary for the complete pacification of Ireland will probably become law in a few days. Its passage through the Lower House has been dis-

tinguished by the usual course of events which must occur whenever a measure is discussed under urgency. Some days of languid and unreal discussion of points more or less unimportant, followed by several hours of uninterrupted divisions on undiscussed and unconsidered amendments, make up the programme. The anxiety shown by some Irish members in the course of the debate for the future comfort of incarcerated persons may have been partly selfish, but the accounts of the fate of the present prisoners of Kilmainham may reassure those who dread hardship for themselves and their friends. In all but name, the disorderly persons upon whom Mr. FORSTER has laid hands are being treated as first-class misdemeanants, and they have liberty of association with each other. Portions of the Land League funds are to be devoted to their comforts—the usual and natural end of political subscriptions in Ireland. The Arms Bill will not become law a day too soon. It is evident that most of the country districts are armed to the teeth, and though little is to be feared in the shape of open rebellion or combined violence on the great scale, it is impossible that the terror should cease so long as the instruments of maintaining it are in everybody's hands. Not the least frequent cause of one of the worst class of outrages—forcible entry of houses by night—is the desire to obtain arms, and when it becomes difficult or impossible to retain possession of these, the motive for such outrages will cease. A still more important point is that the passing of the Arms Bill and the enforcement of its provisions will prove to the people more clearly than anything else the vanity of their leaders' promises. From the very beginning of the agitation Mr. DILLON and his imitators have been unwearied in assuring their hearers that the Irish members of Parliament would take care to secure the right of possessing arms, called by one of the defenders of the cause the first right of a freeman. It will very shortly be evident that they have undertaken what it is impossible for them to perform; and, when this is once clear, their power will be gone. That the Irish tenants should be protected in holding the land was the chief promise of Mr. PARNELL; that no restriction should be put on their arming themselves was the chief promise of Mr. DILLON. Both pledges are in course of being shown to be futile; and the Irish people, who unite with a singular capacity of being duped, a shrewdness which is quite sufficient to find out those who have duped them, will for the time return to their normal condition of grudging obedience to the law. It would probably be too much to hope that the inutility of what the HOME SECRETARY calls the experiment of the Government will be impressed on their minds or on those of their supporters and successors.

The inconveniences of the absorption of the House of Commons in one particular kind of extraordinary business have not seemed to be felt, and the inconveniences of the remedies which have been applied to check obstruction also not. It is very desirable that a day should be found for the discussion of Mr. STANHOPE'S motion as to Canada, but the PRIME MINISTER, while expressing his full sense of the fact, is unable even to indicate a likely date. It is absolutely necessary that Supply should be taken in time; yet it is impossible to say how progress can be made with it, at least under the ordinary modes of business. Supply is the favourite bait of members disposed to obstruction at all times, and it is scarcely likely that at this present position of vantage will be left unoccupied without smarting from defeat. It is said that the little Radicalism who have given a fitful support to the Government have represented to their allies that the time has come for regaining by a moderate attitude in the good opinion of the English constituencies. Doubtless that the persons appealed to have any opinion of the good opinion of the English constituency—that they will be disposed to waive an opportunity of embarrassing the Government for the sake of a few obscure partisans. They can always count on the support of these latter in any anarchic design, but it is a consideration. Nor is it certain that the Irish, though on the whole they may have been suffering on themselves, have been in all cases with strict fairness in the application of the law. The brawl of Tuesday night was directed to Mr. FINIGAN and to his colleagues,

but it is not clear that, technically, Mr. O'DONNELL's complaint of having been tyrannically silenced is ill-founded. It is impossible for the Chairman of Committees or the SPEAKER himself to decide that a point of order is not to be considered until he knows what the point of order is, and on Tuesday night Dr. PLAYFAIR refused to allow the member for Dungarvan even to state his point. Divination of what a member is going to say can hardly be considered a satisfactory method of conducting the affairs of the House and the business of the nation. So long as grievances of this kind are allowed to exist, it is idle to expect that Irish members will abstain from troubling. It would probably be idle to expect it, even if there were no such grievances; but the ruling of Dr. PLAYFAIR and the oratory of the HOME SECRETARY are calculated to make trouble certain, as well as to awake a feeling of sympathy which is inopportune as well as, on the whole, undeserved. Sympathy with the party of Mr. PARNELL should be left to French ultra-Republicans and to beaten candidates for posts of high station in America, a remarkable group of whom is said to have recently telegraphed good wishes to a meeting called for the combined purpose of sympathizing with the Boers and the Land League.

LORD FORTESCUE ON THE EXTENSION OF THE FRANCHISE.

LORD FORTESCUE, in the current number of the *Nineteenth Century*, has suggested, under the appropriate heading of "Our Next Leap in the Dark," some contrivances which might perhaps render a new Reform Bill not wholly mischievous. The objection to all schemes of the kind is that they will certainly not be adopted. The object of so-called Parliamentary reformers is to insure the political preponderance of the multitude, which in turn affords them the necessary support. Government by agitators acting upon mobs is the democratic ideal, and even the metaphor of a leap in the dark has almost ceased to be applicable. The leap will be into a visible abyss, from which there is no return. It unfortunately happens that, through the operation of natural laws, the disposition of constituencies to control their representatives increases in direct proportion to their own incompetence. Questions of foreign policy are habitually debated by clubs and associations, including probably, with the exception of a few demagogues, not a single capable judge of the merits of such controversies. The Liberal leaders, and especially their chief, are largely responsible for the fatal custom of appealing from Parliament to the rabble. In not a single instance was Mr. GLADSTONE's wild and dangerous language checked or criticized by a popular audience. The unanimity which ordinarily prevails in political clubs sufficiently proves the worthlessness of their conclusions. Study, knowledge, and conscientious love of accuracy tend to produce differences of opinion. The war in the Transvaal, for instance, suggests many perplexing problems to those who understand its origin and tendency; but meetings of excited Radicals are not for a moment puzzled. As English democracy has in recent times broken with national traditions, regard for the honour of the country has almost ceased to affect popular feeling. On all questions, domestic and foreign, the verdict of the numerical majority may be easily anticipated.

The admission of the agricultural labourers to the suffrage, combined with the institution of equal electoral districts, will practically disfranchise the educated portion of the community. Lord HARTINGTON's reputation for prudence is greatly impaired by his rashness in pledging the Liberal party to household suffrage in counties; but in the present state of politics, the promise is irrevocable, and those who gave it have the power to redeem it. The concession would perhaps in any case have been unavoidable, though it might have been advantageously postponed. In two or three years the man on the other side of the hedge will unite his efforts with his friend on this side to endanger or overthrow existing institutions. Lord FORTESCUE's plan for averting a formidable danger is, at the same time, simple and ingenious, though the experiment which he proposes will never be tried. He would for the purpose of elections include all rural districts within the limits of the nearest borough, so far as to introduce into the borough constituency all householders who were not possessed of the county qualification. By

this method, the county constituency would be unaltered, while the agricultural labourer would obtain the vote which he is supposed to covet. If it were objected that the borough constituency might be swamped, Lord FORTESCUE would probably reply that, of two evils, he chooses the less. The large towns are already more democratic than the present county constituencies, and there would be a smaller change in the representation than that which will be effected by the impending measure. Lord FORTESCUE is not altogether satisfied with the ATTORNEY-GENERAL's Bill for the prevention of bribery and treating. He apprehends, probably with reason, that the limitation of the number of agents, and the prohibition of employing canvassers, will diminish the proportion of actual voters to the whole constituency, unless inflammatory speeches take the place of private solicitation; or unless disreputable election managers, willing to incur for a consideration the risk of punishment, take the place of respectable solicitors. It may be added, that Sir HENRY JAMES's scale of penalties is out of all proportion to the moral delinquency of corruption as it is measured by popular estimation. Experience shows that excessive severity tends to defeat its objects, and that punishment ought to be adjusted to the actual state of opinion, rather than to the judgment of strict moralists.

Though the Ballot is, like almost all innovations, irrevocable, those who disapproved of secret voting may be pardoned if they regard with a certain complacency its partial failure. It prevents intimidation, and it abolishes much wholesome influence; but against bribery it appears to be powerless. The particular form of miscarriage had not been foreseen by friends or enemies; and it may be doubted whether rigorous legislation may not cause similar disappointment. The elector who sees no reason why he should vote gratuitously is likely to survive till the commodity which he has to sell becomes worthless from the enormous number of votes. It is not known that there is any bribery at Manchester, Liverpool, or Glasgow, where each voter possesses only a small fraction of electoral power. On the other hand, it is possible that the enfranchised rural householders may be more cheaply purchasable than the workmen in the towns. If votes become unsaleable, or if it becomes dangerous to accept a bribe, the system of representation will be but slightly improved. An elector who abstains from selling his vote only because it is no longer marketable is not, on the whole, a valuable member of a constituency. In many cases he will place himself at the disposal of a frothy demagogue instead of earning the wages of corruption from a dispassionate agent. Acceptance of bribes may be more degrading than political fanaticism, but it is much less dangerous. If the system of the Birmingham federation continues to flourish, the American form of corruption will perhaps succeed to the ruder machinery of English bribery. Managers instead of constituencies will receive pay for their services in manipulating elections. The defect of American candidates is rather obscurity than extravagance. At a late meeting of Radical Clubs Mr. COWEN denounced the Birmingham organization on the fanciful ground that it had strengthened the Ministers in their promotion of the Irish Coercion Bills. He had himself defeated the local Association at Newcastle when it insisted on his opposing the foreign policy of the late Government; but, if he had not been well known as a democratic politician, he would probably have been overpowered.

Lord FORTESCUE refers with just contempt to the "flesh and blood" doctrine. The superstition which is symbolized by the phrase has seldom been more perversely exhibited than in some of the Ministerial schemes for the regeneration of Ireland. The franchise which at the present standard causes the return of Mr. HEALY and Mr. BIGGAR to Parliament is to be lowered as soon as the obstructive faction allows the Government to introduce any of its measures. In many counties and boroughs the change will have no practical effect, though it may render the paucity of electors in some petty towns a little less ridiculous; but it is asserted that it will weed the Irish representative body of the few Conservatives and moderate Liberals who now hold their seats. A still more preposterous scheme has been devised for creating little county Parliaments, which will probably be in many cases legalized branches of the Land League. There is no immediate necessity for any alteration in the grand jury system, though it involves some theoretical anomalies. If the grand juries make occasional mistakes, they have the merit of confining themselves to their own

business. The proposed County Boards, to be elected, of course, by household suffrage, will at once usurp political functions. The Boards of Guardians, with far narrower powers, have set them the example; and the managers of the Land League are exerting themselves to procure the election as Guardians of members of their own body. It is idle to attempt to conciliate the advocates of Home Rule by offering them a more complete control over local business. Their objects are not administrative, but political; and any powers which they may acquire would be used for purposes of agitation, without regard to the interests of property. It is probable that elected local Governments of counties may succeed better in England; but there also the power of imposing burdens is likely to be separated from liability to bear them. The late Government is greatly to blame for its negligence or weakness in not carrying a reasonable and moderate measure. The farmers cared little at the time for concessions which had been urgently demanded on their behalf; but it was certain that their claims would be renewed if they were not satisfied in advance.

GERMANY:

THE Imperial Parliament has been immediately on its reassembling provided with a subject to discuss which any other Parliament would regard as of considerable importance to itself and to the nation. It has had submitted to it by Prince BISMARCK a project by which the Budget shall be voted for two years, and the Parliament shall be elected for four years and only meet every other year. The Liberals naturally object that this scheme would kill the Parliamentary life of Germany. The mere fact that the German Parliament was on a different footing from all other Parliaments would discourage members, and lead them to think that their duties were not of so serious a nature as is supposed generally to be involved in the existence of a Parliament. The nation, too, would no longer look to Parliament as the exponent of its wishes and the guardian of its interests. The Government would be always governing, and the Parliament would be only occasionally discussing. Some members of the Clerical and Conservative parties feel these obvious objections so strongly that they are only willing to agree to the proposals of the CHANCELLOR on the condition that the Parliament, although voting a Budget for two years, shall still meet every year for other than financial purposes. This is a kind of compromise which pleases men who on a question of principle do not like to vote really either way. It would not in practice restore to Parliament the authority and position which would be abandoned by voting the Budget for two years. The experience of all Parliaments shows that when nations are new to Parliamentary life, they part with everything if they part with the control of finance. A Government which is sure of its money can always prevent any business being transacted of which it does not approve. If the German Parliament met in the years when no Budget was to be voted, the Government could bring its proceedings to an absolute standstill by the simple process of not proposing anything. Although the Parliament may theoretically initiate measures, yet the scheme of the German Constitution is such that no proposal has the slightest chance of success unless it comes from the Chancellor with the assent of the Federal Council. The Chancellor may have some motives of his own for making proposals, but if he is indifferent to suggestions which the country would like to see adopted, the only mode by which he can be roused into involuntary activity is by making him in some degree uncertain as to the amount of money that will be voted. When he of his own accord makes a proposal, the influence of the Government is so strong that he is tolerably sure to have his way in the main, and the only instrument of preventing his having his way altogether, and of driving him to make some concessions, is, again, the power of the purse. In the alternate years the Parliament would be in a dead-alive state, doing what the Chancellor orders, or doing nothing if he ordered nothing, and would soon be as anxious to be prorogued as he could be to prorogue it.

The arguments by which the proposed change is defended are worth noticing. In the first place, it is said with much reason that, if the Budget is considered merely as a financial arrangement, it is much better to allow it to continue in force for a time sufficient to test the merits

of its provisions. What amount must be raised to provide for the wants of the nation, and how shall it be raised, are the only two questions which have to be decided when a Budget is brought forward. The ordinary wants of a nation may be easily forecast for a couple of years, and the taxes which are the right taxes to impose in one year will in all probability be the right taxes to impose in the next year. And, if this is more or less true of all Budgets, it is specially true of the Budget of a federal State. The wants of the whole German nation are much more constant and can be much more easily ascertained than the wants of each small State, and the scheme of taxation adopted must necessarily be of a broad and general kind. For the purpose of effective Parliamentary control an annual Budget is indispensable, but for mere financial purposes a biennial Budget is at least as good as an annual, and in the case of Egypt the latest device of financial ingenuity has been to draw up a permanent Budget as most conducive to the interests of the Government, the nation, and the national creditors. The advantages of enacting that the German Parliament shall be elected for four years instead of for three, as at present, have been pointedly urged by Herr WINDTHORST. As things are now, he said, the elected are in the first year so full of their triumph, that they can think of nothing else. In the last year they are wholly absorbed in manoeuvres for being re-elected, and thus they have only one year in which they can approach public business in a spirit of appropriate calmness and impartiality. This is a good argument for Parliaments lasting four years if they meet annually, but it scarcely applies to Parliaments that meet only every other year, for they must meet either in the first or else in the last year of their existence. But the chief reason assigned for burying the German Parliament every other year is that its continued vitality interferes with the life of the Prussian Parliament. The proceedings in the Parliament that is really important are cut short in order that the proceedings of the Parliament that is comparatively unimportant may begin. In spite of all proclamations of German Unity, and Prince BISMARCK's denunciations of particularism, it is every day becoming more and more evident that the German Empire is a mere appendage of Prussia. Of all domestic questions, that of the Culturkampf is the most burning. It is essentially a German question; for the only kind of justification of the laws against the clergy is that the clergy were formerly accused, and are still suspected, of intriguing against the German Empire. But, as Herr WINDTHORST said, the field of battle in which the fight of the Culturkampf must be fought is the Prussian, not the German, Parliament. In spite of all his failures, he still hopes to win. He and his friends will, in the long run, ensure the triumph of religion over culture. But what he has to do is to persuade or frighten Prussia into a surrender. If he can but do that, Germany will at once follow the lead of Prussia; but he might as well talk to the winds as address Germany while Prussia is against him.

That Prince BISMARCK's proposal would kill Parliamentary life in Germany would be incontestable if only it could be said to be clear that there is any Parliamentary life in Germany to kill. The German Parliament does not appear to care whether it is buried or not. This is one of the most singular spectacles that Parliamentary history has ever presented. There have been many instances of a Parliament resisting vehemently its suppression. There have been instances equally numerous of a Parliament welcoming a conqueror or turning tail before him; but a Parliament which treats the question whether it shall or shall not be condemned to impotence with the equanimity with which the House of Commons deliberates whether it shall or shall not sit on the day of the Derby is a new and astonishing body. The German Parliament could not come to a decision, because there was not a full House. More than half the members thought that the question to be decided was not one of sufficient importance to make it worth while for them to take the trouble to be present. What is the use of talking of the Parliamentary life of a nation which cannot get half of its representatives to concern themselves when this Parliamentary life is to be snuffed out? Prince BISMARCK's health, too, is an unfailing barometer of the real interest that is felt in any political question. He gauged the amount of excitement aroused by his proposal, and found it to be so slight, that he sent word

that he was too ill to come himself to give explanations, then got well enough to give a large political dinner, and then was again too ill to speak. A Parliament that was so little interested in its own life and death was not worth addressing. If the German Parliament had been really interested in the matter, the proposal would probably never have been made. Prince BISMARCK, it must be owned, knows his countrymen well. He has calculated, and calculated rightly, on the progress of Socialism in Germany. Socialism desires the absorption of the nation in the State. Parliaments necessarily oppose this absorption, unless they are the mere tools of the Government; and in German Parliaments have always been frail plants, and are now being fast smothered by the strong rank grass of Socialism. The German State, not the German Parliament, is coming to be looked at as the embodiment of German unity. And with such a form of Socialism, biennial, or even quadriennial, Budgets are in complete harmony. Socialists, like all other people, wish to know how much of the produce of labour the State intends to consume for its own purposes, and how this produce is to be levied. When once the announcement is made, there is no reason why what is announced should not remain in operation for a considerable time. Prince BISMARCK has recently acknowledged that he is as much afraid of what in Germany is called Particularism as ever. But he thinks, and perhaps rightly, that, if he can but unfold Particularists in the meshes of a Socialist State, they will thenceforth lie still and give no more trouble.

THE HAMPSTEAD HOSPITAL CASE.

ON Saturday last the managers of the Metropolitan Asylums Board were still regardless of their fate. The judgment of the House of Lords on the appeal in the Hampstead case had not then been delivered, and they could send an answer to the Chelsea deputation which breathed nothing but stern resistance. Before forty-eight hours were over their strength had gone from them. The decision of the Queen's Bench Division upon which they have so obstinately relied had been finally overruled, and for the future it rests with a jury to decide whether a small-pox hospital is a nuisance. The Chelsea Committee met on Tuesday to determine what they should next do to obtain for the district they represent the immunity which Hampstead has already secured for itself. They very properly decided not to interfere with the patients at present under treatment in the Fulham hospital, but to take immediate action to prevent any more patients from being sent thither. The Metropolitan Asylums Board have so steadily rejected all notion of compromise, and taken their stand upon their statutory rights, that they cannot wonder that the districts affected by their action should show themselves equally persistent. It may be at once conceded that the managers of the Metropolitan Asylums Board are not likely to receive very tender treatment at the hands of a jury. The order appealed against in the Hampstead case was an injunction not to use certain buildings "as a hospital for small-pox or any other infectious or contagious disorder in such manner as to create a nuisance to the plaintiffs." For the purpose of the appeal it was assumed that the Hampstead hospital had been used in such manner as to create a nuisance, the contention of the Asylums Board being that they have a statutory authority to create a nuisance if they cannot do their work without creating one. The judgment of the House of Lords finally disposes of this plea. The Asylums Board is charged by Act of Parliament with the duty of providing asylums for reception or relief of the sick, insane, or infirm poor, and for this purpose the managers are to purchase or hire the necessary buildings. If no buildings suitable to the purpose are to be had, the managers are directed to buy land and build on it, but they are not invested with any compulsory powers of purchase. In the opinion of the House of Lords all these things may be done without causing a nuisance, and there is consequently no reason to suppose that the Legislature contemplated the creation of a nuisance as in any way incidental to the action of the Board. Had it done so, it would have taken care to give the managers the right to buy what land they wanted, and to bar any claims for compensation that might arise from the use to which it was to be put. By doing

neither of these things Parliament clearly showed that it had no intention to give the managers the power they had assumed to themselves. It will be open, of course, to the managers to contend in each particular case that a hospital is not used in such a manner as to create a nuisance. There is exceedingly little chance, however, that any such contention will be listened to. The sympathies of a jury will naturally be with the public who are exposed to infection by the collecting together of a large number of small-pox patients from various parts of London, and, unless the managers are prepared with much more conclusive evidence than any which has yet been brought forward, the verdict in the Fulham case will probably be identical with the verdict in the Hampstead case.

If the managers are wise, they will at once endeavour to come to terms with their adversary. It is plain that in any future proceedings at law they will be at a serious disadvantage. Public opinion is against them, and the verdicts of juries are very apt to give public opinion the force of law. It cannot be to their interest to have each small-pox hospital in turn made the object of a law suit, in which, if the dignity of the managers is saved, the public purse will be heavily drawn upon. The decision of the House of Lords makes fresh legislation imperatively necessary. There are now an unusually large number of small-pox patients to be dealt with, and it is impossible to deal with them effectually until it has been settled whether they are to be nursed in their own houses or taken away, and, if taken away, whether they are to be carried to a parish hospital or to a hospital in which the patients of many parishes are collected beneath a single roof. It was stated at the meeting of the Asylums Board on Monday that some of the central London parishes object to the local treatment which is desired by the parishes in the suburbs. The reason of this difference of view is plain. A small City parish is not likely to have many small-pox cases arising within its own borders; and, if it can but get rid promptly of the few that do arise, the chances of infection will be much lessened. No one has ever proposed to set up a small-pox hospital in the centre of London, so that the parishes in question can preach the benefit of the aggregate system with perfect safety to themselves. The large suburban parishes, on the contrary, cannot hope to be without frequent cases within their own boundary, while they are naturally marked out as sites for large hospitals, supposing the aggregate system to be adopted. They are consequently as much led by circumstances to favour the treatment of the disease in the locality in which it has arisen as the City parishes are led to favour its treatment in some other locality. Morally speaking, perhaps, there may not be much to choose between the two cases. Each district wishes to have small-pox treated in the way which will do least harm to its own people. But the case of the suburbs has one advantage over the case of the centre. The suburbs may be selfish, but their selfishness takes the form of readiness to bear their own burden, provided that they are not laden with other people's burdens in addition. The centre, on the contrary, is not even willing to bear its own burdens. If the two could change places, they would possibly change their opinions at the same time; but, though in this respect they may stand on the same level, it cannot be denied that the desire of the suburbs to treat their own cases, and no others, is superficially more respectable than the desire of the centre to get rid even of its own.

Between these two views, however, there is a gulf fixed which to all appearance can only be bridged over by Act of Parliament. Mr. TALBOT, speaking on behalf of the Asylums Board, is to ask Mr. DOBSON next Monday whether "he is prepared by legislation or otherwise to secure to the inhabitants of the metropolis the advantages which were intended to be conferred by the establishment of hospitals for fever or small-pox." That is a very reasonable inquiry to make, and it is one which even in the present almost hopeless state of public business ought to receive but one answer. In one way or another the advantages which were intended to be conferred upon London by the Act of 1867 ought to be conferred still, and if the Local Government Board has not the power to make the necessary provisions, it ought to apply to Parliament for fresh powers. It must not be taken for granted, however, that these advantages can only be conferred in the way contemplated by the Act of 1867.

Two things at least will have to be considered before resorting to further legislation in that sense. In the first place, is anything gained by collecting the small-pox patients of London in a few outlying hospitals? At present four such hospitals undertake the charge of 804 patients, 140 being at Homerton, 119 at Stockwell, 218 at unhappy Fulham, and 327 at still more unhappy Deptford. It is contended by the districts in which these hospitals are placed that they are still more a source of disease than they otherwise would be by reason of the number of patients treated in them. Each fresh case admitted multiplies the chances that the infection will be communicated to the houses near. It is contended by the districts through which the patients have to pass that the chances that the infection will be communicated to others are increased by their needless conveyance over long distances. If a small-pox case is treated where it arises, the danger is limited to that particular neighbourhood. If it is carried to a hospital six miles off, it may, according to this view, communicate the disease to the whole district over which the patient travels. This is the case against large hospitals, and it remains to be seen whether the managers of the Asylums Board can rebut the evidence on which it is founded. In the next place, is there any truth in the theory that a patient's chance of recovery is positively lessened by his being placed in a large hospital? This also has been often asserted of late; and, if it can be made good, the last stronghold of the managers will have been carried. It might conceivably be expedient to insist on the establishment of large hospitals in the suburbs if it were found that the patients recover very much more surely and quickly when they are treated in this way than when they are treated in parish hospitals. Consideration for the general welfare of London might override consideration for the particular welfare of this or that district. But if patients die in larger numbers when they are brought together in a few hospitals than when they are scattered over many small ones, general equally with local interests demand that the aggregate system shall be discontinued. This is the issue upon which the Local Government Board has now to bring its medical knowledge to bear.

M. GAMBETTA'S MORNING CALL.

FRENCH politicians may fairly be congratulated on the ease with which they get up a sensation. The talk of Paris for the last week has been the wonderful fact that the President of the CHAMBER OF DEPUTIES has called on the President of the REPUBLIC. This unprecedented event has been the subject of official notes and inspired statements, as well as of articles embodying every shade of favourable or unfavourable comment. The whole affair conveys a useful warning to great personages not to allow their mutual relations to become so distant that when it is necessary for them to go into conference they cannot visit one another without becoming objects of universal attention. Possibly M. GAMBETTA may not dislike the testimony which is thus afforded to the exceptional importance which now attaches to his slightest movement. But, though it may answer his present purpose that his call upon M. GRÉVY should be the object of as much speculation as the visit of one Emperor to another, it is not a happy state of things for France. Real and nominal authority ought to go together. There may be reasons why the most powerful man in France should hold no political office, but they are at best reasons which serve as guides in making a choice between evils.

The purpose of M. GAMBETTA's visit has been variously described as to convert M. GRÉVY to the merits of the *Scrutin de liste*, and to assure him that, whether he becomes a convert or not, M. GAMBETTA has no intention of disturbing him in his seat. From the missionary point of view, the call does not appear to have been successful. M. GRÉVY has been fortunate in lighting upon an argument which it is not at all easy for M. GAMBETTA to dispose of. Will the result of the general election, if it takes place under the *Scrutin de liste*, be identical with, or different from, that result if the election be held under the *Scrutin d'arrondissement*? This is in appearance a most innocent and natural question, but it places the advocates of the *Scrutin de liste* in an exceedingly embarrassing dilemma. If they reply that the change in the distribution of the electors will make no material change in the composition of the Chamber of Deputies, they

at once lay themselves open to the rejoinder, Then why make all this ado about nothing? It was not in this mild way that the *Scrutin de liste* was defended when first the question was mooted. It used then to be said that M. GAMBETTA wanted a Chamber returned by a different process from that now in use because he wanted a different Chamber from that now returned. He could not take office until he saw his way to forming a Government which could count upon a homogeneous body of supporters in the Legislature, and this he felt sure could never be obtained in a Chamber elected by the *Scrutin d'arrondissement*. If, on the other hand, the defenders of the *Scrutin de liste* make answer that they expect the adoption of their proposal to make a radical change in the composition of the Chamber, they risk the loss of that general Republican support without which they cannot be sure of carrying the Bill. So long as a deputy is allowed to hope that his seat will be as safe under the proposed system as it is under the existing system, he is under many inducements to vote for the Bill. It is much pleasanter, no doubt, to be M. GAMBETTA's friend than to be M. GAMBETTA's enemy. But, if M. GAMBETTA's friendship is to do no more towards bringing him back to Parliamentary life than M. GAMBETTA's enmity, it will be better for him to keep to the system under which he has a safe seat rather than wander off to one under which he may very possibly have no seat at all. If success under the *Scrutin de liste*, and the possibilities that may flow from M. GAMBETTA's good will, are but the two birds in the bush, the deputy may after all determine to abide by the bird in the hand in the shape of success under the *Scrutin d'arrondissement*. The statement of the argument in this form does infinite credit to M. GRÉVY's practical ingenuity. After all, if M. GAMBETTA is to get *Scrutin de liste* voted, he must get it voted by the present Chamber. So long as the members of that Chamber think that by voting it they secure their re-election by M. GAMBETTA's help, they may reasonably prefer this to securing their re-election in opposition to him. The immediate prospect is the same in the latter case as in the former, while the ultimate prospect is very much better. But if it once comes to be believed by the members of the existing Chamber that M. GAMBETTA's object in forcing on the adoption of the *Scrutin de liste* is to replace them by deputies better suited to his ideas, they will no longer be under any inducement to vote for it. If under no circumstances can they look for M. GAMBETTA's support, their best policy is to resist an alteration in the distribution of the electors which will have the effect of making his support indispensable.

The partisans of the *Scrutin de liste* so plainly see the force of these considerations that they are taking every opportunity to assure the deputies that no radical change in the composition of the Chamber is dreamed of. Indeed, they could not change it, even if they would. Of what use would it be to run unknown men against candidates who between them have for years past secured the confidence of the whole department. In their several *arrondissements* these candidates possess legitimate influence, and the authority which naturally belongs to men whom the choice of the electors has already sent to represent them in the Legislature. What could be more foolish and more certain to provoke defeat than to ignore such considerations as these? Even if it were possible to vary the composition of the Chamber by a resort to these tactics, there would be no advantage to be gained. Upon all essential points the existing Chamber is in harmony with the country, and as this is the one indispensable condition of a good representative body, it would be impossible to change it for the better. Here, however, comes in M. GRÉVY's question—Then why change it at all? The answer given is that, though the same men would come back to the Chamber under the *Scrutin de liste* as under the *Scrutin d'arrondissement*, they would come back less trammelled by local obligations. When they have a larger body of electors at their back the deputies will feel a larger sense of responsibility, and be able more completely to subordinate the interests of their particular district to the interests of the country at large. Whether this be true or not, it is evident that to argue the question on this ground is to make it one of very secondary importance. So long as it could be contended that under the *Scrutin de liste* the choice of the electors would fall upon a different type of candidate from that in which it falls under the *Scrutin d'arrondissement*, the Bill was, at all events, worth discussion.

If the choice of the electors is to fall upon the same type of candidates under both forms of *Scrutin*, the change is not great enough to excite much enthusiasm.

M. GAMBETTA, however, where the manufacture of enthusiasm is concerned, is able, unlike the Israelites, to make bricks without straw, and it would be extremely rash to suppose that he will not find an opportunity in the course of the next few months for the exercise of this useful talent. This is not the first time that M. GRÉVY has been credited with a determination to shake himself free of M. GAMBETTA, and to form a Ministry which shall be independent enough to act alone. Hitherto, however, nothing has come of these bold resolutions. M. GRÉVY was supposed to sympathize with M. DE FREYCINET, but this did not for a moment postpone M. DE FREYCINET's fall. In the same way, it is now supposed that M. GRÉVY will insist on his Ministers saying definitely which side they are going to take in the approaching debate. If any members of the present Cabinet refuse to support the *Scrutin d'arrondissement*, they must make way for successors of sounder views. It is difficult to feel much confidence in the execution of these magnanimous designs. Unless they are to remain mere dreams, they must involve the possibility, at all events, of an open quarrel between M. GRÉVY and M. GAMBETTA, and this is a danger which even a courageous man may not feel disposed to encounter. If *Scrutin de liste* is carried against the Cabinet, it will be carried against the President of the Republic, who stands behind the Cabinet. In that case will the resignations which must follow the adoption of the new scheme stop short at the Cabinet? Will not the President himself feel that he has been personally convicted of misinterpreting the feeling of the country, and that there is nothing left for him to do except to resign his office? The Paris Correspondent of the *Times* has an alternative solution to suggest in a recognition by M. GAMBETTA of "the necessity for the Republic of preventing the premature close of its first real Presidency." It is not impossible that M. GAMBETTA will be more impressed with the necessity for the Republic of hastening the election of the first real President.

RAILWAYS IN THE BALKAN PENINSULA.

THE Treaty of Berlin, so far as it affected Eastern Europe, contained two sets of provisions. There were territorial and political arrangements embodying the results of war or designed to prevent war in the future, and there were arrangements which contemplated the establishment of a state of peace, and regulated the communications by water and land between Austria, Turkey, and the provinces which had at one time formed part of Turkey. The two chief of these provisions were those regarding the waterway of the Danube and those regarding a railway from some part of Austrian territory to Constantinople. The treaty laid down that, in order to increase the guarantees of navigation on the Danube, which is recognized as of European interest, all fortresses and fortifications then existing on the course of the river from the Iron Gates should be razed, and no new ones erected. No vessel of war was to navigate the Danube below the Iron Gates, and regulations respecting navigation, river police, and supervision were to be drawn up by the European Commission, assisted by delegates of the riverain States. The execution of the works intended to remove the obstacles which the Iron Gates and the Cataracts place in the way of navigation was entrusted to Austria and the riverain States on this part of the river—that is, Roumania, Servia, and Bulgaria were bound to afford every necessary facility for the prosecution of the enterprise. Nearly three years have passed since the Treaty of Berlin was signed, and this long time has been consumed in preliminary negotiations. Austria has not begun the works at the Iron Gates, the fortresses below the Iron Gates have not been razed, and the regulations determining the user of the waterway have not been drawn up. Austria may have been very glad not to have had to find money for expensive works, and the Bulgarians may have been reluctant to raze fortresses which they got without any trouble to themselves, and which their great protector may have thought it convenient they should retain. But the hitch in the negotiations has been, at least nominally, in framing the regulations of the waterway. Austria wished for

an acknowledged supremacy in the Commission by which these regulations were to be put in execution. The minor States, and especially Roumania, denied the title of Austria to this supremacy. Below the Iron Gates the river flows between Roumanian and Bulgarian territory, or wholly in Roumanian territory, until it touches Russia on the left bank of the Kilia mouth. Russia, therefore, was interested in insisting on the equality of the riverain States, and through Roumania combated the pretensions of Austria. At last the protracted conflict appears to be on the eve of being brought to a close. Austria and Roumania are both satisfied, and to celebrate this happy state of things the Prince of Roumania, it is said, intends in a few weeks' time to proclaim himself a King. What good it can do him or his country were it not that Greece has for half a century been allowed to have a King, and the Roumanians not unnaturally think that an honour conceded to Greece should not be denied to them. They are much richer than the Greeks, much more numerous, and have really fought and distinguished themselves in fighting; and if it is objected that their King may be any day upset by a revolution, they may reply that this is not only true of Greece in a general way, but that at this moment the King of Greece is threatened with a revolution unless he will allow his brave subjects to flesh their swords.

With regard to railways, the treaty provided that Servia, so far as it was convenient, should take the place of the Porte in the engagements which Turkey had contracted towards Austria and towards a Company for making and working the railways which were to pass through what had become Servian territory. Further, in the sanguine and gushing language of diplomacy, it was laid down that the conventions necessary for carrying out the contemplated railway should be concluded between Austria, Turkey, Servia, and Bulgaria immediately after the signing of the Treaty. In real life the representatives of the four Powers have only in the last few weeks begun to discuss what are the existing engagements by which any of them are bound, and, in a still more vague way, what new engagements they shall each of them undertake. Austria has long contemplated the establishment of railway communication between Vienna and Constantinople, and in 1875 it got Turkey to undertake to prolong the existing line from Constantinople to Tatar Bazardjik not only to Sophia, which is now the capital of Bulgaria, but to Nish, which is now Servian, but was then on the Turkish side of the Servian frontier. This is the line which the treaty provided should be carried out; but the treaty has remained inoperative, because, before work could be begun, a number of preliminary points had to be settled, and at present none of these points have been settled. It had first to be ascertained where the money was to come from, and then what duties were to be levied at each frontier. Then what were to be the rates for through freight; and, lastly, and above all, what direction the railway was to take. It is especially Austria that wants to get railways made through territory that was or is Turkish, and Austria has two very distinct points that she wishes to reach. She wishes to get to Constantinople, and she wishes to get to Salonica. The difficulty of dealing with small jealous States like Servia and Bulgaria is so great that at one time Austria, in order to reach Salonica, contemplated a line from Brod through Bosnia, and then through purely Turkish territory. The engineering difficulties, and the extreme poverty of the districts which this line would traverse, appear to have induced Austria to abandon this project. Salonica and Constantinople may be both reached by diverging lines from Sophia; but to get from Vienna to Sophia there are two distinct routes, each of which has much to recommend it. The one line may be termed the Servian, the other the Roumanian line. The first would go from Pesth down the valley of the Danube, would cross the Drave, and would enter Servia by an enormous viaduct connecting Semlin and Belgrade, whence it would proceed along the valley of the Morava to the Bulgarian frontier and be carried on to Sophia. The other would start from Hermanstadt, the capital of Transylvania, which is already in railway communication with Vienna, would get through the Carpathians by the Rosenthurm pass, would cross the Danube somewhere near Kakhova, and would thence proceed along the valley of the Isker to Sophia. Austria, after having long

hesitated, seems to have decided to give the preference to Servia. The Servian route is considerably the shorter, and Austria may have found it easier to deal with Servia than with Roumania. But, as Austria wishes to get to Salonica from Sophia as well as to Constantinople, she has to negotiate with Bulgaria and Turkey for this new line as well as for the old line from Sophia to Constantinople; and as the country through which the main line and the diverging line are to pass is very rough and difficult, there are endless opportunities for discussion as to the direction the railways are to take, where junctions are to be formed, and who is to undertake the most costly portions of the work.

The money difficulty, great as it may seem, will not stop the enterprise being some day carried out. Whatever direction the lines to Constantinople and Salonica may ultimately take, the nature of the ground must be such as to make the cost very great. The lines must necessarily be lines with innumerable cuttings, bridges, and tunnels. To say that the districts traversed will be for the most part poor is to paint them in too favourable colours. They are not so much poor as unoccupied by civilized man. It must also be long before the through traffic can be of a lucrative kind. As for Turkey finding a sixpence for railways, that is entirely out of the question at present, and must be out of the question for many years. Nothing more hopeless than the state of Turkish finance can be imagined. Taxes are being demanded five years in advance, and the last poor belongings of the miserable provincials are being sold to satisfy this extortionate demand. The Porte cannot borrow, for bankers will not lend unless they are allowed to collect the Customs duties, and Turkey sticks to its last shred of independence, and knows that a Government which allows foreigners to collect its Customs duties is a servant and not a master. But Austria is planning these railways in view, not of the present, but of the future. It means to hold in its control the lines of communication between Vienna, the Bosphorus, and the *Ægean*, for strategic and political, not for financial, reasons. If it makes up its mind to secure this object, it is far too rich and powerful not to succeed sooner or later. It will get the money somehow, and the political pressure it can exercise on Servia, on Bulgaria, and on Turkey, or the successors of Turkey, will be irresistible. With Servia it has already succeeded. There is a Railway Convention actually under discussion in the Servian Parliament, and rival contractors have been anxiously competing for the privilege of carrying out the works. The heads at least of a commercial treaty between Austria and Servia have been arranged, and the through rates offered by Austria are too favourable for Servia to reject. Probably neither Bulgaria nor Turkey wishes very heartily to see a line dominated by Austria penetrating its territory. But, after the usual amount of shuffling and hesitation has been gone through, both must yield. The Treaty of Berlin is always staring them in the face. They are bound to co-operate in making a line from Constantinople to Nish, and Austria has nothing to do but to hold them to that to which they are bound. They are not in the same way bound as regards the line to Salonica; but common sense, the interests of their pockets, and political influence will unite in compelling them to own that, if Austria is to get to Constantinople, there is no reason why she should not get to Salonica also. So long as it was supposed that Austria wished to extend her territory or her direct political supremacy in Eastern Europe, it was easy to imagine how she might be opposed. But schemes of such wild ambition are quite as distasteful to Austrians as they can be to the enemies, the critics, or the supposed victims of Austria; and as for the peaceful and indirect influence which Austria will gain by dominating a railway system, not only is there no reason why she should not have it, but it is as certain as anything can be in European politics that she will have it, and this certainly is a most important element in the calculation which speculative minds may like to make as to the future of Eastern Europe.

THE ITALIAN MERCHANT NAVY.

THE Italian Government is a good deal troubled about the condition of the merchant navy. The geographical position of Italy ought to give her a high place among maritime nations, but something or other

seems lately to have been at work which is stronger than geographical position. Italy does not now hold a high place among maritime nations. She did so, in respect of tonnage at all events, no longer ago than 1877; but she is now behind, not only Great Britain and the United States, but also France and Norway. Between 1869 and 1879 there was a decline of 80 per cent. in the tonnage of the ships building in Italian dockyards, the total in the former year amounting to 100,000 tons and in the latter year to 21,000. Naturally where there are fewer ships there will be fewer sailors. In a single year the number registered in the various seaports fell from 210,000 to 167,000. Probably the decline would have been still greater but for the difficulty of finding employment on land. The tonnage of the ships gives but an inadequate idea of the state of decadence into which the merchant navy of Italy has fallen. Out of 8,000 sailing-ships, only 1,800 are of over 100 tons burden. The remainder are only suited to small coasting traffic. If the steamers of any size are added to this minority, we get a total of about 2,000 ships, varying from 600 to 1,000 tons in burden. These are all that Italy has to show for deep-sea voyages or even for the longer coasting trips. Italian ships are not even able to hold their own in their own ports. In 1871 about seven-tenths of the ships in Italian harbours were of native origin. To-day, in spite of the progress that Italy has made in many ways during the last ten years, the proportion is somewhat smaller. English, French, Austrian, German, and Dutch rivalry are all dreaded by the Italian sailor, English competition being of course the most formidable. These statistics are certainly extremely discouraging to Italians who wish to see their country making as conspicuous progress in the region of commerce as in the region of politics. A decline in the merchant navy may not argue a corresponding decline in the foreign trade of the country, because that trade may still be carried on in ships belonging to other nations. But it does argue the loss of many of the profits incidental to foreign trade, as well as a marked decline in the energy and resources of the population. Empty dockyards and sailors seeking employment on land imply a good deal of distress in various ways. The men who were once employed, whether in the yards or on board ship, are now either starving or crowding into other occupations which have already quite as heavy demands on them as they are at all able to meet.

The causes of this decline seem to be various. The report to the Chamber of Deputies by Signor BOSELLI, which has furnished us with the preceding figures, assigns the first place to the indolence of the Italians as regards the provision of steamers. Italy has 8,000 sailing-ships, but of the infinitely more useful steamers she has only 151. A nation which thus contentedly drops behind in the race cannot wonder that it is hopelessly beaten. In the mercantile marine steamers are to sailing-ships what ironclads are to wooden ships in the navy. It is by their number and value that a merchant navy is really estimated. If it is weak here, it is of little use for it to be strong elsewhere. The English and French ships which trade with Italy are almost all steamers, the Italian ships are almost all sailing-vessels. Consequently, even if the Italian ships were very much better than they are, it would be but an old world kind of excellence, quite unsuited to the severe conditions of modern maritime competition. As regards the provision of steamers, Signor BOSELLI is of opinion that Italian patriotism has been shortsighted as well as languid. France and the United States, when they want iron ships built, take their orders to English dockyards. The Italians insist on employing their own dockyards for this purpose, a plan which may have a momentary advantage in the way of giving employment to native workmen, but does not do much to increase the supply of ships. This is not the only reason, however, for the strange decline in the tonnage of Italian ships. Injudicious taxation is in part to blame for it, as indeed it is for a good many other things in Italy. Merchant ships are subjected to a variety of administrative requisitions which are exceedingly vexatious to everybody except the Custom House officers. The supposed object of these requisitions is to bring in money to the Government; but the only result that can certainly be attributed to them is to take money out of the pockets of the owners whether of the ship or of the cargo. Again, the character of the officers of the merchant navy does not stand high, and this is a very important consideration for a capitalist who is

meditating how he shall invest his money. Shipwrecks, it is believed, are caused in many cases quite as much by the incompetence of captains as by the fury of the winds or waves. If the men who navigate the ships were more worthy of confidence, merchants might be more willing to provide cargoes for them to carry. In addition to these causes of decline there is one which Signor BOSSELLI does not mention, and that is the exaggerated attention which Italians have lately paid to politics, especially to foreign politics. If the zeal which has been wasted in outcries about *Italia Irredenta*, and in finding money to pay for a needlessly large army, had been spent in investigating the causes which prevent Italy from growing rich, the ultimate gain even to the political status of the country would have been immense. No one wants to attack the Italians. The army is only maintained to keep up the national illusion that it behoves them to attack other people. This useless expenditure diverts the thoughts of politicians and the money of the taxpayers from directions in which both are urgently wanted.

The real remedy, therefore, for the decline of the merchant navy is not suggested by Signor BOSSELLI. He does not bid his countrymen mind their own business, and in this way enable the Government to make fewer demands on the national revenue, and, by consequence, to bear less hardly on those out of whose pockets the revenue has to come. What he does suggest is the extension of a system which, with some seeming inconsistency, he at the same time declares to be in part responsible for the state of things which his Report describes. The system of paying subsidies to certain privileged Companies tends to weaken the rest of the mercantile marine. But at a time when this system of subsidies is largely resorted to by foreign Governments, it would not be wise in the Italian Government to give it up. If it is not given up, it will be well, Signor BOSSELLI thinks, to carry it still further. The two leading Italian Navigation Companies are much pressed by the competition of the French Transatlantic Companies, and Signor BOSSELLI suggests that something should be done to improve the communication between Italy and India, and to establish communication between India and America. The directors of the two existing Companies declare that, if they do not get more help from the Government, they cannot possibly stand up against French competition. So convinced, they say, are they of this, that, if the Government does not consent to provide this additional help, it will not be worth their while to maintain even their present services. It seems clear that, if the Government adopt this course, as apparently they are about to do, the improvement will be exceedingly partial. The only aid worth talking about that a Government can give to a merchant navy is to let it alone. There is a great deal to be done before it can be truly said that the Italian Government lets its merchant navy alone, and so long as it cramps the natural energy of its subjects by vexatious taxes, it will be of very little use to try and atone for its errors by devoting a fraction of those taxes to the subsidizing of particular shipowners.

MR. JAMES SPEDDING.

THE lamentable accident which has cut short Mr. James Spedding's life by a violent and sudden end, though in fulness of years, has inflicted a loss on the world of letters which is not the less because it will be immediately felt only by a small circle. Mr. Spedding combined a wide range of knowledge and interests with fastidious delicacy of taste and an almost morbid shrinking from notoriety. Had he lived at an earlier time, he could hardly have escaped being a voluminous author. In the seventeenth century he must have been a humanist and a scholar by profession. If, living when he did, his own standard of workmanship and diligence had been less exacting, he might have produced popular work in abundance with infinitely less pains than it cost him to produce in moderate quantity work which utterly disclaimed any seeking of popularity. But we have no right to regret that he exhibited in the highest degree, and in a degree even approaching to exaggeration, precisely those literary qualities as to which the present time is most apt to fall short, and stands most in need of examples. It may be thought by some that Mr. Spedding might have done better than to devote to one gigantic monograph, as he practically did, his mastery of English literature and his unsurpassed critical power. And in itself it may not be unreasonable to doubt whether the editing and illustration of Bacon's works was a task of adequate worthiness to fill a lifetime—at any rate, the life of such a man as Mr. Spedding. We shall say nothing strange to any one who knew him, or who knows his work, in

saying that he had all the intellectual qualities that go to make a historian of the first rank. Why, then, one is tempted to ask, did a man capable of treating the history of England confine himself to treating the history of Francis Bacon? But those who knew Mr. Spedding may also doubt, on the other hand, whether he would have been induced to put forth his powers on any considerable scale except by such a self-effacing task as he actually undertook. His one fault was that he was incapable of personal ambition. He could be roused only by having a cause to champion that was wholly apart from any interest of his own. To vindicate the place which appeared to him justly due to Bacon as a man and a philosopher he counted no pains too great. We were about to say that even the least were in his eyes too much to spend on establishing a reputation for himself, but the truth is that he never thought of his own reputation at all. More than once he declined to be added to the Athenæum Club under the special power entrusted to the Committee of electing annually "a certain number of persons of distinguished eminence in science, literature, or the arts." The only distinction he ever accepted was the honorary fellowship of Trinity, his old college at Cambridge. His attachment to Cambridge, indeed, was never broken. There he was the friend and companion of such men as Thackeray, Lord Houghton, the Archbishop of Dublin, Mr. Tennyson, Charles Buller, and John Stirling; and to him, we are now free to say, Mr. Tennyson's lines "To J. S." were addressed. For many years afterwards James Spedding's rooms in Lincoln's Inn Fields were a well-known meeting-place of these and other like-minded Cambridge men of younger generations. To the very last there were men fresh from the University who found in Mr. Spedding, notwithstanding all their disparity of years, not so much a patron, or counsellor, or teacher (though no one who was with him could fail to learn much from him), as a friend. The secret of this was partly that Mr. Spedding's mind was not of those which grow old. Advancing years brought no abatement of his intellectual curiosity. In quality it was of the rarest kind—a constant and disinterested desire of knowledge, unhesitating and unostentatious; and this, together with his untiring and minute perseverance, might well in other circumstances have led him to scientific eminence. As it was, literary criticism was the line in which his activity ran by preference. His minor work in this kind was much scattered, both in time and in its manner of appearance, and there are probably few persons whose knowledge and memory will at this moment serve them to appreciate it at anything like the value due to it as a whole. But Mr. Spedding was certainly one of the best critics of our time. His especial strength was in exact and intimate knowledge of Shakespeare and other contemporary English literature. Here he had the advantage of possessing in an eminent degree not only the grammatical and historical knowledge of a scholar, but the fine perception and sympathy, and the sense of humour and irony, for want of which so many expounders of Shakespeare have made shipwreck. Mr. Spedding's work on Shakespeare is not great in bulk, but every word of it is weighty. Besides the papers which he wrote on various occasions, much good criticism of Shakespeare's text was communicated by him to the editors of the Cambridge Shakespeare, and is preserved in their notes. But his interest in Shakespeare was not that of a mere reader; he was keenly alive to the fortunes of the English stage, and followed with close and acute observation for nearly half a century the performances of our best actors. Only a small part of these observations, we fear, was ever embodied in published writings. Enough is left, however, to entitle Mr. Spedding to high rank as a dramatic as well as a literary critic. To characterize his criticism generally would be a hopeless task on this occasion; it would almost amount to drawing the character of the man. His patience in investigation, his judicial temper, his refined power of analysis, and a subtle humour that was peculiarly his own, have all left their mark on his judgments of other men's work, whether in the past or in the present. If Mr. Spedding had any fault as a critic, it was that of being over-generous to his friends and too astute in finding merits.

We have spoken of Mr. Spedding, as he will be remembered, chiefly as a scholar. But it must not be supposed that he was merely a bookish man. Action and administration were not the business of his life, but he showed himself amply capable in them. For some little time he was a public servant in the Colonial Office, and when the first Lord Ashburton went on his special boundary Commission to America, Mr. Spedding accompanied him as private secretary. On their return to England, the permanent Under-Secretaryship of the Colonies was offered to him; he declined it in order to execute without interruption the work to which he had already determined to give the best of his life. In other matters of private enterprise (but so far public as they involved gratuitous or onerous work for a common good) Mr. Spedding showed himself energetic and helpful. The London Library—now at the age of forty years prosperous beyond expectation, and settled on its own freehold—was founded at meetings held by a few friends in the Lincoln's Inn chambers already mentioned. The Toxophilite Society, of which Mr. Spedding was an active member till a few years ago, was carried through a time of great difficulties, involving even danger of extinction, chiefly by his opportune exertions. Reversing the common weakness of mankind, he was exceedingly diffident before action, and acted well and vigorously when action was thrust upon him.

Mr. Spedding's conversation was, in a certain way, reserved. He never seemed to understand why any one should think it worth

while to seek his company. Those who did seek it were freely and amply rewarded. They learnt what it was to be with a wise man never arrogant, a critic never impatient, and a humourist never bitter. There was a kind of serene warmth and light in James Spedding's talk at its best. Brilliant outbursts of wit were not at his command, but he had what is better in the long run, an equable flow of good spirits justly seasoned and tempered by fine appreciation both of the ludicrous and the pathetic in human affairs. His habits were as simple as would have become a scholar in past times. He travelled little or not at all. His personality was the reverse of obtrusive; but his lofty and well-shaped head and expressive features marked him as one whose thoughts were more than common. In this we are expressing no partial judgment or individual fancy, for Mr. Spedding was chosen by Mr. Watts as the model for one of the heads in his great fresco painted for Lincoln's Inn Hall. It will be long before James Spedding or his work is forgotten by true lovers of English literature. We have here gathered up only a few fragments of what ought to be remembered concerning him.

MORE NEW MORALITY.

MR. GLADSTONE'S admirers have at different times fixed upon different public benefits for the organization of which they suppose him to be a special commissioner of Heaven. Among these, it has been more than once suggested, is the promulgation of an entirely new code of public morality, differing in some very remarkable ways from the old. We have more than once called attention to those contributions to a new science of ethics; but it seems to be time to register some recent and striking additions, no one of which is indeed the direct and individual work of the Prime Minister, but all of which may be said to spring from his influence and teaching. The first has reference to the very old-fashioned virtue of Courage. The new Courage, as illustrated in the Transvaal armistice, might be made the subject of a most instructive discourse to a modern Nicomachus. It has excited immense admiration in the breasts of extreme Radicals, Parisian ultra-Republican newspaper writers, and such-like cattle, but seems to have made even the average British Liberal, who has not slept off the debauch of the general election, a little uneasy. How, say some of these people, is it that if eternal justice and pure valour did not at the time of the Queen's Speech require us to make terms with the Boers they require us to do so now? To this it can only be answered that circumstances alter cases, and that the circumstances in this case are three decided beatings. The justice of the Boer cause, the magnanimity of abstaining from coercion, have been very literally hammered into the head of the Government. They were blind, but the Ingogo and Majuba have made them see. This, it is to be observed, gives an excellent idea of the new Courage. The old required certain preliminaries to be observed before the sword was drawn, but when it was drawn admitted no issue but victory, or such defeat that continuance of the struggle was impossible. The new allows quarrels to be lightly taken up, and to be dropped on strictly prudential principles. If the enemy displays unexpected science and pluck in the first round, suspect the justice of your cause; if he gets you into Chancery in the second, wonder whether you are in the right; if he scores again in the third, throw up the sponge at once. The process is convenient, it saves discomfort and expense, and it may be even thought to savour of piety, as recognizing the hand of Providence in the defeats encountered. But, as has been said, it is curiously at variance with the principles of the old Courage; and it is evidently quite time to restore the moral tone of the country by inculcating the theory, as well as displaying the practice, of the new. At present the average Briton feels that he but too well deserves the *signalement* given of him by his Continental un-friends. He is red in the face, but it is with blushing rather than with beef.

The establishment of the principles of the new Courage of themselves, as has been hinted, require some considerable advances towards the drawing up of proposals for a new Justice; but there are other signs which show the necessity of this still more clearly. Annoyed at the resipiscence of the Government in the matter of the Arms Bill, the chief organs of the Radical party are comforting themselves by thoughts of the good time coming, when the Land Bill at last appears. Great pains are taken to inculcate upon the British newspaper-reader that he is to clear his mind of all cant to the effect that what is just in England is just in Ireland. It is far from being so; there are, in fact, two justices, if not several, as the excellent Baron Grimm discovered long ago. In England, if a man covenants to pay so much rent for so much land, it is (or, rather, will be provisionally until it is time to take up the English land question) just that his covenant should be enforced. In Ireland it is not. The reason of this is that there is a very strong impression in the mind of the Irish occupier that he is part owner of the land. It is true, of course, that this doctrine of part ownership was strenuously repudiated by the very persons who are now in power ten years ago. It is true that millions of money have been sunk by purchasers who fondly believed that the State was selling them—or guaranteeing them in the title to—not a part ownership, but an ownership in fee simple. *Chansons que tout cela*. The Irish tenant, we are told, has in some cases held the same land for generations. This may be said with equal if not with much greater truth of the English and Scotch tenant. But, to give the

Irish tenant his due, he has one claim which his English and Scotch compeers have not—he steadily maintains his belief in his part ownership. It is this in which the new Justice sees his sacred claim. If you go on believing that a thing is yours, or even saying that you believe it, then, says Astræa Redux, it is yours. It is true that there seem to be practical difficulties in the way of elaborating this simple rule into a generally workable theory. The race of thieves, for instance, which is nearly as old as the race of Irishmen, has steadfastly maintained and asserted in theory and by practice its belief in a part ownership of all the property of honest men. It is probable that from the beginning of the world—a prescription respectable even in comparison with Milesian arguments—there never has been wanting a larcenous person of some sort or other to hold up the sacred banner of the doctrine of part ownership in the goods of his fellow-creatures. Brutal laws have ignored the claim and punished its assertion just as they have done in the case of the poor Irishman. Even the terrible history of England's dealing with Ireland, which causes the Radical bosom to heave and the Radical eye to moisten, scarcely comes up to the chronicle of the dealings of proud and tyrannous honesty with pickpockets, burglars, brigands, pirates, and all the other varieties of the champions of the part ownership theory. Not only this, but the thief has a claim to recognition which, at least according to the old Justice, is much stronger than that of the Irishman. For he has never by covenant or compromise barred his right. It is without a flaw, stainless, handed down—if not exactly from father to son—yet from generation to generation of thief-kind. It will, therefore, be necessary for the new Justice, in arranging its rules of distribution, to take a much wider view than it seems at present to contemplate. Yet—which is fortunate for the chances of a harmonious theory of ethics—the new Courage and the new Justice must be admitted to run together in a curriicle admirably. The new Justice says that every man is to have anything which he claims with sufficient persistence. The new Courage deprecates resistance to any one who hits out with tolerable vigour. Rude persons may say that the new Courage and the new Justice taken together appear exactly to correspond to the old pusillanimity. "In Saturn's reign such mixture was not held a stain," and, as we all know, Mr. Gladstone was to bring back, and is bringing back, the reign of Saturn.

Pusillanimity, however, is technically opposed, not so much to justice or to virtue, as to another virtue—magnanimity; and, as it fortunately happens, an illustration of the new Magnanimity has been contributed lately by a distinguished free-lance on Mr. Gladstone's side. The ideal of the new magnanimous man can hardly be better sketched than was done by Lord Derby in his speech last week as to the Candahar question. It will be admitted by the most determined enemy of the House of Lords that in theory at least magnanimity should be the special virtue of a peer. He exists in order to represent that virtue, if only by suggestion and afar off. Lord Derby, therefore, in indicating the whole duty of peers, indicates at the same time the essence of the magnanimous man of the later nineteenth century. This whole duty, it may be remembered, consisted of two parts. Lord Derby's ideal peer never looks further back than the last general election; he only looks forward in order to see how he may haply avoid a snub from the Government of the day or from the halfpenny, penny, and twopenny newspapers. His conduct is thus outlined for him with a delightful distinctness. What are the merits of any question in the past? Look at the last general election, search the speeches of the chief speakers, and count the majority by which the opinions therein contained were approved. That will tell you all about the past. What will be the conduct of a wise man in the future? Look at the most recent utterances of the Government—they must be the most recent, for the mind even of Heaven-born Ministers is given to change—and see what course of conduct is likely to be approved by them. This will tell you all that can be told about the future. So, with one eye on Dad and the other on the last few days' file of the *Times*, the magnanimous man steers his prudent course. If the people were hopelessly wrong a year ago, it is not his business to tell them so now. If they are likely to be angry with what he says now, it is still less his business to say it. Probably Lord Derby's ideal of the perfect politician's attitude is that of Mr. Herbert Gladstone on the disestablishment of the Church. Personally you may not like a thing, politically you may vote against it because it is not yet urgent, but directly the mandate is given you obey. The sheep are to take command of the shepherd, the soldiers will have the goodness to tell the captain where to go and what to do. This is the attitude of the new Magnanimity. Merits? Questions have no merits. Patriotism? Patriotism is bosh. Self-respect? No sensible man has so much respect for himself as when he is returned by a thumping majority in a manufacturing town. Unpleasantness of being kicked? It is much better and much less unpleasant to be kicked—even if the kicking be certain—the day after to-morrow than to run your shins into risk to-day. This last is a fair version of the celebrated aphorism about war by the author of the *Whole Duty of Peers*. It perhaps comes more properly under the head of Courage than of Magnanimity; but this last, as has been frequently observed by students, is a rather composite virtue. It would be possible had we space and time to enumerate many more characteristics of the magnanimous man of the new ethics. How he keeps his servants as long as may be convenient to him, and turns them off as soon as he has an opportunity; how he cries "hands off" to a nation which he thinks not likely to

do him much harm, and "hands on" to one which might be unpleasant to him if he interferes with its acquisitiveness; how he has one tongue for the hustings and another for the Treasury Bench, and so forth, might be told. In most of these points he differs curiously from the person whose name he has borrowed. There is, however, one point of resemblance. The new magnanimous man, like the old, is rather a pig-headed person, at least so long as the majority are with him. As long as his majority is untouched he will blandly remark that he is not open to conviction, that anybody is welcome to argue with him, but that his mind has no room for arguments in it, which indeed is sometimes true. In a certain lack of amenity of manner, too, he resembles his prototype of the Greek, though not of the mediæval and early modern, time. It is a particular pleasure of his to kick men who are down and to insult men who are unpopular. In doing this, indeed, he is probably true to the principles of the new *Courage*. A person or a party which has shown itself able *parcere superbis*, may probably have acquired the right *debellare subiectos*.

THE ORIGIN AND PRESENT ATTITUDE OF MORMONISM.

IT is only natural that Judge Goodwin, in his striking—not to say startling—paper contributed to the current number of the *North American Review*, should regard the attitude of "the Mormon Church" chiefly from its bearing on the political future of the United States and of Republicanism generally, of which he considers it "an open enemy." But in estimating its present attitude and prospects, which he views with undisguised indignation and alarm, he is inevitably led to review its antecedents. His account of the origin and growth of Mormonism will not indeed be new to those previously familiar with the subject, though some details, which there is no reason to believe exaggerated, may perhaps surprise them. But it is impossible to read the story again without a passing thrill of amazement, even in an age of spirit-rapping, Agapemones, Mrs. Girlings, and other strange portents, that so marvellous a delusion, or to put it in another way, such an audacious imposture, should ever have taken root and thriven, as it has. Subsequent experience, to be sure, has abundantly confirmed the well-known saying of Thucydides as to the little trouble men take in the ascertainment of truth, but the historian of religious enthusiasm might add a seemingly still more paradoxical but hardly less unimpeachable axiom, as to the much trouble men—and notably women—will put themselves to, for no personal interest of their own, in the maintenance and propagation of manifest error. Judge Goodwin confines himself in the main to facts, and his facts are sufficiently instructive, but his only attempt at an explanation is, to say the least, inadequate, though it goes some way to explain the very disinterested zeal of female missionaries for their adopted creed. We can readily believe that "the women had imbibed the Christian idea that it was glorious to suffer for their Church"—as suffer they certainly did, and do, at Utah—while the "men clung eagerly to a faith which honoured most the man whose lusts were strongest." Mormonism, like Mahometanism, to which the writer compares it, owes something of its success no doubt to the free scope given to sensual natures by "making animalism the keystone to the arch of its creed." But against this consideration must be set first the conspicuous fact that Mormon, like Mahomet, claimed moral immunities for himself which he did not allow to his followers; "he robbed men of their property and of their wives, and yet he lived on to old age, for was he not a prophet of the Lord?" And in the next place it is not true that any creed, however corrupt, thrives simply by virtue of its corruption. A social arrangement which "honours most the man whose lusts are strongest" might become popular with certain classes for its practical convenience, but it is a libel on human nature to suppose that men will permanently give the adherence of their faith to a religion which is the consecration of the basest animal passions, as such. *Viduo meliora proboque* is perfectly compatible with *deteriora sequor*, and the most corrupt faiths, that have had any vitality in them, have lived by virtue of such remnants of goodness as they retained or seemed to retain; it is the handful of just men still left who for awhile avert the doom of Sodom. What the redeeming elements in Mormonism may be it is not so easy to determine. The lofty claim to an universal theocracy, to constitute "a celestial kingdom on earth"—which looks like a grotesque caricature of the mediæval Papacy in the zenith of its power—may for some minds possess an irresistible fascination, though it results, so far as it is realized, in a grinding tyranny. To that point at all events the writer first calls attention, as the *fons et origo* of what he holds to be, if not checked in time, a deadly menace to all free government.

The dream of the Mormon leaders, he tells us, is that one day all the governments of the world will be brought under their rule; and hence they explicitly teach that every government framed by man is illegal; that the President and Apostles of their Church are by divine revelation the direct vicegerents of the Almighty, and are divinely guided to rule the people entrusted to their charge in all matters, spiritual and temporal. This claim is admitted by their followers and rigorously enforced upon them. They receive little instruction, and are strictly forbidden to read books or journals which attack their faith, the policy of the Church being to keep the masses ignorant and poor. The authority of the States Government, when it happens to conflict

with that of the Church, goes for nothing; if it cannot be resisted by force, it must be evaded by fraud. "Betsy Young, a daughter of Brigham, who has broken away from the Mormon Church, declares that the first thing to open her eyes to the atrocities practised, under the name of religion, in Utah, was the wholesale perjury resorted to by her father and others high in authority, in order to circumvent the laws and defeat justice." In accordance with their principle of absolute submission to the authority and devotion to the interests of the Church, the population of Utah, who, in their ordinary conduct, are peaceable, frugal, and industrious, would any day, at the command of their rulers, lay waste their towns and cities and go forth, whithersoever they were bidden, in search of a new home, and "whether committing atrocities, or themselves perishing from exposure, would say their prayers and sing their hymns in the very ecstasy of fanaticism." The people, it seems, already hold the balance of power in Idaho and Arizona, and are swiftly peopling Washington, Montana, Wyoming, and Colorado. The vote of Idaho for Congress was carried at the last election by a brief order from George Cannon, "first Counsellor of the President," who did not himself leave his office in Salt Lake City; "all the Mormons in Idaho voted as a unit." Judge Goodwin reckons that, if Mormonism is suffered to go on unchecked for ten years longer, Cannon will dictate all the elections between the Rocky Mountains and the Pacific, i.e. over a region as extensive in area as all the United States east of the Mississippi river, "a region of measureless resources, the seat of a future empire, a succession of mountains rich in minerals, and valleys many of which contain magnificent land." It may be worth noting that this George Cannon, upon whom, it seems, Brigham Young's mantle, as leader, has specially descended, as well as his successor in the President's office, John Taylor, are not, like Brigham himself, Americans but Englishmen. And the voting power under their absolute control is strengthened, both morally and numerically, from the law in Utah giving the franchise to women, and to alien women within a month of their arrival, without even requiring of them an oath of allegiance to the United States. It need hardly be said that all Mormon women vote—as women would for the most part vote everywhere—simply as they are told, "understanding no more of what they are doing than a wild native of the Cannibal Islands would of 'the Resolutions of '98.'" It was, adds the writer, this slavish obedience and utter death of free thought, rather than polygamy, which caused the masses of Missouri and Illinois to rise in a frenzy and drive the first nucleus of the bogus creed from their midst. It is clearly, as he expresses it, a system "absolutely un-American in all its attributes. It is a theocracy managed by a plebeian aristocracy . . . the organization is fanaticism and superstition solidified." The present numbers are about 150,000, but are increasing as fast as immigration and polygamy can augment them, and the leaders openly proclaim their intention of subjugating the whole Union to their rule. "They condemn all laws which conflict with any tenet of their creed; are as careless of their oaths as a Chinaman, and bear as little allegiance to the United States Government as do the Chinese. The control of the chiefs, as in Mohammedan countries, is absolute; their organization superb; the discipline of the people perfect." They collect in tithe a million dollars annually. What seems more surprising is that they have become such a power in the States during the last few years that demagogues in Congress, and great moneyed corporations, with their subsidized newspapers, pander to them. And hence "this institution has now become an absolute terror and menace to the United States," and Judge Goodwin thinks that, if vigorous measures are not promptly taken to check the growth of the monster evil within the next fifteen years, nothing less than an exhaustive civil war will suffice for the purpose.

But here the question naturally arises, how this Mormon power has waxed so strong? To this he replies by a statement of facts, which is in itself sufficiently interesting, but hardly seems, as we have already intimated, to supply a satisfactory explanation of the result. The real author of the new creed was one Sydney Rigden, who was born and reared in Pennsylvania, and was expelled for heresy from the First Baptist Church in Pittsburgh in 1823, when he was preaching Communism. From this he "naturally drifted into Mormonism, for he was steeped in incendiarism before he was born," his father being actively engaged in the Whisky Insurrection. Rigden was a keen-witted ambitious man, better qualified to devise a new faith than to propagate it; he had "little magnetism" and too much education; in short he was the Cavour rather than the Garibaldi of the movement. He required an assistant for making it work, and found him in a tramp, who was perambulating the country with a "peep" stone, telling fortunes, by name Joe Smith. Smith, who had a sensual nature, and plenty of "magnetism," became the willing dupe of Rigden, and after a proper course of training managed to supersede his master. Rigden had embodied in his religious code a provision for "senting to the dead for eternity," whereby lost souls might be saved through a celestial (posthumous) marriage with living converts to the Mormon creed. Joe Smith, whose instincts were rather for the concrete than the abstract, preferred real women to doubtful and unsubstantial ghosts, and substituted a "sealing" to those still in the flesh. He had therefore a fresh revelation, and thus polygamy became part of the Mormon faith. But he made himself so obnoxious to the populace that he was at last murdered, and of course at once became to his own disciples a martyr as well as a prophet; his death in fact did more than his not very edifying career on earth to consoli-

date the Mormon Church. Brigham Young, an able and unscrupulous ruler, to put it plainly, succeeded to his supremacy. The way had been paved for him in the abject superstition Joe Smith had inspired in his followers, and for the rest an indomitable will, and abundant "animal magnetism" proved the secret of his success. There is a prevalent notion that, however ruthless and even ferocious to outsiders, to his own people he was a father and a pastor. In truth he was such a cruel and intolerable tyrant that "his dying peacefully in his bed is almost an impeachment of eternal justice." His people dared not disobey him, and for thirty years he ruled them with a rod of iron. His avarice was as insatiable as his lust; "it is said that he never saw a beautiful woman that he did not seek to possess her, never saw a profitable business, fine house, or horse, that he did not plan to obtain without giving any fair compensation. Instead of being the shepherd he perpetually preyed upon the flock." His temper towards those without may be judged from a well authenticated story, that on being asked how he reconciled his professed acceptance of the Bible with the refusal to pray for his enemies, he replied, "I do pray for them daily—that they may all be damned." It is significant that he regretted the existence of gold and silver mines in the hills of Utah, and expressly forbade his people to work them, while foreign speculators who attempted to do so were either driven away or assassinated. "If mines are opened," he said, "men will grow rich; with riches they will want fine houses and horses; their women will want fine clothes; and the result will be the destruction of our holy religion." That his system should have survived him appears hardly less wonderful than that he should have survived his success in enforcing it. But thirty years of such an administration had turned its subjects into slaves, while the example of habitual profligacy, perjury, theft, open and secret murder, and fraud of every kind set by their prophet had bequeathed to them the conviction, which he often enforced in his sermons in the Tabernacle, that any crime perpetrated in the interests of the Mormon Church is an act of duty. George Cannon, already mentioned as his virtual though not official successor in the government, was named by him as delegate to Congress, with the avowed object of "thrusting polygamy down their throats," and he still occupies that post, "and is the sweetest, smoothest, and most plausible sophist in all this round earth." We have already said that he is an Englishman. We have no room to quote the elaborate account of the organization of the Church recently given by "Bishop Henry Lunt, of Cedar City, Utah," to a correspondent of the *San Francisco Chronicle* who had interviewed him. But we may say that at the head of it is a President, with two Counsellors, Twelve Apostles, a Head Patriarch, a Presiding Bishop and various subordinate dignitaries. Bishop Lunt added that this was the year of jubilee of the Church, which looks forward with perfect confidence to the day when it will hold the reins of the United States Government, and "after that we expect to control the continent." He proceeded to expound in detail the instrumentality, sacred and secular, by which this result was to be achieved. His closing words ran thus; "We have another advantage. We are now and shall always be in favour of woman suffrage. The women of Utah vote, and they never desert the colours of the Church in a political contest. They vote for the tried friends of the Church, and what they do here they will do everywhere our principles and our institutions spread." Judge Goodwin thinks that, "while nothing will change the old Mormons"—the rulers being conscious impostors and their adult followers incorrigible dupes—the best hope for the future lies in the growing restlessness and dissatisfaction of the young, who, with the American flag overhead, and "some echoes of the boom of the power-press" sounding in their ears, cannot persistently resist the ideas of freedom which are in the air. But he also insists strongly that a blow should be struck at once at the whole system of polygamy and the temporal power of the Mormon Church, before it is too late. His feeling towards Mormonism, which is probably very general among his countrymen, is not very unlike that entertained by mediæval Catholics on somewhat similar grounds towards the Albigenses, who were regarded, as Dr. Maitland has shown, not only as a religious but a social and political nuisance. And, if some peaceable solution be not meanwhile discovered, it may quite conceivably issue some day in a crusade organized, like that of Innocent III., to stamp out the obnoxious sectaries in a sea of blood.

PRIMITIVE BOYCOTTING.

MAN cannot be adequately defined as a Boycotting animal. The lower creation also practises this art. The herd proverbially Boycotts the stricken deer; sheep, birds, and even fishes, we believe, have the sense and spirit to shun the diseased or unlucky members of their society, and behave, to alter Bill Sikes's praise of his dog, "quite like (Irish) Christians." In Europe Boycotting flourishes most in Irish and in "exclusive" circles; but it is one of the chief institutions of primitive men, whose whole life is spent in Boycotting and being Boycotted. The part which the institution plays in the Mosaic law is well known, and so stringent are the rules of "uncleanness" that a great part of the community must have daily found itself marching to Coventry. Among contemporary savages a violent and almost excessive dislike of the dullness of family parties seems to have been the chief

agent, or one of the chief agents, in making this exclusive-ness fashionable. No doubt there is a great deal to be said against family parties. People who meet so often have nothing new to say to each other, and are obliged to listen to weary old stories, or to revive exploded old discussions and quarrels. People who know each other so intimately think they can dispense with much of the courtesy of common life. The results are known and deplored by all, and relations in civilized lands avoid each other's company as much as possible.

Savages carry the principle further, and most members of the domestic circle Boycott each other habitually under the sanction of terribly severe penal laws. To speak to a mother-in-law or a sister at any time, or a father-in-law or many other relations at certain fixed times, is almost a capital offence. No one exactly knows what the spiritual punishment may be; that depends on the wideawakeness to wrongdoing of the local deity at any given moment. The gods of the heathen are capricious beings, and now (as Mr. Trevelyan's undergraduate translated Horace) "add to the incestuous person the entire man" rapidly, now follow the guilty with halting foot. Though it is a digression, we cannot but mention here the singular Bushman conception of divine morality. The Bushman god is named Cagn; pedantic persons spall it Otkaggn. According to Qing, a native theologian and sportsman consulted by Mr. Orpen, "at first Cagn was very very good and nice, but he got spoiled by fighting so many things." A deity like Cagn, or the Australian Browin, may be good and nice, or may be in a bad temper, after his exertions in "fighting so many things," and a savage who says "good morning" to his sister, or wife, or mother-in-law will be supernaturally punished or let off just as it may happen. But to break the rule of domestic Boycotting is a spearing affair with the savage secular arm.

By way of explaining the number and hardness of the rules of primitive Boycotting, and indeed of domestic life in general, among undeveloped men, let us take a view of an Australian encampment about dinner-time. Every male has been out hunting, and has brought in his game. The members of the family are all in their proper places. The husband sits on the left-hand side of the fire, the wife behind it; the little boys with her, the little girls with their father. The grandfather is on the right-hand side—inconvenient for the wife, who may not speak to, or take any notice of, her venerable relation. The grandmother is behind the father, well away from the fire, but, as a man may in most cases speak to his own mother, this arrangement is comparatively pleasant. A man must always cut his mother-in-law in Africa and Australia. When a Kafir woman meets her son-in-law, she squats behind a bush, while he slinks past, hiding his face with his shield. Mr. Lorimer Fison "once saw a man of the Australian tribe Wangaratta full of the utmost distress and disgust because his mother-in-law's shadow had fallen across his legs. He had been lying at the foot of an enormous gum-tree, which hid him from the old lady's view as she approached, and so the catastrophe occurred." Among less scrupulous savages, mothers-in-law are not absolutely Boycotted, but there must be no *tutoiement*; they are respectfully addressed in the dual or plural. Even so, the presence of relations by marriage (among certain American tribes a man must strictly Boycott his own father-in-law) always brings a chill constraint into the family circle. This is the more inconvenient because a man and a hunter is bound to give much of his game to these same relations, his wife's parents. Thus Boycotting stops a good way short of the Irish system, which chiefly exists for the opposite purpose of depriving landlords, agents, and paying tenants of food. If a married black fellow, aided by an unmarried black fellow, kills a kangaroo, the whole quarry goes to the father-in-law and mother-in-law, except the left leg, the share of the married man, and the right leg, the property of the bachelor. If a married man is lucky enough to spear a native bear his parents-in-law get the left side and two legs, he himself obtains part of the head, and gives his wife a portion, while she supplies her sister with the ears. These negotiations naturally have to be conducted through the wife, while the hunter makes his own arrangements with his own father and mother. When a wombat is slain the father-in-law only gets the backbone, and the mother-in-law some skin. Much ill-feeling is naturally caused, we may presume, when a hunter is always supplying the camp with wombat, and never with native bear or kangaroo. Owing to the simple and salutary rules of intercourse, however, the mother-in-law cannot reproach the bread-winner, or rather, we should say, the wombat-winner, of the family. Such and so simple are the rules of precedence and the regulations of housekeeping among the untutored children of the Australian bush.

The primitive Boycotter by no means confines himself to avoiding his wife's parents; he is often so exclusive as not to be on speaking terms with his wife. A custom of this sort seems to have prevailed as late as the time of Herodotus in Miletus. Some of the old Ionian ecclonists, says Herodotus, (i. 146) "brought no women with them, but took wives of the Carians, women whose fathers they had slain. By reason of this slaughter the women made a law for themselves, and handed it on to their daughters, that they should never sit at meat with their husbands, and that none should ever call her husband by his name." Probably this story about the original cause of offence was devised to account for the custom which made wives and husbands as far as possible Boycott each other. In some of the islands where the natives are always killing and eating the crews of British gun-boats, the Admiralty or the Solomon islands, wives and husbands are on such distant terms that they may be

said never to see each other at all, and only meet with the greatest mystery and secrecy in a plot of common ground where the ordinary rule of Boycotting does not hold good. The Spartans, in the first year of marriage, showed the same extraordinary reserve, which has its modern parallel in the pains taken by newly-married persons to appear old domesticated people. The Aleutian Islander, says Mr. Farrer, quoting Dall, "knows nothing of what civilized nations call modesty," yet the bashful creature positively blushes when he is obliged to speak to his wife, or to ask her for anything in the presence of others. Custom compels them to assume the attitude of perfect strangers; and it is greatly to be desired that this rule, or a modification of it, might be introduced into Germany, where betrothed people behave in company as if they were alone in a wilderness of space, or possessed the secret of fern seed. The Hottentots used to have a bad character for domestic affection, because they were never seen to speak to their own wives. But the Hottentot is not really cold and indifferent; he is only compelled, by the law of his people, to Boycott his wife. The lady may never enter her husband's room in the hut, and the husband, as among the Spartans, must never be seen in the neighbourhood of the wife. Among the Yorubas, an African tribe, this domestic Boycotting is carried out with the extremest rigour. A woman is forbidden to speak to her husband, and may not even see him if it can possibly be avoided. Apparently a similar custom existed among the early Sanskrit-speaking peoples, for the wife, in the famous story of Urvasi and Pururavas, says to her lord, "Never let me see thee without thy royal garments, for such is the manner of women." And when this rule is accidentally broken, Urvasi must "softly and suddenly vanish away," like the victims who have looked on the mysterious Boojum. The Circassians are equally shy. "A Circassian bridegroom must not see his wife nor live with her without the greatest mystery," and the unconverted natives of the Fiji Islands display the utmost distress of mind when adventurous missionaries suggest that there is no real harm in a man's living under the same roof with his wife. So far do the Hios carry this feeling, and so opposite to our own are their ideas of decorum, that "it is the correct thing for a wife to run away from her husband." In this case the lady Boycotts her lord, and it is his duty to try to make her return to the family tent. Domestic Boycotting goes even further than this among the Fijians and other islanders of the Pacific. The young Kaneka bolts with a wild scream into the bush if you even mention the name of his amiable sister, while in Fiji not only brothers and sisters, but first cousins of opposite sexes, strictly Boycott each other, and may neither eat together nor speak to each other.

If civilized races once, as there seems good reason to believe, obeyed these stringent rules, it is difficult to see how society was ever constituted at all on its present amiable terms. The first men who asked their mothers-in-law to dinner, or took their sisters to the play, or led out their cousins in the Corroboree, or waltz, must have been regarded as the worst of heretics and revolutionary offenders. It is a positive fact that in barbarous life many men, and all women, pass a good part of their time in seclusion; they are Boycotted, and if in South Africa they see other members of the tribe these unlucky persons are turned into stone, just as the Australians are if they hear the wild dog speak to them. There is no hope except in prompt flight. One Australian, mentioned in Mr. Howitt's *Kamilaroi and Kurnai*, did manage to escape, after hearing a wild dog pronounce the one word "bones." But there are examples of less fortunate Bushmen being turned into stone merely because they met a girl who was Boycotted because she was being "initiated" into the savage mysteries of the Bona Dea. In New Zealand, Boycotting, there called *tabu* (the word has acquired a social sense in English), applies to "earth, air, fire, water, goods and chattels, growing crops, men, women, and children." The Pakeha Maori got Boycotted by breaking a *tabu*, and was only released after being stripped of all his clothes, and having every pot and pan in his house broken by a friendly medicine-man. "The household then came flocking back." Many of our Irish fellow-subjects would be glad to get off as cheaply.

CARNIVAL TIME IN ROME.

THE Roman Carnival is one of those survivals of the middle ages which every one feels somehow bound to see at least once in his life. A visit to Rome is carefully timed by visitors of all nations to fit in with the Carnival, so as to combine the gaiety supposed to be inseparable from that season with the more intellectual delights of venturing down catacombs or trailing through museums. As the time draws near hotel prices rise, rooms grow scarce, and the tables d'hôte brim over with a mixed multitude full of eager expectation of the joyous festivities that they look for at the hands of the world's capital which they have come from afar to see. It is quite touching to see how many elderly, and indeed very old, people are to be found amid the throng. Some of these, no doubt, have the excuse of escorting young relatives, daughters, or nieces, or cousins, for whom seeing the world is held to be a good thing. But by far the greater number have come solely for their own pleasure. Truth to tell, this much-vaunted Carnival is something like a faded beauty existing on the reputation of a past day. Poets and romancers have done their utmost to keep up that reputation by their glowing pictures

of its charms, and now hotelkeepers and shopkeepers do their utmost to maintain a delusion that helps to fill their pockets at the expense of a too credulous public. A week before the show begins tickets are hung out all along the Corso to signify that windows and balconies may be hired for the ten days that it lasts. The owners ask exorbitant prices from the inexperienced, and are very ready at inventing lies to prove that the particular spot where they have the good fortune to dwell is the only one where the whole thing can be seen to the best advantage. Either their balcony is just opposite the loggia where the King and Queen are to appear every day, or the racehorses are to start or to be stopped in front of it, or it is the only one from which you see equally well both up and down the street; any fiction, in short, that will serve as a bait to the simple Englishman who at the bidding of his wife and daughters pays down any number of francs that will ensure this desirable gazing point. His female tyrants assure him that to have a balcony on the Corso is the proper thing for every one who is in Rome at this season, and that in this balcony he will be expected to show himself every afternoon while the merry-making lasts.

It is amusing to watch how the enthusiasm cools down, and how at the end of one day of it most of the Englishmen, at any rate, would gladly pay as large a sum as they have already paid for the right to their balcony to be let off appearing in it again. The table d'hôte and the hotel sitting-room all the evening are ringing with complaints. Here an old gentleman tells you that he thinks being pelted with *confettacci* very poor fun indeed, and that, but for the difference of the name, one might just as well be peppered with gravel by London boys, an indignity which in his own country he should never have thought of submitting to. He then asks you anxiously whether he will ever be able to get the white stains off the new hat and coat which he had unwarily put on for the occasion. The old lady, well on to eighty, who has been waiting for the Carnival, as she herself says, with all the eagerness of a girl of fifteen, has brought on a sharp attack of rheumatism by sitting some five hours in a draught, and determines to rejoin her grandchildren at Naples at once to be nursed by them through the illness which she fears is to be the only reward of her curiosity. Everybody, old or young, is loud in condemning the famed *corso dei barberi*, which is simply a few runaway horses being hooted along the street, and feels a sore sense of having been shamefully imposed upon. But there are still the masked balls to look forward to, and the disappointed pleasure-seekers brighten up at the prospect. There is much discussion in the several family parties as to the propriety of the ladies being allowed to enjoy this simple spectacle. Great is the triumph of the maidens who succeed in persuading an indulgent father that to have a box in the theatre where the *veglione* is to take place implies no participation or even approval of such practices, and cannot in any way bring them under the censure of Mrs. Grundy. They sally off in high spirits, for a masked ball must surely be a very enjoyable thing. When they come back in the small hours of the morning, they admit that the theatre was very hot, and that the whole thing would have looked better if there had been more fancy dresses, and if those there were had been better worth looking at; if the dancing had been less confused, and if the men had taken their hats off and stopped smoking at least while they were dancing. Long before the ten days have passed all the strangers are heartily sick of the whole thing, confetti and flower-throwing, horse-races, *veglioni*, and all, and think they may as well go on to Naples at once, instead of waiting, as they had intended, till Lent began. Here and there a strong-minded person who has come for the Carnival solely that he might say that he had seen it, boldly says that he wishes he had said so without seeing it.

But the places of those who depart sad and sorry at this fresh proof of the illusiveness of life are soon filled by newcomers buoyed up by the same anticipations of fun that was once felt by the retreating band. A whole bevy of excursionists, four hundred strong, and all of ripe middle age, not one among them under forty, so the newspapers note, arrive just in time for the grand Shrovetide demonstration with which the Carnival winds up. On this the last day the Roman people turn out *en masse*. Every street becomes an animated stream, emptying its inhabitants into the Corso, which by two o'clock is densely crowded from end to end. Some poor attempts to give the street a gala look have been made by draping windows and balconies with coloured calicoes. Those inhabitants who deem the adjustment of such draperies either too expensive or too troublesome, indulge the public love of decoration by simply hanging bright or sad-coloured hearth-rugs, table-covers, or curtains out of the windows. In England we should merely think that all the houses were being cleaned, and the housewives airing their bed furniture; but here in Italy it seems to be taken as the orthodox sign that the whole city is given over to rejoicing. When the Corso is thronged to overflowing, and every place on the stands on the several piazzas, every chair on the church steps, has found an occupant, the carriages begin to thread their way as best they can through the living mass, and the so-called flower-throwing begins. But let no one imagine that there is any lavish scattering of the snowdrops, anemones, and violets with which spring has now starred the slopes of the villa gardens. The ordinary missiles are little slabs of hard twigs of laurustinus, which have been battered about and trodden under foot till they are thickly coated with the sand of the Corso, which, flying in the eyes of the victims at whom they are aimed, cause temporary blindness and much suffering.

All this, however, passes for excellent fun. Now and then a group of masquers struggle through the throng, dealing promiscuous blows with inflated bladders, and uttering at intervals discordant yells by way of adding to the general feeling of hilarity. The costumes are simple in the extreme; dominoes of white or coloured cotton, looking much like night-gowns or shabby dressing-gowns, are prevalent, but are occasionally relieved by a figure in a scarlet skeleton-suit, wearing a hideous mask, and with horns on his forehead, to show that he is meant for a devil. At last the great pageant of the day is seen looming far up the street. This is the demonstration of the French Art Academy. It is an enormous white-and-gold car, drawn by six horses, and preceded by three outriders with waving banners. The car supports a gilt figure of Roma, with the world in her right hand, and is covered with French artists in white cashmere and satin costumes of the fashion of the Court of the last of the Valois, the plumes being clasped to their hats with silver marguerites, in compliment to the reigning Queen. But a much more gorgeous pageant draws near, with sound of trumpets and drums; and, as soon as the crowd can be induced to divide enough to let them through, a long train of Arabs, well mounted, and glorious in turban and burnous of every colour of the rainbow, followed by a horde of slaves of every shade of black and brown, in full dress of nose-jewels and bangles, passes slowly by. These are the escort of an Indian princess, splendidly dressed, and smiling right and left from the lofty height of her palanquin. She is followed by two real camels, one carrying a palanquin and the other a palm-tree. The enthusiasm caused by this cavalcade is so great that a great green alligator with wings that comes next is allowed to pass almost unnoticed. A few minutes more and there is a great sound of whip-cracking and a great deal of kicking and plunging on the part of six very small, but very restive, steeds. It is soon evident that these are men with horse heads, who are doing horses' duty in drawing a carriage, the inmates of which are all masqued as animals. The coachman who is making such vigorous use of his whip has a donkey's head, and bears on his back a scroll proclaiming "Schiaviti all'uomo, protezione degli animali." There is literally nothing more in the way of cortège or cavalcade to look at, but the crowd seem quite content to look at one another till two violent explosions give notice for all carriages to leave the Corso clear for the horse-race. This takes about an hour to effect, but at last the horses are brought out into the Piazza del Popolo. The animals are evidently eager to be off, and get it over; so the last one kicks down the barrier intended to restrain them, and off they all start, rushing through the crowd that closes again behind them, and indeed is so careless about opening to let them through, that it is miraculous that so few accidents happen. Then follows the fighting of the *moccoletti*; and, later on, when the night has darkened, there comes down the Corso, with much flaring of flambeaux and tumult of music and shouting, the procession that accompanies the gigantic figure of the Carnival, mounted aloft on a triumphal car, to his cremation in the Piazza del Popolo. Emblematic figures of the paper currency are committed with him to the flames by way of uttering the popular feeling on that subject. Everybody has turned out to assist at this closing scene; the whole vast Piazza, the steps of the obelisk, the windows and roofs of the houses, the porches of the churches are literally swarming with human beings. There is no pushing and shoving; every one is perfectly good-humoured and willing that other people should see the sight as well as he himself. Women and children thread the throng unhurt, and yet there is no interference of policemen or gendarmes. Even the satiated sight-seer may find this great concourse of the Roman people a thing worth seeing. It almost saves the Carnival from being thrown into the common stock of those amusements which ought to be ticketed "our failures."

MARCH WEATHER.

IF poetry sings the praises of the merry month of May, prose may denounce the miseries of March. March is generally malignant; it is always treacherous. You can never know what any day will bring forth; and when you rise in the morning to read the signs of the weather you are seriously exercised as to the details of your toilette. Nor is it only the signs of the weather, as shown forth in the set of the wind and the temperature of the sitz-bath, that tell of the quick transitions of an inclement climate. Should you have the seeds of incipient disease lurking anywhere in the system, early morning in March is sure to search them out. You feel shrewd twinges of pain in unsuspected quarters, suggesting lumbago, rheumatism, gout, neuralgia, possibly even congestion of the chest, or incipient inflammation of the lungs. It must be confessed that in the murky light of a grim March morning one is disposed to take gloomy views of existence generally. Even the cold glint of the bright sunshine from skies of steel or lead is far more likely to be depressing than exhilarating. It is more apt to bring your silent sorrows into relief than to soothe the senses into temporary oblivion. Any troubles that beset you are sure to be magnified, and, though the biting air ought to be bracing, you descend to the breakfast-table in a state of despondency that tends distinctly towards dyspepsia. Far too frequently, when you have gone out for the day, your worst

forebodings are realized. We know not what the effect of our easterly March winds might have been on the hardy savages who wandered about prehistoric England in their suits of skins picked out with wood. We do know how it tells on constitutions that may have been rendered unnaturally sensitive in centuries of progressing civilization. It is rasping and grinding as well as cutting. It works its way through the bones into the marrow, seeming to grate the marrow up the wrong way. It sets the whole of the delicate nerve-system out of tune, irritating its external expressions into most unmelodious discord. The most genial of mortals feel almost morose; while those who are more quick-tempered or excitable are provoked into morbidly unwholesome frames of mind, ranging from an apathy to something like insanity. Nor are the baleful influences of the nipping east winds confined to the more refined classes of society, or even to the human race. We may generally trust proverbs when they treat of weather-lore, and we are all familiar with the old saw—

When the wind is in the east,
It is good neither for man nor beast.

What ought to be pleasure becomes positive pain under such circumstances; and it says much for the passion for sport so profoundly rooted in the English character that there are many men who profess to amuse themselves in the open air in March, almost persuading themselves and others that they have succeeded. There is salmon-fishing for instance; and we grant that the excitement of a heavy salmon on the hook, with the consequent exercise, if you have been fishing from the bank, may make one forgetful for the time of weather and everything else. But there are blank days for the rod-fisher in March as in other months; and there are drawbacks to the probable prelude to his sport in any case. We imagine you propose to fish one of the Scotch rivers, and in those northern latitudes March is invariably and inordinately severe. At the moment of this present writing Scotland is buried many feet deep in snowdrifts; but that is of course somewhat exceptional. We are content to take things as we find them in ordinary. You have been putting up at an inn or "hotel," which is very fairly comfortable in the tourist season; but which, expecting few visits from strangers in March, has retrenched its general arrangements, and reduced its household staff to a peace establishment. The fire in the coffee-room smokes, the coals refuse to burn; and you snatch a ghastly parody on a hearty Scotch breakfast, without even succeeding in getting honestly warm. But things are more deplorable without than within, as you learn when you venture beyond the outer door. When your numbed fingers have unlatched it, it is dashed violently inwards in your face. The east wind is blowing half a gale, howling down the valley, breaking the surface of the river into a leaden-coloured wash, and eddying the backwater into ugly little whirlpools. There is an "uncanny ough" in it, portentous of something worse to follow; and when you cast your eye upwards to the lowering heavens, you are neither reassured nor exhilarated. There is a drift of black across a background of grey, with occasional glimmers of angry brightness. Were there greater attractions within doors, or had you not come so far for your sport, you would assuredly renounce fishing for the day. As it is, you feel bound in conscience to persevere, though even your enthusiastic attendant looks literally blue on it. Warmly dressed as you are, trotting at the double towards the water where you mean to begin, fails to bring your blood into healthy circulation. Wielding the long and ponderous rod does something, to be sure, towards blowing up your internal furnaces; but you are irritated beyond measure by the vagaries of the wind, which seems bent upon keeping the line and fly out of the water. Whatever you endure for the thrilling sport, you know you are being driven to neglect the refinements of rod-play that should command the success which is the only recompense for this probation of sufferings. You lose heart and hope, and forget yourself still further. Then from those black belying clouds that loomed so ominously on you comes a "blash" of sleet and hail on your cheek. When it has thoroughly chilled and damped you it blows over, leaving you in expectation of another burst of the kind, and very indisputably more miserable than before. In fact, you experience all the sensations that picturesque historians have attributed to the soldiers of Napoleon's grand army in the early days of the retreat from Moscow; while you have neither *esprit de corps* nor the prospects of glory and the Gazette to sustain you. All that is left is to endeavour, like the Marchioness in *The Old Curiosity Shop*, to make believe very much that you are having a good time of it; and should you succeed in that adroit feat of self-deception, we should say you are very much to be congratulated.

Salmon-fishing in Scotland on a bitter March day is a sample of pleasuring in northerly latitudes. But in England we have our open-air amusements too, and steeple-chasing has set in actively with the beginning of our English "spring." Racing, whether on the flat or over fences, is become a business like any other, and business must be attended to in spite of its inconveniences. But we must say that in the middle of our March the profession of the book-maker, setting aside its speculative profits, appears to us anything but enviable; while as for the jockeys who are "put up" on "the pigskin" in such weather, we are inclined to look on them in the light of martyrs or heroes. It must require equal quickness of intelligence and presence of mind to calculate the odds and make intricate reckonings while wading above the ankles in chilly clay, with the wind snatching the last faint vestiges of

feeling out of fingers that fumble with the metallic pencil. It must require considerable nerve to grin and bear it when a naturally grasping disposition, trading upon slender means, has been wrought by a series of losses into sullen malevolence or savage frenzy. But book-makers are bound to cultivate self-control, and they may comfort themselves in their misfortunes with the sanguine hope that the revolutions of Fortune's wheel will bring them right side upwards in the end. The jockeys must harden their hearts to bear themselves boldly and coolly when infallibly their resolution will be severely tested. When a brilliantly groomed race-horse in high condition is stripped of his clothes in a stinging hail snow, he naturally begins by dancing on his hind legs and venting his annoyance in eccentric evolutions. The jockey who has trained that he may ride down to weight must feel stripping in similar circumstances at least as much; but he must possess his soul in apparent patience, while he screws his courage to the sticking-place. His is no easy task at best; nor is it made the pleasanter by the feeling that he carries an amount of money which its excited investors will be loth to lose; that the eyes of the course and its captious critics are upon him, and that his reputation as a rider will be affected by their verdict. He is sticking by instinctive grip and force of habit to the lightest of damp and slippery saddles on a spirited horse that is "pulling double" already. Possibly, indeed, "spirited" may be a euphemism for vicious, though in reality, should it be so, that makes little difference when the horse has got over the preliminary gallop and is ranging up with the others at the starting-post. After two or three false starts have nearly maddened him, the actual signal is given and away they go. Were we one of the riders we should rather not have gone round the course beforehand to examine into the details of the obstacles arranged for us. Good luck must do much for one under such awkward conditions, and where "ignorance is bliss, 'tis folly to be wise." All that may be pretty confidently surmised beforehand is that the ingenious stewards have done their best to make things disagreeable if not dangerous. That surmise is strengthened at the first one or two fences, where the taking off on the slippery turf is as awkward as the landing is ugly. And it is amply confirmed at the formidable water-jump, which is the grand sensational obstruction of the meeting. By that time the rider's blood may be up, though if he hopes to win he is bound to keep his coolness; and, if his blood be up, so much the better for him. But in any case it is a thrilling situation when the horse is screwing the bit into the corner of his powerful jaws; when the wet bridle is slipping in the cold fingers, and the slight saddle seems sensibly to have diminished in size; when you are riding for the leap neck and neck, with a rival coming up on either elbow; and when, if you can spare the time to cast a glance back over your shoulder, you see jealous competitors charging behind, who are likely enough to light on your shoulders should you come to grief. Casualties in the spring steeple-chases are common enough; and, if a contemplative rider were to weigh contingencies in advance, he might compound for a fractured collar-bone or a couple of broken ribs, and think himself on the whole tolerably fortunate. We might indefinitely multiply our pictures of the sports and pleasures of an English March. We might go yachting in the sudden storms that compel one to clasp the covers on the hatchways and put "the fiddles" on the rolling dining-tables, so that existence on board ship becomes one horrible nightmare, varied by the distortions of involuntary gymnastics. Or we might talk of the troubles of ordinary travel when, lured abroad for premature touring by the lamb-like blandishments of the end of the month, we have been caught in the intensity of Continental cold with very inadequate clothing. But we may have said enough to set sympathetic chords a-throbbing in the bosoms of sufferers who have been victimized in the pursuit of pleasure, nor do we desire to harrow their feelings gratuitously by needlessly exaggerating their unspeakable griefs.

A WEEK ON THE NILE.

THE excursions which may be made on foot from the dahabieh are often the most pleasant. Where everything is new and strange, from the table-topped mountain in the background to the dark peat of the river bank; from the blue-robed women with their water-jars to the slender funeral plume of the palm tree; from the brilliant primrose-coloured sky to the shining expanse of the Nile, you can never feel bored until Egypt is as familiar as England. The native Egyptian is always interesting. He is courteous in his manners to a stranger. He is cheerful and contented under oppression. He is hardworking, and so honest that you may trust him with your purse and money uncounted. As you pass through a village you will be asked over and over again to stop in and have a cup of coffee; and you may walk all day without hearing so much as a whisper about backsheesh, and without meeting a beggar, except of the religious kind. The traveller who has been on the Nile before will perhaps be more easily satisfied with the appearance of the villages and people than the stranger. He will observe this year a very different state of things from that which existed under the late ruler. There is not only greater evidence of material prosperity, but it is reflected in the faces of the populace. No greater sign of the real change that has taken place can be remarked than this. We did not know what the misery

must have been until now that it is removed. Strange to say, the peasant, when you speak to him on the subject, attributes his comparative contentment invariably to the fact that under the new régime he has notice given him of the taxes, and knows beforehand both how much will be expected of him and when he must pay. Not even the abolition of the oppressive Salt-tax and other vexatious imposts affects him so much. It is a powerful commentary on the rule of the beneficent Ismail. A walk through a rural district is now, therefore, very different from what it was even two years ago; and when, as about Beni Soof, the scenery is of that park-like character which we are accustomed to consider exclusively English, we are not sorry if want of wind or the delayed return of a messenger from Cairo obliges us to tie up at the bank and spend a day or two in short excursions among the villages and into the town.

If you ask the dragoman how far it is to Beni Soof—or, for that matter, any other place—he invariably makes the same kind of reply. "It is two or three miles, exactly." No Egyptian has any idea of linear space. The same word—"sah"—serves him equally for a mile or for an hour. You understand how this is when you have reached any town which lies "two or three miles, exactly," inland. The first part of the road is across a ploughed field towards a dead wall, over which fine old trees are visible. The Mudir's garden, you are told, it is, with his palace, which looks rather like a tumble-down French château, such as is called in some provinces a "haye," built round wide courts, with cattle passing to their pasturage through distant gateways, and horses picketed in the open air, under the overarching acacias. The experienced traveller on the Nile, who knows how troublesome the attentions of potentates often become, would hurry by in silence; but it is not possible to convey his sentiments to his companions in time, and their talk, perhaps their laughter, bring out the great man. He wears a costume exactly like that of an English clergyman; his coat has a standing collar, his tie is white, his waistcoat and trousers are black, and, it must be confessed, a little rusty. On his head is a biretta, but it is of crimson felt. The Mudir carries a string of beads in one hand, which adds to his eminently religious aspect, and he wears the air of a man absorbed in the contemplation of holy things. As Governor of a province containing many thousand inhabitants, he has, of course, much to think of; and his air of abstraction may not be affected, nor the little start with which he catches sight of the party from the dahabieh. His greeting is most courteous. All he has is at their disposal. He will do himself the honour of returning with them to their boats, and asking how they like the Nile. Finally, he has many horses, which he indicates with a wave of the hand, much as the late eminent millionaire may have called for "more carriages and four." The day's walking prospect is over. On the Nile, more perhaps than anywhere else, one member of a party must control his own likings, and give in to the wishes of the others. The ladies are charmed with the handsome Turk. His mother must have been a lovely Circassian. How many wives has he? What good French he talks, and even a little English! How dignified his manners are! And he has probably power of life and death over his people—only think! Such are the remarks which the Governor's visit elicits; and his offer of horses is willingly accepted, while the dragoman descends to him mendaciously of the ancient lineage and enormous wealth of the party under his charge. If, however, you wish to ascertain for yourself how far "two or three miles, exactly," may be, and, tearing yourself away from the blandishments of the great man, set out for the chief town with a sailor for your guide, you soon understand how it is that a mile and an hour are synonymous terms in the Egyptian tongue. The path skirts round a village, so that the traveller describes two-thirds of the circumference before he strikes out, over a canal bridge, into open fields, traversed by high, narrow mud banks. The country is in places covered with young sugar-cane, in places with maize, just ripe. Everywhere it is intensely and brilliantly green, except where a patch of velvet brown shows in the distance that ploughing for the second crop has begun. You walk round three sides of a vast field, in the middle of which the reapers are encamped behind shelters—we may almost call them huts, but they have no roof—of the strong maize straw. The men are threshing with long sticks. The women are carrying in the ears and winnowing. The children are superintending the feeding of the cattle on the broad leaves stripped from the straw. The whole scene looks as if it had come into life from a bas-relief at Sakkarah or a painting at Beni-Hassan. Then a smaller canal is reached, and, after following its course on one bank for twenty minutes, the traveller finds a crossing, having perhaps to wade, and then returns down the other bank to the place at which he first struck the canal. Soon he comes to another village, where he insists that his guide should ask the way, feeling sure he has come a long round. No, he has come the right way, and if he goes on as he began he will eventually reach the town, which he now learns is, as it was, two or three miles away. He has walked for an hour, yet he seems still close to the river, and thinks, as well as he can judge in the clear Egyptian air, that the long pennon flying from the yard of his dahabieh over the Mudir's trees is not more than a short mile distant.

But people of irritable disposition should not go for a winter on the Nile, unless it be to learn a lesson of patience. There is no use in being in a hurry. It will not advance you a step when the wind is contrary or too high. You can only reflect that the average time of the voyage will be the same whether you go fast

or slow, to-day or to-morrow. It is, of course, a different matter if you have come for only a week or ten days, and do not care for native harvests or Turkish pashas, but would prefer, if you are stationary, to be near some celebrated ruin or in sight of a pyramid. You have not come out for the pleasure of visiting the neighbouring dahabieh and condoling on the state of Ireland. It may amuse you to hear in one boat that the ladies are scandalized because their waiter puts a night shirt over his ordinary dress as a preparation for attending at dinner. It is rather dull to spend half an afternoon when the captain is sure the wind will change in sitting on the deck under the flapping awning. The only excitement is offered by a cockfight, and we must hope that the Englishman who nowadays witnesses such combats with pleasure, or even complacency, is very rare, or has the excuse of having been greatly bored. But, if you would interfere in the interests of humanity, as you mistakenly count it, you are informed that the fowl now promenading the bank are from your own hen coop; that during the voyage they inhabit the open boat which your dahabieh drags after it; and that it is necessary that all the cockerels should be allowed to fight it out at the beginning of the voyage, so that, the strongest having shown himself conqueror, his life may be spared, and his powers devoted to keeping order in the coop. That you find yourself interested in the social economy of the henroost betrays the state of mind into which even a week on the Nile may bring you. There are few ways, it must be conceded, by which a traveller in search of rest as well as climate can obtain what he wants so easily. The highest excitement for days together lies in the result of a game of chess or a rubber at whist. Like Mr. Toots you take no pleasure even in your tailor. The coldness of the early morning makes you wrap yourself in shawls and plaids, and perhaps you even put a silken "cutia," or Damascus handkerchief, over your head at breakfast. As midday comes you divest yourself even of your coat, and are glad if you have taken an experienced friend's advice and furnished yourself with a gorgeous gown in Cairo. So, too, if you wear your London boots on deck, you annoy your fellow-travellers by the noise they make in the cabin below, and you find yourself in slippers all day. Stiff collars are a nuisance when it is hot, and gloves impossible. The best head covering is the native square fez, because it resists the sun's rays best, and need not be taken off even at table, where there is always a thorough draught. In short, the sooner you conform to the habits of the natives the better, shaving your head and wearing a turban, clothing your body in loose wrappers, easily put on and off, and covering your feet with the wide slippers of the country, which you can take off occasionally when you are out walking, if you want to wade over a canal, or to empty out the sand. It must be recorded, however, on the other side of the question, that a gentleman—he was, we have been told, the editor of a Californian newspaper—wore black broadcloth and a tall silk hat throughout the Nile voyage, and declared them eminently suited to the climate.

YACHTS.

MR. G. L. WATSON, the naval architect who designed the *Vanduaara*, recently delivered at Glasgow a lecture on "Progress in Yachting and Yacht-Building," of which a short account is given in *Hunt's Magazine* for the present month. According to this writer, who seems to have devoted almost as much attention to the history of pleasure vessels as he has to the art of constructing them, no mention of yachting as a sport is to be found before the year 1690. Eight years after this date, Peter the Great, when visiting England, took delight in navigating a yacht; and Mr. Watson seems to look on the craft which he sailed in as the forerunner of that remarkable vessel built for the present Czar, which was destined, it was said, to revolutionize naval architecture, and was so marvellously constructed that Sir E. Reed was able to dine on board her comfortably during a voyage from Scotland to Spain, which has hitherto remained her solitary achievement. Whether Peter the Great, if he could be revived, would look upon this ship as the legitimate development of his work may perhaps be doubted. His fondness for sailing does not seem to have made it fashionable in England, as during the eighteenth century yachting was little indulged in, and did not become a recognized sport or amusement until the present century. After the conclusion of the great war yacht clubs came into being, and their number increased gradually at first, afterwards rapidly. In 1852 there were, according to Mr. Watson, 17 Royal Yacht Clubs, and there are now at least 31, besides a great number of minor ones. The fleet of yachts has increased in larger proportion than the clubs. In 1850 there were 503, in 1864, 895, in 1878, 1,883, and in the present year there are, says Mr. Watson, "fully 2,000 yachts, having a gross tonnage of 100,000 tons, and valued in the aggregate at four millions sterling." It may be deemed a matter for regret that so huge a sum of money should be devoted to mere amusement; but it may in fairness be urged that no healthier or better form of amusement has yet been devised, and that yacht-racing is the one sport which involves no cruelty, and is free from all corruption.

After giving an account of the growth of the fleet which has now become so large, Mr. Watson turned to yacht-building, and spoke of the progress which had been made in the art of designing, and of the present method of ballasting and equipping vessels.

For a long period racing yachts were built with great beam in proportion to their length, and on what was known as the cod's-head-and-mackerel-tail principle—that is, with a bluff bow and a fine run, there being an idea prevalent that the pressure of the water as it closed in on a vessel of this kind more than compensated for the resistance of the full bow. The fallacy of this view was seen clearly enough by some builders and some amateurs before the advent of the famous *America*; but the yachtsmen of those days were a conservative class, and it was not till the schooner distanced everything that the advantage of a long bow was generally appreciated. It is not unfrequently said now that the victories of the *America* were almost entirely due to the admirable set of her sails; but there can be no doubt that this opinion is erroneous, and indeed it can only be held by those who are not acquainted with the subsequent career of the celebrated yacht. After being used as blockade runner, scuttled, sunk, and brought to the surface again, the *America* was, at a comparatively recent date, refitted as a yacht. She has on more than one occasion sailed against modern vessels, and has acquitted herself admirably, thus showing clearly that her early successes were, to a great extent, due to the excellence of her form. That form English yacht-builders were not slow to imitate, and at first they did so with some exaggeration; but the spirit of emulation was raised, and intelligent attention was given to the designing of sailing-vessels. Since the days of the schooner's triumph there has been a slow but steady improvement in the English yachts, and there can be no doubt that they are now, as sea-going vessels, very superior to the American craft, though the latter would probably beat them in light winds and smooth water. Mr. Watson in the latter part of his lecture described the changes which have taken place in form, to wit—the gradual deepening, narrowing, and increase in displacement, and the alteration in the method of ballasting, which, by the way, has not been in all respects beneficial. Then, passing from the position of the historian to that of the prophet, he spoke of the racing yacht of the year 2000, "framed of arminium, plated with manganese bronze, and ballasted with platinum and gold," and with this description of an ideal vessel concluded his excellent lecture.

In spite of the doubt which has of late been cast on Sir G. O. Lewis's famous *dictum* about centenarians, there is, we fear, very little chance that Mr. Watson will be able to record the successes of the bronze yacht; but it is to be hoped that he will for a long time to come continue his labours as the historian of yachting, and it is not impossible that within a few years he may have to record alterations in the design of sailing-vessels almost as remarkable as those caused by the *America*. The rule of measurement, which decides the size of yachts for competitive sailing has been for many years past the subject of intermittent argument and dispute, is now once more under discussion. This rule, as need hardly be said, is based on what is known as the builders' old measurement, long abandoned for men-of-war and merchant vessels, and its leading feature is, that it taxes beam more than length, and does not practically tax depth at all. Several forms of the rule are at present adopted; but it is only necessary to refer to two, the old rule of the Royal Thames Yacht Club and that of the Yacht Racing Association. According to the first, the length of a vessel is measured from stem to sternpost; according to the second, it is measured from the fore to the after end of the load water-line. This method of estimating length constitutes, no doubt, a marked departure from the Thames rule; but both rules appear equally to encourage the production of long, narrow, and deep vessels. That a system of measurement which is specially favourable to one particular type is faulty can hardly be doubted, and during past years many and angry have been the assaults on the Thames rule. Strange to say, however, though theoretically indefensible, it does not seem to have produced bad vessels hitherto, though in one effect its operation has been bad, as it has led to a vicious system of ballasting. Under it the builder's object is, of course, to make a long, narrow vessel, and the necessary stability is obtained by giving great depth and placing lead ballast very low. Up to a recent date, however, designers did not yield to the temptation to exaggerate length, and the vessels planned under the Thames rule seem in many cases to have approached the proportions which—so far as length and beam are concerned—are most approved by naval architects. It seems now to be very generally thought that a sailing-vessel which is to unite speed with good qualities in a sea should have a length of about five times her beam. The most successful yachts of the day, as shown by the performances of several seasons, are, beyond all doubt, the *Florinda* and *Miranda*. The former has a length of 4.59 beams, the latter a length of 4.81 beams. The *Vanduaara* and *Samana*, which came out last season, and achieved so much, have lengths of 5.0 and 5.17 beams respectively. The racing yacht which, so far as we are aware, is longest in proportion to her breadth is the much-discussed *Jullanar*, of which the length is 5.47 times, and by Y. R. A. measurement 5.86 times her beam. It is, then, abundantly clear that, up to the beginning of last season, the Thames rule had not led to the construction of vessels of bad proportions fit for racing and for nothing else. Of late, however, there have been signs of a disposition to take every possible advantage of the present system of measurement. Forty-ton cutters of extraordinary length have been designed, and a so-called ten-ton vessel has been begun which is 50 ft. long by 6 to 7 in breadth. Yachts of this type would have an enormous advantage in racing, as they would be really far larger than others nominally of the same size, while, in all proba-

bility, they would, for various reasons, be quite unsuited for cruising; in fact, they would be, to use a term which is often very wrongly applied, more racing machines, and naturally the adoption of such extravagant proportions has a good deal disquieted the yachting community. It is seen that the well-designed and seaworthy yachts now afloat will be driven out of racing waters by ungainly monsters, and a strong desire has been felt that the Thames rule and the Y. R. A. rule, which now seem likely to be abused, should be altered. Various alterations have been proposed, but there is only one which merits any attention. This is the amendment which has been accepted by the Council of the Yacht Racing Association, and submitted by them to a general meeting of that body. According to this suggested new rule, the square of the length is to be multiplied by the breadth and the product divided by 1,200, the result giving the tonnage. Without going into details, which would be superfluous to those who have paid attention to the subject, very wearisome to those who have not, it would be impossible to compare fully the operation of this rule with that of the Thames and Y. R. A. rules; but it may be said briefly that the old law greatly favours length as against beam, while the proposed rule puts a penalty on excessive length. In so far as it does this it must have a beneficial effect, as it can hardly be supposed that any one will seriously maintain that a sailing-vessel should be eight or nine times as long as she is broad. It has, however, to be considered whether this benefit may not be too dearly bought, and whether the new rule may not be found unduly to encourage beam at the expense of length in the same way that the old rule encouraged length at the expense of beam. The question has been carefully discussed by the well-known writer who treats yachting subjects in the *Field*. He has taken the trouble to draw up a table setting forth the comparative dimensions of yachts of 40 and 122 tons, which could be built under the present Y. R. A. and under that proposed. This table shows that, with a proportion of 5 to 1, a larger vessel can be built under the new regulation than under the old. With 5½ to 1, on the other hand, the present rule is more beneficial to the builder, and with greater proportions there is an increasing penalty on length. Below 5 to 1 the operation of the new system, as compared with that now in force, greatly favours beam, and it may seem therefore at first sight as if the change in the law would tend to produce very broad, short vessels, such as are liked in America, but are justly abhorred by English yachtsmen. The writer in the *Field*, however, takes great pains to prove that this would not be the case, and certainly brings forward very powerful arguments in favour of the proposed method. Considering, apparently, that five beams is the best length, he shows that a 122-ton vessel of 3½ beams would be 10·25 feet shorter and nearly five feet broader than the yacht of five beams, and urges that the gain in breadth would be no adequate compensation for the loss in length. Ten feet in length would no doubt make a great difference in sailing, and the longer yacht would, as a sea-going vessel, be very superior to the other. Some doubt may, however, be felt as to her being decidedly superior as a racer. The shorter craft would have, as has just been said, five feet more beam than the other, and in smooth water and light breezes this would give her an enormous advantage, as her initial stability would be so much greater than that of her comparatively narrow antagonist. Her sails, it may be said, would be much smaller, but this would not necessarily be the case, as, with a vessel intended only for fair-weather sailing, sailors would not mind a good deal of boom outside the counter. If such a yacht were modelled in the manner advocated by the late Mr. Froude for larger ships, she might be in light breezes a most formidable antagonist to a five-beam vessel in spite of the much greater length of the latter. What beam is worth in fine weather has been shown often enough. The *Florida*, as we have stated above, has a length of 4·59 beams, the *Miranda* of 4·81. No one who has seen much of these two vessels can doubt that, with every allowance for the advantages of the yawl rig, the *Florida's* extra beam gives her a certain slight advantage over the schooner in beating to windward in smooth water. When there is a strong breeze the yawl's superiority is less marked. There is then some reason for supposing that the new rule might possibly lead to the construction of vessels of an objectionable type. We do not say that it would, or that any evils which might arise under it would be so great as those which may arise under the present one; but, in spite of the very able arguments of the writer in the *Field*, it cannot be considered as perfectly certain that the effect of the new rule might not be in some respects prejudicial.

It is therefore a matter for congratulation that the Y. R. A. has not hastily accepted the proposed change, and that, at the meeting held last week, it was determined to refer the matter to the whole body of members, and only to accept a two-thirds majority. The practical result of this decision will probably be to leave the question in abeyance for some time to come, and on the whole it is better that it should not be decided at present. There is no fear that any more monsters will be planned now that it is known that a change in the rule is probable, and nothing could injure the reputation and authority of the Y. R. A. more than anything which bore the semblance of precipitate legislation. During the time which will probably elapse before the subject is again brought forward the new rule will be considered in all its bearings; and, if there are serious drawbacks to it, means of amending it so as to prevent the adoption of extravagant types will doubtless be found. That the present law cannot be allowed to obtain for

much longer seems clear, but it is equally clear that the new law should be well considered. Even if it be clearly shown that the new rule should be adopted as it stands, the result of the delay will be beneficial, as sceptics will be convinced, and the Y. R. A. saved from the reproach of being too ready to change. It is hoped, therefore, that the question may be postponed for the present, and that the next time Mr. Watson takes up his pen he may be able to record that, after full consideration, a new rule for ascertaining a vessel's size was adopted, which led to more equitable measurement, to fairer competition, and, in time, to improvement in design.

EMIGRATION.

THE marked increase in emigration which we found twelve months ago when noticing the returns for 1879 was still more marked during the past year. According to the returns which have just been issued by the Board of Trade, it appears that the total emigration from the ports of the United Kingdom in 1880 amounted to 332,294, against 217,163 in 1879, being an increase of 115,131. But in these figures are included the foreigners who sailed from ports in the United Kingdom. These, of course, take nothing from our population, though no doubt they give valuable employment to our shipping; and we leave them out of account, therefore, in the remarks we are about to offer. Of British and Irish emigrants last year to ports outside of Europe there were 227,542, against 164,274 in 1879, being an increase of 63,268. Since 1853, when the nationality of emigrants from British and Irish ports was first distinguished, this latter number has been exceeded only three times—namely, in 1853, 1854, and 1873; so that the British and Irish emigration last year was practically as great as it has ever been, except during the period of the Irish famine—when, however, we cannot determine its magnitude. Of course it is to be borne in mind that in 1853-4 the population of the United Kingdom was very much smaller than it is at present, and that consequently the emigration was proportionately, though not absolutely, very much larger than last year. Still it is a very noticeable fact that the figures should have risen so greatly and so suddenly. After the Crimean war the emigration from these islands began steadily to decrease, and reached a minimum in 1861, when it was as small as 65,197. After that it began again to increase, and rose to a maximum in 1873, in which year it was as large as 228,345. It then again began to decrease, and fell to a minimum in 1877, when it was as low as 95,195. Once more it began to increase, and last year, as we have already seen, amounted to 227,542. This ebb and flow in the tide of emigration from this country is noteworthy, and it will be observed that it follows a special law. Receiving its first great impetus from the Irish famine, when it became abnormally large, it seems since to have been mainly regulated by the material condition of the United States. In 1861, as will be remembered, the War of Secession broke out. Business was disorganized, and there was a general fear amongst intending emigrants that they might be pressed into the armies of the North. In that year, therefore, the number of British subjects who landed in the United States was smaller than it had previously been since the Irish famine. But, in fact, for the preceding three years it had fallen to about half what it had been in 1857. In the latter year, it may be recollected, there was a great panic in the United States, and business was depressed during the years we have just mentioned. Emigration thither accordingly fell off, and, as we have said, reached the minimum in the first year of the War of Secession. The war gave rise to a special industry and, consequently, to a great demand for labour, and emigration again began to increase, and went on expanding up to 1873, when occurred the great railway panic. During the years of depression which followed, it fell off until 1877, when the lowest point was reached. The tide of prosperity in the United States then turned, and with an increasing demand for labour emigration also increased. That we are not attributing too much importance to the United States labour market will be seen from the fact that, of the total of 227,542 who left these shores last year, as many as 166,570, or about 73 per cent., went to the United States.

A little reflection will show us that the relation we have been tracing is most natural. Community of language, laws, and origin might reasonably be expected to attract the people of this country to the United States; and, doubtless, does exercise considerable influence. But that community of language, laws, and origin alone do not determine the movement is evident from the fact that the emigration to our colonies is small, and varies but little from year to year, while the emigration of foreigners, particularly of Germans, varies, like that from this country, with the condition of the labour market in the United States. The truth is that the great determining cause is the almost illimitable demand for labour which exists in the United States when trade there is good. The native population is large enough to be able to absorb and assimilate the elements which are added to it year by year. It is enterprising, energetic, and pushing enough to lead, to fashion, and control these elements. And it has wealth enough to give them productive employment. There are two great conditions which make immigration into a country both safe and advantageous. The native population must be large enough to assimilate the foreign addition, and to impose upon it its own customs and manners, or else the new comers, having none of the attach-

ment to country which so immensely aids law elsewhere, will soon introduce anarchy, if not revolution. At the same time, there must have been a sufficient accumulation of wealth to set the new comers to productive employment. In time it may be, and no doubt will be, that our colonies, and particularly our Australian colonies, will be in a position safely to absorb a very large immigrant population; but, at present, they have not advanced sufficiently to do so. The United States, however, have now reached a point when scarcely any imaginable addition of foreigners could do them serious injury, while the accumulation of wealth has reached a point at which the more the new comers, the more rapid will be the development of the country.

Mr. Giffen, both in the report which we are now noticing, and in that for last year, directs attention to the fact that the tide of emigration from this country seems to increase with a revival of trade, and fall off in periods of depression. At first sight this seems anomalous. One would rather expect to find emigration greater in bad times and less in good. But it is to be borne in mind that the crises in the United States generally precede those in this country, and the return of prosperity there also takes place first. For example, the panic of 1873 preceded by a considerable time the depression of trade here at home; and the revival became great and well marked there before prosperity returned here with us. It is natural, therefore, that the more enterprising of the poorer classes here at home should be attracted to a country where the revival of trade has become more pronounced and reached a further stage. Besides, it is to be recollected that in a country like this, which is already so thickly populated that the struggle for existence is, even in the best of times, intense, very large numbers must become discontented with their lot when depression lasts long. They are, therefore, inclined to employ the first money they earn on the return of good times to try their chance in a country which affords greater opportunities for rising in the world. It may be asked, if this is so, how it happens that the United States, which themselves suffer severely from crises every now and then, do not also witness a large emigration. But, as a matter of fact, they do. The tide of emigration from Europe to America is not more marked or more continuous than is the movement of population within the United States themselves, from the East to the West. The centre of population has been steadily shifting more and more to the westward; and the present revival in trade there was preceded by a migration to the new and unsettled lands of the West of almost unprecedented magnitude. Indeed, it may be said without much exaggeration that the revival of trade in the United States was largely due to the fact that the mechanics and mill-hands, who in the inflation period and under the influence of protective tariffs had been collected in the great towns of the Eastern and middle States, were dispersed by the panic of 1873, and sought new homes and new employment in the wheat-growing lands of the North-West. As it happened, a series of good harvests in the United States was contemporaneous with a series of very bad harvests in Europe. In consequence the surplus produce of the one continent was available for the needs of the other, and produced the prosperity which is now so great. It is probable, therefore, that emigration on a large scale will continue for some time longer from Europe to the United States; but, for reasons which we shall presently point out, it is not likely that the present year will witness an increase upon the last, rather, perhaps, we may expect a slight falling off.

The increase of emigration from British and Irish ports was accompanied by an increase of immigration homewards. Thus the immigrants of British and Irish origin numbered last year 47,007, against 37,936 in 1879; being an increase of 9,071. This increase is small, no doubt, compared with the increase in emigration. But it is in accordance with past experience, immigration, like emigration, increasing in good times, and falling off in bad times. The course seems to be for emigration to increase much the more rapidly in the early years of a trade revival, and to be nearly overtaken later on by the increase in immigration, and then for both slowly to decrease until the tide of prosperity turns once more. The immigrants of British and Irish origin were distinguished from others for the first time in 1876, and their numbers steadily decreased up to 1879, when they numbered only 37,936. Last year, as we have already seen, they began again to increase, slightly exceeding 47,000. In 1877 immigration so nearly balanced emigration that the difference was only 31,305—that is to say, the loss of population through the departure of our own people had almost come to an end. Since then emigration has increased so rapidly that it exceeded the immigration last year by as much as 180,535, or almost six times as much as in 1877.

We said above that the great increase in emigration last year was to some extent exceptional, and our reason for saying so is that there was a sudden and a very remarkable increase in the Irish emigration. The Irish emigrants, who in the three years 1853-55 formed 61 per cent. of the total emigration from these islands, had fallen in 1879 to 25 per cent.; but last year they rose again to 41 per cent. The absolute increase was from 41,296 to 93,641; and, what is more remarkable, the greater part of this emigration took place in the first six months of the year. Almost the whole of the Irish emigration is to the United States, and, naturally, it varies even more than the whole British and Irish emigration with the state of trade at the other side of the Atlantic. But there was this additional cause operating last year, that, as we all remember, the harvest of 1879 was the worst experienced in Ireland since the famine years. The whole western coast of Ireland was very little removed from actual famine. The Government had to

step in to administer relief, and even outside the districts specially scheduled there was intense and deep distress. It is not surprising, therefore, that almost all the young and enterprising persons who could scrape together the means, and were not bound to remain in Ireland by ties too strong to be easily broken, should be eager to get to the United States, away from such deep distress at home and to such great prosperity there. Accordingly, we find that, out of the 93,641 persons of Irish origin who emigrated last year, over 63,000—that is to say, over 67 per cent.—took their departure in the first six months. The harvest of 1880 was good in Ireland, and as soon as it became plain that it would be so, there was a slackening in the tide of emigration. Possibly also political influences, and the hopes they aroused, had their effect; at any rate, it is remarkable that, while emigration from Ireland doubled in a single year, two-thirds of the total emigration of 1880 occurred in the first half of the year.

REVIEWS.

THE BOKE NAMED THE GOUVERNOUR.*

THE *Book of the Governor* is one of a class of books which better suited the general tastes of the sixteenth century, but which will not lack readers in the nineteenth, and perhaps not in the twentieth. The author is, indeed, a personage of considerable interest both in himself and in his writings. But, in spite of the large influence which he exercised on the thought and life of his own age, he became practically forgotten. Politically, his fame was eclipsed by that of the more illustrious statesman who may be said to have died the victim of the personal cruelty of Charles I., and who is said to have been his kinsman. So much more prominent became the figure of the latter that even Hallam speaks of the *Book of the Governor* as the work of John Elyot. This neglect of later ages is no matter for surprise. Elyot worked throughout his long career for a definite purpose, and his purpose was answered far probably beyond his highest hopes. He found that education in his own time rested on no solid basis, and that in some professions a merely empirical practice was kept up by a pretence of knowledge which was virtually nothing better than a sham. The apparatus for teaching was miserably deficient, and he set to work to improve it with a zeal which entitles him to a place scarcely below that of Colet or Ascham. In short, he took in hand a task which was of the first importance at the time, and his efforts were on the whole rewarded with a signal success, although that success itself brought on him what he may perhaps have regarded as one of the greatest misfortunes of his life. Throughout the long series of years in which he was able to think and to write, he devoted his whole energy to the advancement of learning; and the large circulation attained by his books showed that his efforts were fully appreciated by his countrymen. These books have a further interest in their bearing on the history of the English language. To its strength and beauty Elyot was thoroughly alive; but he felt not less keenly the poverty of its vocabulary for practical work in many of the most necessary regions of thought, and he resolved deliberately to supply the want by the adoption of words from other languages. Of these words not a few may be pedantic and absurd. It was, in truth, scarcely possible for one in Elyot's position to avoid overshooting his mark; but a large number of his words have been permanently established in ordinary English speech as well as in the diction of science. Elyot saw clearly that a vast multitude of notions could never be expressed by terms built upon purely English roots; and he therefore adopted a method just the opposite of that by which Mr. Barnes is trying now to effect a counter-revolution. At least he helped to make the substitution of such terms as "fore-begged thought puttings" and "twinsuchness" for "preconceived ideas" and "duality" impossible; and we may be justified in thinking that Elyot in the sixteenth century was better able to give an estimate than we can be now of the probable result of such experiments.

Of Elyot, then, it may safely be said that neither his personal history nor his book-work ought to be forgotten. An effort was made about fifty years ago to rescue them from this neglect; and the edition published in 1834 by Mr. Turberville Eliot was the first which had appeared for about two centuries and a half. The fact that the edition now put forth by Mr. Croft is the tenth is proof of the large success achieved by Thomas Elyot as an author in his own and the next following generations. Mr. Eliot's edition, based professedly on one of 1564, or, as Mr. Croft thinks it must have been, on the one of 1546, seems to have fallen almost dead from the press, and scarcely to have deserved a better fate. He claimed consideration for the amount of thought and trouble which he had bestowed upon it; but he assuredly mis-conceived altogether the duty of the editor of such a work as the *Governour*. Refusing to hold himself responsible for its "apparent quaintness or obscurity of style," he made it his business to "simplify the composition of the original work," and he got through his task by dint of changes which converted "adumbrations" into "adjunctions," "verbe" into "herb," "craftesman" into "crafts of men,"

* *The Boke named the Governour*, devised by Sir Thomas Elyot, Knight. Edited from the First Edition of 1531 by Henry Herbert Stephen Croft, M.A., Barrister-at-Law. London: C. Kegan Paul & Co. 1880.

"taken with the maynure" into "seized with the mania," and "comeliness of nobility" into "comeliness of no utility." In the matter of the book his shortcomings as an editor are not less serious. Whole paragraphs are wanting, the absence of which, Mr. Croft remarks, can generally be discovered only by comparison with the black-letter edition; nor did Mr. Eliot make the least attempt to explain in foot-notes any points in the text which could not fail to be either obscure or unintelligible to readers of the present day. Lastly, he seems to have mistaken altogether the very purpose of the book. In his view it is "an able treatise on the interesting and important science of political economy," and his hope in republishing it was that it might serve as an antidote to "the visionary schemes of political enthusiasts who broach doctrines which cannot be reconciled with religion, justice, or with reason." With such a mode of treating a work which is strictly ethical he could scarcely fail to go wrong in every portion of his task; and we might wonder, not that his edition was neglected, but that it had any sale at all.

By pointing out the defects and wrongdoings of his predecessor, Mr. Croft defines his own duties as an editor; and it must, we think, be allowed that he has fulfilled them with abundant conscientiousness. Sir Thomas Elyot's purpose was to deal, as Mr. Croft somewhat strangely expresses it, with "the ethics of morals"; and in carrying out this purpose he ranged at will over the whole ethical philosophy of the ancient world, working up his subject with an infinity of historical illustrations. But, although almost every sentence which he wrote down has either a direct reference or an allusion to some passage which he had come across in his wide reading, he seldom gives any references, and fails often to name the writer whose words he may be citing. Mr. Croft has taken on himself the verification of this vast multitude of quotations, more or less exact, or of adaptations from passages of a like meaning in other writers; and he has naturally found that the task involved huge labour. Working on for years, he has at length accomplished it, and the result is an assemblage of notes which cannot fail to increase the reader's interest in the perusal of a text in itself highly suggestive as well as entertaining, even if we take no account of the author's singular earnestness in his work. Not content with the completeness of this part of his undertaking, Mr. Croft has bestowed equal pains on his glossary, which fills nearly two hundred pages of small type. This glossary shows throughout his wide and accurate learning; but, if he has erred at all, he has erred in the way of giving his readers too much rather than too little. Sixteen of the closely printed columns of the glossary are given to the word *Cocknays*, *cockney*. Nothing more perhaps can be done to illustrate the history of its usage by English writers; but the wealth of information on this point seems to throw little light on the origin of the word, and in this respect the short entry of Mr. Skeat in his *Etymological Dictionary* of the English Language is far more satisfactory. Mr. Croft proves by a plethora of citations the fact that the word bore generally a disparaging meaning; but we may reasonably wish to know why it should have done so, and Mr. Skeat here offers a suggestion, which he calls "a mere guess," urging that the possible connexion of *cockney* with the Middle English *coke* should not be overlooked. The word bears, he adds, a remarkable resemblance to the Welsh *coegynidd*, meaning "conceited," "simple," or "foppish," from *coegyn*, a conceited fellow, which seems to suggest a further comparison with the Gaelic *goigianach*, cockcomb-like, and the Old Gaelic *cuan*, void, hollow.

Lastly, Mr. Croft has prefixed to the *Boke of the Governour* a biography of Thomas Elyot, which for many readers may have an interest greater than that of the work which it precedes. It is written with great care, nor can it justly be urged that it is overloaded with irrelevant matter—a sin to which the writers of memoirs for which there is some dearth of material are often tempted. It certainly cannot be said that Elyot lived only for book-work, but he attracts us chiefly as a writer, and still more from the motive which prompted all his tasks. His one object was to render the citizen more fit to do his duty in the commonwealth, and more particularly those citizens who are to exercise authority in it. With Aristotle this included the whole body of freemen; but Elyot had to take the word with some limitation, and he put out his book with no slight misgivings as to its reception. In setting forth the training needed to fit a man for functions of State, he had to speak clearly about many prevailing faults and vices which had taken deep root, and which many were content, and even eager, to pass off as virtues. He had to attack many vested interests, and the grounds on which he did so, as in the case of medicine, might be condemned as perilous not merely to those interests, but to society and religion. Against such criticism he found a defender in no less a personage than the King, who, he says, "with princely wordes full of majestie, commended my diligence, simplicitie, and corage, in that I spared none estate in the rebukynge of vice"; nor can it well be doubted that Elyot's appointment as Ambassador to the Emperor in the Low Countries was his reward for writing this book. This honour, which we may suppose largely added to the number of its readers, was for him the beginning of troubles. Henry VIII. was not lavish in the pay which he accorded to his envoys and ambassadors, and sometimes the pay accorded was kept back, or not bestowed at all. Many were thus unable to appear in a manner worthy of the accredited Ministers of the English sovereign. Like others, Elyot had to draw on his own resources; and when he came back very much the poorer for the high office which he had filled, he had to face the further losses involved in his being chosen to serve as

Sheriff of Cambridgeshire. Writing to Cromwell, he makes no secret of his straits. His journey, he says, had been "moche grievouse" to him,

for that I have brought myself thereby in grote dett, spending therein almost six hundred marcs above the Kinges allowaunce, and thereby am constrained to putt away many of my servantes whome I loved well. . . . I borrowed of the Kinge a hundred marcs, which I wold fayne paye if myn other creditours wer not more importune on me than Frencheshold be. Sir, for as moche as the Kinge allowid me but xxs. the day, and I spent xla. the day, and often times four marcs, and moreover I receyvyng the Kinges money in angells, I lost in every angell xivd. sterling . . . I heresaye that I am named in the bill of Sheriffs for Cambrige Shyre. If the Kinge should appoynt me, than am I more undone, and shall never be able to serve him nor to kepe my house; consydering that no man eskapith oute of that office withoute the loss of one hundred marcs, and as for my practice in office ye somewhat doo know. If Godd sent me not other lyving I were likely to begg.

Elyot's application to Cromwell was useless; but he contrived to get on, and he carried on the tasks of his life to a time when Cromwell and his more illustrious friend, Thomas More, had long since fallen victims to the despotism of their master. That Elyot should still address Henry in language not less glowing than that which he had used before the commission of these crimes is perhaps not to be wondered at; but, although he may not be chargeable with meanly disowning his friendship with More, we cannot say that this aspect of Elyot's public life is specially attractive. It is singular, as Mr. Croft remarks, that Elyot should never have made the least reference in any of his books or in any letter thus far discovered to the story told by William Roper, More's son-in-law, that Elyot received the tidings of More's death from the mouth of Charles V. himself, who, on Elyot's saying that he knew nothing about the fact, told him that it was very true, adding, "If wee had bine Mr. of such a servaunt, of whose doings ourselves have had these many yeares noe small experience, wee woulde rather have lost the best cittie of our dominions than have lost such a wortheie Councillor." Mr. Croft thinks that the truth of this story, "which in itself is too precise to be disputed," is indirectly confirmed by other circumstances, which he goes on to examine minutely.

Of Elyot's writings the *Boke of the Governour* was undoubtedly the most important; and to many it may be interesting chiefly in its relation to other works which influenced the thought of his age, while they guided his own. To some of these, as to the *Institutio Principis Christiani* of Erasmus, he refers directly; of the *De Regno et Regis Institutione* of Patrizi, from whose pages he borrowed largely, he makes no mention; but it is enough to say that it was no part of his plan to give references systematically. In working out his design he looks on the whole world of thought as a field from which he may gather such materials as may be likely to serve his purpose, and he writes as one saturated with a learning which, from its very bulk, sometimes becomes unmanageable. Hence the number of digressions, which often run to prodigious length, and seem to make him lose all remembrance of his immediate topic. The subject of poetry leads him to descant on the objections urged against poets from the mischievous portions of their works; and on this path he advances until he has to pull himself up with an effort. "In defendynge of oratours and poetes I had all mooste forgotten where I was." In his statements of fact he is seldom far wrong; but he sometimes strains his evidence unduly. The occasional mention of the dances of youths and maidens by ancient writers is a perilous foundation for the general statement that "in every daunce, of a mooste auncient custome, there daunseth together a man and a woman, holding each other by the hande or the arme." But, in truth, the chapters on dancing are throughout wonderful specimens of recondite symbolical doctrine, interesting from more than one point of view, although, it may be, wearisome from others.

On the whole, Elyot's book, although successful, brought him no great wealth. But the nobleness of the man comes out in the confession that money was not the end for which he had put down his thoughts upon paper. He might, he knows, have better consulted his worldly interests in other ways. But he says:—

To excuse me of my foly, I will professe without arragauce, that when I considered that kunninge contynueth when fortune flyteth, havinge also rynging in myn care the terrible cheeke that the good maister in the gospel gave to his ydel servaunte for hidyng his money in a clowte and not disposing it for his maister's advauntage, those two wordes, *Serve nequam*, so altered my sperites that it caused me to take more regarde to my last rekenyng than to my riches or worldly promotion. And all though I do neither tyspute nor expounde holy scripture, yet in suche workes as I have and intend to sette forth, my poore talent shall be, God willinge, in such wise bestowed that no mannes conscience shalbe therewith offended.

Mr. Croft has rightly judged that to the career and the writings of such a man, if fitly brought before them—as they are in these volumes—Englishmen will not be indifferent.

SKETCHES IN INDIAN INK.*

THESE sketches, we are told in the preface, are intended for people in England who may wish to know how Indian exile acts upon Englishmen and Englishwomen. We sincerely trust that there are amongst civilians, members of the staff corps, and merchants and planters, a good many on whom an Indian career has acted in a very different way. Too many of the characters

* *Sketches in Indian Ink*. By John Smith, Junior. Calcutta: "Englishman" Office. London: Allen & Co. 1880.

are bores or snobs. It is true that there is no attempt to describe an elopement or a seduction, and that there is some local colouring and a few clever remarks. But there is nothing whatever to delude the author into the belief that he is gifted with a talent for describing society; or that he can turn out pen-and-ink sketches worthy of a moment's comparison with his predecessors in the same line. Of Anglo-Indian life, as it flits about in mess-rooms, hill-stations, dinner-parties, the racquet-court and the cricket-ground and the racecourse, he has very likely seen something. But he has the merest surface knowledge of native society; he writes under a scarcely concealed dislike of chiefs and princes and their country; and it is difficult to say whether, supposing his knowledge of India to comprise the days before the Mutiny, he could ever have had any genuine interest in either old *régime* or new. It is a perilous thing, too, to invent names which suit your characters and give an inkling of their professions. This sort of device has been effectively resorted to by Walter Scott and by Thackeray. But when the writer laughs at the late Samuel Warren for giving his men and women nicknames taken from the nursery and the schoolroom, he falls into the same error himself. To describe an indigo-planter as Blueskin; a Judge of Sessions as De Murrer; a pugnacious clergyman as Boxer; a young civilian as Cadwallar; and ladies as Mrs. Fryske and Mrs. General Bangles; is no proof of invention or literary skill. And if the language which these personages employ, the topics they select, the sermons they preach, and the amusements in which they indulge, are to be taken as fair representations of society in Upper India, all we can say is that Colonel Smith must have had the ill-luck to fall in with a good deal of vulgarity, or else that, in a world where there has always been some healthy leaven to purify the mass, he has an eye for little but the low parts of human nature. When *Oakfield* was published a quarter of a century ago, an Anglo-Indian official was asked by a dignitary of the Church whether in the Indian services there were really such excellent persons as Stanton, Mr. Middleton, Miss Middleton, and others. On receiving a reply that there were such in the speaker's humble opinion, the Churchman snapped his fingers, and said that, with such leaders, society, in spite of Cade and other low characters, could not be demoralized.

Neither does the author seem to us very accurate or felicitous in the few historical allusions and the sketches of natives with which he tries to vary the dull festivities of English magnates. For instance, he endeavours to prove Macaulay wrong in his allusion to a well-known Urdu couplet about the horses and elephants of Warren Hastings. The contention of Colonel Smith is that the lines refer to the hasty flight of the Governor-General from Benares, when Chait Sing, if he had only known it, had the ruler of India in his power. Here there is a remarkable confusion as well as an omission. In the original lines, as applied to the Governor-General, the saddle is put properly on the horse and the howdah upon the elephant; and Hastings, though doubtless not ostentatious in character, went in and out of Calcutta on caparisoned elephants, as those animals had not then been excluded from within the Mahratta Ditch. When, some quarter of a century afterwards, Colonel Monson retreated in confusion before Holkar, the Sepoys altered the current saying about Hastings, and laughed at Munsee Sahib running away with the saddle on the elephant and the howdah on the horse. It would have been much to the purpose had this venturesome critic recollected a homely proverb about putting the saddle on the right horse. Then we have a specimen of very loose evidence on which Mr. Shore, afterwards Lord Teignmouth, is represented as having held the rope ladder by which Sir Philip Francis tried to curry off Mme. Grand, who became the wife of Talleyrand, from the house of her first husband. The letter of M. Grand himself, as quoted in an essay of the late Sir John Kaye on Philip Francis, is now before us. From this we find that when Philip Francis had managed to get clear off, his friend and accomplice, Mr. Shée, was caught and tied to a chair by a faithful Rajput Jemadar; and that Mr. Shore and others were said to have been clamorous for the prisoner's release. It also appears that, on the sole evidence of this Jemadar, the injured husband accused Mr. Shore and others with active complicity, to which these gentlemen replied very naturally to the effect that they had merely come forward on hearing a disturbance. Any one conversant with the proclivities of native witnesses, who invariably make a drag-net of every one present at a row and put them down as defendants lest they should be called as witnesses on the other side, will know what value to set on the evidence of a "faithful black" anxious for the honour of his master. Moreover, it is clear from the evidence given at the trial in the Supreme Court that Mr. Shée was the chief participator in the villany, while Mr. Shore's high character all through his career is quite enough to clear him from an improbable accusation tacked on by a native witness to a stratum of solid fact, and reproduced by M. Grand in a narrative evidently written under the most excited and violent feelings, as was very natural.

Macaulay said once that, after the appearance of Byron's poetry, no novel was quite complete without some unhappy Larr-like peer. Similarly after the Mutiny and the Nana, Azimullah, and the rest of them, few Indian tales have been wanting in some native chief with a furtive glance, a polished demeanour, and obsequious flattery that veiled the blackest of hearts. In these sketches the "Baron" is loud-voiced, which, by the way, a native rarely is, and he is elegantly said to be a compound of the tiger, the snake, and the gorilla. This Oriental Front-de-Bœuf is denounced to the magistrate by one Ishmael Beg as having

abducted, confined, and ill-treated his sister. Sheikh Shaitan Buksh—an improbable compound or combination of words—the aforesaid Eastern Baron, in order to be on an equality with his opponent, rides into the station, pays a visit to the magistrate, and gives his own version of the occurrence, to the effect that the accusing Ishmael had gone off with a large sum of money entrusted to him for the purchase of a horse, and was trying to seduce the Sheikh's wife. After this interview, the magistrate determines to go to the spot himself; and so far there is no violent improbability in the narrative. Many an active magistrate has mounted his best Arab, and has ridden a dozen miles or more under a burning sun or a hot wind, to release a captive, to arrest a noted bad character, to visit a bazaar ravaged by fire, or to prevent an affray about boundaries and ripe crops. On arrival at the "Baron's" residence, the experienced eye of the magistrate at once detects the *zenana* or women's apartments, and a "wild gipsy-like woman," with dishevelled hair and marks of recent ill-treatment, rushes out and throws herself at his feet. Of course she corroborates the tale of Ishmael and denies any lawful marriage with the chief. Hitherto all this might possibly have happened as described. Native Rajas do certainly carry off women, ill-treat them in seclusion, and get up false counter-claims. It is also within official experience that active magistrates have been resisted when forcing an entrance or endeavouring to apprehend a prisoner, and that they have been subsequently waylaid and murdered by vindictive scoundrels of the Front-de-Bœuf type. Mr. Blake, many years back, was assassinated at Jaipore in a sudden tumult. Mr. Fraser was waylaid and shot at Delhi by a bravo acting at the instigation of a Nawab, who was afterwards hanged for it. Captain Alcock, being mistaken for Mr. Unwin, the experienced magistrate of a district in the North-West Provinces some thirty-five years ago, was dragged out of his palanquin at night by a noted Dacoit and his band, and then and there murdered. But we do not think that any native ever tried to get rid of an English functionary in the sudden way attempted by Shaitan Buksh, or that any magistrate would have been so simple as to fall into such a trap. Mr. Ernest Hathaway, for such is the magistrate's name, tells the Chief that he is to be responsible for the lady's safe-keeping, and that some "definite arrangement" must be made on the morrow, and then he leaves the palace accompanied by one of the young men whom Shaitan Buksh has thoughtfully assigned to him as an escort. At a convenient place in the road, where the sand is deep and the horses slacken speed, the mounted Pathán unsling his firelock, and quietly puts a bullet into the unsuspecting Englishman. However, the shot is not fatal; and Mr. Hathaway, after becoming insensible and delirious, is sent to the hills, and nursed by two charming women; and then he very speedily becomes engaged to the attractive young lady of the story, who only waited to know her own mind and is very sorry for having listened to any naughty stories about her lover, a native chief, and a woman.

As an instance of the carelessness of the author, Shaitan Buksh, in the first chapter, is very properly called a Sheikh. Towards the end of the tale he figures as a Raja; in short, he becomes a Mahomedan and a Hindu by turns. We are very sorry to add that, to the eternal discredit of the police and the judicial authorities of Ilkimpore, both Shaitan Buksh and the murderous Pathán escape without summary punishment. No steps are taken to procure any evidence against the former, and the latter escapes by a timely flight. Noted villains in these sketches have an easy way of getting off, in spite of police, telegraphs, and other means within the reach of detectives and magistrates. Perrival L., who is a great scamp but bears an ancient name, marries a charming young lady, seventeen years of age, and "full of joy and trust and undeveloped affection." That he ill-treats his nice young wife, and prefers to her a wretched and tawdry half-caste, is, of course, part of his character. The young wife is thrown violently out of a buggy, and the wicked husband murders his own father-in-law; but, although these atrocities take place at a large military station in the Upper Provinces, the villain is enabled to hide, take the mail train to Calcutta, at the lowest computation six hundred miles away, and get clear off to New Zealand or Australia. We fear the author's experience in mess rooms hardly qualifies him to be a judge of the possibilities of distance, time, and ordinary departmental activity. Another military demirep tries to ruin his brother officer at cards, and after having fought endless duels, fairly runs away from the levelled pistol of the Honourable P. Walsingham. The *roué* had imprisoned and half starved a native banker in a subterranean chamber; and we hear nothing more of this fighting but runaway Englishman till his blackened corpse is recognized inside the Cashmere Gate at the fall of Delhi. The very mutineers had been so ashamed of him that, although he had pointed the guns against the English troops on the ridge outside, they left him nailed to a cross.

This writer is probably capable of producing something better than this poor stuff. An imitation of Carlyle's peculiarities is decidedly clever, and there is a fair amount of intelligence and observation. But, to write a good novel or story about India, a man should not hate the country and people as this writer obviously does. He has not even a good word to say for life in tents during the cold season. This is a time to which a civilian, engineer, or surveyor, chained to the desk for eight months in the year, looks forward with feelings akin to those of a permanent official in the English Civil Service who can get away in September or October

to salmon-fishing and grouse-shooting in the Highlands or to the Italian lakes. The independence, the pure air, the repeated change of scene, the absence of endless interruptions and petty worries, the lawful combination of sport and pleasure with work and intercourse with the agriculturists, invest camp life with unfailing attractions. A distorted account of a time so passed describes it as "the most horrible six weeks that ever I spent in my life." India was not conquered, and will not be civilized or be held, by men holding these opinions, and it would be unjust to the present race of officials to think that they set about their duties in the spirit with which they are credited in these third-rate tales.

HAROLD SAXON.*

THERE is a masculine ring about the syllables of "Alan Muir." The author of *Harold Saxon* confirms the inference by the use of the personal pronoun belonging to the stronger sex, and even a reviewer is unaccustomed to contradict a lady. Yet "every one who has been so patient as to read this history with common care" as far as the middle of the third volume will have pondered in much perplexity the opening sentences of a chapter which, indeed, bears as a heading "Her Pretty Way":—

Unless the readers of this story have been exceptionally fortunate in life, each of them has known at some time the sensation of relief which follows when we throw off a tight-fitting garment put on without consideration and worn with excruciating pain; while all the time we have been forced to look pictures of attention or enjoyment. The reviving circulation, the expanded lung, the freer breath, the relief from torture, may be reckoned among the most felicitous experiences of human life, and almost repay the sufferer for the past.

Mr. Alan Muir may have known in his day the miseries of tight boots; but these are not usually known as "garments." As a Scotchman he may have also groaned in spirit under other bonds of fashion to which a Southerner would patiently submit; yet "the expanded lungs" and "freer breath" of relief do not fall in with such a supposition, and it is certain that no waistcoat-buttons could bear the strain which the author so feelingly describes. Another and analogous difficulty meets the patient reader a little further on:—

Mrs. Vesey's dress was nothing short of faultless. Five-and-twenty years ago, fair reader, a bonnet was a bonnet indeed . . . it was a bonnet that covered the whole head, and the neck, and the ears, and came down under the chin, and was tied with a substantial bow of ribbon. It did, as one must confess, faintly suggest the idea of a coalscuttle; but . . . mightily as the bonnet was in size, it yet allowed the sun to behold something of a neck of very queenly mould.

The ordinary male writer, before presuming, if he presumed at all, to describe such mysteries, would have turned to the pages of a recognized authority, and, instructed by John Leech, would scarcely have identified the "Kiss-me-quick" bonnet of "five-and-twenty years ago" either with the earlier "coalscuttle" or with Alan Muir's description of it. To a young lady, certainly, the fashions of 1855 would seem as much ancient history as those of 1830; but then the author of *Harold Saxon* is not a young lady, but a man. As a man, too, we cannot concede to him any indulgence on the plea of "Varium et mutabile semper," which we should willingly grant in the case of a lady novelist who might provoke us half-a-dozen times in as many consecutive chapters to the contradictory assertions that the book was tolerably readable, and intolerably foolish.

The principle that in a modern novel the hero should be in love with three women at once, of whom one at least should be married, has been established by so high an authority, and has been so recently re-affirmed, that no reasonable objection can be taken to Harold Saxon's relations with Gertrude Treasure, Kathleen O'Brien, and the lady of the bonnet, except possibly on the ground that he was a clergyman. Even this criticism has been anticipated by the author, who assures us that the clerical hero did not believe anything, and therefore confined his ministrations in Theodosia Chapel to its pulpit, carefully avoiding the reading-desk. Sermons, as reported or conceived by writers of contemporary fiction, are usually deep and wondrous utterances, breathing we know not what of soul-agonies and the like; and Alan Muir has faithfully copied the regulation pattern. In Harold Saxon's case this style may have been true to nature; for it is known that somewhere about the time of his ordination the Bishop of London requested from one of his candidates information whether the sermon submitted, as was then customary, to the Episcopal judgment was intended for an educated or an uneducated congregation. In the latter case, the Bishop remarked, they will not understand a word of it; in the former, they will think that you are mad. And Mr. Saxon, whose story is described as "of the Church and the world," began his experiences of the Church in the East-end of London. This region, as the ancient manor of Stebonheath, was formerly a favourite royal hunting-ground, and has since passed into the hands of the novelists, who range in it at their will, starting by general consent such game as they may please. It is therefore quite natural to learn that in the parish of Whitechapel "on every acre there dwelt a thousand heathen," the area of the parish consisting actually of 174 acres, with a population, including many Jews and some Christians, of

34,874. The larger Whitechapel Union, on an area of 406 acres, has an average population of 189 to the acre; but "a thousand" certainly sounds better in a story, especially "heathen." In the same way, it is natural to find the Rector of Whitechapel "casting his big body on the little lodging-house sofa, which squeaked like a mouse as it felt the descent of the ponderous frame" in his preparation "to smoke a quiet pipe" with the curate. But from the East End the scene rapidly changes to "Great Axemouth," a "city" somewhere on the southern coast, where, as is usual in "cities," the clerical element in society was strong. There were, in fact, rather more than forty clergymen, of whom "about thirty were of the Gossamer," or Low Church, "party; about five of the Threshem," or High Churchmen, while "the Moderates, as represented by the Vicar, may have been half-a-dozen more." Great Axemouth, it will be observed, differed from other cities in the curious fact that the head of its hierarchy was not the Bishop with his Chapter of Cathedral clergy; but a modest "Vicar," with 400*l.* a year, whose patron, and possibly lay rector as well, was a young baronet given to breakfasting on brandy and beefsteaks, and to making presents of diamonds, at a cost of 500*l.*, to Miss Fanny Featherloe, "the queen of burlesque" at a "London theatre where beauty and dancing are always to be found," and in private life an estimable young lady who lived at home with her old mother, "kept her heart faithfully for the man of her choice, a fellow-actor, and kept her presents, too." There was a bishop somewhere about, available on emergency for the Great Axemouth people, "a quiet, fatherly ecclesiastic," "mild, white-haired," and "old"; but of him we catch only a passing glimpse in his easy chair as he deplores many times over his inability to "refuse to induct" to the vacant vicarage a certain Reverend John Rudd, a popular preacher who appears in the second volume with a black eye, and who disappears from the scene in the third, "half under the vestry table" before evening service, "delivering a second handful into the mouth of the organist, which finishes off his front teeth." It may be well to explain in passing that the author of *Harold Saxon*, in common with many older and wiser persons, disapproves of the buying and selling of church patronage through ecclesiastical agents; and that, by way of emphasizing this censure, the representative of this agent class, one Mr. Augustus Fly, is made to enter on his profession by being physically kicked downstairs, a process which is repeated metaphorically by his biographer at intervals throughout the story. The early client of this gentleman, Mr. Harold Saxon, is made also to fall downstairs, but with no other assistance than that of a small dog, and with results which prove in the end highly beneficial to his fortunes.

Next to the extermination of traffickers in advowsons, the purpose, if there be a purpose, with which this story has been written would seem to be the exhibition of a remedy for the Agnosticism of the day, especially as it prevails among interesting young men and is associated in their views of life with a contempt for young ladies and a general disbelief in love. The charm is effectual, to be sure; but, like many of the charms of the middle ages, its extended use is hindered by the two difficulties that it is very costly, and that the conditions under which alone it can be secured are more than exceptional. Two heiresses with something approaching half a million between them are not waiting everywhere to solve the perplexities of the drifting clergyman and the demented layman, his friend; nor is it usual for a well-endowed young lady to lie stone-dead and cold in a deserted house by the sea, which the storm-waves are preparing each moment to dash into ruins, while notice is on its way to the coroner, till it suddenly occurs to her to begin to sing, and then to ask, as she stands "flooded in the moonlight," "'Why'—with a pause of fatigue before she went on—'why have you left me alone so long in that cold room?'"

This young person is Miss Gertrude Treasure; and the two gentlemen thus addressed are Harold Saxon and one Donoughmore O'Brien. To the former she had become casually engaged many years before, and had kept up an affectionate correspondence with him as her "darling old man." She had declined, indeed, on various pretexts, to marry him, as to which, seeing that he had private reasons of his own to consider, he did not much complain. But as the plot of the story depends on Harold's entire ignorance of any relation between Gertrude and O'Brien, it is, to say the least, a trifling oversight on the part of the author to make O'Brien, after relating to Harold the history of his secret marriage, go on to tell how not long afterwards his brother Anthony "threw a note on the table before" him, saying, "Your friend Miss Treasure desired me to give this to you privately." It was the key to the whole secret; and nothing whatever comes of it. It is, however, due to the author to state that mere conditions of sequence in time are not allowed to interfere with the development of the idea of his work. The second heroine remained with her father and her two brothers at Florence till she was fourteen; and she was just "entering upon her thirteenth summer" when, after the return of the family to England, she is first introduced to the reader. Upon the tragic history of this young lady's two brothers, Donoughmore and Anthony O'Brien—the sudden end of the one, the stormy despair of the other—we would dwell if it were possible. They were twins; they grew up exactly like each other; they were dressed with faultless care, and that "dress, down to the smallest particular," was the same in both. In one moment, too, they met their fate. Sworn by the bond of brotherhood never to desert each other, bound by the maxims of an adamant philosophy to defy, or to deny, all charms of woman, they both fell hopelessly in love with Gertrude Treasure the first moment they saw her at the

* *Harold Saxon: a Story of the Church and the World.* By Alan Muir, Author of "Children's Children." 3 vols. London: Smith, Elder, & Co. 1882.

luncheon table of her father the rich farmer. But across our most determined efforts to think of, or to describe, the consequent catastrophe, with fitting seriousness, there come the memories of Alice in her interview with the two brothers who "resolved to have a battle," and Donoughmore and Anthony transform themselves into Tweedledum and Tweedledee, while the phial which had contained the deadly draught becomes the little white rattle lying on the ground. If again we try to picture from his own and "Gertrude's story" the agony of the surviving brother as he "went hither and thither over the grounds," his "clothes and face torn with branches of trees—what a face! Tyn, gashed in several places, covered with blood and disfigured with dust"—yet another figure arises from still earlier memory of the man who, "wondrous wise" as the philosophic Donoughmore himself, had like him "jumped into a quickest hedge" with as disastrous consequences. It is useless to make any further attempt; but we may suggest to the author that the machinery by means of which the distracted husband is concealed by Gertrude is just a little too extravagant and impossible for waking readers.

But *Harold Saxon* is not a book for serious criticism. Its simple ignorance of affairs in the Church, and its happy innocence of the world and its bad ways—for the chapters about Miss Fanny Featherstone are charming in this respect, and the boat incident with Mrs. Vesey shows that there are other things with which the writer is as little familiar as with the "mushroom" hat, which would undoubtedly have formed Muriel's "head-gear" on the occasion—are in perfect keeping with the form which the speculations of modern unbelief are made to assume. "The struggle," cries Donoughmore, suddenly, as they stand by the seashore, "shall not be long!"—

The order of nature is doomed. The sun shall set to rise no more. The last beam of light shall be swept from the sky amidst the roar of some universal tornado, which shall be the herald of returning anarchy. And if nature be thus doomed to extinction, who shall express the brittleness of human joy? Nature is the struggle of the universe to escape from chaos. But deep shall swallow up deep. Society shall sink and be lost in the gulf of nature. Nature shall drop into the gulf of chaos. I see the globe wrecked. I hear the helpless cries of her millions as she rushes wildly into the blackness of some untrodden destruction.

Whether this prose-ode be original, or deliberately "after" Bon Gaultier's "Death of Space," it is equally deserving of high praise, both for its conception and execution. As a vision of "Infinity creeping into her shell" it is almost perfect.

As with some of the characters of *Harold Saxon*, in whose stead other figures will rise than those which the author presents to us, so it is with the personality of Alan Muir. He is, we know, a man of experience in the Church and the world, stern and severe; but yet there does arise persistently the picture of a freshly-emancipated schoolgirl, whose first blushing literary effort, *Children's Children*—a book which we have not the happiness of remembering—had for its subject Dolls, and who has been wont to charm her room-mates with thrilling or entrancing stories in those delicious half-hours when the candles are put out, and all talking strictly forbidden, and when the horror or the suspense of the narrative deepened as some approaching footstep suggested the dread of a loss of conduct-marks all round. What need could there be of balanced probabilities in the plot, or of precise consistency in details, when the auditors were softly dropping off to sleep, and perhaps the story-teller herself found the directions about wearing the diamond locket fading away from her own thought as completely as they faded from the consciousness of Gertrude in her trance? With such a vision before our eyes, we could not find it in our hearts to write a word in unkindly criticism of the lively and harmless nonsense which has amused us in *Harold Saxon*.

THE INGENIOUS KNIGHT DON QUIXOTE.*

"BUT for all, to my seeming," said Don Quixote to the author at Barcelona, "this translating of one language into another—excepting those queens of tongues, Greek and Latin—is much like beholding a Flemish tapestry from the wrong side, where, although the figures be seen, yet are they so covered with threads which hide them, that their smoothness and beauty cannot be seen." The quotation might appropriately be taken as a motto and plea for considerate criticism by whoever undertakes the difficult task of rendering *Don Quixote* into English. The smoothness, in other words, the flowing style of the original, is far from making the task any easier. It is by no means in one of those "easy languages" the translating of which "argues neither genius nor eloquence." Yet our translators have apparently been hitherto of a different opinion. They have treated Cervantes with a carelessness few Englishmen would be bold enough to show to the classics. His work has been made a vehicle for the translators' own literary quarrels or satire; it has been rendered by workmen who had no qualification for the undertaking beyond a love for the original, and it has been done as hack work. Allowing that the merits of his English style are to exempt Shelton from this general censure, yet his work is inaccurate, and the translation which goes by his name is probably not all by his hand. Moreover, even if his rendering were free from mistakes, it gives no longer a true picture of the original. It is now in style much

the older of the two. The Castilian of Cervantes is, as Don Juan Valera insists, "not a dead language"; it is, with few and unimportant exceptions, the language which is spoken to-day. In the meantime the whole tone of English prose-writing has undergone a profound modification. The Spanish of Cervantes is simpler and freer of movement than the English of his contemporaries. The translator who undertakes to present the *Don* in an English dress to-day would therefore do better to take, if not Thackeray, at least Fielding, for his model, rather than mould his style on Ben Jonson. The Spanish language has been far more stationary than ours. Its literature was greatly influenced by the French during the last century, and lost colour and character in consequence. The few writers of that period were men of little or no originality. The principles and the style they adopted were in them mere echoes—the letter, but not the spirit, of French literature; and, being utterly uncongenial to Spanish taste, struck no root. The literary revival of this century has produced nothing great, but it has at least the merit of being national. It has drawn for its style on the language of the people, which remained unchanged under the French varnish of the Court and the academies, or it has reverted to the great models of the sixteenth century. The best writers of this generation—Castro y Serrano, for instance, or Pedro de Alarcon—are nearer Cervantes, or even Santa Teresa, than they are to the Padre Isla. There was not life enough in the Spanish literature of the last century to modify the language. The utmost it could do was to introduce a few Gallicisms, which are now being weeded out.

If there is, then, any foundation for these observations, it follows that an English translator of *Don Quixote* should avoid going to the English contemporaries of Cervantes for his style; since, even supposing him to be successful in his reconstruction of the language of a former generation, the result would only be that sort of literal rendering which is no true translation. Still more should he be careful to avoid using words which are older than his original. The main fault we have to find with Mr. Duffield's translation is that he does both of these things, adding to the difficulty which must exist in translating Cervantes the further difficulty of putting back the language some two hundred and fifty years. His translation, though not free from errors, is more generally accurate than any hitherto made. It is needless to say that he has added nothing of his own, while the very few suppressions he has made do not affect the substance of the book, and are justified by changes in taste, but the effort to be archaic hampers his style, and leads him into anachronisms. The following quotation is a fair specimen of Mr. Duffield's style. It is from the eleventh chapter of the first part, which gives the Don's adventures among the goat-herds:—

Seeing him [i.e. Sancho] standing his master said to him, "That thou mayest know the good which is comprehended in knight-errantry and how quickly they who exercise themselves in ministering to it come to be honoured and esteemed of all the world, I desire that thou seat thyself here, at my side, and in company with these good people, and be one and the same with me, who am thy master and natural lord, and eat of my dish and drink out of the cup out of which I drink, for of knight-errantry may be said the same as of love, that it levels all things."

"Gramercy," quoth Sancho, "but I can tell your worship that if I had plenty to eat, I could eat it as well and better standing and by myself than if I were seated on a level with an emperor. And besides, if I must speak the truth, I relish much more what I eat in my corner without niceties and ceremonies even though it be bread and onions than turkey cocks at other tables where I am forced to chew slowly, drink little, wipe me often, neither sneeze nor cough when I have a mind to, nor do other things which solitude and liberty grant. Argal, good master, these honours which your worship would put on me for being minister and follower of knight-errantry—as I am being squire to your worship—change them into other things which may be of more advantage and profit to me; for these, though I hold them to have been received in full, I renounce from here to the end of the world."

"For all that," said Don Quixote, "thou hast to sit thee down; for he who humbles himself God shall exalt," and taking him by the arm he compelled him to sit near himself.

Now this passage, which, as we have already said, is a fair example of Mr. Duffield's manner, illustrates what is worst and best in it happily enough. It is an accurate translation; but we feel that the style is not natural to the translator—that he is conscious of effort in composing—which is the effect least produced by Cervantes, one of the most spontaneous of writers. Besides Mr. Duffield has gone out of his way to choose words which are antiquated or peculiar, and therefore improperly put in the mouth of Sancho. A certain pedantry is proper enough to the master, when consciously playing the part of knight-errant, though at other times he is perfectly unaffected; but Sancho's language is that which his worthy descendants are speaking at this moment, except where he uses an ambitious word picked up from the Don or a scrap of Latin from the priest. It does not follow as a matter of course, because a conceited clown in Shakespeare used the word "argal," that it is a proper translation for Sancho's "asi que," or that minister is a proper rendering for his "ministro." The latter, as an ecclesiastical word applied to the servants in the sacristy, meant something very different from "minister" for Sancho. Mr. Duffield seems to us to yield too often to the temptation of using an out-of-the-way or utterly obsolete word without regard for the fact that the Spanish original is still in familiar use. An instance of this is found in the frequent use of the word "rouncy," as a translation for rocin. Not only does Mr. Duffield use it in the narrative, but he puts it in the mouth of the housekeeper, who would have been considerably surprised to find herself speaking an unknown tongue. The use of the word is hardly justified by a quotation from the *Canter-*

* *The Ingenious Knight Don Quixote de la Mancha*. Composed by Miguel de Cervantes Saavedra. A new Translation from the Originals of 1605 and 1608, by A. J. Duffield. London: C. Kegan Paul & Co. 1881.

bury Tales. Much of Chaucer was obsolete long before 1605, and we may ask, Why stop at Chaucer? Once set on so good a road, why not go right back to King Alfred, his well of English is even less defiled. And there are many other words of the same kind—"assured" as the translation of *seco*, "ruthful," "cautelous," and so on, words which, as they are antiquated, need not have been used to translate the commonest Spanish words.

Nor is Mr. Duffield completely free from mistranslation pure and simple. "*Del sahumero os hago gracia*" is rendered "For the perfumery I thank you," as if the original had been "*Oa doy gracias*." The word used ought to have been excuse or remit. "Windmills of eleven stories," for "*molinos de once piedras*," is perhaps a misprint for "stones," though we do not find it in the *errata*. In the expression "*caballero asnalmente*," Cervantes makes a play on words, such as he was very fond of, and which is perhaps not capable of exact translation, but "mounted asswise" is surely a mistake. The point of the original lies in the fact that "*caballero*" means both horseman and knight in Spanish. Perhaps it could not have been preserved in any case, but it need not have been thus replaced. The Don was not mounted like an ass, but on an ass. Once or twice Mr. Duffield contrives to unite in one sentence a too literal translation and a mistake. Thus the Don's challenge to the traders from Toledo, "*Todo el mundo se tenga si todo el mundo no confiesa*" is rendered by "Halt all the world, and let all the world confess," whereas the Knight of La Mancha ordered everybody to stop unless everybody confessed what he desired them to confess as to the beauty of the peerless Dulcinea. Thus, too, we have "successes" for "*sucesos*," and "gracious artifice" for "*gracioso artificio*." One of Mr. Duffield's mistakes is made prominent by occurring in a passage which he has selected for comparison with a passage from his predecessors. He gives "*palacio woods*" for "*rincones de los palacios*" where Motteux has accurately translated the "corner of great men's houses."

Before leaving Mr. Duffield's translation we have a few observations to make on his prefatory matter. Mr. Duffield advances a theory that Cervantes had a hidden meaning; that he was making a disguised attack on despotism, priestcraft, and even, as we gather, on at least some of the doctrines of the Church. He asserts confidently that the clergy felt themselves assailed, and tried, if not to suppress the book, at least to damage it. We cannot find any evidence in support of either statement. The book could never have been published without the consent of the Inquisition, which, had it pleased it, could have immediately suppressed it. As for the esoteric doctrine theory, which is mainly due to L. Viardot, it can only be maintained by such forced interpretations, and ingenuity in finding references where none were meant, as would equally serve to prove that the book was written to demonstrate the possibility of squaring the circle. But Mr. Duffield is not consistent with himself in his explanations. Not only was Cervantes a great religious reformer, but his book was written to abolish the books of chivalry; not to laugh at more bad literature, which was the intention with which Cervantes undoubtedly began it, but to free Spain from "that form of delirium which comes from the unnatural excitement of the fancy." The whole country was given up "to the dazzling wonders of a heavenly, an earthly, and an infernal chivalry which made men mad." Putting aside the question how far this is a true description of the books of chivalry, we have to account for the fact that it was the men of Spain's greatest generation who were made "mad" by them. The works which formed the favourite reading during boyhood of such men as Cortes and Diego de Mendoza cannot have been merely noxious. Besides, if the literary taste of the country was in this corrupt state, how came it that *Don Quixote* had such immediate and complete success? The fact is that books of chivalry were falling into discredit long before Cervantes attacked them, both in and out of Spain. Mr. Duffield would appear to be so eager to explain the hidden meaning of his hero's life and book that he has been somewhat hasty in his examination of the facts. This becomes still more noticeable in his sketch of Cervantes's life. Mr. Duffield tells us that Cervantes was born "on the 9th of October, 1547—at least so it has been said in official quarters"; whereas all that is known is that he was baptized on that day. Again, he says "he became the friend of the father of the Spanish theatre"—meaning, no doubt, Lope de Rueda, who was very far from being the father of the Spanish theatre, and whom Cervantes only says he had seen. As to his military life, "*Cervantes . . . enlisted*," as Mr. Duffield puts it, "first under the banner of the Colonna, but finally deciding for the career of a soldier, fought his first and last battle under Prince Don John of Austria." He was throughout a Spanish soldier in Don Diego de Urbina's company in the *tercio* of Moncada; and, although Mark Anthony Colonna was a general in Philip II.'s service at one time, he was then commanding the galleys of the Pope; and, moreover, Cervantes never was in the service of that family. At Lepanto his galley was stationed with the Venetian squadron of Barberigo; and, so far from that being his last battle, he took part in the expedition against Tunis; and, after his release from captivity, he re-enlisted for the invasion of Portugal and the *Terceiras* under the Marquis of Santa Cruz, and was in the fight against the French. We recognize the zeal with which Mr. Duffield has set about his difficult task, and, while we acknowledge the success which he has attained, we cannot help regretting the hasty and uncritical spirit displayed in some parts of his work.

MAX MÜLLER'S SELECTED ESSAYS.*

MR. MAX MÜLLER has reprinted, in two handy volumes, a selection from his *Essays on Language, Mythology, and Religion*. No one has done so much as Mr. Müller to kindle English interest in these subjects. He has a large and active band of followers, and even those who, like ourselves, differ greatly from Mr. Müller's explanations of the growth of mythology, must admit that his hypothesis was a necessary stage in the development of opinion. When philology became a powerful scientific instrument, people naturally expected it to pick many difficult locks, and it has been freely applied as the key of mythology. We propose to examine, in this review, Mr. Müller's use of this key, and to consider some other explanations of the difficulties which he thinks he has solved. As Mr. Müller has subjected his work "to a more careful sifting," his views may be regarded as, for the present, final.

His article on Comparative Mythology (vol. i. 306) was originally printed in 1856 in the *Oxford Essays*. It has lately, as we have seen, been "carefully sifted." In this essay (i. p. 306) Mr. Müller remarks:—"As far as we can trace back the footsteps of man, even on the lowest strata of history, we see that the divine gift of a sound and sober intellect belonged to him from the very first; and the idea of a humanity emerging slowly from the depths of an animal brutality can never be maintained again in our century." If by "maintain" Mr. Müller means "persistently uphold," this prediction has been falsified by Mr. Darwin. As to the soundness and sobriety of early man's intelligence, we fear the remark is only true in practical matters. In mythology, savages show an insane credulity, as when an African tribe believes that the world was made by a big spider. About his daily life, man, as soon as he exists, is perfectly wide awake. But the backward races—savages like the Australians, Bushmen, Red Indians, and the rest—do not display a sound and sober intellect even now in those matters with which Mr. Müller is concerned—namely, religion and mythology. The very reverse is the case. The credulity of savages; their explanations, neither sober nor sound, of the universe in which they find themselves are the marvel of missionaries from Charlevoix to Dr. Moffat. These explanations are treasured in the mythology of savages, which consists, from Kamtschatka to the Cape, and from Australia to Lapland, of a series of wild propositions about "gods and beasts and men." Mr. Max Müller recognizes in the essay which we are examining a similar "insanity" in the mythologies of India, Greece, and Rome. The word "insanity" is his own. "Was there," he asks, "a period of temporary insanity through which the human mind had to pass, and was it a madness identically the same in the south of India and the north of Iceland?" (i. 309). To this question we reply, certainly there was such a period of temporary insanity, as civilized philosophers count madness. Savages vary much in intellectual development, but the common characteristic of all their physical, metaphysical, and spiritual philosophy is something which certainly, to civilized men, has all the appearance of lunacy. Remains of this period of temporary insanity are freely scattered through the mythologies of the cultivated races. "The traditions of the Red Men," says a writer in Schoolcraft's Collection, "are the *Metamorphoses* of Ovid rendered into Indian." Our view would be briefly stated if we said that the *Metamorphoses* of Ovid are the traditions of Red Men, Eskimo, Ahts, Bushmen, Kanakas, Zulus, New Zealanders, Fijians, rendered into Latin. Ovid used the materials which the ancestors of Greeks and Romans, when they were in the intellectual condition of Murri and Maori, bequeathed to later religions. These materials were the expressions of savage speculations which, to modern ears, sound like insanity.

Now let us turn to Mr. Müller's theory:

Let us think [he says] of the times which could bear a Lykurgos and a Solon—which could found an Ateopagos and the Olympic games, and how can we imagine that, a few generations before that time, the highest notions of the Godhead among the Greeks were adequately expressed by the story of Uranos maimed by Kronos—of Kronos eating his children, swallowing a stone, and vomiting out alive his whole progeny. Among the lowest tribes of Africa and America we hardly find anything more hideous and revolting.

A natural and obvious explanation of Mr. Müller's difficulty is that the ancestors of the Greeks were once in the intellectual condition of the lowest tribes of Africa and of America; that they, like the Africans and Americans, found nothing incredible or revolting in the "swallowing myths," and that these myths, once admitted into tribal religion, got a hold on mythology which was never shaken off. There is nothing contrary to experience in this explanation. We know that the Athenians in their mysteries, like the Australian Maori and the African Bechuannas, daubed themselves over with bran and clay. We know that the Athenian maidens when they arrived at puberty danced the bear dance, imitating the attitudes of the bear, in the temple of Artemis, just as the daughters of the Australian Kurnai dance the bear dance now in the ceremony which admits them to the ranks of marriageable women. Harpokration, and even Liddell and Scott, indicate these savage rites under the words *ἀρουαίρειν* and *ἀρουαίρειν*. We prefer to look on the passage of the human intellect from the "temporary insanity" of savagery as one of gradual evolution. But, on Mr. Max Müller's system, man's early philosophy should have been more rational; and so Mr. Müller

has to devise a scheme by which man's original soberness and soundness were degraded to the condition in which Greeks imagined the story of Kronos and the stone, and the hideous mutilation.

Let us examine now Mr. Müller's theory of "the mythopœic period." It is hard to do this properly in a short review, where we are inevitably obliged to give a mere summary of a long process of explanation. As we understand Mr. Müller, "the mythopœic period" (i. p. 355) was "previous to any national separation" of the stocks which are spoken of as the Aryan race. Even before the separation the Aryan race was, as we may say, civilized. "They knew the arts of ploughing, of making roads, of building ships and carts, of weaving and sowing, of erecting strongholds and houses, more or less substantial. . . . They had tamed the most important domestic animals; they were acquainted with the most useful animals." Here we must explain that myths identical in grotesque and incredible hideousness with those of Greece are found among contemporary races which cannot plough or make roads, or build ships or carts, and which have few domesticated animals. We should, therefore, expect to find similar myths among the Aryans also before they could plough or sow, or tame horses or oxen. Are we to believe that the Aryans, after they were civilized, evolved myths identical with those framed by other races before they are civilized? We presume that this is Mr. Müller's theory. His explanation of Aryan mythology we may attempt to state thus:—Early language was necessarily material, or perhaps we should say physical, in its character. Breath, spirit, shadow are physical facts, and their names became names for life, soul, ghostly shade. Again, early language had "necessarily" [why?] "terminations expressive of gender"; so that the names for earth, sky, and so forth, "received, not only an individual, but a sexual character. . . . What must have been the result of this? As long as people thought in language, it was simply impossible to speak of morning or evening, of spring and winter, without giving to these conceptions something of an individual, active, sexual, and, at last, personal character." May we not ask whether language was not constructed on these principles because early man thought that all things had a personal character? Mr. Müller's view is that things acquired a personal character in obedience, on the other hand, to the terminations of early language. The Australians conceive all nature as not only gifted with sex, but arranged, like the natives, into a few families. Such notions are universal among savages. Did these notions give rise to the languages in which gender is denoted, or did the languages give rise to these notions? Leaving that part of the problem, we return to Mr. Müller's theory. All words for all nature in early language implied life, sex, personality. Here we have the germ of a story about the things of nature conceived of as persons. But "all these sayings, though mythical, are not yet myths. It is the essential character of a true myth that it should no longer be intelligible by a reference to the spoken language." This sentence, if we correctly understand Mr. Müller, contains the gist of his theory. May we state it shortly thus:—Before and after the Aryan separation a number of personal and sexual names for the things of nature, and of statements about nature, existed, and were understood. Before and after the separation the different scattered tribes evolved new terms, lost the meanings of the old names and statements, while retaining the forms, and so found themselves in possession of a number of traditional expressions which had ceased to be anything but stories or myths. This process would be facilitated by the large number of synonyms for the same object which exist, Mr. Müller says, in the more ancient languages. And thus, if our reading of Mr. Müller is correct, the figurative terms of the civilized undivided and divided Aryans became the myths of the united and separated Aryans. These myths, as we have said, contain many features identical in character with the myths of the lowest savages. We are to believe that language had lost its meaning, and that words had been converted into myths before and after the Aryan separation. If myths grew up before the separation, how long before may the process be dated? May it be carried back to a time when Aryans had not become civilized, but were still in their savage condition? If this is granted, then the Aryan myths which are identical with those of Ahts, and Bechuanas, and Murri arise from a state of mind also identical with that of low savages. Now, an investigation of the intellectual conditions of savages proves that their myths are the natural expression of their belief in magic, in the intercommunity of man's nature with the nature of animals, plants, winds, and stars, and are a statement of the results of their crude efforts at physical and metaphysical philosophy. In short, savage myths are the fiction and philosophy of a childish and unsteady intellect. That condition of the intellect is constantly being examined by students like Mr. Tylor and Sir John Lubbock; but we are not aware that their researches have anywhere discovered among human beings the stage of intellect and of language, from which Mr. Müller, in the essay we are examining, derives mythology. In that stage of language most objects have dozens of names, each "originally an appellative or predicate, expressive of what seemed at the time the most characteristic attitude of an object" (i. 376). Mr. Müller adds, "in the course of time the greater portion of these names became useless, and they were mostly replaced in literary dialects by one fixed name, which might be called the proper name of such objects." Among the innumerable races which have no literature, and no literary dialect, do we find any or many in which the sun, for example, the wind, and the dawn, have each between ten and fifty names? Do those

names get applied to other objects which happen to possess the same quality? Is there, or is there not, a body of historical evidence for this condition of language co-extensive with the distribution of myths identical in ridiculous, disgusting, and incredible character? Mr. Müller refers for examples to the Vedas (i. 377). But the Vedas are acknowledged to be the singularly artificial compositions of an age and a race which may almost be termed completely civilized. This being admitted by Sanskrit scholars, what evidence about the origin of religion or mythology can we reasonably expect to derive from the Vedas?

Mr. Müller's theory of the origin of myths presents many singular difficulties. One will instantly occur to every reader. Mr. Müller, like the later Greeks, like Pindar and Plato, and probably Homer (whose mythology is singularly pure), is horrified and astonished by the state of mind in which Greeks could believe in the mutilations and cannibalisms and bestial amours of gods. Such beliefs, when found among savages, do not, even to Mr. Müller, appear so very remarkable. Cannibal men, cruel men, men who believe in their own descent from beasts, naturally see little harm in cannibal gods, cruel gods, gods who intermarry with beasts. But it is odd, certainly, that Greeks should have had similar superstitions. Mr. Müller's explanation is that an accident, an inevitable accident, of language, degraded men, almost completely civilized, to the grovelling credulity of cannibal savages, whose ancestral heroes married wolves and musk rats, or were crabs and crayfishes. Can any unbiased student doubt that the theory which makes cannibal and bestial myths proceed from cannibal and bestial minds is more rational than that which says the myths were forced on civilized minds by a corruption of language? Or are we to aver that Ahts, and Dacotahs, Murri, and Khonds, and Kanakas, were all at one time civilized, that processes of language corrupted their mythology, and that they adopted cruel and cannibal customs, and insane beliefs about kinship with animals, that they might conform their conduct to their new religion, the religion of language in decay?

Mr. Müller's theory is so widely accepted, and has such almost undisputed sway in modern mythological speculations, that we have thought it deserving of a fresh examination. Postulating a sober condition of the primitive intellect in matters of mythology, Mr. Müller was compelled to devise a theory of degradation to account for classical mythology. That theory he based on philological facts, for which we ask a corresponding amount of evidence. But the hypothesis necessarily falls into all the perplexities of the theory which makes degradation as the rule of human evolution.

In leaving this topic we must guard ourselves against being supposed to hold that no myths arise from confusions of language. There are plenty of such examples. Again, we go on no theory of man's slow emergence from "animal brutality." We take man as we find him, in Australia, Africa, America—as perfectly human, but inordinately childish in his explanations of the universe. We maintain that it was not confusion of language which degraded Greek mythology, and, as a consequence, Greek religion and conduct, to a savagery like that of Bushmen. Savage mythology, savage religion, savage practices were the early conditions of Greek thought and behaviour, and were never completely burned away by that ardent Hellenic spirit which flamed and fell too swiftly to complete its purifying task.

FLORA HEPBURN'S MARRIAGE.*

EVERY ONE knows, if only at second hand, the disadvantages of being surrounded by a melancholy ocean. But it may be doubted whether any one is in a position to appreciate the real drawbacks of that position so fully as the critic of novels. He is perpetually surrounded by the most melancholy of oceans, an ocean of first and second books which sometimes promise more or less well, but which hardly ever perform. From what we remember of Mr. Laurence Brooke's earlier work, he is a person on whom if not exactly great expectations, at any rate expectations not wholly small, might have been founded. His *Queen of Two Worlds* showed a certain faculty of imagining or reporting character, and a certain faculty of tolerably brisk and interesting narration. *Flora Hepburn's Marriage* ought to have shown some development and expansion of these good gifts. As a matter of fact, it shows a distinct and lamentable falling off. That there is a certain repetition of the component parts of the former book does not very much matter. All our best living novelists, and some novelists of the past who were much better than any now living, have repeated themselves constantly. If the repetition is accompanied in each case by some fresh display of literary talent or some fresh evidence of observation of human nature, it may be excused, or even more or less thankfully accepted. For the creative talent is not to be had for the asking, and in default of it we must be satisfied with that which is observant and analytic.

Unluckily, *Flora Hepburn's Marriage* shows no new evidence of observation and criticism of life on Mr. Brooke's part. Nay, more, it gives, we are afraid, pretty clear evidence of much acceptance of second-hand estimates of that life, a thing altogether intolerable in novel-writing. It may seem absurd to find fault with a man for spelling Lafite with two ts, as Mr. Brooke does throughout his book, yet we have more than once noticed

* *Flora Hepburn's Marriage*. By Laurence Brooke. 3 vols. London: Tinsley & Co. 1881.

that this word is a kind of shibboleth. Besides, Mr. Brooke, not merely spells the literal Lafite with two *ts*, but his whole book is a kind of vast repetition of this blunder. Flora Hepburn is the daughter of a man of excellent family, and originally of some wealth, who has dissipated most of his means by gambling, and has been forced to retire to Leybridge, a country place where he may live cheaply. The theme of Mr. Brooke's first volume, or of most of it, is the old and well-worn one of the pettiness of country society and the rivalry of unmoneyed birth and of moneyed vulgarity therein. To handle this well needs a very sure and fine touch; and Mr. Brooke's hand is neither sure nor fine. Here is an instance. Major Hepburn, as we have said, is a middle-aged man, who has lived in the best society. The time of the book, too, is apparently about ten or twelve years ago; so that he cannot be said to be of other than the present generation. Leybridge is disturbed by the advent of two young men—a soap-boiler, or something of that sort, with a great deal of money, and a good-looking addition to the garrison who has just exchanged from a cavalry regiment. The Major is asked by a good-natured, but rather vulgar, woman to come and meet the latter, Jack Charteris, and this is what he replies:—"I regret, my dear madam, that I cannot assist at the public glorification of this young man, whose advent seems to have created such a stir in our small world. But at present my health is so indifferent that I should make a poor guest. I must beg you to excuse me. Mr. Charteris will receive so much homage that he will be able to dispense with mine." Mr. Brooke hastens to tell us that Major Hepburn's mind was a small one. But we are quite content to let the question of his capability of representing the conversation and manners of persons of Major Hepburn's class rest on this speech, which is simply an impossible one for a gentleman of the latter half of the nineteenth century. "Very sorry, Mrs. Lake, not at all well just now," the live Major would probably have said; and, if he had been very small and very spiteful, he might have added, "Daresay the young fellow will get on without me." But as for Grandisonian sentences, such as those we have just quoted, Mr. Brooke might just as well have made him speak in Japanese. So much for the Hepburn papa; this is the daughter's fashion of speech:—"Have no fear of me, papa; there is no *roturier* blood in my veins. I could keep a whole regiment at bay. No man will ever dare to be disrespectful to me." We should think not. A young woman who can talk like that would certainly put any number of nineteenth-century regiments to flight. As with the *père noble* and the heroine, so is it with the *jeune premier*. Jack Charteris, a young gentleman, and represented as exceptionally natural and unassuming, habitually expresses himself in a style of the noblest rhetoric worthy of his own great-grandfather. "I should be very happy if she would; but my acquaintance is hardly sufficient to enable me to ask her personally." This, translated from fiction into fact, is, we presume, equivalent to, "I wish she would; but, you see, I don't know her well enough." Lieutenant Charteris, however, is far from considering such a style of address proper or pleasing. Even in circumstances when most men speak naturally—that is to say, when he is making love—he retains his grandiloquence, and talks extracts from the Polite Letter-writer. We know few things which spoil the enjoyment of a novel more than this sort of stilted and unnatural talk, unless it be the unnatural and evidently secondhand portraying of character which, unfortunately, is also noticeable in *Flora Hepburn's Marriage*. A book must have a very interesting story indeed to atone for such defects.

Unluckily the story of *Flora Hepburn's Marriage* is very far indeed from being extremely interesting. Flora and the excellent Charteris begin to philander in Polite Letter-writer language at an early period, and continue as they have begun. The young woman who has nothing *roturier* about her, and who could keep a whole regiment at bay, selects as her place of pasture with her admirer a meadow with a public path through it, but fortunately they are not discovered. Charteris, being a simple person, wishes to go to papa in the proper manner, but Flora, for no wholly comprehensible reason, objects, and a great many scenes are taken up with her objections. At last they are secretly married. That the circumstances of the marriage are wholly impossible—a curate marries them in a drawing-room before two witnesses—is but a trifling matter. It seems to be part of the rite of initiation into novel-writing that the neophyte shall take an oath to ignore the existence of the first Earl of Hardwicke. As Major Hepburn immediately succeeds to a baronetcy and a fortune, the innocent reader may think that all goes smoothly. It does not—very far from it; but we are not going to spoil such fraction of story as Mr. Brooke has to tell his readers by indicating the precise nature of the roughness. Suffice it to say that Flora behaves very badly, and Charteris very foolishly, indeed in a manner which almost deserves the word imbecile, and woe comes to all parties. Under what circumstances it comes to pass that marriage again becomes possible for the lady, we need not take the trouble to explain, but Mr. Laurence Brooke has seen in the fact an occasion for a very preposterous "machine" in dealing one of those pieces of second-hand social satire which are so common nowadays, and which for his sins he evidently affects. Flora has a dream. She supposes herself to be married, and her second husband (it should be said that he has been accused of stinginess) suggests that "these things—a fête she is giving—cost an awful lot of money." Her most intimate friend, also a character of the story, comes up and asks her after her husband; the reply being, "I don't think we ever meet except on the stairs." Then her

own husband leaves her for a fortnight with a very insufficient explanation of his reasons for absence, after which the ghost of Charteris turns up, of course very unpleasantly. This dream prevents Flora from marrying, and she ends by devoting herself to good works, while her friend, Mrs. Bingham, fulfils the prophecy of the vision, and becomes a fashionable beauty—in 1870, by the way, which seems to be a slight anticipation of dates. Thereupon Mr. Brooke concludes with some unexceptionable morality:—

I must leave my reader to decide which has the happier life. Mrs. Bingham has set her heart upon perishable things. The woman who subsists upon admiration and popularity must tremble every time she looks at the glass. Her tenure of power hangs upon her beauty, and what art can prevent that from fading? At no distant date she will be supplanted by a younger and fairer rival. What torture will be hers then? To see her portraits displaced; the people who crowded round her crowding round her successor, &c. &c.

Regarded as material of "copyheads" intended for young ladies of promising looks this might indeed have some merit, but it is dull reading otherwise.

We are sorry to have to pronounce so unfavourable a judgment on a novelist who once seemed, as Mr. Brooke seemed, to promise fairly well, but it cannot be helped. *Flora Hepburn's Marriage* has an insufficient plot, and the plot is worked out with more insufficient appliances of observation and literary skill. Some of the scenes between Flora and Charteris do not lack pathos, and the strange situation of the latter, a husband and not a husband, might in the hands of a strong man have turned out well. We are afraid that Mr. Brooke is not a strong man—indeed, we are half induced to doubt his being a man at all. We have seen what he makes of professional beauties and the separate system of husband and wife. A personage not yet mentioned, Mrs. Brierwood, the women's rights advocate, is another instance of the cut-and-dried satire which is so terribly boring in a novel. "With a woman possessing your powers of penetration I am certain that to know men more intimately, will be to despise them as I do." This sentence is perhaps sufficient. So again with Verschoyle, Flora's second suitor. Mr. Brooke has taken a character which in itself is neither good nor bad, but which has capabilities, the character of an easy-going, wide-awake, and rather selfish man of the world, who has never had occasion to deny himself anything, and who rather late in middle life falls really, though not very deeply, in love. Here there is no room for cut-and-dried satire, because the features of the part are not sufficiently salient to have been made the mark of any such. Therefore, Verschoyle is simply null; a human doll who takes up so many pages of *Flora Hepburn's Marriage* and nothing more. Mr. Briggs, the *nouveau riche*, is more capable of receiving colours from Mr. Brooke's second-hand palette, and they are laid on pretty thickly. But the only character in the book which shows the least trace of real power, and this in no very marked degree, is that of Jack Charteris. He is a very improbable young man, and, as has been hinted, more than rather foolish; but as an example of amiable and honourable Quixotism there may be something to be said for him. He is, however, not strong enough to carry even a single volume on his own unaided back, let alone the regulation three, and the book is, therefore, not a little dismal. Even its absurdities are not of that daring kind which affords a certain consolation. They only go to show that the author has endeavoured to draw a picture of the daily life and speech of modern men and women without knowing how modern men and women really live and speak. It is possible that Mr. Brooke has only been unfortunate in his choice of a subject; but, if it be so, his misfortune is still great enough in all conscience.

WARREN'S TEMPLE OR TOMB.*

THERE is an apparently insuperable difficulty awaiting any one who attempts to criticize the theories or dogmas laid down by Mr. Fergusson, in that whatever arguments he may bring forward will fail to meet with the slightest attention. After all the controversy which for years past has concentrated itself upon his singular notion of the site of the Holy Sepulchre, we find Mr. Fergusson from time to time—and may count upon finding him while life lasts—coming forward again with a more dogmatic assertion of his crotchet than before, yet without the faintest indication that anything has been said on the other side. That such a controversialist should ever retreat from his declared position is never to be looked for, if only for the reason that, like Nelson, he can never see the signal. What can be the use of taking up such a challenge for the twentieth time—the challenge of a man who gives out that he "has met no one during these twenty years able or willing to discuss the matter," and that "if there is any one in this country who has taken the trouble to master the subject in all its bearings, he can only express his regret that he is not acquainted with his name"? Those whom he admits to have dabbled in the matter are summarily set aside, as failing in some particular of the manifold qualifications essential to a mastery of it. That each one in his special department concludes against Mr. Fergusson's single verdict goes for nothing. Architects, archaeologists, Talmudists, divines, students of Eastern records may come to one conclusion, only to be set aside. Lightfoot and the Rabbins have attempted

* *The Temple or the Tomb; being further Evidence of the Authenticity of the Present Site of the Holy Sepulchre, &c.* By Charles Warren, formerly in Charge of the Exploration at Jerusalem. London: Richard Bentley & Son. 1880.

the task with great industry, but "they failed for want of local knowledge and of the architectural skill necessary to solve the problem." The late Mr. Lewin was a formidable opponent. He, however, "knew nothing of architecture, and was familiar only with the classical branch of the literature of the subject." The high architectural, as well as archæological, repute of the Count de Vogüé might be supposed to entitle him to speak with some authority on a theme which he had made a special study. Mr. Fergusson goes, indeed, so far as to allow that "Count de Vogüé knows both the art and literature of the subject." That the Count should go dead against him he can only explain by his opinions being biased "by sincere devotion to his infallible Church." That the Church of Rome claimed to be infallible on matters of topography, and that she had in any way bound the faithful to a belief as to the site of the Temple or the Holy Sepulchre, may be within Mr. Fergusson's private knowledge, but is assuredly new to us. That the late Professor Willis of Cambridge was pre-eminently qualified by his knowledge both of the architecture and the historical authorities involved to give a satisfactory opinion upon the subject, would be most commonly allowed, and is admitted in express terms by Mr. Fergusson himself. But before Mr. Fergusson's theory was published Professor Willis had committed himself to an opinion as regards the Sepulchre, and, with a *naïveté* of confession which we cannot too highly commend, we are told that "it would be demanding a little too much from human nature to ask any one in his position to confess the error of his ways, and to admit the success of a rival." Another such rival of a formidable kind Mr. Fergusson had to meet in the "great American Dr. Edward Robinson." A still graver charge, however, is made to dispose of all claim in this quarter. Without even the poor excuse of religious zeal, Dr. Robinson had, it seems, been guilty of inserting two definite articles into the text of Eusebius. "He knew, of course, that he was stating what was not true." The eminent American topographer and biblical student no longer lives to defend his character, but his conclusions rest upon researches and evidences which speak for themselves, and swell the chorus of conviction to which have been since contributed the voices of explorers and inquirers like Messrs. Williams, Palmer, Besant, and the official unbiased staff of the Royal Engineers in the service of the Ordnance Survey and the Palestine Exploration Fund. Whatever minor differences divide these individual authorities, testifying to the independence of their judgment, one and all against one solitary and unsupported enthusiast give their unhesitating verdict that the Dome of the Rock was built to cover, not the Tomb of Christ, but the site of the Temple of Solomon.

In *The Temple or the Tomb* Colonel Warren, R.E., who had charge of the first party of exploration under the auspices of the Fund, surveys in ample detail, though without much systematic arrangement, the whole ground of controversy between Mr. Fergusson and his opponents. His book—made up, in part, of detached lectures upon special points herein involved, in part of notes and critical fragments, loosely strung together—is not one to be read continuously with any degree of pleasure. The facts, bits of historical evidence, biblical and historical quotations, and telling critical argumentation, which he leads to the attack are not marshalled with much strategic method, and pretend to no artistic show of array. They are hurled at the enemy's position in a highly desultory way—horse, foot, and dragoons in turn. Yet each arm must be allowed to be effective; and, though the fire may be loose and intermittent, there is scarcely a shot but tells.

In the first of the four sections of his work, on the parallel holiness of Zion and Moriah, Colonel Warren sums up briefly the historical proofs on which rests the comparative topography of the Holy City. From abundant passages out of the canonical Scriptures, supplemented by the books of the Maccabees, Josephus, and the Talmud, he makes it clear that Jerusalem, Zion, and Moriah were not interchangeable terms, but designated fixed places—the first being applied to the Holy City as a whole; the second, to the westernmost of the three main hills which made up the group, Moriah being the hill to the east, on some part of which, by universal consent, the Temple was built; the third hill to the south-west being known as the Upper City. The Ordnance levels shown in Colonel Warren's contour map prove the last of these to be the highest of the three hills, 2,470 feet above the sea, Mount Zion, originally the highest, having been cut down by the Maccabees under Simon forty or more feet to its present level, 2,430 feet above the sea. This rocky Mount of Zion may without hesitation be identified with Jebus, the original Canaanite fortress taken by Joshua, the Akra of the Septuagint and of Josephus, called also by the Jewish historian the Lower City, being, when cut down, overlooked by the upper city, or city of David, to the south of it. It thus became before Herod's time the citadel of Jerusalem. Round it Herod threw his first wall, his second wall being built upon the lines of the old wall round Zion. Some ten years after the Crucifixion the third wall was built, including the suburb north of Zion, and bringing in the still more lofty hill towards the west (2,490 feet above the sea) traditionally connected with the Holy Sepulchre. In the time of Pilate the plan of the city thus displayed an indented wall bounding Zion to the north-west, Golgotha being in the re-entering angle without the wall, past which ran the main thoroughfare from Jerusalem to Jaffa and Cæsarea. This is in entire accord with the rabbinical rule made clear by Lightfoot, that nobody should be buried within fifty cubits of the wall of a city.

The easternmost of the three original hills is by universal con-

sent known as Moriah. It is once only mentioned in Scripture as the place upon which Solomon built his Temple (2 Chron. iii. 1), though tradition in later times, if not even then, identified it with the site of Abraham's intended sacrifice. On what portion of this rocky plateau, now known as the Haram or Noble Sanctuary, stood the Temple of Solomon, and what were the dimensions of the second temple as enlarged by Herod, is the point to which all the present discussion converges. The focus of interest lies in the Sakhra, the rudely hollowed mass of unworked native rock which rises above the pavement of the noble building thence designated as the Dome of the Rock, traditionally known as the Mosque of Omar. What was this cavern in its origin? when was the building erected over it? by whom, and for what purpose? these are the questions on which Mr. Fergusson stands at bay against the entire host of his critics. This cave he maintains to be the tomb of Christ, and the vaulted building over it to have been erected in its honour by Constantine. Before him, no one is known to have questioned its having been the site selected by David. Which, then, is it, Temple or Tomb? Whatever its original use or subsequent purpose, it was clearly about the last site to have been used as a place of sepulture. It was the well-known rule with the Jews, induced by the nature of the soil, to bury their dead in *kokim*, receptacles hewn in the native rock, branching right and left from a main gallery driven into the face of a cliff or quarry, the mouth of this gallery being closed until the next occasion of interment with a slab or block of stone. Such was the case when Joseph "rolled a great stone to the door of the sepulchre" (Matt. xxvii. 60). In utter contrast to this is the site of the Sakhra—on the very summit of a hill; a natural fissure or crevice, not "hewn," as was Joseph's new tomb; and bearing no trace of the habitual mortuary chambers, or *kokim*. Nothing, at the same time, could be more appropriate for the purpose of a threshing-floor, to which the rock above is assigned by the traditional belief that here stood the angel who stayed the plague, the site being in consequence bought by David from Araunah, and the Temple built over it by Solomon; the highest peak of the hill being naturally chosen, that the corn might be winnowed in the breeze, and the fissure below serving for husbanding the grain. To what other cause but this sacred association with the history of David can we assign the fact that to this day, through all the vicissitudes through which the area of the Haram has passed, this hollow mass of native rock has upreared its rugged head, unprofaned by human tool, in strange contrast with the richness and splendour of the over-arching Dome and surrounding pavement, an object of veneration to Jew and Moslem alike? In later times, it is true, as told by the Arabian writer Mejr-ed-din, additional sanctity came to be attached to the rock as the spot from whence the Prophet sprang on his memorable night's journey on the back of his steed Burak. But in the self-same story we read that the same stone was recognized by Omar, the finder thereof, as the site of the Temple of David. The particulars of this history are quoted by Colonel Warren from Professor Palmer. The holiness of the spot caused it to be regarded, these authorities combine to show, as the Kiblah of all the faithful, until superseded by the Kaaba of Mecca. Here, they point out, was erected by Abd-el-Melek the octagonal building popularly, but erroneously, known as the Mosque of Omar. It is not really a mosque. Here Mr. Fergusson is unquestionably right. Neither is the rectangular building called the Mosque of Hebron. Nor is the latter properly a tomb, but in reality, as our author points out, a place of prayer, or *makam*, adjoining the cenotaphs of the prophets, as in the case of the Wells, or saints' tombs abounding in the East. So at Jerusalem the Dome of the Rock is the well, or oratory; and the Akra mosque, in which Mr. Fergusson would see the site of Solomon's Temple, is, with the other praying places in the Haram area, turned towards Mecca, while the Dome of the Rock, on account of this difference, and not because of its being, as Mr. Fergusson maintains, a tomb, has not its front towards Mecca. In the following passage Colonel Warren sums up briefly the leading points which he has to make good, and which he proceeds to fortify in abundant detail:—

1. That all local indications, all historical accounts, all Christian, Jewish, and Moslem traditions, prove that the Temple of Herod extended from the West Wall of the Noble Sanctuary to the east, from the south wall to the north of the Dome of the Rock platform.
2. That the Dome of the Rock was within the Temple area, and therefore could not have been the sepulchre.
3. That there could not have been ordinary tombs about the site of the Dome of the Rock.
4. That the Dome of the Rock is not a building of the time of Constantine.
5. That Constantine never built any dome over the Holy Sepulchre.
6. That no transference of sites is possible in this case, the historical accounts being so continuous.
7. That Arculf's plan (made in A.D. 680, before the asserted transference) closely resembles the present Holy Sepulchre, and is entirely unlike the Dome of the Rock.
8. That the site of the Sakhra is that which was uncovered by Omar, that it is the traditional site of the Temple among the Jews, and that the Dome of the Rock was built by Abd el Melek.
9. That the present Holy Sepulchre is that which Constantine uncovered, according to all accounts and traditions.

Though all evidence points to the Temple having crowned the summit of Moriah, Mr. Fergusson's theory huddles it away into what our author on comparison of levels calls a hole. The area of Herod's building with its precincts is made to shrink from the magnificent proportions of Josephus to a square of six hundred

feet or less, measured from the south-west angle of the Haram, whereas there is no fact more certain than that the wall of Solomon extended the whole length of the southern face, it being upon the huge foundation course of the east wall that the inscription in old Phœnician letters was found. That the Temple buildings ranged to the north of the Dome of the Rock is made clear by the discovery of the fosse partly filled up by Pompey, and by the identification of the site of the gate Tadi in the northern wall, stoutly denied by Mr. Fergusson, though spoken of in the Middoth. In his dogmatic assertion that the Dome of the Rock was built by Constantine, the only erection of Abd-el-Melek having been the Mosque-el-Aksa, marking the site of the Jewish Temple, he is flatly contradicted by a letter written to the Caliph, quoted by Mesara. Besant and Palmer, speaking of the building of the Dome of the Rock and the Mosque separately as now complete. It is his way to make light of authorities opposed to him, never hesitating, where necessary, to "correct" the figures of Josephus or to "do violence" to the text of Scripture. Contemptuous of tradition as he shows himself to be when in opposition to him, he is so eager to fortify his view of the Dome of the Rock as a tomb as to hamper his theory with the astounding idea that here was the burial-place of David and the early kings. We are to believe that in the sepulchre of David, of which St. Peter speaks as then well known (Acts ii. 29), burial was accorded to one crucified as a malefactor. Hardly less rash can we consider his challenge that, if the Dome of the Rock was not the work of Constantine, "the whole of our architectural science is an illusion." Happily there are architects distinguished in the practice no less than the science of their profession to maintain, as Colonel Warren amply sets forth, that in plan and design the structure is strictly Saracenic, largely indeed made up of materials from the spoils of Constantine's magnificent structures, the pillars round the Dome, for example, being of various marbles, and both capitals and bases differing in pattern and dimension.

With no less clearness and force Colonel Warren draws out the testimony of history and topography to the authenticity of the site traditionally assigned to the Holy Sepulchre. It is *a priori* equally hard to conceive that a spot so hallowed should have passed away from the recollection of the first Christians, as that at a later date a change should, either by fraud or lapse of memory, have come over the popular belief. But this presumption is as nothing in comparison with the weighty proofs which our author is able to adduce from his careful survey of the site by the light of historical notices the most varied and authentic. Eusebius, who was present at the dedication of Constantine's church, which took the place of the Temple of Venus, built doubtless by the Romans in derision of the sacred spot, speaks of the preparation of the site, and its relation to the magnificent range of buildings designed by the Emperor, extending eastwards to the Temple Mount. The direction of Constantine's church, still to be traced by the foundations, is in a line exactly at right angles with the Haram wall. The testimony of the Bordeaux pilgrim, A.D. 333, of St. Cyril, A.D. 347, and of St. Jerome, who lived at Jerusalem, A.D. 400, comes in to the same effect. Whatever proof might have been adduced by the architecture of the fane itself has been hopelessly set aside by its total demolition under Chosroes the Persian. The like fate befell the second church built upon its ruins by Modestus, A.D. 629, and described by Arculf, who visited it in 680, whose plan is of supreme importance for the entire topography of the Holy City. Thrice burnt and rebuilt during the eighth and ninth centuries, the group of churches over and round the Holy Sepulchre were again totally destroyed under the mad Kaliph el Hakim, A.D. 1010. The church now existing, built in the main by the patriarch Nicephorus, A.D. 1048, modified by the Crusaders, extensively damaged by fire in 1808, and subjected to alteration as lately as 1867, when the Dome, partly open, was entirely covered in, has of course nothing save the site in common with the original memorial building of Constantine. But no impartial student can, we feel assured, lay down Colonel Warren's able work without being convinced that the site has, at all events, been identified beyond doubt.

MINOR NOTICES.

MRS. COMYNS CARR proves by her volume called *A Story of Autumn* (1) that the art is not lost of composing out of the simplest materials a story which shall be really interesting and charming, without any hint of "sensationalism," over-sentimentality, or fine writing. The "Story of Autumn" is told by a certain Miss Craven, daughter of the aged Rector of Firley, to one of the girls living hard by, to whom she has constantly been kind. This girl, full of some little love grief, goes for comfort to her old friend, and presently says to her:—

"What was it that happened when you were young, Miss Craven?"

"Many things, child, many things."

"Ah, yes; but one thing I mean. Won't you tell me?"

She mused. "There's great comfort in thoughts of another's happiness," said she.

"Yes," I answered doubtfully.

"Ah, that will not come to yet awhile, Kate. But be patient," replied this old maid, who, of all old maids, has ever seemed to me the most patient herself.

"You and I have both made a mistake," she went on, "but the mistake's end was only the necessary consequence of the beginning. Kate, if things had happened as we wished, may be we should have been less happy than we are now. That seems poor fun, eh, child! and I forget that you have no 'have been' yet. Well, well, if you should chance to be an old maid when you come to my age, dear, think of what I say now, and I am sure you will not be an unhappy one."

Then follows the story, which the supposed narrator tells in the third person, since, as she says, "there was so little of the 'I' about her (Miss Craven) that I can never think of her as talking of herself." The story is, as we have hinted, of the simplest possible kind, and the more credit is due to the author for having made it one of the most attractive little volumes that we have read for a long time. The attraction lies in a combination of qualities which are by no means too common among story-writers. The story is told as simply and directly as it is imagined, there is no attempt at mystification, and no pauses for the writer to pose as a moralist. The characters explain themselves, and are drawn with a light yet firm hand. The style, easy and pleasant, has a character of its own without a touch of affectation, and for once the self-sacrifice which women authors are too much given to glorifying indiscriminately seems the only natural and proper thing for a girl like Miss Craven to do. We must not close our notice of an excellent little volume without a word of praise for the descriptions.

A very interesting account by Mr. Nicholson of the Roman Villa near Brading, in the Isle of Wight (2), has been reprinted from the pages of the *Antiquary*. The volume is very well got up, and is illustrated by capital photographs.

People who know and share Peacock's dislike of the Learned Friend and the Steam Intellect Society may at first sight look with some disapprobation on a volume of patches from the *Spectator* (3). But they will, perhaps, remember that many readers of the present day would recoil in dismay from the volumes of the *Spectator* unless they should chance to be lured on to them by the volume of selections which we are now considering. They will also recognize the fact that no one could be better fitted than Mr. J. R. Green for the task of compiling such a volume, and, finally, they will certainly read Mr. Green's Introduction with interest and pleasure.

The comparatively early death of the late Dr. Appleton deprived the English world of letters of a very earnest devotee of literature, and of what is perhaps rarer, a capable organizer of literary work. The fragments here given of Dr. Appleton's own work (4) may not give the highest idea of his powers, but in truth those powers did not in such work find their appropriate field of operation. The *Academy*, and the memories of the numerous friends which the *Academy* gathered round its editor, are really his chief monuments, and of both of these the Life prefixed to this volume gives account, much of it being composed of contributed "remembrances." Dr. Appleton had a very high ideal of the standard which a literary journal ought to maintain, and he thought, perhaps rather hastily, that that standard might be best maintained by adopting the Continental practice of signed articles. In its earlier form at least the *Academy* was a remarkable publication. Personally its editor was extremely and deservedly popular with those who knew him, and this volume, though in form it might have been more attractive, does him no more than justice.

To the Calendar of the Incorporated Law Society for the current year (5) is prefixed a carefully arranged account of the origin of the Society, and of its progress towards its present position, with a review of its past doings.

Messrs. Browne and Theobald's useful volume (6) contains the statutes relating to railways in England, with notes of the cases decided up to November in last year. The whole subject has been comprehensively and carefully treated, and an excellent index has been made by Mr. Montague Lush.

The thirteenth annual volume of Crockford's *Clerical Directory*, for 1881 (7), has been issued.

We have also to note the eleventh issue of the smaller *Clergy Directory* (8).

The *Medical Register* for the current year (9) appears considerably earlier than has hitherto been the case, and there are various important improvements in the latest and carefully revised issue, among which we may specially notice the useful reference table which will be found in p. 68 and the greater clearness of type.

Herr Sachs's German Grammar (10) opens with a fair promise

(1) *A Story of Autumn*. By Mrs. Comyns Carr, Author of "North Italian Folk." London: Remington & Co.

in the preface. He gives it as his opinion, and we entirely agree with him, that the natural way of learning a foreign language is to learn first to speak, then to write, it. In pursuance of this theory he has written this Conversational Grammar, to the opening pages of which we turned with pleasant anticipations after reading the preface. We were not a little surprised to find that Herr Sachs's boasted natural method is a simple variation upon our old enemy Ollendorff. Here are a few examples from one of the earliest "Reading Exercises":—"The brother is tall," "The uncle is happy," "The hat of the uncle is small." As we get a little further on we find that "He is politer than you," and that "(The) Lead is dearer than (the) iron"; while towards the end of the course we find ourselves proudly announcing that "We know already the declension of (the) proper names. It is not so very difficult." We are almost weary of protesting against the monstrous folly of sticking to this antiquated fashion of trying to teach languages, but it will be admitted that this is a glaring instance, since from the preface one might think that the work was a sort of expanded Prendergast.

The eighth volume of the "Hundred Greatest Men" (11) Series is devoted to "inventors, discoverers, and philanthropists," and includes the names of Gutenberg, Columbus, Pallas, Franklin, Montgolfier, Howard, Arkwright, Watt, and Stephenson. Professor Fiske has written a commendably brief introduction to the volume.

A second edition has appeared of Wigram's *Justices' Note-Book* (12). The work has been corrected and revised up to December last, and an index has been added.

It is hardly necessary to say a word as to the great value of the *Foreign Office List* (13), the fifty-fourth issue of which we have received.

We have also to note the issue of the *India List* for 1881 (14).

In the present year *Debrett's Peerage, Baronetage, and Knightage* (15) reaches its 168th year of publication. Certain changes, all of which are for the better, have been made in the typographical arrangements; and it is worth while to note the increased difficulties of revision spoken of by the editor in his modest preface. One very interesting addition will be found in p. 731, on which are given the arms, lineage, &c., of Charles Colmore Grant, seventh Baron de Longueuil of Longueuil in the Province of Quebec, Canada, creation 1700. On this Dr. Mair has the following note:—"The undermentioned Feudal Barony is entirely exceptional, and is the only Canadian hereditary title existing. The Patent of Nobility, signed by King Louis XIV., granting this title to Charles le Moyne for distinguished services, is remarkable for creating, not only a Territorial Barony, but also conferring a title of honour upon himself and his descendants, whether male or female. The cession of Canada to England, by the Treaty of Paris in 1763, made no change in the legal right to hold honours; since this period each successive head of the family has, by assumption of right, used the title; but it was not officially recognized by the British Government until December 4th, 1880."

The fifth volume of the new and complete edition of Mr. Bret Harte's works (16) contains several short stories, among them "Jeff Briggs's Love-Story," which we take to be in the writer's happiest vein, and also contains the well-known parodies called "Condensed Novels."

The *Star of the Fairies* (17) is a prettily-told fairy story, which is further remarkable for some of the most preposterous efforts in the way of illustration that have ever been given to an astonished world.

The style and quality of Mr. Wildings' attempts in verse-writing may be judged from the fact that one of his pieces is headed "Study in White and Blood" (18). Among many objections to a silly little volume, which had better not have been published, we may note that the writer's notions of rhythm and scansion are, to say the least of it, primitive; and that, choosing *Faust* for one of his subjects, and seeming by the introduction of Margaret to keep to Goethe's version, he writes in the apparently sincere belief that Faust is damned at the end of the play.

A *Death-Ring* (19) is a story which, with some obvious mistakes, has a good deal of freshness and invention. The notion of a highly-born, highly-educated, and highly-bred gentleman taking up, through stress of want, the profession of head detective to a private inquiry office is, if somewhat incongruous, at least to some extent novel; and the idea is worked out by the author with considerable skill and tact. It is of course necessary to represent the

office, and the way in which its affairs are managed, in a light somewhat different from the real one; and it is also necessary to ignore, or to keep carefully out of sight, all the meaner side of the calling which Aubrey Delaware has adopted. Nor perhaps is his manner of adopting it the most natural that could be imagined. He and his mother (who, by the by, is a very fascinating old lady) were struggling with the bitterest poverty, in consequence of the sudden and harsh injustice of an old uncle who had during his early youth spoiled him to the top of his bent; and, in the midst of their distress, the mother fell ill and Aubrey could get no work. "One night I went out desperate. I had come to the last gasp, and for the morrow knew not literally where to turn. I knew that evening what despair means, if I never did before—felt it, realized it." Then, standing in a dreamy, half-stupified state on a bridge, he heard an eager conversation between two men. "The fellow," said one, "has forged and got off with a pocket-book worth thousands to me. You can't trace him or it. I tell you, Polmark, I would this moment chance five pounds down to any man who would hunt it out." I heard that. I was my own self-possessed self directly. I turned round, and said coolly, 'Put your affair into my hands, gentlemen, and I will find you both pocket-book and forger within a short time. Pay my expenses only, because I am too hard up to do so myself. I will claim nothing more until I get the book, Mr. Polmark, of course I know your name. More than I do yours,' he said, scanning me sharply. 'Are you a detective?' 'By nature,' I answered, bowing. 'I don't want to interfere with your work; employ me.' The other man laughed very much at my cool assurance. 'Odd encounter, faith,' he said. 'Chance it all, Polmark. Give this gentleman-detective of nature the job, and I'll chance my five pounds. 'I don't believe'—he had been watching my face all the time—that he will cheat us. Take his offer, Polmark. Your present staff have failed.'" This odd, and if improbable not ill-invented story is, at a certain stage of the tale of *A Death-Ring*, told by its hero, Aubrey Delaware, to Olive Vernon, a well-born young lady who has also for the moment taken up the detective line, not for money, but to oblige her uncle, and who listens to Delaware's adventure with "eyes fixed on his face all this time, actually glowing with eager interest, filled with tears." One result of this can of course be readily enough foreseen; but many things have to be done and endured before this is arrived at. The particular motive which induces Mr. Mordaunt, Olive's uncle, to go to Mr. Polmark and engage Delaware, and subsequently to take the rather remarkable step of engaging his favourite niece as a private detective under the orders of Delaware, is a burning desire to discover the murderer of Olive's dead brother Sidney, a task which the Government police and detectives have failed to accomplish. The murder had been committed in a somewhat singular fashion, which may be left to readers to find out for themselves, and there was good enough excuse for the ordinary detectives not finding the clue which the brilliant intellect of the heroic Aubrey at once lighted upon. One thing Delaware finds out almost immediately, that he has to search, if his idea is the right one, for an Englishman with snake-like eyes, a large nose, a mole under his ear, and a possible taste for chemistry. He does not know either where to look for him, or whether, if he finds him, he will have any chance of bringing home to him the crime which he suspects him to be guilty of. The really exciting events which follow from this beginning are compressed—would that all novels were so compressed—into two thin volumes, which also contain a very ingenious, and in its way no less exciting, under-plot about Olive Vernon's living brother and a beautiful girl with whom he falls in love, and with whose union with him there seems for a time to be a fatal barrier. The story is one which can be confidently recommended to amuse an idle hour.

The Calendar of the Mason Science College, Birmingham (20), contains, together with full information as to the College and its classes, an account which was certainly worth preserving of the opening ceremony in October last, and the address delivered by Professor Huxley.

Mr. O'Byrne has compiled a very interesting little volume (21) which chronicles the various deeds of bravery in many parts of the world which have earned for their doers the valued distinction of the Victoria Cross.

Mr. Lodge has translated, evidently as a labour of love, and in the first instance with a view merely to his own instruction, Winckelmann's well-known *History of Ancient Art* (22), to which he has prefixed a Life of Winckelmann, which one almost regrets not to have in a more handy form. We can for the present at least do no more than chronicle the appearance of a work of this character and extent.

A new edition has appeared of Mrs. Oliphant's *The Makers of Florence* (23), which was reviewed at length in these columns when it first came out some three years ago.

Admission, 1s. Season Tickets, 5s.

DORÉ'S GREAT WORKS, "CHRIST LEAVING the TABERNACLE," "CHRIST ENTERING JERUSALEM," and "MOSES BEFORE PHARAOH," each 33 by 22 feet; with "Dream of Pilate's Wife," "Christian Martyrs," &c. at the DORÉ GALLERY, 35 New Bond Street. Daily, Ten to Six. 1s.

MATRICULATION of the UNIVERSITY of LONDON.—ST. BARTHOLOMEW'S HOSPITAL and COLLEGE.—A CLASH, in all the Subjects of this Examination, will begin on Monday, March 7, and continue until the Examination in July. The Class is not confined to Students of the Hospital.—For particulars, apply to the WARDEN of the College, St. Bartholomew's Hospital, London, E.C.—A Handbook is forwarded on application.

MATRICULATION EXAMINATION.—UNIVERSITY of LONDON.—Instruction in all the subjects of the above Examination is given at GUY'S HOSPITAL. The CLASSES for the June Examination will commence on Monday, March 21. The Classes are not confined to Students of the Hospital.—For further particulars address the DEAN, Guy's Hospital, E.C.

OPEN SCHOLARSHIP WITHOUT EXAMINATION.—The HUBBERT TRUSTEES are prepared to grant, at their Meeting in June next, ONE SCHOLARSHIP of £200 per annum, for Two Years, to a Graduate of any University in Great Britain and Ireland, between the ages of Twenty-one and Twenty-eight, to enable him to study Theology and Mental and Moral Philosophy at Universities in Germany, Holland, or Switzerland (or elsewhere), subject to the approval of the Trustees. Full particulars may be obtained of the Secretary, to whom applications for the Scholarship must be forwarded before March 31, 1881.

University Hall, Gordon Square, London, W.C.

PERCY LAWFORD, Secretary.

CLIFTON COLLEGE CLASSICAL, MATHEMATICAL and NATURAL SCIENCE SCHOLARSHIPS.—NINE or more open to Competition at Midsummer 1881, value from £25 to £80 a year, which may be increased from a special fund to £50 a year in case of scholars who require it.—Further particulars from the HEAD MASTER, or SECRETARY, the College, Clifton, Bristol.

CHELTEMHAM COLLEGE.—TWELVE SCHOLARSHIPS. Eight £40; Four £30. Election, third Tuesday in May.—Apply to the SECRETARY, The College, Cheltenham.

SEASIDE.—PREPARATION for the PUBLIC SCHOOLS. For Terms apply to C. H. ROSE, M.A., Conyngham House, Ramsgate.

ST. EDMUND'S COLLEGE, SALISBURY.—A HIGH-CLASS SCHOOL for SONS of GENTLEMEN. The religious training is upon definite Church principles. Boys are educated with much care and thoroughness. They receive individual teaching and help whenever needed. Candidates for Matriculation at the Universities are specially prepared. Terms, £70 a year.—For references, prospectus, or further particulars, apply to the Warden, Rev. G. H. BOURNE, D.C.L.

STRATFORD-ON-AVON.—TRINITY COLLEGE SCHOOL. The Warden, RICHARD F. CURRY, M.A., is assisted by Seven Resident Graduate Masters. Special attention paid to Modern Languages. Classical and Modern Education. Department for Young Boys. Exhibition to the Universities. Large Playing Fields, Gymnasium, Five Courts, &c. Terms, 50 and 20 Guineas. Apply to the WARDEN.

ETON, HARROW, &c.—A GENTLEMAN, of Twenty years' experience, occupying large House and grounds near Asot, prepares BOYS (Boys, Gentlemen exclusively) for the Public Schools. Highest references to Noblemen, Officers, Clergymen, &c. Special advantages. Modern languages. Music, Swimming, &c.—Apply for particulars to Captain DR. CATHART BISHOP, 3 Berners Street, W.

WOOLWICH, SANDHURST, MILITIA QUALIFYING and COMPETITIVE.—MORGAN JENKINS, M.A. (Warringer), assisted by an able staff of Graduates in Honours, and by a Captain, late R.A., prepares PUPILS for the above examinations alone. References to Parents, many of whom have had more than one son successful at this establishment.—50 Cornhill Road, Westbourne Park, W.

PREPARATION for SANDHURST, WOOLWICH, and COOPER'S HILL.—Individual Tuition. Special attention paid to the speaking of Modern Languages.—For terms, address Mr. E. VIDAL, Roseville, Farquar Grove, Surbiton, Surrey.

CARSHALTON HOUSE SCHOOL, Surrey.—BOYS carefully prepared for Civil and Military Examinations.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. Oxon., assisted by a Cambridge M.A. and competent Teachers, prepares PUPILS for the Universities, Woolwich, Sandhurst, and all Competitive Examinations. A few Vacancies.

H. LAVATEL, Pastour, in Oberstrass, Zürich, Switzerland, receives One or Two YOUNG GENTLEMEN desirous of learning German and French.

ARMY ENTRANCE EXAMINATION.—There is a Department in connexion with BLAIR LODGE SCHOOL, Polmont Station, N.B., for preparing PUPILS for the above Examinations. All the Candidates (including J. M. Holmes, First in December Examination) sent up for Woolwich in 1880 have passed. Special advantages. Absence from town life, and individual preparation.—For full particulars apply to the HEAD-MASTER.

PRINCESS HELENA COLLEGE, REGENT'S PARK.

Patron—Her Majesty the QUEEN.
President of the Council and the Executive Committee—H.R.H. Princess CHRISTIAN.
VACANCIES exist for YOUNG LADY BOARDERS at this College. Girls under Twelve 18 Guineas a Year under Twelve, 20 Guineas a Term.
Apply to the Hon. Sec., the Hon. Mrs. JOHN STANLEY, 37 Wimpole Street, W.

EDUCATION of GIRLS in PARIS.—A LADY, who is superintending the Education of Two Young Girls in Paris, would be willing to take Charge of Two others, to be educated with them. Liberal terms expected.—Address, M.D., care of F. T. Lawrence, Esq., 21 Berners Street, Oxford Street, W.

A CLERGYMAN'S DAUGHTER is anxious to find useful Employment, as a COMPANION, or in other ways. A kind home more desired than remuneration. Highest references given.—Address, E. G., 4 Fishman Road, Kensington, West.

TO LONDON SOLICITORS.—A SOLICITOR (Honours) recently admitted, and at present working with one of the Conveyancing Council of the Court, requires a CLERKSHIP to a Firm with a large business.—Address, CONVEYANCE (No. 1, 197), 10 Wellington Street, Strand, W.C.

A GENTLEMAN, in Government employment, desires to UTILIZE his EVENING LEISURE with Secretarial or other work. Would undertake Management of a Household.—Address, G., 50 Bessborough Street, S.W.

WANTED, on a Morning Paper, a high-class POLITICAL WRITER, of experience on Home and Foreign questions. Must not object to night-work.—Answer, enclosing specimens of work, to J. B., care of Messrs. Smith & Sons, Strand, W.C.

TO BE LET, with immediate possession, 55 LOFTUS ROAD, Uxbridge Road, Shepherd's Bush, W., within a few minutes' walk of the Metropolitan and London and North-Western Stations. The House, which has just undergone complete repairs, contains Ten good Rooms, and is well arranged as to domestic offices; with good Garden at the rear overlooking fields.—Apply to Mr. J. BOARDEN, Builder, 5 Pleasant Place, Uxbridge Road, W.

SUNNINGDALE, BERKS.—DALE LODGE.—This FINE OLD ESTATE, of about Three Acres, to be SOLD or LET on LEASE. The House, which has every accommodation for a Family, is delightfully situated in this beautiful and healthy locality, with charming views. There are Coachhouses, Stabling, Gardener's and Coachman's Cottages, &c. About half a mile from the Railway Station, and the same distance from one of the entrances into Windsor Park.—Full particulars to be obtained from WM. SIM, Esq., 1 Danes Inn, Strand.

BRIGHTON.—BEDFORD HOTEL.—Facing Sea and Esplanade. Near the West Pier. Central and quiet. Long established. Suites of Rooms. Spacious Coffee-room for Ladies and Gentlemen. Sea-Water Service in the Hotel. BENJN. BULL, Manager.

THE ASSASSINATION OF THE CZAR.

THE murder of the CZAR has at last been accomplished. After three failures within two years a fourth attempt has been made, and has proved successful. Last Sunday the CZAR was returning from a military review, and had paid a visit to his sister. He was driving along a canal, when a bomb was thrown which shattered his carriage and wounded some of his attendants. The assassin was immediately seized, and the CZAR was unhurt. He got out of his carriage to look to the wounded, although he was pressed to drive off at once to his palace. He had hardly alighted when some one close to him threw a second bomb, which inflicted mortal wounds on the CZAR and is thought to have killed the person who had thrown it. The CZAR died an hour or two afterwards. About twenty people were killed or injured by the two explosions. The thrower of the first bomb is supposed to have made revelations, and, at any rate, the police have made arrests of persons indisputably connected with the plot, and have discovered that a mine has been dug under the roadway by which the CZAR habitually drives from the Winter Palace. Everything reveals the fixed determination of a number of perfectly reckless conspirators, who were resolved that if the CZAR did not die in one way he should die in another, who were perfectly willing to die in killing him, and who were entirely indifferent as to the number of persons whom they might kill at the same time. Except that it has been successful the attempt is exactly like the previous attempts of the Nihilists at assassination. As before, the police were warned that a new attempt was to be made, and, as before, the police could not see what was going on under their eyes. It is not wonderful that the police should not detect a person who carries a bomb in his pocket and is going to explode it. The assassin who was arrested is said to have had a spare bomb in his pocket, which was found on him. These engines seem to have been cunningly and scientifically constructed, and thus contrast remarkably with the clumsy infernal machine more recently used without effect at the Mansion House. If the police cannot find out who are making bombs in Russia, or cannot stop their introduction into the country, they cannot possibly prevent their being used by any one who is ready to use them before he is arrested. But some of these bombs have got into the hands of such persons as are known to a considerable number of persons in different parts of Europe, although it is unknown to the police of the capital where they are being kept at hand until the time comes. Even if the bombs could not be traced beforehand, it is very strange that a mine should be dug in the immediate neighbourhood of a palace without the police having any suspicion of what was going on. It may be added that, as before, the assassin who was arrested turns out to be a man of some education and position. He was a student in the School of Mines, and was quite a young man. All these things must be taken into consideration when the import of this tragical event is to be calculated. It must be accepted that, with the murderous appliances which modern science has devised, a sovereign cannot long escape if persons of a particular sort determine to kill him. But these persons must be of a particular sort. That they should be willing to die and pitiless of the fate of innocent bystanders gives them no special character.

Most assassins go as far as this. They must also have some motive so deeply felt as to make them not only combine, but persist in combination. They must have money at their disposal, and official friends who, consciously or unconsciously, help or screen them. They must be persons of education and intelligence; and they must be persons whose presence in the place where the attempt is to be made seems natural—that is, they must be in such a position as that of a student of mines, and not in that of the poorer sort of Poles, who might wish to kill the CZAR, but who would never be allowed to hang about St. Petersburg. All these conditions appear to be fulfilled by the Russian Nihilists; but the Russian Nihilists must be very exceptional people to fulfil them.

All Europe has rung with the indignation, horror, and pity which this act of extreme audacity and wickedness was sure to provoke. Every Court has gone into mourning, every people has sent messages of sympathy to the family of the victim. The English Parliament has voted appropriate messages of condolence to the QUEEN and the Duchess of Edinburgh. The first thing for the civilized world to express the natural feelings of humanity. But when this has been done, the question is sure to force itself on general attention how there happen to be such exceptional people as Russian Nihilists, and what is the motive which is strong enough to make such persons combine, and go on combining, until, after three desperate attempts at the murder of a Sovereign, they at last succeed. There are many causes which impel men to become assassins that are intelligible. It is easy to understand how foolish, wrongheaded, half-mad people try to kill a king to gain notoriety. Others, again, like the Pole who tried to kill the CZAR at Paris, may think that they and those dearest to them have suffered great wrongs, and wish to exercise personal vengeance on the wrongdoer. Others, again, like ORSINI, may wish to punish a sovereign for not having adopted a particular line of policy, or may hope that, even if he escapes, when his life is attempted, he may be frightened into adopting the policy which they wish to see him adopt. But the Nihilists do not appear to have wished to kill the CZAR because he personally had done anything they thought to be very wrong, or because there was some definite thing which they wanted him or his successor to do. If the reports of their views which have been published may be trusted, they wished to kill the CZAR simply because he was the CZAR, because he was a sovereign, and among sovereigns was conspicuous as having more of the power of sovereignty than any other sovereign. A meeting appears to have been held at New York in which a Russian and a German addressed an assembly of Socialists, and calmly approved the crime of St. Petersburg as calculated to impress on the world the great doctrine that all sovereigns must die. That it cannot possibly do any good to kill one sovereign when he is immediately succeeded by another, and that the immediate effect of the odious act of assassinating a sovereign is to make the mass of mankind cling more fondly to royalty, is perfectly true, but the Nihilists and their friends seem to be quite deaf to it. The real origin of those attacks on sovereigns is probably that there is a large amount of discontent in modern society; that long habit and old traditions shape this discontent into secret societies; and that these societies, in order to avoid falling to pieces, must do something. It seems to be a law of the existence of secret

societies that action, however useless, must follow conspiracy. The standing organized police, and the right feeling of the societies make action on a large scale impossible. Action must be the action of individuals, and individuals cannot do anything more striking, dramatic, and encouraging to discontented persons than to kill a sovereign. In Russia, where the discontent is great, where the attractions of conspiracy are very strong to half-educated minds, and where the greatness of the CZAR is always present to every one, it is the CZAR whose death seems the most conspicuous end that those who long to act can achieve.

Speculation has already been busy, both within Russia and without it, as to what effects on the policy of Russia this murder of ALEXANDER II. will carry with it. But if the Nihilists have killed his father neither because he did something which they very much disliked, nor in order to get a policy adopted on which they had set their hearts, there seems no especial reason why the new CZAR should be impelled to do anything which he would not have done if his father had died a natural death. Whatever he does—whether he grants reforms or withholds them, whether he makes war or preserves peace, whether he pushes forward the boundaries of his Empire or keeps them as they are, he must equally take his chance of being killed in his turn, merely because he is the CZAR. If, therefore, the influence of the murder is set aside, the new CZAR can only do what any new CZAR would do. He may have some personal views or wishes, but in the main he must be guided by the traditional policy of his country, and by the present needs of his people. ALEXANDER III. may not be as closely tied by the bonds of affection to the German Royal family as his father was; but he cannot leave out of sight the permanent interests of Russia when he thinks what a friendly, if not intimate, alliance with Germany is worth to him. He may make some changes in the political system of Russia, and the Russian papers have ventured, or have been directed, to assume that he will do so; but it is Russia and the Russians with whom he has to deal, and he can only make such changes as Russia and the Russians are forward enough to endure with advantage. The burden of the Empire that has fallen on him is frightfully heavy; and not only must he bear it, but the way in which he must bear it is fixed for him within narrow limits of divergence. It may be possible to under-estimate, but it is very easy to exaggerate, the difference which the accession of a new sovereign can make in a country like Russia.

URGENCY IN SUPPLY.

A CONSIDERABLE party defeat always throws the party defeated into a condition of fretful explanation, and it is not to be wondered at that the vote of last Monday night has had this effect on the supporters of the present Ministry. According to the conditions of the urgency vote, the nominal majority of rather more than eighty which Mr. GLADSTONE obtained was in reality equal to a minority of more than a hundred, each Aye being for the purpose equal to but a third of a No. The subsequent events of the evening must, however, have been even more irritating to the extreme partisans of the Government than the vote itself. Not merely Conservatives, but even Irishmen, removed their obstructive motions with polite readiness. A considerable number of votes were taken with only the usual minute cavilling from professed estimate-critics, and at the close of the night rather more business had been done than is at all usual on such occasions, though not so much as might have been done had the Government been ready with it. Subsequent days were equally profitable. This rapidity, so inexplicable on the alarmist suppositions which had induced Mr. GLADSTONE to propose that the House should put itself in irons at the very moment when it is supposed to possess and to require most liberty, has thrown the before-mentioned partisans into a paroxysm of paradoxical excuse. The impression which seems to have obtained in the provinces—Mr. GLADSTONE's favourite source of political wisdom—that his motion was a "bogus" one, intended to get rid of the awkwardness of demanding urgency for coercion only, may be dismissed as the offspring of maladroit zeal. If Ministers get through their business in time, as they appear likely to do, "the practical object of declaring urgency," we are told, "will have been fully

"obtained." It seems to escape these ingenious arguers that everybody wishes for the attainment of the object; the only difference of opinion is as to the choice of the means. The process of roasting, to use the old parallel, can be equally effected by burning the house down and by making use of the ordinary fire and spit; the question is whether it is worth while to adopt the more expensive method.

To put, however, these ebullitions of a very natural pique aside, there can be no doubt that the refusal of the Opposition to grant urgency on Monday was justified. The grounds of that refusal may be said to have been double, or rather treble, two being peculiar to the occasion, and one of a general character. That urgency and Supply are things which should be kept apart as much as possible is perhaps the weightiest argument of all. But, from the merely practical point of view, the arguments applicable to the particular case probably deserve to have precedence, and precedence was accordingly assigned to them in Sir STAFFORD NORTHCOTE's Manifesto. This Manifesto was of itself an evidence of the needless and unnatural restrictions which the state of urgency imposes. The vote, when it is demanded, must be granted or refused without discussion; and thus the leader of the Opposition has no means of explaining his attitude except by addressing the astonished electors of North Devon; while the PRIME MINISTER has no means of reply except by the aid of a little comedy got up between himself and an independent member who "wants to know." The points handled in this roundabout fashion are, however, sufficiently clear. The first question is, Had the conduct of the Government in relation to business been such as to deserve the assistance which they demanded? the second, Was that assistance necessary for the due accomplishment of the business of the country? The first question can hardly be answered except in the negative by any person who has not made up his mind beforehand. By the shilly-shally about the Arms Bill, which involved the dropping and revoting of urgency, and the consequent loss of much valuable time; by omitting on more than one occasion to take business for which an opportunity presented itself; and, above all, by going out of their way to irritate the Irish members, and thereby to embitter and prolong their opposition, the Ministry have been guilty of something more than contributory negligence in regard to the present state of affairs. But it may be granted at once that mere irritation at this conduct and at the insufficient return made by it for the unwavering abstinence of the Opposition from any factious use of their powers would not have justified the refusal of urgency if the public business required it. It is, however, exactly this point which is most in debate. Sir STAFFORD NORTHCOTE, whose experience and business-like aptitude are not denied by anybody, asserts that public business does not require it; Mr. GLADSTONE, a greater authority, but a somewhat less disinterested one, asserts that it does. To examine the minute points of date and detail on which this dispute turns would be out of place here. It is sufficient to say that Mr. GLADSTONE's denial admittedly depends upon two propositions; one, that there ought not to be Saturday sittings at this period of the Session; and the other, that the House of Lords cannot be expected to sit on Wednesday. Considering that but a week or so ago the House of Lords did sit on Wednesday for the convenience of Mr. GLADSTONE and his Government, the argument cannot be congratulated on its strength, though it has of course served those who cannot forgive that House for being wiser than themselves as an occasion of railing. But, weak as it is, it probably yields in imbecility to the argument about Saturday sittings. According to Mr. GLADSTONE, it is a less evil to fetter the privileges of the House of Commons and to limit the immemorial freedom of discussion in reference to Supply than to oblige members to give up an afternoon or Ministers to hold Cabinet Councils an hour or two earlier or an hour or two later than usual. This is the argument of the house and the spit over again. The spit is rusty, and it would take a little trouble to make it turn. The house can be set on fire by the spurt of a match.

The real inconveniences of the granting of urgency in Supply are, however, much greater than these particular and incidental arguments show. The Government might be wholly guiltless. There might actually be scant time for compliance with precedent or statute as to the time of voting money, and yet it might seem wise to hesitate about this new innovation. It may

be admitted that the constitutional objection seems on the face of it pedantic. But, as in a good many other things which have the same appearance, there is a fund of solid reason in it. True, the traditional jealousy of Ministers of the Crown has entirely lost its original justifications. But it is not certain that it has not acquired others of equal force in losing these. A conspiracy of a Minister with the Crown against the people is impossible; a conspiracy of a Minister with the people, in a moment of intoxication, against their own true interests is exceedingly possible. All obstacles in the way of the success of such a conspiracy chafe the modern Radical, and his most outspoken mouthpieces openly declare that the machinery of Parliamentary government must be altered entirely. That machinery is not sufficiently powerful for swift destruction, and it must be made more powerful. If only for this consideration, too strenuous opposition can hardly be offered to the removal of the salutary checks now existing. But there is more to be said than this. A hold upon supply is of greater value to an Opposition than any other of the drags they possess. The cure of the Estimates and of the means of providing for them is the least welcome, but at the same time the most necessary, part of a Minister's business. They must be attended to; they are of the first importance, and yet they bring him in most cases little credit; they can have nothing directly to do with his pet political projects, and, by their subdivision into minute parts, each of which can be criticized and objected to, they present innumerable handles for the enemy. Hence every Minister, no matter what his politics may be, would like to hurry over the Estimates. But he cannot, because he can by no possibility do without them. The House has in them exactly the same check on him that it had of old on personal government by the Crown. Mr. GLADSTONE of course denies, as he has a perfect right to do, that his desire is to get "the cream of the Session" for party work. It has been thought a pertinent reply to Sir STAFFORD NORTHCOTE to ask whether the Irish Land Bill is party work. It is no part of our business to put arguments in Sir STAFFORD'S mouth, but he certainly would run little risk in boldly replying that it is. No Land Bill would have been required at all but for the party measure carried by Mr. GLADSTONE ten years ago. None would probably be required now if his Government had shown proper firmness on their accession to office, and none is at all likely to be either proposed or passed which is not much more of a party than of a national measure. Even this consideration, however, does not exhaust the matter. The danger which has been over and over again insisted upon, the danger of this perpetual dram-drinking of urgency on the part of the House, is more than ever present in such a case as this, where it is asked to adopt urgency in reference to its most ordinary business, and, moreover, to that particular kind of business to which, both according to reason and according to precedent, urgency is least applicable. That 296 Liberal members should have been found to vote in favour of the surrender of what on all Liberal theories of government, as distinguished from Democratic-despotic ones, is the most important of all the privileges of the House, will always remain a striking instance of the mechanical condition to which wide suffrage, caucuses, and a fanatical devotion to a particular leader can reduce a majority.

IRISH AFFAIRS.

THE course of proceeding which might be adopted by the obstructive faction during the conduct of ordinary business was watched with anxious curiosity. The offenders had nothing to gain by interrupting debate and legislation, except as far as injury to Parliament may be deemed an advantage to themselves. It was possible to pretend that their shameless obstinacy was suggested by insuperable objection to the protection of life by extraordinary methods, or to the disarmament of the Irish population. It would have been difficult to devise excuses for interference with the progress of Supply or with the annual measures which it is necessary to pass; but it would have been hasty to assume that obstruction might not be removed, because it would be irrational as well as mischievous. Agitators cannot often afford to suspend the operations which prevent their existence from being forgotten. The ulterior object of making their presence in the House

of Commons intolerable to their English and Scotch colleagues might also, perhaps, in their opinion be promoted by a continuance of their recent proceedings. In the meantime they probably regard with unqualified satisfaction the restrictions which have in consequence of their conduct been imposed on freedom of discussion. The consideration which has perhaps for the moment inclined them to moderate counsels may be the hope of an alliance with the extreme section of the Liberal party in and out of Parliament. As Mr. SHAW, Mr. MITCHELL-HENRY, and other rational Irishmen, have repeatedly explained, the managers of the Land League have deeply injured the cause which they professed to support. The same persons have perhaps excited still more general indignation by their ostentatious defiance of decency and good order in the House of Commons. It was possible to deny or to explain the connexion of the Land League with murderous outrage and intolerable tyranny; and English demagogues were not unwilling to accept and repeat the excuses of Irish agitators. The record of obstruction in the daily reports was forced on the knowledge of the whole community; and it was not illogically inferred that the enemies of Parliamentary freedom were also tyrants and oppressors at home. If the little faction which has so long defied the great majority of the House henceforth abstain from wilful waste of time, their differences with the ultra-Radicals may perhaps be removed. It would not be necessary for their purpose that they should withdraw their outrageous abuse of Mr. FORSTER, or that their female confederates on platforms should retract the remarkable statement that Quaker and liar have now become synonymous terms.

The practical operation of the coercive measures cannot be immediately ascertained. It is satisfactory to learn that the Government has at once used the weapons which were placed in its hands by arresting a certain number of persons known to be guilty of agrarian or treasonable offences. The leniency of the treatment to which they will be subject is, at least in some cases, absurdly inapplicable to their characters and to their crimes. One of the victims of legislation which is said to be unconstitutional has been tried more than once for a murder which the prosecuting authorities must have attributed to him on probable grounds. Other offenders are still more undoubtedly guilty of the minor offence of exciting the populace to crime by inflammatory speeches. The arrest of a few persons of comparatively respectable position has been denounced as inconsistent with Mr. FORSTER'S statement of the objects of the Bill. He spoke of the necessity of checking the proceedings of lawless ruffians rather than of the expediency of restraining their abettors and patrons. It is highly probable that the worst offenders are not the lowest in rank. It is barely possible that among the prisoners one or two may be innocent; but there is a necessary uncertainty in the administration even of ordinary criminal justice. In England, and probably in Ireland, few persons are committed for trial who ought not to be afterwards convicted, though in some cases legal evidence may not be forthcoming. If it is true that, in consequence of the relaxation of the despotism of the Land League, contumacious or timid tenants are beginning to pay their rents, the beneficial result of the Act will be highly satisfactory; but the reports of the state of the country vary, as might be expected, with the temper and the opinions of newspaper correspondents. The chief agitators, who are still at large, fully understand the importance for their purposes of perpetuating social anarchy, even when open resistance to law has become dangerous. They are now making it their business to hold Land League meetings at which the tenants will be again advised to fix for themselves the amount of rent which they shall pay, and to conspire against any landlords who may attempt to enforce their claims. Mr. PAENELL thought it prudent to cancel the profligate recommendation that outgoing tenants should destroy or reduce the value of their holdings by ploughing up grass lands; but many modes of injuring owners of property have not been expressly anticipated by statute. It may be hoped that the LORD-LIEUTENANT will not hesitate to arrest agitators who suggest the execution of criminal conspiracies.

The Land League party in the House of Commons displays a tardy prudence in allowing necessary business to proceed during the short interval which will elapse before the introduction of the Land Bill. Their leader has re-

peatedly announced that no measure which the Government is likely to propose will satisfy the demands which he has urged the Irish peasantry to prefer; but the Land League section, though it may feel or profess disapproval, will not venture to reject offers which may afterwards be treated as instalments of justice. The real danger to property consists more in the vague theories of Liberal members than in the extravagant doctrines of Mr. PARNELL and his followers. The revolutionists will, as in many other cases, practically swell the numbers of theorists who still profess a certain respect for law and justice. Schemes of partial spoliation may assume the appearance of a compromise between moderate reforms and anarchical proposals. The Land League may have other reasons for acquiescing in changes which it will nevertheless denounce as inadequate. Experience has confirmed the probable conjecture that every interference with the rights of property serves as a precedent for further encroachments. Although in 1870 Mr. GLADSTONE repeatedly declared that his measure conferred no right of property on occupiers, his party, if not himself, have during the recent agitation repeatedly asserted that the Land Bill changed the entire condition of the tenant by substituting a legal status for a position merely founded on contract. It is not yet known whether the forthcoming Bill will purport to be a mere expansion of the former Act. It is strange that the hopes of moderate politicians and of menaced landowners are at present founded rather on the rumoured opinions of Mr. GLADSTONE than on the disposition of any of his colleagues. It is true that Lord HARTINGTON in the early part of the Session limited the objects of legislation to the removal of any defects which might be proved to exist in the Act of 1870; but he still sits in the same Cabinet with Mr. BRIGHT, Mr. CHAMBERLAIN, and Mr. FORSTER, all of whom have at different times promised that the Land Bill would be large enough to satisfy the most zealous sections of the Liberal party. It will be prudent to submit, if possible, to innovations which can scarcely fail to involve future danger; but the arguments of Lord DUFFERIN and Lord LANSDOWNE will not have been answered but overruled by superior force. The Irish tenants will regard any concession which may be contained in the Bill as irrevocable; and the present majority of the House of Commons will support the Government, though some of them may at the same time protest that its offers are insufficient. It has become a rhetorical commonplace that the Bill ought to be comprehensive and generous, with a generosity which is to be practised at the expense of the landlords. It will in any case infringe on the received principles of political economy; but the rejection of the measure would be followed by more sweeping proposals of change. It is possible that for a time it may check agrarian disorder; and it is certain that any settlement which may be made will soon be disturbed.

THE TRANSVAAL.

THE secret of the Transvaal negotiations has been studiously preserved by the Government hitherto. Mr. GLADSTONE and his colleagues deserve credit for their recognition in office of the facts which they ignored in Opposition. Secrecy is the essence of business in war and diplomacy, though it occasionally suits the immediate purpose of demagogues to advocate an impossible frankness. The rumours which are due to the various Correspondents of the London daily press are of varying probability; but as they are mutually contradictory, it is unnecessary to examine them in detail. Confident statements that the prolongation of the armistice for four days has resulted in a practical agreement are met by equally confident assertions that a resumption of hostilities is unavoidable. Sir EVELYN WOOD is reported to be confident of his ability to force the Nek in the latter case, and but for the singular ill-success which has hitherto attended the efforts of English generalship, there would be little doubt about the matter. If nearly four thousand seasoned troops of all arms, amply provided with artillery, cannot dispossess forces scarcely superior in number, destitute of artillery, undisciplined, and led by amateur generals, the art of war, at least as practised by our commanders, is a farce. At the same time, such sifting as is possible of the intelligence received as to the probable dispositions of the negotiating

parties is calculated rather to furnish grounds for hope than for reasonable expectation to those who desire a bloodless and honourable settlement. Mr. GRANT DUFF is not in a prominent official situation, and his tendency is rather to exaggerate the importance of his individual opinion. But he would hardly have ventured upon a statement so categorical as that which he vouchsafed at Oxford unless he had at least some knowledge. According to this statement, an immediate laying down of their arms on the part of the Boers and the reference of the whole matter to a Royal Commission are the initial conditions of any agreement. It is possible that these conditions may be accepted, but they hardly agree with the tenor of the information which has come from the Boers' side. According to reported conversations, the authenticity of which in the main there is no reason for doubting, Mr. JOUBERT represented the laying down of arms as a thing out of the question. The acceptance, too, of a Royal Commission would be an unqualified acknowledgment of that which the Boers specially repudiate, the sovereignty of the QUEEN. The guarantees which in consequence of their alleged experience of English bad faith they are said to demand, seem to be incompatible with any such arrangements. It is impossible to guarantee that a court of arbitration will decide one way. These calculations, however, involve a considerable number of unknown quantities, and it is impossible to do more than indicate the general probabilities of the case. The desire of the Government to come to a settlement, and the reasonable apprehensions which the Boers must entertain of the heavy odds shortly to be brought against them, may succeed in bridging the present chasm. But it may be said with some safety that qualified English opinion, which is unfortunately not now the opinion which directs public affairs, would not approve any considerable advance on the terms indicated by Mr. GRANT DUFF.

The prolongation of the armistice, and the general ignorance of the tenor of the negotiations carried on during it, have helped to foster the barren dispute as to the side from which proposals for a truce originally came. Ministers have fenced upon this point more than upon any other, and it was long uncertain whether Sir EVELYN WOOD had been instructed to make fresh advances, whether the negotiations were merely a continuation of the *pour-parlers* interrupted by the ill-starred attempt on Majuba Hill, or whether some unknown circumstance accounted for them. It seems that the supporters of the Government are literally correct in stating that advances from the Boers preceded advances from the English commander. But as the Boers acted only in reply to a solicitation from President BRAND, whose agency Lord KIMBERLEY formally accepted some time ago, the actual origin of the proposal must be admitted to have come from our side. The point would be of small importance if it were not connected with other points, the importance of which is very much greater. The dissatisfaction with which the news of an armistice immediately succeeding three defeats was received has been entirely misunderstood by some persons in this country. The entire want of reasonable justification for adopting now proceedings which, if justifiable, ought to have been adopted months before, was a heavy objection. The shock to national feeling which it has become usual and perhaps natural with some persons to confound with national vanity was another and a heavier. But a still stronger and a wholly practical objection remains behind. No reasonable person wishes to expend the blood of several hundred Englishmen and Boers merely to make a salve for the wounded pride of the English people, or to wash out the memory of the incompetence of an English Ministry. But every reasonable person must see that a settlement obtained under present circumstances must be wanting in the conditions of value and endurance which would be present if it were obtained after the restoration of the credit of our arms. At present, whatever their official utterances may be, the Boers must feel that we have taken up arms against them unjustly, and have been unable to use the arms which we have unjustly taken up. That they have had to fight us at all will be a reason for distrusting us in the future. That they have fought us successfully will be a reason for despising us as well. Distrust, accompanied by fear, may serve as the basis of a tolerable state of relations between two communities who, in the future as in the past, will have much to do with one another;

distrust accompanied by contempt can hardly be regarded as likely to furnish such a basis. If there were no native question, no neighbourhood of warlike and independent and semi-independent tribes, no Orange Free State, no Afrikaner party in the colonies, it might be possible to disregard these considerations; as it is, it is impossible. Very few Englishmen wish to dragoon the Boers into absolute submission; all Englishmen who understand the question wish that whatever settlement may be arrived at should at least have the air of being given by, not extorted from, England.

On the whole, it seems likely that some settlement will be arrived at in the course of the next few days or hours. Although, for reasons already given, that settlement can hardly be satisfactory to persons who do not consider patriotism an obsolete absurdity and political foresight a useless cumbering of oneself about chances, some elements of practical comfort may be found in it. The Transvaal business has been from the beginning a *gâchis épouvantable*. Almost all politicians of all shades of politics are agreed that the annexation was at best doubtfully justifiable on the facts as shown, and that the facts were not, on the whole, shown correctly. The famous submission to the twenty-five policemen was construed into unconditional submission; the ill success of badly organized commandos against SECOCOENI was supposed to convict the Boers of national cowardice; their quiescence in the immediate pressure of a Zulu war and the presence of a great English force was supposed to show the likelihood of future good behaviour when this pressure was removed. Afterwards, though the complaints put forward as to the conduct of "that man LANYON" are doubtless exaggerated, it seems certain that sufficient care has not been taken to avoid wounding the susceptibilities of a peculiarly touchy people. Of the conduct of affairs since hostilities began the less said the better. Any close of such a chapter may be plausibly argued to be preferable to its continuance. But there are weightier reasons still for acquiescence in any settlement not utterly intolerable. The hands in which the government of the country at present is have proved themselves so inadequate to the conduct of difficult matters, that it is simply patriotic to desire that their inadequacy should not have further opportunities of displaying itself. Ministers who can be driven from their purpose, solemnly expressed in the official programme of their policy, by the pressure of a defeat abroad or a threatened agitation at home, are fit only for quieter waters than those of South African wars.

CHURCH AND STATE IN FRANCE.

THE French Republic is once more in presence of a great opportunity and a considerable danger. Its enemies have begun to pay it the best tribute that it is in their power to offer. They are divided upon the question whether they shall try to agree with the Government which until now they have persistently combated. In spite of a Republican policy which is described but feebly when it is called unconciliatory, the Church is no longer anxious to continue the struggle. The clerical organs properly so called breathe nothing but resignation. The Bishops have taken to reading ST. PAUL'S Epistles, and to drawing thence instructions to Christians to submit themselves to the temporal authorities without a too narrow scrutiny of their historical claims. The NUNCIO has shown a marked civility to the Government. The Pope has quietly accepted the new Bishops proposed to him by the President of the REPUBLIC. In short, the Church has insensibly passed through another crisis, and has accepted, without enthusiasm but apparently without any thought of retracing her steps, the existing order of things. This singular transformation has been going on for some little time without attracting much attention, and if it had been acquiesced in by the whole clerical party, it might have remained unnoticed a good while longer. What has brought it before the public is the schism which it has effected among the clericals themselves. It seems certain that the policy of the NUNCIO has been extremely distasteful to the Legitimist Right, and that very strong efforts have been made to bring about his recall. In the happy days when PIUS IX. was Pope, Mgr. CZACKI would have been recalled long ago; indeed, he would never have got to Paris except by an accident. But LEO XIII. is a ruler of different temperament and different ambitions, and

Mgr. CZACKI has been sent to Paris, not in ignorance of his tendencies, but because of them. Consequently all that the Legitimists have got for their pains is a semi-official note which fixes the NUNCIO more firmly in his seat than ever. It has been announced in one of the clerical journals that the Cardinal Archbishop of Rouen, who is now in Rome, has had several interviews with the Pope and with Cardinal JACOBINI; that he has taken advantage of these interviews to assure the Pope of the profound satisfaction with which the French Episcopate has seen the prudent and skilful policy which the Holy See has pursued towards the Republic, and of the earnest desire entertained by the great majority of French Catholics that no change should be made in the representation of the Pontifical Government at Paris; and that he has been assured in reply that the NUNCIO enjoys the full confidence of the Holy See—a confidence which has only been increased by the attacks of which he has recently been the object. This undisguised approval of the new attitude of the French Episcopate seems to have been more than Legitimist patience could endure. They have been accustomed to regard the Church as their own peculiar property, and to assume that orthodoxy and sound views upon divine right were inseparable supernatural gifts. They have now been forced to reconsider their position, and to admit that the clergy may not always be safe guides in politics. The very journals which, when their party was all powerful at the Vatican, would not allow that the laity had any more right to think for themselves in secular matters than in matters relating to theology, now proclaim with equal vehemence that, though they yield all respect to the clergy within their own sphere, they cannot allow them to claim any authority outside that sphere. The doctrines which brought MONTALEMBERT within a measurable distance of excommunication are now proclaimed by the men who were his bitterest enemies. So long as the Church said what it ought to say, it had no more docile children than the French Legitimists. Now that it has taken to preaching peace with the Republic and good will to men who owe no allegiance to HENRY V., they measure out their obedience with the most watchful and grudging accuracy. So much goes to the Pope because he is Pope, but if he presumes upon his Pontifical character, and even hints that the welfare of the Church demands that it shall not associate itself with any one form of government, he must at once be made to feel that he has gone beyond his tether, and has presumed to advise French Catholics upon a point of which they are better judges than he.

Whether the quarrel has been precipitated by the recent publication of a new Legitimist programme, or has itself hurried on that publication, does not appear. Obviously, however, the recent speech of M. DE MUN at Vannes constitutes a new political departure, and the circumstances under which it was delivered have made the severance between the Legitimists and the Clericals extraordinarily conspicuous. M. DE MUN announces that the time for acquiescing in existing institutions has passed away, and that the Republican Government must be overturned by a diligent use of the weapons it has itself provided. By an express clause in the Constitution, that Constitution is capable of revision, and nothing has been laid down as to the form which the revision is to assume. The two Chambers are permitted to meet together in Congress, and when thus gathered together they may, if they so please, convert the Republic into a Monarchy. That M. DE MUN should persuade himself that any two Chambers that could possibly be got together in France would implore the Count of CHAMBORD to ascend the throne of the BOURBONS would seem impossible if it were told of any other party than the French Legitimists. They have shown, however, a natural turn for misreading the views of their countrymen which practice has now brought to an unusual point of perfection; and there seems no reason to doubt that M. DE MUN was really recommending what he thought to be a practicable and peaceable means of bringing back the King. But he failed by anticipation to convince the ecclesiastical authorities. The Bishop of VANNES did all he could to dissuade him from making a speech at all, and when he found that M. DE MUN was not to be turned from his purpose by the whole French Episcopate, refused to allow him to sleep at the Seminary, and forbade his clergy to attend the meeting. M. DE MUN is now consequently in the position of a class of men which he has always held in the utmost detestation. So far as his relations with the

POPE and the Bishops go, he is no better than the despised Liberal Catholic. He draws nice distinctions between this and that function of the Sovereign Pontiff, and decrees on his own supreme authority that obedience is due to LEO XIII. in this character, while disobedience is permissible in that.

This, then, is the opportunity which is now offered to the Republic. The Church is once more in search of a temporal ally, and its support may plainly be had on very easy terms. It is no slight concession on the part of LEO XIII. to be willing to live at peace with a Government which has banished the Jesuits, dispersed the religious orders, and secularized the communal schools. The POPE, we may be sure, has not gone this length without many misgivings and immense opposition from his own natural advisers. The Government has only to meet the POPE half way, and to make the working of the new laws as little irritating as possible, in order to see the secret or open opposition of the last ten years die gradually away as the fuel of fresh political extravagance is withdrawn from it. The danger is that, instead of welcoming the changed attitude of the Church as an indication that it is time to abandon a policy which even its authors can no longer pretend to be necessary in self-defence, the Republic may lay too much stress on the fact that this change has followed with remarkable closeness upon the adoption of a policy of active hostility. It is to be feared that the Left will be inclined to argue that the more the Church is oppressed the more submissive she is likely to become. If, they may say, the measures taken by M. DE FREYCINET and M. FERRY have already had such excellent results, what may not be expected from patient continuance in well-doing? While the clergy believed themselves to be strong in the affections of the people, they could hardly be brought to tolerate the Republic; now that they have seen with what indifference the people have viewed the infliction of one heavy blow after another, they are only anxious to avert what may yet be in store for them. If this latter reasoning prevails, an ecclesiastical truce is not likely to be proclaimed for some time to come.

THE STATE OF PARTIES.

THE result of the Coventry election may perhaps be accidental; or it may be due to anomalous and unsatisfactory causes; but, on the other hand, it may possibly indicate a partial reaction. The two Irish members who went to Coventry on a mission from the Land League may perhaps have done as much harm as good to the party which they honoured with their support. The indigenous mob treated Mr. FINIGAN as his own constituents would have dealt with an opponent from a distance; and it is probable that some more respectable electors voted for the Ministry because it had incurred the enmity of a seditious faction. It may be hoped that, unlike some other boroughs, Coventry has purged itself of former corrupt tendencies, in which indeed constituencies can no longer indulge with impunity; and it would be unjust to suspect either the candidates or their friends of offering illicit temptation. On the whole, the chances seem to be in favour of the assumption that the election represented the general opinion of a borough of secondary rank. A few weeks ago a Conservative victory at Wigan was ingeniously interpreted as a proof that coercion was unpopular in Lancashire. In that case the party which had returned a member at the general election obtained a largely increased majority. At Coventry the fortunes of the previous contest have been reversed. The Liberal party found in Sir UGHTRED SHUTTLEWORTH a candidate of ability and political influence; and there is no doubt that Mr. BRASSEY, who came to support him on behalf of the Government, was sincere in his expression of confidence that he would be returned. The defeat must be mortifying, even if it can be explained away. The only other recent election resulted in a questionable triumph for the Government. It is true that the vacancy in East Cumberland was caused by the death of a Conservative member; but until the general election the representation had for a long time been in the hands of the Liberal party. Mr. GEORGE HOWARD, the virtual head of a popular and powerful family, had been elected member for the division on the death of his father, who had held the seat with little or no opposition for the lifetime of a

generation. In the late contest Mr. HOWARD was opposed by Mr. LOWTHER, a comparative stranger to the county, who proved during the canvass, as formerly in his official career, that his respectable abilities were not accompanied by taste or discretion. With all the advantages on his side, Mr. HOWARD was returned by the narrow majority of thirty. The result scarcely proves that the Government commands popular enthusiasm.

At the close of his last administration Mr. GLADSTONE attached exaggerated importance to the defeat of the Government in several local contests. His successors, having been in this respect apparently more fortunate, were tempted by their victories at Southwark, Liverpool, and some other places to precipitate the contest which ended in their total defeat. It appears that occasional elections are sometimes, but not always, significant of the tendency of political opinion. The Coventry election implies disapproval of the Government rather than preference for the successful party. The Conservatives are at present too weak in numbers to be rival pretenders to office, and the more judicious of their number probably congratulate themselves on their freedom from responsibility. It is difficult for a Liberal Ministry, even with the aid of a considerate and patriotic Opposition, to carry on the government. If Sir STAFFORD NORTHCOKE were in office, he would be attacked with the same reckless fury which was exhibited a year ago in Midlothian. The extreme Radicals, who sympathize with the Land League in its defiance of the Government, are still more hostile to the Conservatives, who have steadily supported the measures proposed for the protection of life and property. The questions of foreign, colonial, and Indian policy, on which Parliamentary parties are really divided, tend to unite the Liberal masses with their official leaders. The Radical householder takes it for granted that the Transvaal and Candahar ought to be abandoned; and he is taught by the journals of his party to believe that in international disputes the English nation is always and everywhere in the wrong.

The direction of straws which, like casual borough elections, purport to show which way the political wind blows, must at present be observed with even less than ordinary confidence. Allowance has to be made not only for local currents and eddies, but for the withdrawal of the pressure which is usually applied by Parliamentary discussion. Except on one or two occasions in the House of Lords there have been during the first two months of the Session no regular debates. Mr. GLADSTONE, though he has delivered two or three weighty and eloquent speeches, has been compelled to restrict himself to the duty of furthering if possible the progress of business. Finance, legislation, and foreign policy have been superseded by a barren struggle with a score or two of perverse brawlers. It is believed that the constituencies have, with the exception of the lowest rabble, sympathized with the great majority of the House in its attempts to maintain order and freedom of debate; but neither the failures nor the successes of the Government have raised any issue between political parties. With the exception of a few candidates for notoriety, the Conservatives have supported the Government; and even where the Opposition object to the standing orders proposed by Mr. GLADSTONE, the questions in dispute are unintelligible or uninteresting except to members of the House. In the meantime Mr. GLADSTONE's list of thirty urgent reforms is left in abeyance. The financial measures which he has prepared must for the present be postponed; but his pleasant duty of distributing a surplus may perhaps revive a waning popularity. The introduction of the Irish Land Bill will probably be followed by an entire change in the present relations of political parties. If the measure is moderate and just, it will alienate the Radicals, and a revolutionary scheme will force the Conservatives into active opposition, even if it is unwillingly accepted by moderate Liberals. The Bill has been preceded by much injudicious boasting, in which Mr. GLADSTONE himself has never joined. The orators who demand or promise a large and generous measure are not careful to remark that benevolence can only be practised by the robbery of one class for the benefit of another.

Mr. GRANT DUFF and Mr. COURTNEY lately represented the Government at a dinner of the Oxford Palmerston Club. The name of the institution furnishes a warning to the founders of similar political institutions. Half a century ago the CUMBERLANDS and ELDOES of the time used to celebrate at the meetings of the Pitt Club the

doctrines of commercial monopoly and religious intolerance. The great Minister whose memory they desecrated had been the first official patron of Free-trade, and he had sacrificed power in the cause of Catholic Emancipation; but his surviving partisans associated his name with their own prejudices and passions. Lord PALMERSTON is not believed to have sympathized warmly with the brilliant colleague who was destined to be his successor, and he would probably not concur in any opinion or measure of the present Cabinet, except the Protection Bill and the Peace Preservation Bill. Mr. GRANT DUFF adheres to some of the traditions of the older and better time. Mr. COURTNEY would be opposed to Lord PALMERSTON on every domestic and foreign question. At Oxford he took occasion to expatiate on the unity and discipline of the Liberal party. His satisfaction may perhaps be well founded, though it has become a Liberal commonplace that a body of politicians so original and so highly enlightened is incapable of the monotonous unanimity which is attributed to the Conservatives. It cannot be denied that the Government has, in the contest with the Irish obstructives, been supported by its followers, with the exception of a few extreme and insignificant seceders; but a large majority consisting partly of the bulk of the Opposition scarcely proves the harmony of the followers of the Ministry. The section to which Mr. COURTNEY belongs is not likely to desert Mr. GLADSTONE as long as he leads the party of movement. The Liberals who utterly distrust his policy may perhaps continue to suppress their chronic dissatisfaction. It is only in private that they can prudently or properly express their real opinions. A disruption in the party or in the Cabinet is not at present imminent, and it is to be strongly deprecated. The Conservatives, even if their party interests were to be considered, have nothing to gain at present by a Whig secession. Two or three years hence, when discontents have accumulated, the Conservatives may perhaps hope to recover office by the aid of proselytes. If they can add a few other triumphs to their victories at Wigan and Coventry, their prospects may gradually improve.

FLOGGING IN THE ARMY.

WHEN Mr. CHILDERS comes to explain the provisions of the Army Discipline Bill, he will be in no want of a shield at which to aim his lance. A Correspondent of the *Standard* in South Africa has kindly cut out the SECRETARY OF STATE'S work. Mr. CHILDERS will have to show how the mysterious punishment which is to take the place of flogging will work in cases such as that mentioned in Monday's telegram. "The other day"—so it runs—"a vedette, placed to watch a valley by which the enemy frequently approach our lines, was found drunk at his post. Many crimes of this and other descriptions have taken place, and the military authorities are powerless to punish, and have indeed no means whatever, short of shooting, of maintaining discipline." Mr. CHILDERS will, no doubt, say when he approaches the question in Parliament, that no confirmation of these statements has been received from the General in command. It would be impossible to govern soldiers under a Parliamentary system if the SECRETARY OF STATE were not always enabled to give this kind of assurance with a safe conscience. The dirty linen of the army, more perhaps than that of any other department of the public service, needs to be washed at home. But when he has pleaded official ignorance to the full, Mr. CHILDERS will not be out of the wood. There is nothing in the statement telegraphed by the *Standard* Correspondent which is in the least degree improbable, and in recommending a new punishment in place of an old one, it is necessary to show that it will answer the same purpose as the old one and answer it equally well. Mr. CHILDERS'S device will at once be applied in imagination to the state of facts, real or imaginary, described in the *Standard*, and it must stand or fall by the success with which it endures this test.

The offence of which the telegram just quoted gives an instance is one which there is a strong temptation to commit. A man is placed to watch a point by which the enemy may possibly approach, and he finds that the duty is dull so long as the enemy does not show himself, and alarming so soon as he does. Whether he is waiting

in weary expectation of something happening, or considering with himself how best to carry back his news without exposing himself to the enemy's gaze, the sentry is inclined to have recourse to liquor to support his courage, and to make the time pass a little less slowly. The only motive for abstaining from liquor which is likely to have much weight with him is the dread of the penalty which will certainly follow upon detection. Before the abolition of corporal punishment a soldier knew very well what would happen to him if he were found drunk at his post. He had been flogged himself, or he had seen others flogged, and either from experience or observation he could realize fairly well how he would feel if he found himself in the Provost Marshal's hold with the cat waiting to descend upon his back. If anything would avail to keep him sober, it would be the prospect of making, or possibly renewing, acquaintance with this unpleasing instrument. Mr. CHILDERS has now to invent some penalty which shall be equally deterrent, and will equally admit of being applied in the conditions in which the British army now finds itself in South Africa. The disclosure is one to be looked forward to with more curiosity than hope. Imprisonment is impossible where there is no prison; and, where soldiers are young, there is some fear lest, even if it could be had, it might become too popular. The rapture of the strife is not equally enjoyed by all men; and it is quite conceivable that some of the exceptions might be anxious to qualify themselves for a punishment which would necessarily have the effect of keeping delinquent soldiers out of harm's way. On the eve of a battle even custody may not be disagreeable, provided that it is really safe custody.

There are, no doubt, alternative forms of physical torture which might be equally well calculated to destroy any desire to drink which may exist in the soldier's mind. These are not punishments, however, which English officers are good at inflicting, and some of them might be open to objection, on the ground of withdrawing the soldier from active service for a longer period than is the case with flogging. It is a further evil attendant upon the use of these expedients that they are almost of necessity resorted to at the arbitrary pleasure of the commanding officer. No military code prescribes hanging up a man by his thumbs, but the practice is not, we fancy, unknown in more than one army. There are other expedients which, though they inflict physical suffering, stop short of torture, and it is from among these perhaps that Mr. CHILDERS intends to select his new penalty. There would be no harm, for example, in a man being ordered to do all his drills for a certain time in irons or with a heavy shot fastened to his leg, and to spend some days under this discipline might conceivably be too high a price to pay even for the fearful joy of getting drunk in presence of the enemy. But these are punishments which can only be applied on the parade-ground, or at most on the march. A man who is found drunk to-night cannot be sent into action to-morrow with shot fastened to his legs. All that he has in the way of agility and endurance may be wanted before the day is over, and to send him to fight at a disadvantage is to put others besides himself in peril in order to read him a moral lesson. There remains death, but this is a terribly severe penalty to resort to except in the very gravest cases, and, moreover, it takes away from the delinquent all power of being again useful. There are men in every regiment who are not hopelessly bad soldiers—perhaps not bad soldiers at all, except when they are drunk—who have been kept in some sort of order by the fear of being flogged, and will now have no really effective sanction before them, except the prospect of being shot. They will know in most cases that this prospect is not at all likely to be realized, and the exceptions when an unusually severe officer orders them to execution will be too rare to be really deterrent. On the other hand, if executions were frequent enough to be really dreaded, they could only be resorted to at the cost of throwing away useful soldiers in deference to a sentimental dislike to the infliction of a smaller punishment. The soldier who prefers death to the lash does not exist for any practical purpose. If the feeling is ever found, it is in men who are not in the least likely to commit the offences which entail flogging.

This, however, is the ridiculous dilemma into which the weakness of the Government has brought the military authorities. They must either shoot men for offences which do not deserve death, or they must practically let them

go unpunished. How Mr. CHILDERS proposes to get the army out of the difficulty which he and his colleagues have created we have no idea. Nor have we the least belief that any way out of it really exists. Flogging combined in itself certain recommendations which made it the best of all punishments for an army in the field. For troops in barracks a substitute may probably be found, and no great harm may come of it if it is not in all respects as effective as the penalty of which it takes the place. But what may be sufficient in barracks is not sufficient in the field, and it is with the field that Mr. CHILDERS has now to deal. If he can suggest a punishment which is free from all the drawbacks which have been enumerated, he will take very high rank as an inventor. There is, however, every reason to fear that his forthcoming patent will turn out unworkable.

TURKEY AND GREECE.

THE Ambassadors of the Great Powers have now been for some weeks engaged in the difficult task of finding a means of preserving peace between Greece and Turkey. They do not appear to be getting on very fast or very well. They have to find out what is the most that Turkey will give and the least that Greece will take, and it is hard to find this out when neither side will tell its secret, and when neither side, perhaps, knows what its secret is. The Ambassadors, too, now occupy a new and peculiar position. When in October last the Porte made its counter proposals to the decisions of the Conference of Berlin, the Ambassadors, speaking collectively and in the name of Europe, at once pronounced that those counter proposals would not do, and were not even worth a moment's discussion. They were united, and gave a united sentence. Now they work each for himself, and only meet on one common ground, that of wishing to see peace preserved. They are brokers, not judges, and want to get an offer from one principal which they can recommend the other principal to accept.

The Porte wanted them to begin and say what it was they would recommend, but this was quite inconsistent with their present modest position. It would be most inconvenient for them to make a proposal without being sure that it was one that Turkey would accept, for then Turkey would begin to haggle with them and not with Greece, and this is not the business of brokers. After many delays they at last got Turkey to begin, and Turkey, while positively declining to give up an inch of Epirus, talked of increased concessions in Thessaly. To give a definiteness to vague talk the Ambassadors asked for a map on which Turkey should trace the line it meant to adopt as the Thessalian boundary. Turks do not like making maps. There is something rigid, businesslike, and accurate about maps which is distasteful to the Oriental mind. The Ambassadors kept meeting in their solemn confiding fashion, but there was no map for them, and so they had to wait and meet again. At last they got a map, or something that did duty for a map, and could begin discussing how the tracing of the Turks was to be altered. They did something more. They got the Turks to propose that Crete should be surrendered as an equivalent for that part of Epirus which was not to be surrendered. So far they have succeeded, and what they are now apparently endeavouring to achieve is the pushing back of the Turkish frontier in Thessaly to the very furthest limits which Turkey will permit. If they can get the frontier pushed back to any considerable degree, they will then have an offer which they can submit to their other principals, the Greeks. With Crete and almost all Thessaly in their hands, they will have something to give which they may think it reasonable to expect Greece will accept. If it refuses, the negotiations will be at an end. These good brokers will have done the best for the Greeks that they found it practicable to do, and it is for the Greeks to judge whether this best is good enough for them. Europe is not signifying its will either to Turkey or Greece. It has no will to signify. It has no opinion as to what either party ought to do. It only strives to see a bargain made, and to see such a bargain made that it can advise those to whom it is submitted for rejection or approval to accept it.

The Hungarian PRIME MINISTER has just assured his Parliamentary hearers that the concert of Europe is un-

broken, and that Austria will do her best to maintain it. The whole character of the concert is changed from that which it wore in the days when it was a concert that led to making decrees and to the enforcing of decrees. It now decrees nothing, because it will not enforce anything. But even in its present shrunken limits it is a good thing, and does good. It is not much, but it is something that the Powers should at the last moment work together to get a bargain for Greece which Greece may accept with profit and honour. It is also something that, if there is to be a war, the Powers should agree to do all they can to localize its limits. But what is meant by localizing the limits of the war if war breaks out the future only can show. The Powers can easily agree that they will not send any of their troops or ships to give assistance to the Turks or the Greeks, but what are to be the limits of the localized war? Is it meant that Austria will keep in check Servia and Montenegro, and that Russia will hold down Bulgaria and Eastern Roumelia? There is almost sure to be trouble for the Turks in Albania, in Syria, and in Arabia. If the war or the commotions that will grow out of the war are to be localized, the limits in which it will be localized will be very wide. Then, if the Greek navy proves superior, is it to be allowed to visit and annex any islands where there is a Greek population to welcome it, or to blockade it if it cannot force the Dardanelles? If the Turkish navy proves superior, is it to be allowed to anchor off the Peiræus, and to throw its shot into Athens? It would be extremely convenient to the onlooking Powers if the Greeks and Turks would meet in the plains of Thessaly, have one good big battle, and decide the issue of the war at a stroke. But, although this may happen, it is not at all probable that it will happen. It is much more likely that the Turks will remain on the defensive, and use the shelter and support of their fortresses. The war may thus linger on, and in a lingering war very much may happen to excite the passions and provoke the alarms of the onlookers. What will then become of the localization of the war? It is because they see how difficult it may be to localize the war that the Powers are honestly anxious to prevent its breaking out. But, although all are anxious that peace shall be preserved, and all are agreed that the way to preserve peace is to get an offer which may be proposed to Greece as worth its accepting, there are naturally some who work harder than others at getting the best offer possible. England, no doubt, leads those who work hardest for this end, and this is the sense in which it must be understood that Italy and Russia are inclined to be in a great extent guided by England. France hides its light under a bushel, while Germany and Austria co-operate in the task of getting something reasonable to offer to Greece, but acquiesce in, rather than push forward, the endeavours made to determine what this reasonable thing shall be.

Meanwhile, both Turkey and Greece are rapidly completing their final preparations for war. Greece is calling in, not the reserves of her army, but the reserves of her population, and is demanding service from those who have been hitherto exempt. Turkey is fortifying Volo, and pouring in through that convenient port the last contingent she thinks necessary for the defence of Thessaly. In point of finance, it may be said that Turkey has no money, and Greece has no more money, so that, as regards their impecuniosity, both sides are equally prepared and impelled to fight. The Greeks are perhaps the more eager for war, for they know less of what war means, and they think with much justice that they have been hardly treated, that France has deserted them in an unaccountable way, and that the Berlin Conference ought not to have made a pompous award in their favour if this award was to mean nothing. Still, reason can make its way into excited and wounded spirits, and if they could get Thessaly and Crete without firing a shot, the Greeks may be expected to reflect in time that they could hardly hope to get more even by a successful war. Turkey may lose more, but the Greeks will not gain the difference. Albania may make itself independent of Turkey, but it will also make itself independent of Greece. If a new Power comes to Salonice, it will not be Greece, but Austria. On the other hand, if Turkey has much to lose by war, and is so far impressed with a sense of its dangers as to be willing to make considerable concessions to avoid war, there are limits to the concessions which the SULTAN can make. When

he pleads the difficulty of handing over an unwilling Mahometan population to a Christian Power, he is talking of something which to him is very serious. He has to think in the first place of his own life. Who is most likely to try to kill him is not unnaturally his chief thought, and, after the possible emissaries of his nearest relations, he most dreads the attack of a fanatic infuriated by the thought that the chief of Islam has been false to his faith. Then there is his religion, and his religion forbids the cession of Mahometan territories and peoples except under pressure of conquest. If war goes against him, he is perfectly justified in yielding to fate. Russia conquered him, and he had to bow; if the Powers ordered him to do specified things under pain of war, he could not be bound to enter on a perfectly useless struggle. But Greece is not a conqueror, nor a formidable opponent; and to give over without a fight unwilling Mahometans to a little State that he thinks he could easily beat, raises a very anxious case of conscience in his breast. Lastly, there is the Caliphate itself. The Caliph is the champion of the Mahometan world, and if he ceases to be the champion of this world, why should he be its Caliph? The late Khedive of Egypt has been amusing his hours of enforced leisure with the compilation of elaborate proofs that the SULTAN has no right to call himself Caliph, and the Arabs are said to be filled with the idea that it is their present mission to provide a new Caliph from the original home of the Prophet. If the Greeks have got their feelings, the Turks have got their feelings too, and it may be equally a mistake to suppose that policy and expediency will exclusively guide the one or the other.

WELLINGTON COLLEGE.

THE discontented officers who regard Wellington College as a memorial of broken promises and disappointed hopes have at last seen the end of their uncertainties. Practically, indeed, they were in this happy position seven months ago, for with the publication of the Report of the Royal Commission the prospect of any radical change in the constitution of the College completely disappeared. It was settled last August that Wellington was not to be made a cheap school for the children of living officers, and that is naturally the point about which living officers are chiefly excited. Still, until the Committee of the Governors appointed to consider the recommendations of the Royal Commission had made their report, the subject was not finally laid on the shelf. It might even have seemed conceivable to some sanguine and imaginative spirits that the Governors' late remorse might yet wake, and that the doors of the College might at last be thrown open to as many boys as there is room for at a payment of 30*l.* a year. The appearance of the Committee's Report makes it plain that no such work of grace has been going on in the Governors' hearts. As regards the character and cost of the school they are hardened and impenitent sinners.

It must be admitted that with the settlement of this central point most of the interest of the subject has disappeared. If we notice the observations of the Committee, it is rather because they wind up a long controversy than because in themselves they specially call for remark. The Committee examine the recommendations of the Commissioners one by one, and, as is the wont of such Committees, they give reasons in almost every case why these recommendations should not be adopted. The Commissioners suggest that, as the boys on the foundation at Wellington are seldom without relations who could pay something towards the cost of their education, 25*l.* a year should be charged for every foundationer not exempted in consideration of special circumstances; and that the money thus gained should be spent on the admission of twenty-three more foundationers. The Committee object that a payment of 25*l.* a year would exclude "many boys in straitened circumstances who are now able to obtain admission," and propose that the charge for every foundationer should be 10*l.*, which is the sum for which the Governors are bound by contract to take the eighteen boys nominated by the Patriotic Fund, which would enable them to increase the foundation by eight boys, instead of by twenty-three. The reason given by the Committee does not seem of much weight; since, if a payment of 25*l.* a year would exclude

some boys who now get in, the substitution of eight for twenty-three as the number of the additional foundationers will equally exclude boys who would otherwise have got in. Another means of adding to the foundation suggested by the Commissioners was the reduction of the amount retained by the house-master out of the payments made to him by each boy. At present 90*l.* a year is thus retained, and the Commissioners were of opinion that this sum might be reduced by 15*l.* The Committee point out that the instances quoted by the Commissioners of schools in which the proportion of the payments retained by the house-master is less than it is at Wellington are misleading, since the salaries paid to the Wellington masters are much smaller than in most other schools of the same class, while in some of the cases quoted the number of boys in a house is larger. The Committee are not, therefore, prepared to recommend the Governors to make the proposed reduction. As regards the suggested reduction of the head-master's salary, the Committee prudently remark that no decision upon the subject "can be arrived at by anticipation." When the office is vacant the Governors will consider whether effect can be given to the Commissioners' recommendation. Something must plainly depend upon the condition of the educational market at that time. The present head-master is willing, however, to waive the payment of any capitation fee in respect of the eight additional boys to be placed on the foundation.

There is another point touched upon in the Report of the Royal Commission about which the Committee are silent. This is the audacious suggestion that the masters "ought to aim in their training of the scholars at inculcating 'by precept and example a strict simplicity of life.'" Interpreted by the brutal mind of a Philistine and economical parent, this might be taken as discouraging the acquisition of blue china and aesthetic draperies. As no master who combined artistic culture with manly self-respect could brook any interference in this direction, the Committee are probably well advised in saying nothing. Upon the kindred question whether it ought to take 80*l.* a year to board and educate a boy at Wellington, when it takes only 67*l.* to board and educate a boy at Haileybury, the Committee are scarcely more communicative. They think that any controversy founded on a comparison between the expenses of Wellington and those of other public schools would be unprofitable, inasmuch as, if those expenses can in any way be curtailed, it ought to be done without reference to any such comparison. We cannot but think, however, that some opinion might have been given by the Committee on some of the specific charges of extravagance which were brought against the school by some of the witnesses before the Royal Commission. In dealing with the Report of this Commission, we instanced the evidence of the medical officer, and pointed out that when this gentleman is constantly obliged in the discharge of his duties to urge a boy not to eat the full amount of meat provided, there was reason to suppose that the amount which has thus to be cut down is somewhat in excess in the first instance. As to the allegation of the same authority that the College beer is needlessly strong, it is best to imitate the reticence of the Committee. It is a subject upon which providers and consumers seldom see eye to eye. There is one means, however, which the Committee think might be made available for the reducing of expenses; and, as this is one which is not mentioned by the Commissioners, the recommendation to try it has doubtless been given with peculiar pleasure. A public school of five hundred boys can be more economically managed than one of four hundred, and at present Wellington does not come up even to this lower figure. As, however, this increase will necessitate certain enlargements in the school buildings, it may be doubted whether the effect of it is likely to be immediately felt either in an increase in the number of the foundationers or in a reduction in the payments made by the house boys. There can be no doubt, however, that these and all similar questions are really matters to be determined by the authorities of the school. Circumstances have unfortunately brought Wellington College exceptionally before the public; but it certainly would not be to its advantage that the public should retain that habit of discussing its affairs which has unavoidably grown up during the last two years.

ALEXANDER II.

ALEXANDER II. was born on April 29, 1818, and was thus a little more than a year older than the Queen. When he was seven years old his uncle Alexander I. died, and his father Nicholas succeeded. One of his earliest memories was therefore that of the military revolution, the stern and swift repression of which seated the Emperor Nicholas firmly on the throne, and the memory of which determined the severe character of his reign. Its dangers never ceased to be present to his mind, not only because it was very nearly successful for the moment, but because it was the work of men young, educated, and aristocratic; because it proposed to use the army as the means of success; and because it was the expression of those ideas—fanciful, liberal, and revolutionary—which had at one time gained a strong hold on the visionary mind of his brother Alexander. Thenceforward to mould the aristocracy into a set of cringing courtiers, to make the army everything and merge everything into the army, and to stamp out Liberalism at home and abroad, were the fixed purposes of the Emperor Nicholas, and they were never abandoned for an instant during the thirty years of his reign. In this atmosphere of repression the heir to the throne grew up, cowed by his father, obedient to him, admiring him, but at the same time disappointing him. Alexander did what he was told to do, was a colonel at seventeen, directed military schools, and served a campaign in the Caucasus. But his heart was not in soldiering, and his father saw that it was not. The youth was too much like his mother and his mother's race for the work of iron and blood in which his father was absorbed. The Emperor Nicholas had married the Princess Charlotte of Prussia, and she brought to her new home not only the memories of a daughter who had seen her mother insulted by Napoleon, and her father stung by the oppression of Napoleon into trying once more the fortunes of war at Leipzig, but the vague tenderness of German poetry and the gentle morality of German pietism. She inspired her son with as strong a distaste for everything, bad or good, to which the ardour of the French Revolution had given birth, as her husband himself could feel; but she aroused in the boy the desire to do right which has been the standing characteristic of the Royal family of Prussia, and that cultivation of the inner life which permits men, even when yielding a mechanical obedience to the strictest discipline, to dwell secretly in the region of soothing or melancholy dreams. When he was twenty-three Alexander was allowed, through his mother's influence, to make a love match with the Princess Marie of Hesse-Darmstadt, and lived happily, but in almost as great reserve as if he had not been the heir of all the Russias. He saw peoples rise and thrones tumble down in 1848, he saw his father's legions sent to crush the Hungarians, and earn the eternal ingratitude of Austria. He saw the Crimean war break out; he heard of Alma and Inkermann, of the collapse or seeming collapse of the allied armies, of the strange turn of events by which the besiegers were turned into the besieged, and of the enormous efforts by which the allies were endeavouring to repair their misfortunes when, in March 1855, he was called to the deathbed of his father, and was told that the mighty burden of Empire was, in a few short hours, to descend on his unwilling shoulders.

Even when a sovereign is an autocrat it is often difficult to say whether the policy he pursues is the policy he imposes on his advisers or the policy he accepts from them. It was supposed that the new Emperor was inclined to peace, and a Conference was held at Vienna to ascertain how far this supposition was justified. But either Alexander or Russia would not give way, the proposal to exclude Russian vessels of war from the Black Sea was rejected, the Conference broke up, and then the fight went on until Sebastopol was taken, and the anxiety of France to escape on almost any terms from a costly war enabled the Czar to make peace on terms singularly advantageous to his country. Could Lord Palmerston have had his way, the power of Russia might have been broken for years. As it was, Russia nursed her strength for a little time, and then showed herself stronger than ever. This peace, which Russia had reached after enormous sacrifices, but with considerable credit to her arms, was turned without delay by the Czar to the useful purposes of domestic reform. He had long been known to have in view some project for the emancipation of the serfs. When he had power and leisure he set to work, and this time the work done was unmistakably his. The Czar, and the Czar alone, gave freedom, hope, and property to more than twenty millions of serfs belonging to others and to as many belonging to himself. A Commission was appointed to report on the shape the project was to take; but it soon appeared that there was a radical divergence between the views of those who wished to give the serfs a new life and the views of those who wished merely to improve the life of the serfs as it was. The Czar cut the knot, and, by a stroke of his pen, decreed that the serfs should be free, should be communal proprietors, and should be exempted from the penal jurisdiction of the landowners. It was a great, a bold, and a wise measure; but the change was not really so great as the bare statement of its leading features would suggest; it awoke many heartburnings and jealousies; and, like all changes, it carried evil as well as good with it. The peasant was still tied to the soil, and could only change his place of abode under the most severe restrictions. Frequent contests, which still remain unsettled, arose as to what portions of an estate were to be given over to the peasants and what were to remain to the landlord. The conscription, increasing taxation, bad brandy, and

slovenly habits of cultivation never slackened their hold on the peasant, and it may be doubted whether the material condition of the millions in Russia is better now than it was twenty years ago. Other reforms were also contemplated or attempted by the Czar. There was an endeavour to institute something like local self-government, but it cannot be said to have been carried very far, as those to whom local self-government was entrusted have never been certain whether they had it or not, or whether they were intended to report what their constituents wished, or what the Government wished they should wish. The administration of justice was also recast. New courts, new codes, new rules of procedure were invented, and legal remedies were made, at least on paper, more intelligible and more accessible. Within certain limits trial by jury was instituted, and even Russia was allowed to share in the advantages of the bulwark of English liberty. But trial by jury is like confidence in aged breasts. It is a plant which grows very slowly, and is soon choked off in an uncongenial soil. In Russia its frail life only lasted until it was found that juries let off persons whom the Government expected to see condemned. It was then replaced by the more robust and trustworthy mechanism of courts-martial.

In his foreign policy the Czar has in some distinct ways shown his own personal leanings and influence. His strong attachment to his mother's family and the affection shown him in return by the German Emperor have very largely contributed to that alliance between Germany and Russia which so largely shaped the fortunes of Europe during the contests of Prussia with Austria and France. It was the Czar, and not the adherents of the traditional policy of Russia, that responded to the appeal of the people and launched Russia into the perils of the Turkish war. It was the pious wish of the Czar to blot out every humiliation which could attach to the memory of his father that made him insist that at the end of the Turkish war every condition imposed on Russia when the armies sent forth by Nicholas were stricken down should be abrogated, and that the admission of the Russian fleet to the Black Sea should be followed by the restoration of Bessarabia and the surrender of the Armenian fortresses. In other incidents of Russian foreign policy during his reign, in Russian opposition to the creation of the Italian Kingdom, in the contemptuous refusal of Russia to permit the interference of England and France in the affairs of Poland in 1863, in the audacious repudiation of a leading provision of the Treaty of Paris while the Franco-German war was going on, and in the momentous step taken by Russia in 1875 when she forbade an unprovoked attack of Germany on France, and gained the undying hatred of Prince Bismarck, the hand of Prince Gortschakoff is to be traced more clearly than the hand of the Czar. In subordinate matters and in distant scenes the Czar has frequently had a policy created for him by adventurous officials who have pushed forward the limits of his Empire or his influence, and who have taken their chance of being rewarded or disgraced. Their zeal has generally been rewarded, but this is a part of the traditional policy of Russia, and had scarcely anything to do with the personal views of the Emperor. But that Alexander II. should have been so habitually guided by the traditional policy of Russia must be taken into account when an estimate is being formed of his life and character. It may perhaps be said of him that he was a man who had strong impulses, but who yet was not impulsive. He had that kind of good sense which warns a sovereign, however powerful, that he must not go too far, must avoid committing himself, and must be ready, if necessary, when he has got far enough in one direction, to move in a different and perhaps an opposite one. Before the emancipation of the serfs he told the refractory nobility that he was Czar and should enact what he pleased; but after the emancipation he told the disappointed peasants that he was Czar, and that not a line could be altered in that which he had enacted. Nor was it merely good sense and firmness that kept him from going too far in the path of reform. He was not a philosophical reformer or an enlightened constitutional monarch of the Western type. He was before all things the Czar, and he never shrunk from acting as Czars have been accustomed to act. He sanctioned the cruelties by which Poland was driven into revolt in 1863, and the ruthless tyranny by which, when the revolt was crushed, all classes in Poland above the peasants were ground to powder in the Russian mill. Siberia, and more Siberia, and ever more and more Siberia, was as much his answer as it had been that of any of his predecessors to the appeals of aspiring subjects. He was as ready to interfere, after the fashion of Czars, in small things as in great; and, having ordered his young men to learn science to open their minds, he suddenly ordered them to learn classics to close their minds. He was as powerless, and perhaps, as time went on, as unwilling, as any other Czar to remedy the confusion of Russian finance, or to check the corruption of Russian officials. In his days the serfs have been emancipated, and the country has been what is termed covered with a network of railways—that is, some lines have been made where they were wanted, and some where they were not wanted, to an extent not insignificant in so vast a space. Otherwise, there is probably no great difference between the Russia of to-day and the Russia of a quarter of a century ago.

The later years of the Czar were clouded with war, revolution, attempts on his life, and those domestic troubles of his own creating which were notified to the public by his recent marriage with the Princess Dolgorouki. Whatever his faults may have been, he was a tender-hearted, compassionate, and courageous man. During the

early part of the Turkish war he was in a most unhappy position. He had the good sense to abstain from a task for which he was so totally unfit as that of directing military operations. He could only sit and wait in a lonely Bulgarian town, hearing the sad accounts of his faithful soldiers being cut down by thousands in what seemed an ineffectual struggle, visiting the wounded in the hospitals, and so stricken with sorrow that in their far-off homes his subjects began to see, and almost to worship, in their Czar the greatest and most sublime of sufferers. From the time when his life was attempted at Paris in 1867 he was noticed to be an altered man. He was conscious that he had done much for his people, and he had been taught the bitter lesson that no amount of well-doing can make the life of a Czar safe. After the end of the Turkish war, he found that not only was his life exposed to danger, but that a knot of persons were determined to kill him. He was shot at by a retired officer, the train in which he was supposed to be travelling was blown up, the room in the Winter Palace in which he had by the merest accident not sat down to dinner was shattered, and now the end has really come, and he has been killed. He had shown on Sunday last his habitual courage by insisting on going out to a review in spite of very positive warning, and he displayed in the last act of his life his habitual kindness by refusing to escape from further danger until he had seen to those wounded by the first missile. After the attempt of the Winter Palace he would neither abdicate nor retire into privacy, but he placed all the executive authority in the hands of Count Melikoff, and only watched more or less closely how his substitute went on. The experiment was a successful one in many respects. Russian society seemed to be beginning to breathe a little more freely, a kind of liberty was given to the press, systematic inquiries were made into the wants of the provinces, order reigned in Russian towns, and at last Count Melikoff saw his way to abandoning his exceptional position, but retained his power in the guise of an ordinary Minister of the Interior. In the background stood Alexander II. like the spectre of Ozardom, not directing, not reigning, but existing with the awful majesty and latent omnipotence of the Czar, until his enemies should succeed in bringing his mournful, but not undignified, existence to an end. He had lived his life, he had wrought his work, and perhaps a sudden and violent death was the best means of endearing his memory to his people, and letting the good he had done live after him.

A POLITICAL POT-POURRI.

NOT very long ago one of our contemporaries made a doleful complaint to the effect that "the hobby-horse is forgot" in political life—in other words, that the lighter shades are sadly wanting just now in the picture of public affairs. As there can be no suspicion of a want of imaginative penetration in the quarter to which we refer—where it has just been discovered that Mr. Gladstone is a man of peculiarly calm and equable temperament, as shown by his wearing a black skull-cap, and going round Scotland in the *Grantully Castle*—the only way in which we can account for the complaint referred to is that the complainant has not looked in the right place. For the political comedy never ceases to be comic—that is to say, to those who have eyes to see. Here are a few instances collected almost at random from the daily papers during a range of forty-eight hours only. We might amplify them considerably by extending that range a little. For instance, few things more genuinely comic have ever been seen than the intense disgust of the Radicals at the falsification of Mr. Gladstone's predictions as to the course of Supply on Monday and Tuesday night. The ingenious Liberal M.P. who wrote to the *Times* indignantly protesting that not a single thing occurred on either of those nights which would have been prevented by the rules of urgency, and arguing from this that urgency might just as well have been imposed, is in himself a study for a contemplative humorist. A great novelist once described two of his characters as "gazing on each other with animated countenances" for some moments in the silent enjoyment of a just revealed instance of ingenious rascality. So might others gaze in silent enjoyment of that Liberal M.P. To know that such a man exists is something; it brings one very near to the discovery, the possibility of which used to animate the thoughts of the late Mr. Carlyle when he meditated on the whereabouts of the stupidest man living. To have the cover narrowed to the walls of St. Stephen's, to know that the betting is not much more than three hundred and sixty to one against identification of the paragon at the first trial, and that an easy process of exhaustion would bring the odds down to a very short figure indeed, is of itself delightful. It is more delightful still to feel sure that the unlucky writer is not the least conscious of the sublime folly of his argument. "You might just as well have let me put you in irony, for you have been quite as quiet as if I had."

Let us go back, however, to our stipulated adventures of forty-eight hours. Ireland, of course, furnishes a considerable part of them. How charming, for instance, was that remark of Mr. Dillon the other day, that plaintive expostulation with the Government. They had promised, he said, to arrest only village tyrants, dissolute ruffians, and so forth, and they had actually lodged in Kilmainham "as respectable men as any of that platform." The occupants of the platform are not reported to have grined; the audience, for an Irish audience, seems apparently to have

faculty of seeing a joke) did not greet the truism with uproarious laughter. Nobody present saw the joke, and the fact that nobody saw it makes it perhaps of a more delicate flavour. Hibernian still, but less obviously delightful and delightfully obvious, was the remark of another Land League chairman that Sir William Harcourt was "the rejected representative of a sink of iniquity." The cold Saxon mind would take this for a compliment, inasmuch as to be rejected by a sink of iniquity can scarcely be said to be evidence of vice. But these verbal assertions of the right of self-government as regards the misuse of sense and the English language pale before the pleasant fiction or fact with which the Reverend Mr. Kenney, P.P., regaled his flock at Ennis a day or two ago—the secret history of the Irish Church Disestablishment, and also of the constant fears which have arisen in ultra-Protestant minds as to Mr. Gladstone's religious soundness. It was not the Clerkenwell explosion which determined Mr. Gladstone to disestablish the Irish Church. That act was a kind of earnest of his conversion. But, after all, "when everything was prepared to receive him, and the altar candles were lighted," Cardinal Wiseman received a letter from him stating that he had changed his mind. The wrath of a prince of the Church, trifled with in this manner, may be better imagined than described. And then the waste of the candles! It is only to be hoped that the Cardinal, having book and candle all ready, and doubtless bell also, did not at once fulminate his most elaborate curses at the head of this most unseasonable changer of his mind. And yet, as Lamb would have said, can there be anything in the story? For Mr. Gladstone certainly has been known to change his mind with great rapidity, and the lighting of the candles is a valuable piece of circumstantial evidence. If Father Kenney had a piece of one which he could satisfy impartial observers had been actually lighted, it would be very serious. Pleasant, again, is it to consider the arguments of Miss Anna Parnell on the subject of outrages. At a meeting of the London branch of the Ladies' Land League, Miss Parnell undertook the castigation of Mr. Jesse Collings, who objects to outrages on cattle. With convincing force Miss Parnell showed that it was impossible for her brother to denounce outrages, because such denunciation would be equivalent to an acknowledgment that they had been committed by his followers. An equally strong argument was found in the fact that it was the person who was unpopular with his neighbours whose cattle were houghed. The stupid Saxon thinks he sees in this the act of the neighbours. Not at all; the unpopular villain does it himself that he may get compensation at the expense of his enemies, and so revenge himself on them. Nothing can be clearer. As usual, however, with Irish defenders of cruelty to animals, Miss Parnell endeavoured to carry the war into the enemy's country. Walking through an aristocratic London square, it seems (the story begins rather like the unlucky joke which lost Lamb's unfortunate friend his place on the "Oracle"), Miss Parnell met a cat. Miss Parnell has a weakness for cats, and we parenthetically but heartily wish she had a weakness for nothing worse. So the cat and the agitatrix exchanged courtesies, and the agitatrix gave food to the hungry cat. The populace flocked round her, and informed her that it was the custom of the brutal Saxon to abandon his cats when he goes from his luxurious London home to the castle whence he tyrannizes over a down-trodden peasantry. Now mark the contrast. "In Ireland," says Miss Parnell, "that cat would have been put into a blanket" (not and tossed, as the reader may anticipate, but) "and carried to the other house." From a rather intimate acquaintance with the manners of the English cat, we doubt whether that independent animal would relish the blanket. However, Miss Parnell has hit a real blot in the thoughtlessness on which she comments. Perhaps she would do well to remember that the cruelty which horrifies English lookers-on is not thoughtless, but deliberate and systematic. However, to make these reflections is to treat Miss Parnell rather too seriously, and, besides, we promised only Democratic handling of topics in this article.

If we have hitherto confined ourselves to Ireland, it is from no want of home subjects. Indeed, as we have hinted, the deliciously problematic Liberal M.P. who has such a charming fashion of arguing ought to supply food for silent laughter for at least a week. But there is plenty more. It may not be true that, as some reports have it, the senior member for Northampton, in the debate the other night about his colleague, being confused by Mr. Gorst's arguments, hit upon the happy compromise of styling him "the Hon. Mr. Bradlaugh." But if it were true, this new Americanization of our institutions would be sublimely typical. Less suggestive but larger subjects for passive merriment suggest themselves in Mr. Grant Duff (who may be surprised to find himself a cause of mirth), and still more in the New Party. How Mr. Grant Duff went down to the Palmerston Club dinner at Oxford with the object of assisting in the praiseworthy task of bringing up young Liberals under glass in that ungenial atmosphere; how he knew all about the subjects on which his chief had just said he knew nothing; how he laid down an ultimatum as to terms with the Boers, and how very shortly afterwards it appeared that the two points of Mr. Grant Duff's ultimatum are just the very things which the Boers protest they will never concede; all these things make a pleasant story. If it be said that the Transvaal war is too important a subject to regard jocularly, it may be at least replied that Mr. Grant Duff is not too important a personage to receive such treatment. On the whole, however, the home event of the last week which deserves most attention from the politician with a sense of humour is perhaps the formation (or rather the

formativus, for the actual formation can hardly be said to be complete) of the New Party. The New Party has not settled on its name, or apparently on its principles. It avoids, perhaps wisely, the numerical appellations which have been in favour of late. But it meets assiduously and strives to come into being. All that appears to be clearly known about it is that it includes—or when it comes into existence intends to include if it can—Mr. Cowen, Professor Beesly, and Mr. Hyndman, as odd a trinity surely as any one could meet on a day much longer than any that March allows for the search. The New Party, as far as its immediate programme goes, appears to be mere old Chartism, writ not exactly large, but in different letters. Triennial, instead of annual Parliaments, is the only alteration noticeable to a casual observer. These things, however, are after all only means to an end, and it would be extremely interesting to know what the end of the New Party (we have no evil intentions in the use of that ambiguous term) is to be. Mr. Cowen would probably like to use it to destroy Russia; Professor Beesly to exterminate the wicked race of literary men whom he so much hates, and who are given to misrepresent the best of sovereigns like Tiberius; Mr. Hyndman to do something—what, we believe, nobody, not except himself, knows—with India. But, when Russia has been subdivided into sixty or seventy Republics, with manhood suffrage, annual Parliaments, &c., and when the last literary man is dismissed to his appropriate Tartarus amid the plaudits of an enfranchised world, and when the sponge has been passed over India's debt, and over the establishment of her services, civil and military, what will the New Party do then? To what mysterious goal will it bend its majestic steps? These are questions which may be answerable, but which none has yet answered; and the New Party thus continues to loom in the political mist, a pleasant subject of conjecture, of observation, and last, but not least, of amusement.

Such is a sketch of the subjects contributed to the *comédie humaine* by the recorded public events of some two or three days only. Far be it from us to claim that we have extracted all their sweetness; on the contrary, we have only indicated the sources of that sweetness to the judicious public; and, in face of this generous abundance, complaints are made that there is nothing to laugh at. Such conduct is, indeed, in the expressive Scotticism, "spanning your mercies."

ASHBURNHAM HOUSE.

If the losses involved were less irreparable, there would be something almost grand in the nonchalance with which we see the works of our great English architects destroyed piecemeal, almost without a protest, certainly without effectual interference. One by one the few beautiful buildings which relieve the monotony, or atone for the vulgar pretentiousness which is the characteristic of modern London, disappear, and with them page after page of history is wiped out, and a crowd of memories scattered recklessly to the winds. Wren's works are rapidly becoming fewer. Temple Bar—that unjustly decried but really dignified gateway, not unworthy of its great architect, and well suited to its surroundings, with its odd suggestions of the "Bridge of Sighs" at Venice, with all its memories of royal entries, and civic processions, and quartered traitors, and decapitated Jacobites, and "spying glasses" let at a halfpenny a look at the ghastly spectacle, and Johnson and Boswell quoting Latin verses at one another—is the latest sacrifice. Now it is gone the usual reaction has set in, and people begin to regret it. After Wren's City gateway, Wren's City churches are going fast. St. Antholin's, with its taper spire—one of Wren's loveliest creations—with its sisters, St. Benet's, St. Bartholomew's, Allhallows, and others—has been pounded down into Portland cement, while the stones of St. Mildred's, rescued from the same ignominious fate by Mr. Ffytche, are still lying in that gentleman's park near Louth. St. Mary-at-Hill, which we are glad to believe we had some hand in rescuing when it was attacked three years ago, is threatened again by the Inner Circle Railway, and unless a vigorous defence is speedily organized, its graceful domed interior will become a thing of the past. But it is not among Wren's works alone that the hand of the destroyer has been busy, witness Northumberland House and the colonnade of Burlington House, whose graceful semicircle seemed to Horace Walpole like the vision of a fairy palace raised in a night-time, whose pillars are mouldering in a rubbish heap in Battersea Park.

The most recent object marked out for destruction is Ashburnham House; not the well-known town house of the Earls of Ashburnham in Dover Street, so long the residence of the Russian Ambassador, but the mansion of the same name in Little Dean's Yard, erected by Inigo Jones for a former member of the Ashburnham family, and occupied till his recent demise by the late Lord John Thynne as his canonical house. It appears that the authorities of Westminster School, still shortened for room, notwithstanding the alterations which have swept away the famous "shed" and other historic landmarks, have long since cast envious eyes on the range of buildings running westward from the school-room (the old monastic dormitory) which lies to the south of the cloisters, and the site of the Refectory, of which Ashburnham House forms the westernmost.

Our apprehensions were raised a few days since by a paragraph in the daily papers announcing to the world that a compact had been made some time since between the Governing Body of the

school and the Dean and Chapter, by which the former might on the next avoidance take possession of these houses and work their wicked will upon them. We inquired, and found the statement only too true; that, unless warned off by indignant antiquaries, the rapacious school would infallibly seize on, and destroy, Inigo Jones's lovely creation. While we write we read that the seal of the Governors has been affixed to a request to the Dean and Chapter to complete the bargain. Small reverence would the school authorities show for the priceless relic of Jones's architecture. Individually the members of the Governing Board may not be dead to æsthetic influences, but collectively they are bound to be superior to such weaknesses. A seventeenth-century nobleman's mansion cannot meet the requirements of a school. We ourselves have seen a *scuola primaria* kept in the magnificent halls of a Genoese palace, and—such is the radical difference between an Italian and an English schoolboy—without damage to its frescoed ceiling and rich architectural decorations. But we are sure a Westminster boy would feel strangely out of his element in Jones's richly stuccoed chambers or on his pillared staircase; while even in these luxurious days, a Westminster master might find Ashburnham House a costly and comfortable domicile for his *ménage*. But surely there can be no call for any haste in demolition. The circumstances of Westminster School are not such as to render the question of enlargement one of immediate urgency. Boarders are few; day-boys are not overpoweringly numerous.

But, whatever may be the future of Westminster School, an earnest protest must be raised against its being allowed to swallow up Ashburnham House. This is indeed a building that London can ill afford to lose. Small as its dimensions are, nowhere is the genius of the great introducer of classical architecture among us more unmistakably felt. Little as it is now known, the grand staircase, with its short stately flights of broad, low stairs, broken with dignified landings; its panelled walls and lovely oval lantern, which is the chief feature of the house that has survived the conflagration of 1731 and modern innovations, is an architectural composition whose merits have "claimed the attention and secured the admiration" of all who have become acquainted with it. Sir John Soane, the architect of the Bank of England, a man of eccentric but original genius, thought so highly of it that he had a series of drawings made to illustrate its plan and details, and exhibited them as instructive examples to his pupils at the Royal Academy lectures. A little later, the late Mr. George Gwilt was so struck with the beauty of the design that he made drawings of it with his own hand, which were engraved by Le Keux for Butler and Brayley's *Public Buildings of London*. The main order on the first floor is Ionic, with capitals of the Roman type, with eight angular volutes. The columns and half-columns which support the panelled ceiling and the boldly enriched entablatures are fluted. The oval dome which crowns the whole springs from twelve smaller columns also of the Ionic order, but unfluted, arranged in four groups of three. If there be a fault in the composition, it is that their upper columns are somewhat too diminutive. The chief apartments are entered from this staircase by arched-headed doorways with very bold but somewhat heavy projecting keystones. They include a drawing-room of exquisite proportions which was once surmounted by a cupola, and a state bedroom, now the dining-room, with a graceful tribune. They are ornamented with heavy cornices, stuccoed ceilings, and other rich, but well-designed and harmonious, decorations. The exterior of the mansion is perfectly plain, but well proportioned. The front towards Little Dean's Yard, of which there is a good view in Smith's *Westminster*, taken 1808, shows two wings and a slightly receding centre, in dark red brick, with a uniform range of tall narrow sash windows lighting the principal floor. The northern face looks out on the interior wall of the demolished refectory of Westminster Abbey, with the Confessor's Norman arcade below, and Abbot Litlington's decorated windows and roof corbels above. The site of the great hall (130 feet long by 38 broad) forms the garden of this and the adjacent house, now occupied by Mr. Turle, the venerable organist of the Abbey. Traces of the conventual kitchen have been discovered at the south-west angle.

The history of Ashburnham House is somewhat obscure. Britton, more than half a century back, speaks of "the difficulty of reconciling and combining the varied and vague traditional annals of nearly two centuries." Nor, though there could be little difficulty in working out the history from the Chapter records, do we know that anything has been since done to elucidate it. We have explained that it is said to have been designed by Inigo Jones for one of the Ashburnham family. The history of the family, "one," writes Fuller, "of stupendous antiquity, which hath been equalled by its eminence," would point to the celebrated "Jack Ashburnham," the trusted and faithful attendant of Charles I., his confidant and companion both in his flight from Oxford to Southwell in 1646, and in his escape from Hampton Court to the Isle of Wight the next year, as the person for whom the mansion was built. He was born in 1603, and was the eldest son of Sir John Ashburnham, who is handed down to posthumous fame not very engagingly, in his son's epitaph in the church of Ashburnham in Sussex, rebuilt by him after he had retrieved his fortunes by marriage, as "that unfortunate Person whose good Nature and frank Disposition towards his Friends is deeply engaged for them, necessitated him to sell the Estate which had been in his Family long before the Conquest (?) and all the Estate he had elsewhere, not leaving to his

Wife and six Children the least Substance." Inasmuch as the epitaph goes on to say that within two years of the easy-going gentleman's death, which happened in 1620, "not one of his children but was in Condition rather to be helpful to others than to want support themselves," Jack Ashburnham may well have been in a position to employ the leading architect of the day when he was in the zenith of his fame (the Banqueting House, Whitehall, was built between 1619 and 1621) to erect his town mansion in the fashionable classical style. The site for his mansion, probably at that time a strip of useless unoccupied land adjacent to the old ruined Refectory, would be probably obtained on a long renewable lease from the Dean and Chapter. In 1708 we find his grandson John, the first Lord Ashburnham, residing here, having been married ten years before in Westminster Abbey. He could not, however, have made this house his usual place of abode, for his death took place in 1710 "at his house in Southampton Street, near Bloomsbury Square." The house remained in the possession of the family twenty years longer, until 1730, when the lease was purchased by the Crown of his son John, who that same year, "in consideration of his great merits," had been raised to an earldom. The object of the purchase was to secure a place for housing the King's and other libraries belonging to the Crown, including the celebrated Cottonian library of manuscripts, which, after their purchase by the Crown in 1706, had remained six years, together with the other collections, in the old Cotton House, at the back of the former House of Commons, which afterwards became the residence of the Commons' chief clerk, in vain expectation of the erection of the new library, the erection of which had been ordered by the Act of Purchase, and had then been removed, in 1712, to what remained of Essex House in the Strand. From Essex House the manuscripts were removed back to Westminster in 1730, and placed in Ashburnham House, under the care of one Mr. Bentley, the deputy of his great namesake Dr. Robert Bentley, the celebrated Master of Trinity, who had been made Keeper of the King's Libraries throughout England, in succession to Justel, in 1694. Dr. Edward Gibson, afterwards Bishop of London, had been a rival candidate to Bentley; but the place was actually given to one Mr. Thynne, with whom a compromise was effected, which was no secret at the time, Bentley engaging, on his resigning his post to him, to pay him 150*l.* out of the yearly salary of 200*l.*

Scarcely had these invaluable collections been placed in their new repository when they were near being burnt to ashes, to the incomparable loss of literature and the world. In the early morning of October 23rd, 1731, a fire broke out in the house which, in Dr. Monk's words, "did much damage to the Cottonian collection, and was very near destroying the whole united treasures" (*Life of Bentley*, ii. 308). Bentley, we are told, happened to be in town, at his post, and hastened to the rescue of the imperilled treasures, of which he was the official guardian, assisted by Speaker Onslow and others hastily summoned from their beds by the alarm. Bentley's first care was to secure what he considered the palladium of the library, the Alexandrine MS. of the Holy Scriptures, the famous Codex A, presented to Charles I. by Cyril Lucar, Patriarch of Alexandria, and then of Constantinople in 1628. Dr. Freind—not the famous physician, Dr. John Freind, confined in the Tower by Walpole as privy to Atterbury's plot, and charged by him with blackest treason, but subsequently basking in Royal favour as physician to Queen Caroline, wife of George II., but his brother, "Doctor Bob," Head-Master of Westminster School—was one of the earliest on the spot; and, in his letters to Lady Sandon, he draws an amusing picture of the great scholar seen issuing from the burning house in his flowing dressing-gown, a huge periwig on his head, and the Codex under his arm. This catastrophe reduced the manuscript volumes from 958 to 861, of which as many as 105 were almost hopelessly scorched or shrivelled. The patient industry and delicate manipulation of the late Mr. Planté succeeded in restoring fifty-one of these damaged volumes to legibility, and subsequent Keepers have recovered others whose charred condition seemed past remedy. We may here mention that after this disaster the collections were removed to the old Dormitory of Westminster School, "their last migration before the year 1752, when they were given to the British Museum, and found a resting-place in Montague House."

In 1739 Ashburnham House once more reverted to the Chapter, the remainder of the lease having been purchased of the Crown out of money granted by Parliament for the repairs and improvement of the Abbey and its precincts, which were then being vigorously prosecuted under Dean Wilcocks. He "being a gentleman of taste and judgment," according to Gwyn, had courageously swept away no fewer than four prebendal houses, which were nesting under the walls and encumbering the cloisters of the Abbey. To compensate for the loss of these Ashburnham House, the part damaged by the fire having been pulled down, was bought and divided into two residences, which were assigned to Dr. Welles and Dr. Barker. At the beginning of the present century Ashburnham House was for many years the residence of Dr. Andrew Bell, the founder of the "Bell Scholarship" for clergymen's sons at Cambridge, and the introducer of the once famous "Madras system" of mutual instruction in our primary schools; the precursor of the pupil-teacher system which has rendered the education of our national schools so much more thorough and efficient, and has kept up a constant supply of well-trained teachers. Bell's was a strongly marked character, and his services to the cause of primary education both in India and England

deserve to be remembered; but he was possessed by such an overweening sense of the importance of his "discovery" that, in the words of his friend and literary executor Southey, it "left no room in his heart and soul for anything else," while the fear that it was failing of just appreciation, and his jealousy of the rival system established on the same lines by Joseph Lancaster, made it "a perpetual torment to him, whatever good" writes Southey, "it may ultimately produce to others." From an exaggerated estimate of himself and his work Bell nourished "a sure conviction that the more fully he was known, the higher would be the opinion formed of his character, so that whatever related to him would be deemed of importance by posterity" (Southey to May, 1833). He therefore never destroyed a paper, and Southey describes with dismay the sacks full of letters and documents of all kinds sent down to him at Keswick to sort, arrange, and publish. Too bulky for the narrow limits of Greta Hall, already filled to overflowing with his own books and literary collections, they were deposited in a building at the end of his garden, where Bell's amanuensis spent several months parting the precious from the vile, for Southey's inspection. Again and again does the Laureate groan over the uncongenial work, for which his 1,000*l.* legacy was felt to be but an insufficient compensation. A still later occupant who has illustrated Ashburnham House was the brilliant poet, essayist, and historian, Henry Hart Milman, who resided in it till his nomination to the Deanery of St. Paul's in 1849. Its last tenant, as we have said, was the late Sub-Dean of Westminster, Lord John Thynne, a very worthy specimen of the dignified aristocratic clergyman of the older generation which it is the fashion now to disparage, but whose high-bred courtesy, quiet dignity, and faithful discharge of the duties of his office—it is easier to admire than to imitate. It would be an additional source of regret if his death were to be followed by the demolition of the noble house which was in such true harmony with his stately bearing. The expressed intention of the Dean and Chapter to resist the threatened spoliation is extremely satisfactory. Chapters are but trustees, and are bound to hand on to their successors, unimpaired what they have received from those who have gone before them.

"BIRER RABBIT."

THE capabilities, ambitions, and personal adventures of the rabbit have been hitherto greatly neglected in the literature of fable and allegory. The world, which seldom looks below the surface, regards with contempt an animal which possesses such ridiculous and inadequate weapons of self-defence and such deplorable lack of personal courage. The rabbit has, it is true, a pleasing exterior, with a graceful head, expressive, though melancholy, eyes, picturesque ears, and sensitive mouth; yet, even with these advantages, he offers little scope for a writer of fable, because it seems impossible to endow him with any single quality which commands respect. One cannot admire a fellow-creature who meets every danger, real or imaginary, with instant and precipitate flight. We may venerate meekness as a cardinal virtue in the abstract; but when a person is meek, not from a sense of duty so much as from weakness of frame, absence of claws, and cowardice of disposition, that person is commonly little thought of. It is perhaps also against a rabbit that he belongs to so numerous a tribe; it seems as difficult to single out one rabbit from a warren as one herring from a shoal, he is one among millions, rapidly multiplying, though rapidly destroyed; he would overrun the whole round world, and eat up every green thing that therein is, but for his enemies, who devour the devourer. Then there is something contemptible in belonging to a race no member of which was ever in any warren—though the memory of the oldest inhabitant is short indeed—known to die a natural death. Other animals, again, possess distinct characteristics which connect them with the emotions and qualities of man; there are "spiritual correspondences"; they become types of human character; we liken our fellows to them; one is a wolf for appetite, a pig for earthliness, a monkey for tricks, a bulldog for tenacity, a mole for blindness, a skunk for general disagreeableness, or a bandicoot for baldness. When such a comparison is set up, the most stupid observer knows at once what is meant, and sees before him, in rude but effective outline, the manner of the man. But what, one asks in sorrow, are the distinguishing characteristics of a rabbit? and what would be thought of a man who was likened to a rabbit? We should picture to ourselves a creature with no fight in him, without any strength or any resource in danger, or any hope except to live and enjoy; a man born to be plundered; the natural victim of every rogue; whose mere appearance would be an invitation to all foxes, ferrets, weasels, martins, stoats, and polecats to come and devour their prey. He would be imagined, in short, to have been born, like the rabbit, for no other purpose than to satisfy for a few moments the ever-hungry maw of his enemies; to fill, for a brief space, the Universal Pot.

These be truths, and it might seem hardly worth while to state them; but there are special reasons why, at the present moment, by way of *amende honorable*, we should confess our late low opinion of the rabbit, for we must be immediately prepared to change that opinion altogether, and to regard the despised creature for the future with respect and admiration. We have, in fact, been recently introduced to a collection—short as yet, but we hope still growing—of genuine legends, fables, and gestic in which

the rabbit shows himself a fellow quite superior to his previous reputation, and, indeed, full of resource, cunning, wit, and mirth. It will be a matter of rejoicing to every candid mind to feel that this animal, too, has at length joined those creatures with whom children are brought up to sympathize. Henceforth, whether he is basted with onion sauce, or roasted, or curried, he will be looked upon with more respectful eyes; classical associations will gather round the dish; and the knowledge of his many good qualities will doubtless improve his flavour.

Let us suppose that, by some lucky chance, a copy were to be found of the famous "Renart" story in its most primitive form, that in which it left the brain of the ingenious person who conceived it or first adapted it to the social conditions of his time. It is easy to trace the great complicated allegory, with all its additions and later growths, back to an early form. The story of how superior strength may be met by cunning is one which would be naturally interesting at a time when the world was a great deal vexed by strong men strongly armed, always hungry, and always wanting meat and wine for nothing. What more natural allegory than the quarrel of the wolf and the fox? The earliest form of this legend would contain none of those envenomed sayings which mark the hatred of an oppressed people; none of the *nuances*, none of the discordances, the irrelevancies, the intrusions of erudition, and the multiplicity of allusions, which are found scattered up and down the great cycle of *Renart*, from *Reinardus Vulpes* to *Renart le Contrefait*. It would be the simple tale of how the cunning beast outwitted the strong beast. Later on will be found allegorized resistance to the King, the Church, and the Law. But in the first plain, unvarnished tale Renard lives in the little country house with Hermeline his wife, and his sons Percehaie, Malebranche, and Rovel; he in no way resembles a hero of early French epic; he is not brave; he performs no great exploits; he is assisted by no magicians; his desire is simply to bring his enemy to discomfiture and death, and then to live at home undisturbed, as any simple country gentleman might wish. It is strange that this same tale of craft against strength, once so popular, between the Rhine and the Loire, should be found in the plantations of the Southern States, and should have been the principal delight and consolation of the negroes in their long years of servitude. Yet, unless the editor of the stories called *Uncle Remus* (London: David Bogue) has misled the world, this is actually the case; from one generation to the next the slaves handed down their stories of how by wit, dexterity, and craft the rabbit defended himself successfully against his enemies.

Mr. Joel Chandler Harris, who introduces us to Uncle Remus, thinks it necessary to assure us that his intention is entirely serious—we like those who amuse us to be serious—and he goes on to assert that the legends which he has collected are so familiar in the South that they have "become part of the domestic history of every Southern family." Many of them, it is true, are familiar in other forms, a fact which we leave to professors of folklore for explanation; we may, however, record the fact that one or two are common not only among the negroes of the Carolinas, but among the Amazonian Indians, and also in the Far East of Siam. The important point, however, for us is the very singular and appropriate selection of the rabbit as a hero, because it is immediately obvious that of all creatures the slave could probably find none whose condition more resembled his own. He is the most helpless of animals, surrounded on every side by enemies; he is liable to attack from every quarter and from almost every creature; he has no place of safety; there is no law to protect him; he is at the caprice of his masters. Yet the rabbit defeats his enemies, enjoys their discomfiture, and gets the laugh on his side in the end. He is not, in the fable, represented as asking respect for his virtue, his honesty, or his truth—did over any one ask respect for the black man on account of these qualities? He is *malin*, mischievous, and, on occasion, revengeful; he is not depressed by his condition; but, on the other hand, is gay, merry, sprightly, full of wit and of fun. These are the qualities which the slave must present to his masters. And, like the rabbit, he must show no distrust, seem to suspect no danger, pretend blind confidence, seem easily seduced by honied words; and yet, when his enemy is once within his grasp he will, also like the rabbit, be ready to *boil him alive*.

The language of the negro as given by Mr. Harris differs somewhat from that to which Mr. Stowe and other writers of nigger patois have accustomed us. It is not always easy to understand it, and perhaps one might find fault with the spelling. For instance, the word *brer* (= brother) would, we think, from our personal observation be more correctly written "barrer," but perhaps Mr. Harris knows best. The stories principally turn on the following motif. "Brer Fox bin doin' all dat he could fer ter ketch Brer Rabbit, en Brer Rabbit bin doin' all he could fer ter keep 'im fum it." Thus Brer Fox spies his friend afar off "lopin up de big road," and invites him with a friendly compliment to stop for a chat. Brer Rabbit declines to do so on the ground of being "monstus full of fens"; however, not to show distrust, he invites his enemy to take dinner with him. Brer Fox consents, but on the appointed day does not come, preferring to lurk outside on the chance of picking up one of the family. Brer Rabbit sees the tip of his tail and sings:—

De place wharabouts you spill de grease
Right dar you're boun' ter slide:
And whar you fine a bunch er ha'r
You'll sholy fine de hide.

Next day the Fox invites the Rabbit to return. He accepts and goes, finding the Fox "wrop up wid fannil," and looking "mighty weak." But his suspicions are awakened by the curious fact that though there is a carving knife on the table there is nothing in the dish pan. "Look like you gwine ter have chicken for dinner, Brer Fox?" sez Brer Rabbit, sezee. "Yes, Brer Rabbit, dey er nice, en fresh, en tender," sez Brer Fox, sezee. Den Brer Rabbit sorter pull his mustash en say, "You s'n't get no calamus root, is you, Brer Fox? I done got so now dat I can't eat no chicken 'cep'in' she's seasoned up wid calamus root." En wid dat Brer Rabbit lipt out er de do' and dodge mong de bushes."

Then the Fox made a Tar-baby out of tar and turpentine and set it up in the road, and waited in the bushes to see what would happen. Presently the rabbit came along and stopped, seeing the baby—

"Mawnin'!" sez Brer Rabbit, sezee—"nice wedder dis mawnin'," sezee.

"Tar-Baby ain't sayin' nuthin', en Brer Fox he lay low.

"How duz yo' sym'tums seem ter sogashuate?" sez Brer Rabbit, sezee.

"Brer Fox, he wink his eye slow, en lay low, en de Tar-Baby, she sin't sayin' nuthin'.

"How you come on, den? Is you deaf?" sez Brer Rabbit, sezee. "Kaze if you is, I kin holler louder," sezee.

"Tar-Baby stay still, en Brer Fox, he lay low.

"Youer stuck up, dat's w'at you is," says Brer Rabbit, sezee, "en I'm gwinter kyore you, dat's w'at I'm a gwinter do," sezee.

"Brer Fox, he sorter chuckle in his stummock, he did, but Tar-Baby ain't sayin' nuthin'.

"I'm gwinter larn you howter talk ter 'specttubble fokes er hit's de las' ack," sez Brer Rabbit, sezee. "Ef you don't take off dat hat en tal me howdy, I'm gwinter bus' you wide open," sezee.

"Tar-Baby stay still, en Brer Fox, he lay low.

"Brer Rabbit keep on axin' 'im, en de Tar-Baby, she keep on sayin' nuthin', twel presently Brer Rabbit draw back wid his dis', he did, en blip he tuck 'er side er de head. Right dar's whar he broke his morlases jug. His dis' stuck, en he can't pull loose. De tar hilt 'im. But Tar-Baby, she stay still, en Brer Fox, he lay low.

"Ef you don't lemme loose, I'll knock you agin," sez Brer Rabbit, sezee, en wid dat he foteh 'er a wipe wid de udder han', en dat stuck. Tar-Baby, she ain't sayin' nothin', en Brer Fox, he lay low.

"Tu'n me loose, fo' I kick de natal stuffin' outen you," sez Brer Rabbit, sezee, but de Tar-Baby, she ain't sayin' nothin'. She des hilt on, en der Brer Rabbit lose de use er his feet in de same way. Brer Fox, he lay low. Den Brer Rabbit squall out dat ef de Tar-Baby don't ru'n 'im loose he butt 'er cranksided. En den he butted, en his head got stuck. Den Brer Fox, he sa'ntered fort', lookin' dez ez innocent ez wunner yo' mammy's mockin'-birds."

The way in which the Rabbit extricates himself from the difficulty is, oddly enough, exactly the same as that in which, in the Persian story translated by Professor Palmer, Rustam escapes from Akwan Dev:—

"Well, I speek I got you dis time, Brer Rabbit," sezee; "maybe I ain't but I speek I is. You been rummin' roun' here sassin' atter me a mighty long time, but I speek you done come ter de cen' er de row. You bin cuttin' up yo' capers en bouncin' roun' in dis naberhood outwel you come ter b'leve yo'self de boss er de whole gang. En den you allers some're whar you got no bizness," sez Brer Fox, sezee. "Who ax you fer ter come on strike up a 'quaintence wid dish yer Tar-Baby? En who stuck you up dar whar you iz? Nobody in de roun' worrl. You des tuck en jam yo'self on dat 'Tar-Baby widout waitin' fer enny invite," sez Brer Fox, sezee, "en dar you is, en dar you'll stay twel I fixa up a bresh-pile and fires her up, kaze I'm gwinter bobbyeue you dis day, sho," sez Brer Fox, sezee.

"Den Brer Rabbit talk nighty 'umble,

"I don't keer w'at you do wid me, Brer Fox," sezee, "so you don't fling me in dat brier-patch. Rous me, Brer Fox," sezee, "but don't fling me in dat brier-patch," sezee.

"Hit's so much trouble fer ter kindle a fier," sez Brer Fox, sezee, "dat I speek I'll hatter hang you," sezee.

"Hang me des ez high as you please, Brer Fox," sez Brer Rabbit, sezee, "but do fer goodness' sake don't fling me in dat brier-patch," sezee.

"I ain't got no string," sez Brer Fox, sezee, "en now I speek I'll hatter drown you," sezee.

"Drown me des ez deep ez you please, Brer Fox," sez Brer Rabbit, sezee, "but do don't fling me in dat brier-patch," sezee.

"Dey ain't no water nigh," sez Brer Fox, sezee, "en now I speek I'll hatter skin you," sezee.

"Skin me, Brer Fox," sez Brer Rabbit, sezee, "anatoh out my eyeballs, 't'out my years by de roots, en cut off my legs," sezee, "but do please, Brer Fox, don't fling me in dat brier-patch," sezee.

"Co'se Brer Fox wanta hurt Brer Rabbit bad ez he kin, so he catch 'im by de behime legs en slung 'im right in de middle er de brier-patch."

Presently the Fox sees the Rabbit a long way up the hill, "settin' cross-legged on a chinkapin log, koamin' de pitch outen his hair wid a chip," and from this position of vantage he calls to the Fox, "Bred en bawn in a brier-patch, Brer Fox—bred en bawn in a brier-patch!" This story is a fair specimen of all. Had we space we should like to quote the tale of how Brer Rabbit makes Brer Fox put on saddle and bridle, and rides him, as the lady rode Aristotle in the *fabliau*, into the presence of "Miss Meadows en the girls." It is instructive, too, to read, how he fooled the Turkey Buzzard and turned the tables on the Fox who wanted to smoke him out of the chimney; how he destroyed the Wolf; how he patched up a friendship with the Fox; went out hunting with him and got all the game for himself; how he devoured all the butter; and how he brought Brer Bar to unmerited disgrace, with other stories, which we must pass over. To sum up, the stories, as was said before, should effect a complete revolution in the general estimate and reputation of the Rabbit. More than this—they point to an immense field open for those who are in search of new character, new scenery, and new dialogue. The negro of the Southern States has hitherto only been sketched, never stuffed, save perhaps by Mr.

Leland in his excellent portrait of "Ebeneser." Mr. Harris shows that he is full of curious stories, traditions, and superstitions. But as yet no one has collected them and set them down. Only a Virginian, indeed, or a Carolinian, or Georgian, would be competent to do so, because only one born and brought up among the people "bawn and bred in de brier patch" could do justice to their language, know how to get at their traditions, and understand their simple satire.

PIUS VII. AND THE CONCORDAT OF 1801.

A CONTROVERSY, arising originally out of the Abbé Martin's strictures on "Ritualism"—noticed at the time in our columns—is being carried on between him and one of our weekly contemporaries as to the precise relations of Church and State established by the Concordat of Pius VII. with Napoleon in 1801. The Abbé has lately republished in a volume, entitled *Anglican Ritualism as seen by a Catholic and Foreigner*, the papers he contributed to the *Nineteenth Century* and *Contemporary*. In one of these, it may be remembered, he falls foul of the Erastianism of the English Church in no measured terms, the point specially dwelt upon being the appointment of the Bishops by the civil power "through a Minister who may be anything, even an Atheist." In reply to this his reviewer in the *Spectator* not unnaturally called attention to the terms of the Concordat of the Pope with Napoleon I., which he himself summed up thus:—"The First Consul nominates a hundred bishops [there were only sixty by the by] and the Pope institutes them. They nominate the parish priests, and these are paid by the State. They take the oath [to the Constitution]. The priests who do not submit are transported." Napoleon added with characteristic urbanity—his sincerity is more open to question—that he was himself indifferent to all religions, being a Mahometan in Egypt, and a Papist in France, as best suited his conscience. To this criticism the Abbé replied after some weeks' delay, that the real question is not what a tyrant may seek to impose, but what the Church accepts, which of course is obvious enough, and equally obvious is the reviewer's rejoinder that the Pope did accept the Concordat, some provisions of which he goes on to cite as well as certain clauses from the Organic Articles. On this a fresh controversy broke out, in which the *Tablet* has taken part, as to whether Pius VII. ever accepted the Organic Articles at all, which the Abbé denies and his critics affirm. It appears clear at all events that in a subsequent Concordat with Louis XVIII. in 1817 it was agreed that only such of the Organic Articles were abrogated as conflicted with the doctrine and discipline of the Church, and some thirty years later, when the question was raised in the French Chambers, in 1845, M. Thiers insisted that the Court of Rome was as much committed to the observance of the Organic Articles as the French Government. The *Tablet* therefore is certainly incorrect in affirming that "the Pope never was a party to those [Organic] laws," while the assertion that he "did not concede to the secular Government the right of rearranging the French Sees, or give the secular Government the right of suppressing Sees, or of depriving recalcitrant bishops of their jurisdiction," is true, so far as it is true, only in so purely technical a sense that the distinction indicated is practically without a difference. With the particular dispute between the Abbé Martin and his critics—none of whom seem to us to be quite accurate in their statements—we have no desire to meddle. But the question thus raised is an interesting one, and one not of purely historic interest, for the Concordat marks the line of demarcation, not only chronological but moral, between the old Gallican Church of the middle ages and the *ancien régime* and the modern Church of France, which are as unlike each other as two bodies bearing the same name and identified by a common principle of national and ecclesiastical continuity well can be. Moreover the changes effected by the Concordat and Organic Articles, Erastian as the process undoubtedly was, may also be regarded from another and hardly less significant point of view, which appears to have escaped the notice of all parties alike engaged in the recent discussion. To the record of what actually occurred at that critical period we will now turn.

It was, as Ranke recounts, from the field of Marengo that Napoleon deputed the Bishop of Vercelli to open negotiations with the Pope as to the re-establishment of the Catholic Church in France, which however could only be purchased by enormous concessions. These, adds Ranke, Pius VII. at once determined to make, though including the alienation of Church lands to the value of 400 millions of francs, and the complete reorganization of the French hierarchy and clergy, who were henceforth to be appointed and paid by the Government. A more elaborate account of the proceedings about the Concordat will be found in the third volume of Thiers's *Histoire du Consulat et de l'Empire*. We must content ourselves here with a brief review of the principal points of interest. When Napoleon in 1799 assumed the reins of Government he had the sagacity to perceive at once that, as a matter of political expediency and for the consolidation of his own power, it was necessary to reconstitute the French Church in its old connexion with the Roman See. The Concordat signed at Paris July 15, 1801, by Joseph Bonaparte, as representing the French Republic, and Cardinal Consalvi, as plenipotentiary of the Pope, was the result of these convictions. The leading principles of this remarkable compact present an unprecedented novelty in ecclesiastical

history, and certainly appear at first sight to involve a complete subordination of the Church to the civil powers. The entire existing episcopate, whether bishops appointed under the *ancien régime* and thus still recognized by the Church, or archiepiscopal bishops holding under the Civil Constitution, were peremptorily required to resign their Sees under compulsion—only ten days being allowed them to make up their minds—and a new circumscription of dioceses, reducing the number by more than half to sixty in all, including ten archbishoprics, was to be at once substituted for the old one. Even the Archbishopric of Rheims, the grandest and almost the oldest in France, was swept away, though restored by Louis XVIII. in 1817. To these new Sees the First Consul was to nominate and the Pope to institute, and Napoleon further insisted, in spite of the urgent remonstrances of Pius VII., on selecting his nominees from the ranks of the Constitutional as well as the orthodox Bishops of the old hierarchy. The Bishops were to appoint to parochial curas, but only priests approved by the Government, and the canonical status and rights of parish priests were abolished. The Catholic religion was formally declared to be, not the established, still less the true faith, but—"The religion of the majority of Frenchmen," and, as such, was to be protected and paid by the State. The clergy were to take an oath of allegiance to the Government, and a prayer for it was to be inserted in the liturgy. And the wholesale confiscation of Church property already mentioned was to be accepted as an accomplished fact. In accordance with the first and most startling of these revolutionary arrangements the Pope demanded of the Bishops of the ancient hierarchy, of whom 81 still survived, the immediate and unconditional resignation of their Sees, while he addressed another Brief to the Constitutional prelates—who had never acknowledged his jurisdiction—urging them to return to Catholic unity. It is hardly wonderful that of the 81 Bishops, whose vested interests and prescriptive rights, to say nothing of the rights of their Sees, were so contumeliously ignored, 36 demurred to this arbitrary requirement, of whom fourteen were residing in England. Those who persevered in their resistance were afterwards called the *Petite Eglise*. The Constitutionals had of course no *locus standi* ecclesiastically, and they were forced to resign their preferments, not with a very good grace generally, to the Government at whose hands they had originally accepted them. Meanwhile the Pope and the First Consul proceeded at once with the reconstruction of the French Church on the lines agreed upon without the least regard for the remonstrances, protests, or petitions for delay addressed to them. The prelates who refused to resign were summarily deprived, and Cardinal Caprera as legate *a latere* gave institution to those named by Napoleon for the new Sees. It was in vain that he endeavoured to extort from the twelve Constitutionals, whom Napoleon insisted on including among them, a retraction of their previous schismatical oath to the *Constitution Civile*: the First Consul would not allow it, and the Cardinal succumbed.

In this compact, formally accepted and acted upon by Pius VII., the humiliation of the Church seems tolerably complete. There was however appended to the Concordat, under the name of *Articles Organiques*, a further series of still more sweeping regulations, which moreover bear more directly on papal claims, and of this supplementary code all knowledge was withheld from the Pope till after the Concordat had been signed. The articles were such as the following:—No document from the Court of Rome was to enter France, and no papal emissary to exercise his functions there without authorization of the Government, nor might any decrees of foreign Councils, General or Provincial, be published in France without previous examination and approval. Appeals *comme d'abus* were restored, and cognisance of them assigned to the Council of State. No religious marriages were to be solemnized by the clergy till a certificate of the previous execution of the civil contract had been produced. Restrictions were even placed on the Bishops in conferring holy orders. Against these Organic Articles the Pope protested in full Consistory, but we have seen that a qualified assent was afterwards given to them, and they have in most particulars been regularly enforced. That the Concordat, with or without the Organic Articles, was a direct infringement of the ancient rights and liberties of the Gallican Church, as such, there can be no sort of doubt, and it is probable that Pius VII. submitted unwillingly, and, as he himself explained at the time, only in order to avoid worse evils, to so daring an innovation on the traditional usages of Christendom. But there is another way of looking at the matter from the Roman standpoint, which the successors of Pius VII. at all events and their leading adherents have never lost sight of. Such a pontiff as Leo XIII., whose instincts all point in a liberal and constitutional direction, would have liked the procedure even less than Pius VII., but we may safely conjecture that Pius IX., who exulted in every innovation which tended to augment his own prerogatives, would have eagerly caught at such an opportunity, if it had been offered him. There is much indeed, as Mr. Jervis has pointed out, in the Concordat of 1801 to remind one of the Concordat of Bologna three centuries before between Leo X. and Francis I., when Pope and King agreed, as Pope and Emperor agreed afterwards, to sacrifice for their own ends the liberties of the national Church, which was thus subjected to a double dictatorship, secular and spiritual. The autocratic act, which by a single stroke of the pen annihilated the constitution of a thousand years and replaced the hierarchy of Charlemagne and St. Louis by the hierarchy of the first Empire, was no doubt dictated by Napoleon for purposes of his own, but it was effected

by Pius VII. in the plenitude of his apostolic power. And as no such stretch of papal prerogative had ever been attempted or dreamed of by the Hildebrands or Innocents of a former day, the later apologists of Ultramontanism have taken good care that the newly created precedent shall not be forgotten. We must not enter here on the theological question hotly discussed in the later middle ages, and deliberately left open by the Council of Trent—partly in deference to the vigorous maintenance of their *jus divinum* by the Spanish bishops present there—whether episcopal jurisdiction is derived immediately from Christ or mediately through the Pope. But there can be no doubt, as learned canonists like De Marca and Thomassin have shown, of the historical fact that bishops were originally elected, confirmed, and consecrated without any direct intervention of the See of Rome. And this had been the established discipline in France till the Concordat of Bologna swept away the rights of Chapters and Metropolitans alike, reserving to the Crown the absolute right of nomination to bishoprics and to the Pope alone the confirmation and institution of the royal nominees. One practical result of this new prerogative was shown when for eleven years the Pope refused to institute the prelates named by Louis XIV., who had subscribed the Four Gallican Articles of 1682, and thirty-five dioceses were thus left vacant, till at length the bishops designate were induced to withdraw their signatures and thus purchase institution. It was perhaps a logical inference from this novel claim of the Papacy, that those to whom it could absolutely assign or refuse jurisdiction it could also absolutely deprive. But still it was a new idea even among ultramontanes that bishops held their Sees of the Pope simply *durante beneplacito*, much as English bishops during the reign of Edward VI. took out commissions to act from the King revocable at his will and pleasure. And nothing less than this was implied when Pius VII., after peremptorily requiring the whole French episcopate to resign their Sees, proceeded at once to deprive all those who refused or hesitated to comply, and suppressed about half the Sees by his own sole authority.

The occasion for this autocratic achievement was no doubt sufficiently humiliating and disastrous for the Church, but the act itself, and in its consequences, tended directly to the aggrandizement of Papal power. It was the avowed design of Napoleon to make himself master of the Church, with the Pope for his head chaplain, and hence he insisted that the papal rule could not be too exclusive and absolute so long as it was exercised under his own control. The canonical rights of parish priests were abolished that they might become, as notoriously they still are in France, the mere creatures of their bishops—"an army to whom we say, march, and they march," as a Cardinal Archbishop not long ago expressed it in the French Senate—while the bishops themselves were held in absolute subjection to Rome. And it is noteworthy that when Pius IX. started his new hierarchy in England no canonical rights were bestowed on parish priests. No such prelato as Bossuet would be possible in modern France. And when we think of the great ultramontane reaction of the present century, and of the master minds who promoted it, such as Lamennais and De Maistre, we are irresistibly reminded of Pius VII. and the Concordat. Even writers like Cardinal Newman can hardly help referring in a tone of something like triumph to the destruction of the old Gallican Church, and the terrible cataclysm out of which the new *régime* was born. After a glowing description of the horrors of the French Revolution, when "the breath of the Lord went forth upon the face of the earth and the very foundations of society were melting in the fiery flood it had kindled," he bids us mark how "great changes have been wrought, but not those which were anticipated. . . . The Gallican Church, with its much-prized liberties, and its fostered heresy, was swept away, and its time-honoured establishment dissolved. Jansenism is no more. The Church lives. The Apostolic See rules. That See has greater acknowledged power in the Church than ever before." In other words the autocracy of Rome, first formally proclaimed in the Vatican decrees, has been raised on the ruins of national independence. It may sound like a paradox to say so, but it is not the less strictly true that the transaction which, when viewed in its circumstances and its agents, constitutes the extremest and most violent encroachment of Erastianism on the liberties of the Church, which was probably so regarded at the moment by all concerned, has yet proved both the starting-point and the most conspicuous exemplification of the pretensions of modern Ultramontanism.

UNFREQUENTED PARIS.

NO one who has not made the experiment can know how many difficulties beset the unfortunate seeker after truth when he attempts to explore the unfrequented quarters of a great city, nor can he form any adequate idea of the manner in which these difficulties multiply themselves when the city in question is Paris. To the average Parisian that quarter of Paris in which he lives is the universe; and he will discourse concerning those parts of the city in which he has never happened to set foot much as an imaginative astronomer might speak of unknown stars whose rays had not yet reached our world. Moreover, the poor quarters of the city lie more out of the beaten track in Paris than they do in London; and it is possible to walk beside them and round and round them without suspecting their existence. This is notably the case in regard to what we may, in default of its having any

name of its own, call the "Chiffonniers' town." Although this strange locality is more widely known than some others to which we may presently refer, it is yet so much out of the way as to make it worth while to describe its exact whereabouts. It lies, then, beyond the northern slope of the hill of Montmartre, it is bounded to the south by the Rue des Cloys and to the north by the Rue Marcadet, and is completely surrounded by a high stone wall. It covers a considerable tract of ground, and was used during the Commune as an artillery park. The entrance to it is through a large wooden door in the Rue Marcadet, opposite the cemetery of Montmartre. Before we go any further, it will be well to warn any intending visitor that the inhabitants, although a very tolerant folk, cannot endure the sight of decent clothes, and that amongst many healthy symptoms to be noted in them, the most prominent is a deadly abhorrence of the tall hat of civilization. To attempt to take them in, on the other hand, by any assumption of "blouse" or of silken "casquette" is absurd, however "quaint and curious" your knowledge of Parisian slang may be; but they will be pleased by the attention, and when you come among them will comment pleasantly upon your good breeding and taste in adopting the outward habits of the country in which you happen to find yourself. Such, at least, was our experience. The *coup d'œil* when you find yourself within the entrance is a striking one. Immediately before you lies an open space with grass growing here and there between heaps of rubbish. In the centre is a sort of avenue of young trees and plants in every stage of decrepitude, leading up to the houses, or, "to speak by the card," boxes, in which the *chiffonniers* live. These are about six feet square, and the roofs are kept in their places by heavy stones, such as one sees on the cottages in exposed situations in other places. The roofs are for the most part of wood, whereas the walls are composed of all things which are generally considered unfit to build with, so that the appearance of a Rue Marcadet *chiffonnier* in his house may be best likened to that of a caddis in his strangely-constructed abode. On the occasion of our visit a high wind had been blowing, and more than one member of the community was busy rebuilding his house, which had been blown down in the night. On all sides a bustling activity prevailed, men and women busily sorting the contents of their baskets, while numbers of dogs of an unknown breed barked lustily at our approach. Strangers are, indeed, few and far between in the *chiffonniers' town*, for no man from the outer world ever comes to sell them anything, a street of shops kept by their *concoyons*, existing, not indeed within their own walls, but in another enclosure close by. Here dwell bootmakers, a butcher (a great expert at making a cat found dead into a toothsome dish), tailors, and lampmakers, who provide the triangular lanterns with which the members of the "profession" go their rounds at night in search of prey. Go through that strange little street, of which the houses come up to your shoulders, at what hour of the night you will, you will still see the bootmakers at work on the cast-off shoes which their customers have picked up in the Paris gutters. Not the least striking things to note among these people are their good humour and their comparative cleanliness. Some of the interiors, indeed, contained carefully-arranged furniture and old prints, framed and hung up on the walls, but we are forced to admit that the inhabitants were, without exception, unnecessarily filthy both in dress and in person. But their lot appeared happiness itself compared to that of some of their brethren whom we found living not far off in the Cité Bablot—a horrible block of buildings, with doors like rat-holes, standing in the midst of filth unutterable in the Rue Jacques Cartier. This place was almost unapproachable on account of its smell, and its inhabitants were evidently living in utter misery. This abominable place, we are happy to add, has been destroyed within the last few days, and there is now nothing left to show that it ever existed. We cannot leave this quarter without speaking of the curiously picturesque scene it presents at night, when the *chiffonniers* are starting on their rounds. There is next to no light in the streets, so that the distant windmills of Montmartre stand out grandly in black masses against the red glare in the sky from distant Paris; and the *chiffonniers' lanterns*, dangling between their feet, creep down the hill of the Rue Marcadet, like a little army of glowworms. The adjoining Quartier des Epinettes is also not without its beauty at night, or here and there in the daytime. Like all the out-of-the-way parts of Paris, it is lighted by oil lamps, slung on wires across the street, or hanging at the desolate corners from a sort of wooden galleys. The back streets of this quarter (chiefly composed of low stone huts with flat red tile roofs) have a great resemblance to the old streets and lanes of the southern French towns—a resemblance which is not a little strengthened by the unsavoury odours which prevail in this unfortunate district, which has acquired the worst reputation for villany of any in Paris. Nor is this to be wondered at. The endless labyrinths of small passages, the rambling houses with half a dozen entrances, and the numerous courts or "cités" which abound on all sides, make it a splendid place to hide in, or to escape from if pursued. These "cités" are many of them of recent construction, and certainly reflect no credit on the persons who suffered them to be built. The space between what must by courtesy be called the houses, although they are far more like cattle-stalls, rarely exceeds four feet. No provision of any sort whatever exists for drainage, and here on either side of the footway some of the most abandoned ruffians of Paris may be seen in the daytime taking their ease in their chosen abode—which they mostly do in sunshiny weather by lying on their backs on the floors of their dens with their feet projecting through the doors—forming an avenue of boots, which might be monotonous

to the eye of a spectator but for the interposition of a bare foot or two. As a rule, they seem to be left completely to their own devices—the police contenting themselves with making a raid in force from time to time, on which occasion the *sergents de ville* pay dearly for such victories as they may win. In a recent attack on the Cité Villa des Fleurs the members of that body which M. Victor Hugo abhors barely escaped with their lives.

One of the most distinctive features of this quarter is to be found in the number of disreputable *auberges*, wherein dances (entrance gratis) are given twice a week, or in some instances every night. It is well not to confound these *bals*, wherein a stranger's life would not be safe for an instant, with the numerous places of public entertainment frequented by the lower orders of the working classes, which have so often been described in terribly vivid language by imaginative "Own Correspondents" as centres of corruption, but where nothing worse is to be found by a commonplace observer than dulness unutterable. Side by side with all this ruffianism exists the most abject poverty. Miserable men and women are to be seen cowering in wretched rooms, without beds or furniture of any kind. Assuredly those who say that there is no such poverty to be found in Paris as that which disgraces London have never walked in this wretched district. It is a comfort to escape from it, making our way through the Porte de Olichy towards the outlying Boulevard de la Révolte.

Here means are afforded us of solving a problem which had often perplexed our leisure moments—what becomes of the worn-out cheap-jacks' carts. Our attention is attracted by a notice board on which is written in letters of vermillion, "*Issy plus sieurs voitur à vendre*," and behind this strange specimen of modern French are ranged gipsy caravans in imminent danger of tumbling to pieces, surrounded by ragged people eagerly disputing their value. Nor have we to go far to discover to what purpose they are destined. They are converted into houses by the simple expedient of wheeling them off to a convenient spot, knocking off the wheels, and crawling into them then and there with one's wife and family. Much of the space between the Fortification line and the Boulevard de la Révolte is occupied by such habitations, which, although they somewhat lack picturesqueness, have at any rate the merit of originality.

Once in the Boulevard de la Révolte, we make straight for the Cité St.-Germain, which is another stronghold of the *chiffonniers*, but which differs from that in the Rue Marcadet in every respect, setting aside the fact that it also is cut off from the thoroughfare by a wooden door which is generally closed. This place (without exception the most disgusting we have ever come across either in Paris or anywhere else) appears to have been skilfully planned for the fostering of all such diseases as are begotten of dirt and corruption, and its inhabitants are the lowest and most ruffianly of their kind. The aspect at night of that part of the Boulevard on which this *cité* is situated is such as to make one doubt whether one can be in a civilized country; for "the pestilence that walketh in darkness" may here be seen working his wicked will unmolested. Thick volumes of vapour rise from the *bouches d'égout* which abound on every side, rendering the air not only unfit, but impossible to breathe. The sight is not one to be forgotten, and we earnestly hope that among the numerous schemes recently set on foot for improving the condition of Paris, this ugly corner will not be overlooked. Of the "Carrière de l'Amérique" at La Villette we do not intend to speak at any length; in outward appearance it closely resembles the worst corners of the Quartier des Epinottes which we have already described. The most striking part of it forms a little citadel, built on a hill of mud, and is the favourite retreat of those juvenile malefactors whose ages average from fourteen to twenty years, and who gain a precarious living by committing robbery with violence in the out-of-the-way streets of the capital. Not far removed from them, however, dwells another commonwealth, that of the professional beggars—a people by no means deficient in humour, and far more amusing to observe *chez eux* than elsewhere. Here those lines of the poet are verified which declare that

The poor and the halt and the blind
Are keen and mighty and fleet.

The old man stricken with paralysis may be seen dancing merrily with his grandchildren, while the blind mother looks on with complacent delight, and a whole crowd of lamentably maimed folk suddenly regain the use of their limbs, and turn into the neighbouring wine-shop to have a drink. We cannot conclude this article without warning any intending explorer of the "eccentric quarters" of Paris against the "Quartier Mouffetard." This most tiresome place has given us more trouble and annoyance than the rest of Paris put together. In bygone years it was undoubtedly the same sort of district as those which we have been describing; and although it is an undisputed fact that the poorest members of the population, together with most of the criminal classes, have migrated in a body from the south of Paris to the north, this same quarter Mouffetard has remained enveloped in mystery as far as the outer world of the Parisians is concerned, and there is no end to the legends with which one is plagued concerning it. It is as a matter of fact a prosaic and fairly well-conducted district, absolutely devoid of any characteristic feature, and offering no interest whatever to those whose lot it is to live outside its limits.

FRENCH AND ENGLISH CHARLEMAGNE ROMANCES.

AMONG the many good deeds of the Early English Text Society not the least is the reprinting in its extra series of the entire collection of English Charlemagne romances. It would be perhaps ungracious to qualify this expression of gratitude with a wish that the editor of the series had a somewhat wider acquaintance with the French originals of his texts and with other early French literature than he seems to possess, though it is certainly irritating to find Wace's work described as the *Roman de Rose*, an unholy combination of two widely different things. When, too, Mr. Herrtage says, in reference to the *Chanson de Roland*, that it contains in the French six thousand lines, he seems to be confounding the Oxford version, the only complete one which he mentions, and which has but four thousand lines, with the Venetian, which does indeed contain six thousand, but of which the last part is altogether posterior and, so to speak, unimportant. These, however, are minutiae into which there is no need to enter at present. Our object in this article is not to criticize the reprints, but to point out some considerations of a purely literary and historical interest which arise from the comparison of the French with the English romances of Charlemagne.

In the first place, the small number and the extreme rarity of the English romances in comparison with their originals deserve notice. The French *Chansons de Geste*, without counting in obvious *remaniements* of the same poem, reach the round hundred in number, and of these all but the crusading cycle of the *Chevalier au cygne* and a few isolated examples deal directly or indirectly with the Emperor à la barbe fleurie or with his immediate ancestors and descendants. The English romances are barely half-a-dozen, they are in each case preserved in unique or almost unique copies, and they are for the most part direct, and not often very intelligent, translations of the French originals. In this respect the different fortunes of the legends of Charlemagne and of Arthur afford a curious example of the influence of a spirit of nationality on literature. To the great Arthurian cycle the contributions made by men of English birth were at least not less important—if they were not a great deal more important—than those made by Frenchmen, while no original Charlemagne romance is certainly known to have been written by an Englishman, and none, save perhaps the burlesque journey to Constantinople, seems to have achieved great or general popularity in any language but French. It is true that the greater intrinsic attractions and capabilities of the Arthurian story must be allowed to count for something. Germany, which may be said to have been unprejudiced in the matter, or rather to have had as strong an inducement to devote itself to the enlarging of the Charlemagne legend as England had to devote itself to the enlargement of that of Arthur, preferred the latter, and, comparatively speaking, neglected the former. The truth seems to be that the Charlemagne legend and the poems which make it up are so exclusively French in spirit, construction, and general characteristics, that, though they had out of France the attraction which all interesting stories written in the chief literary language of a time have, they hardly took root or flourished. Only in Gallia Cisalpina does such a root seem really to have been struck, behing as a result the curious bastard French *chansons* of which the so-called *Macaire* is the chief example, and the famous *Real di Francia*. The general question, however, of the distribution and reception of the Charlemagne romances is too large a one to handle here, and we must confine ourselves to the special comparison of their French forms with the English versions which are now being collected and made generally accessible. It is necessary to add that, at least in one instance, an English version has preserved to us a *Chanson* of which no exact English equivalent is at present known, the "Siege of Melayne."

The first point which strikes the reader is the general inferiority in technical execution of the translations to their originals. A good deal has been said—in some cases we suspect by persons who have read very little of it—of the wearisomeness of the assonanced or rhymed tirade of the *Chansons*. Like most metres of the time it was, doubtless, rather intended to be declaimed than to be read, though its prosody is as a rule very careful. But even at its worst it never falls into the singsong doggerel of the English common measure, or, still worse, the six-line stanza (sometimes doubled into a twelve-line one) which Chaucer put to an open shame in *Sir Thopas*. Such metres as these latter stand self-condemned for a long narrative poem, not less for the way in which they break up the sense and cramp the expression, than for the tiresome monotony of cadence which is inseparable from them. In English blank verse, rhymed couplets, and stanzas of the roomy kind, such as the Ottava Rima and the Spenserian, are the only proper vehicles for narration. It is much more difficult to say what the ideal metre in French is for such a purpose, but at the risk of differing with most authorities, we shall declare our own preference for the Alexandrine tirade of irregular length, with its single rhyme or assonance. To begin with, the absence of any fixed scale of length enables the writer to observe what would be called in prose paragraphs—a thing impossible otherwise, except with blank verse. In the second place, the continued rhyme, at least in French, for it would hardly be possible in English, rather assists than interferes with the narrative. Thus the original writers had over their translators a decided superiority of vehicle. In the second place, they had the still greater superiority of writing about a subject which still awoke sympathetic feelings in their own minds. In all, except the very latest, *Chansons de Geste* the impress of a very

distinct and definite "public opinion," if it may be so called, on social and political matters is clearly observable. Some French writers have rather exaggerated this, and have still more exaggerated its attractive features, but for all that it is there. The intractable nature of the French feudatory, his determination to have his rights and to avenge his wrongs, his singularly scant reverence for any person or institution, were it king, or wife, or child, who stood in his way, his indifference to anything but fighting, an odd kind of religion, and some rude creature comforts, all these things had distinct existence in the world in which the authors of the *Chansons de Geste* found themselves. They had almost ceased to exist, even in the France of the fifteenth century, the usual date of the English versions; they had entirely ceased to exist in the England of that date, at least as a set of social conditions which imposed upon the mind of writers. Hence, in the hands of the English translators, the Charlemagne romances become only a variety of *romans d'aventures*; they are told for the story merely, and the moral and social atmosphere disappears. Now, the *Chansons* are by no means adapted to such treatment as this. Their attractions as mere stories are, as a rule, of the meagrest. If they are enjoyed at all, it must be because of the singular atmosphere they breathe, the delight of battle which finds expression in them, the sonorous roll of the verse at its best, the occasional flashes of genuine poetry which break out, the epic repetitions which are sometimes so striking in themselves, and which always have such a curious critical interest of the comparative kind. Most of these things, if not all of them, disappear in the bald abstracts or watered translations which represent them in English, and they become frankly intolerable.

Of all these disappearances, the disappearance of the poetic flashes before mentioned is the most afflicting. Why it should be so, it is hard to say, for assuredly, as England has shown abundantly since, there is no abstract poetical inferiority in the language or the race to be considered, but very much the reverse. Mr. Herrtage has printed, for the first time completely, the English fragment of the *Song of Roland*. It is impossible, of course, to say what text the translator had before him, but as the only two texts of the oldest form—the Oxford and the Venetian—agree pretty closely as far as they go together, it is not likely to have been very different from the former. It is hardly too much to say that wherever the poet, in the words of an English craft-brother, "has his eye on the subject," the translator promptly "spoils the passage," and that in a very odd way, not by insufficient rendering, but by simply omitting the best things. No passage in old French poetry is more famous, and more deservedly famous, than the lines describing the wailing of the elements and of the land of France for the death of Roland, which made all men fear that the end of the world was come; here are the two versions side by side:—

En France en ad mult mervucillus
turment
Ores i ad de tuncire et de vent
Pluies et gressils demesurement
Chiedent i fildres et monut et
suvent;
Et terre moete co i ad veirement
De Saint Michel de Paris jusques
seinz
Des beseneun tresques ports de guit-
sand;
Nen ad recet dunt del mur ne cra-
vent.
Cuntre midi tenebres i ad granz
Ne ad clarte se li ciels ne si font
Hume nel veil ki mult ne creepant
Dient plusor co est definement
La fin del secle ki nus est en present
Il ne secevent ne dient veirement
Co est li grans dolors por la mort de
Rolant.

But while our folk fought togedur
Ther fell in France a straung
wedur,
A gret dork myst in the myd-day-
tym
Thik and clowdy and euill wedur
thene,
And thiknes of steris and thunder
light
The erthe dynnyd doilfully to wet.
Foullis fled for fear, it was gret
wounder,
Bowes of trees then bresten asunder,
Best ran to bankis and cried full
sore
They darst not abide in the mor.
There was no man but hid his hed
And thought but to dy in that sted.
The wiked wedur lasted full long
From the morning to the evensong.
Then rose a cloud even in the west
As red as blod withouten rest
It showed down on the earthe and
ther did shyn
So many doughty men as died that
tym.

Let us do justice to everybody. The excellent translator is entitled to the entire credit of the blood-red cloud, which no doubt he thought an immense improvement. But, as he has omitted all the best of the original—the sorrow of the elements for the death of the hero; the trembling of the very land of France for the son she had born; the dread, not of mere vulgar death, as he has put it, but of the end of the world, for which the earlier middle age was always waiting—it is to be feared that his account *per contra* does rather more than redress the balance. This prosaic spirit, this missing of the points of the original, is apparent everywhere, the real excuse for it being that the points themselves were unintelligible. Of a very different kind, but illustrating the same thing, is a passage in *Sir Ferumbras*. In the French original Charlemagne has captured the Saracen Emir whose daughter, Floripas, after the habit of Saracen young ladies in the *Chansons*, has taken a violent fancy to a Christian knight, and is quite ready for baptism or anything else. Her father is less pliant, not having the same inducements. Whereupon Floripas delivers this unfilial speech:—

Et Floripas s'ecrie Karles que demourés
Ce est un vis diables pourcoi ne l'ociés
Moi ne caut se il meure, mais que Gui me donnés.
Je le plorai moult peu se j'ai mes volentés.

This outspoken brutality shocked the English translator:—

To the Emperour said Florippe than
Why tarriest thou so long with that man
That hath thee and thine aggrieved?
All is for nought ye aboute goos
Ye ne bringeth him never to your purpos
Y leve thereto myn hed.

Here the lady certainly does not call her father an old devil, nor does she in so many words demand his death. But, on the other hand, the savage directness and force of the "*Mais que Gui me donnés. Je le plorai moult peu se j'ai mes volentés*" is lost wholly. This cry, the curiously repulsive echo of that "*Mais que j'ai Nicolete ma tres douce mie*" with which so many readers have fallen in love, is perhaps the most notable thing in the whole poem, and the translator has not given it. In fact, these Charlemagne romances were altogether an exotic in England, and there is hardly reason for regretting that we have not more of them. Those we have are, from the purely comparative view, interesting enough; but intrinsically their interest is linguistic merely, and hardly in the least literary.

CONVERTED PRIGS.

A FLIPPANT writer has observed that "no one is ever converted except prize-fighters and captains in the army." The remark is no less untrue than profane. A glance at the advertisements in the shop-windows of serious districts will often give us the information that "Happy William, the Converted Basket-maker," is about to recount his experiences, or that "The Converted Gipsies" are at present "working" the south-western suburbs of a sinful metropolis. Fancy suggests that the entertainment afforded by a troupe of converted gipsies is likely to be miscellaneous and interesting. When Mr. Charles Honeyman's sermons on the Romance of Religion cease to draw, we might hint that this enterprising divine should call to his assistance a band of converted Christy Minstrels, warranted to discourse none but spiritual music. Converted bank directors were not long ago to be commonly met with in the West of Scotland, but the cruelty of an iron law removed many of them from their sphere of usefulness.

Perhaps the classes of converted persons indicated in these sentences make rather too much noise about their own happy change of mind. "Are you a converted character?" said a disciple of Messrs. Moody and Sankey to a casual artisan in the streets of Edinburgh. "No, sir; I'm a plasterer," the young man replied, with much simplicity. He, at least, made no fuss about his spiritual condition. The Prig, too, when he is converted, does not commonly boast of the great and salutary change. His new life makes itself manifest in his works and ways; nor are there many more edifying and amusing studies than the behaviour of the converted prig. There are, of course, prigs and prigs. The species is very difficult to define, and the word is generally used to designate any one whom we do not like, while we have no particular charge to bring against him. On the whole, probably, the common character of the prig may be said to consist of a belief in his own superiority and in the extreme gravity and importance of the matters with which he is pleased to concern himself. The happy latitude of this definition admits of the existence of prigs in all classes of mankind. We have most of us, in what the Scotch sacred lyricist calls "Life's gay morn, when sprightly youth with vital ardour glows," known the religious prig. He was of any sect, but he always had an air of gathering together his raiment when the profane approached him, as nervous people do in the plague-stricken cities (if there are any cities) of Mesopotamia. He also appeared to suffer from a confirmed cold in the head. This kind of prig is rarely converted, and generally blossoms into a colonial bishop or the clerical master of a select private school for the children of the aristocracy. But when he does change his course he becomes, we regret to say, the weakest sort of fast man, a fast man with hours of remorse, which he drowns in the bowl, and with an incurable tendency to keep the king up his sleeve, and to bet on certainties. This sort of prig is probably dimly aware that his only chance of getting decently through life is to entrench himself in collars of the stiffest starch, and to protect himself from familiarity with the world by obtrusive austerity, and the sanctified cold which so promptly repels the worldling. It is much to be desired that he should never be converted at all, but should remain for ever in the untorturing condition of demure and acrid respectability.

Art has her prigs as well as religion, and they are, of course, wonderfully abundant in the æsthetic age which has given us Mr. Birch's griffin, and which promises us civic statues on Blackfriars Bridge. We have not ventured to call the religious prig a hypocrite. Very few persons know when they are hypocrites themselves, and it is still more difficult for the observer from outside to be certain that a man has not a little grain of sincerity in his beliefs and practices. The artistic prig, then, has perhaps some feeble natural interest in art. In another age, he might have got as far as taking lessons in poonah-painting or coloured chalks. But he has found out that practical power is the last thing which is needed in the modern amateur. It is soul he wants, with a properly arranged attitude of body. All this the artistic prig very readily acquires, his initial difficulty being to avoid laughing at his own

nonsense. But practice soon makes him perfect in this part of the profession, though we presume he occasionally goes out to waste places, like Barnes Common, to laugh, as the Australian neophyte did whenever the missionary came to explaining the immortality of the soul. But let us imagine the case of the conversion of the æsthetic prig. It may be brought about in various ways. The most creditable change is produced when the sweet enthusiast suddenly becomes aware of the real character and aims of some of the high-priests of his religion. Many young persons are led astray by fashion, folly, and the affectations of boyhood, without really knowing where their guides are leading them. When their eyes are opened there is a healthy, but rather amusing, reaction. To kick the chief *tohunga*, or wizard of the sect, becomes a scarcely repressible desire. Then comes the fury of the renegade. The converted prig hurries to the barber and has his flowing locks cut down to a military brevity. He sacrifices his hair on the empty sepulchre of the art of the period, as Greek maidens dedicated their tresses to Diana. He worships what he had burned, and burns what he had worshipped, like *Ménage*, that example of a converted *Précieux*. He is no longer to be seen in the frock-coat which used to swathe him like a delicate shroud. "He will never be friends again with roses, he will hate sweet music his whole life long," like Mr. Swinburne, and his aversion for lilies will even exceed the exaggerated dislike he entertains for the other vegetable. He does not sell his large library of modern minor poets, for that is impossible, as the most enterprising bookseller will not give twopence a volume for the works of our less popular singers. Probably he is obliged to pack his "Arrangements" and "Nocturnes" into large paper parcels, which he drops furtively over the edge of the Embankment. It is difficult to do this without attracting the eye of the law, and the mind of the policeman is apt to receive explanations with incredulity. But the converted prig sticks at no sacrifice. He discards his great-coats, which were deeply furred about the neck and cuffs. He burns—ah! saddest sacrifice of all—his pre-Raffaëllite neckties. It really is with a pang that he sees the silks of strange dyes, *eau de Nil*, and subtle green, and lurid red, and admonishing grey, and silver-blended strands of delicate woof disappearing in the flames. The manuscript poems follow them. They perish like the tomes of those who had used curious arts in Ephesus, and brought their books together, and burned them before all men. One comfort is that the price of the manuscript poems would by no means amount to "fifty thousand pieces of silver." What a collection must that Ephesian one have been, what a thought for the amateur! but this is a digression. The converted prig is now scarcely to be recognized by his old friends; indeed, he does not want them to recognize him. His short hair is covered by a billycock hat (billycock, "in case it mattered," as Mr. Carlyle says, is probably a corruption of the last-century word bullycock), and his graceful shoulders are now draped in a seedy old shooting-coat. He has made a complete change in his vocabulary. The Chinese and the Kaffres, when any friend dies, proscribe all words which even remotely resemble his name. In the same way the converted prig tabus "subtle" and "supreme." His lips move to utter the term "consummate," but he substitutes for it "clipping." He reads nothing but the newspapers, and in them little but the City article and the sporting intelligence. He develops an extraordinary interest in even obscure rowing-matches and in the shooting of glass balls. Pictures of Pets of the Fancy assume the place deserted by portraits of the long-chinned ladies of his love. He expresses anxiety about the future of Knurr and Spell. He regrets the decline of cock-fighting. He attends glove-fights. He purchases a velocipede—to such extremes does reaction hurry a soul naturally feeble—and he has been known to join a corps of volunteers. Finally, after a few months of these and similar extravagances, he devotes himself to a profession, or becomes a member of the Stock Exchange, and renowned for the vehemence of his patriotism.

The career of the converted political prig is not unlike that of his æsthetic brother. He, too, shows a feverish and irritating earnestness almost in his cradle. He is a leader of the extreme left in his house debating society at school, and at the University his home is the Union. He talks with perfect gravity (in fact, he never sees a joke) about "the House" and its rules. He excites himself about the election of a sub-librarian, imploring all his friends to vote. He reads Mr. Herbert Spencer, and has *Mill on Liberty* bound like a prayer-book. When asked to attend chapel, he reflects on the intolerance of a sacerdotal order, and inveighs against "the pale name of priest." Many years ago, when Mr. Bright was in his genial prime, he fixed his faith on that "sublime tribune." Now he hankers after Mr. Bradlaugh, calls Mr. Auberon Herbert a renegade, and thinks that Mr. Chamberlain does not go far enough, while Mr. Courtney lacks the courage of his opinions. He is never so happy as after a British defeat, and, to tell the truth, he has plenty of chances to enjoy this satisfaction. But even this politician is occasionally converted. A Minister makes one apology too many, or constructs a dirt-pie which only himself can swallow. The political prig suddenly has his eyes opened. He hates and breaks with his past. He ceases to lecture to "The Young Atheists' Mutual Improvement Association." He drops his friends and admirers—the Radical chemist's assistant and the photographer's sceptical young man. He no longer speaks of Mr. Gladstone with bated breath. He assumes a spruce, fierce, and somewhat military air. He would like to know young guardsmen, and has quite ceased to inveigh against the vices of an indolent and pampered aristocracy. Like Mr. Carlyle, he revels in the "cheery stoicism" of that

severely-trying class of persons who happen to be dukes and earls. He confounds the working classes, and is great on the topic of the wickedness of popular holidays. He hopes that our Parliamentary system is on its last legs, and would not be sorry to see his favourite military man seize the reins of Government. He is for exterminating the Boers and annexing Central Asia. In fact, he, like the converted æsthetic prig, is still a prig, still resolutely and earnestly bent on doing what he considers the right thing. It is only his point of view that is altered.

THE INTERNATIONAL MONETARY CONFERENCE.

THE invitations to the International Monetary Conference have been sent out. They are said to be addressed in identical notes by the Ministers of France and the United States at the several Courts which are asked to send representatives, and the meeting is to take place in the middle of next month. It is stated that both Germany and Italy have accepted, Germany, however, making it a condition that she is not to be understood to have pledged herself to any course in agreeing to send representatives. But England has unexpectedly made a difficulty. According to the explanation given by Lord Hartington to a deputation from the Liverpool Chamber of Commerce last week, and repeated the next day by the Prime Minister in the House of Commons, it seems that the invitations practically commit those who accept them to the principle of bimetallicism, and our Government has very properly required a modification in the form of the notes. Negotiations, we are told, were still going on last week, and no announcement has since been made as to how they have resulted, or whether they are still at an end. But we presume that the two inviting Governments will not allow the Conference to be defeated by such a difficulty. We may assume that the required modification will be made, and that the Conference will take place. This initial difficulty, however, does not promise well. In any case it warns those concerned not to reckon on the complaisance of the British Government.

It is generally said that of the two inviting Governments the French is the most interested in the objects of the Conference. We are, however, by no means convinced that it is so. It is quite true that the French monetary system is at present in a very unsatisfactory state. Until a few years ago France had practically only gold in circulation. The scarcity of cotton caused by the American Civil War had led to the exportation of nearly all the French silver for the purchase of cotton in India, and gold had completely taken its place. Even when specie payments were resumed after the Franco-German war, gold almost alone became current; and the Bank of France held scarcely any other coin and bullion but gold. During the past few years, however, a great change has occurred. It will be recollected by our readers that, in accordance with what is known as the "Latin Convention," France, Italy, Belgium, Switzerland, and Greece maintain a double standard—that is to say, both gold and silver coins of full weight are legal tender for debts of any amount, and the full legal tender coins of each of the five countries are current in the remaining four. When Germany resolved to substitute a uniform currency for the various currencies previously existing, and to adopt a single gold standard, the Latin Union attempted to protect itself by stopping the coinage of silver pieces. It was feared that the silver demonetized in Germany would flow into the Latin Union countries, and displace the gold, and that thus France and her monetary allies would be deprived of the superior metal for the benefit of Germany. To prevent this, as we have said, the suspension of the silver coinage was decreed. But still the silver five-franc pieces remained legal tender as before. The result has been that, though no new silver has been coined, silver has been gradually taking the place of gold in the coffers of the Bank of France. The public practically has rejected silver. It is found to be too heavy and cumbersome, and people naturally prefer either notes, or the lighter, smaller, and handier gold coin. But the silver which has thus been rejected from the circulation flows into the Bank of France. At the same time a succession of bad seasons has been visiting France with deficient harvests both of corn, wine, sugar, and silk, but particularly of corn and wine, and France consequently has had to import immense quantities of wheat from America, and of wine from Italy and Spain. Owing partly to the enormous protective tariff of the United States, and partly to the heavy taxes at home, the French have not been able to pay for those imports from the United States by the export of commodities, and they have therefore had to ship large quantities of gold. Thus the Bank of France has been rapidly losing its gold until, according to the Bank of France return of last week, there remained of gold only 22,336,000*l.*, against 48,616,000*l.* in silver. Even these 22½ millions sterling are kept up only by withdrawing gold from the circulation. For political purposes the Government has induced the Bank not to raise its rate of discount, as it ought to have done long ago, so as to protect its metallic reserve, and in return for the complaisance of the Bank the Government has engaged to order the Receivers-General to pay into the branches of the Bank scattered all over France the gold coming into their hands. By this means the gold reserve has been prevented from falling lower; but, on the other hand, the metallic currency is gradually being drained. If this state of things continues much longer, it is quite clear that France will find herself entirely without gold—that is, without the metal which has now

become the medium of international trade settlements. There is no doubt that this is a very grave state of things, well deserving the attention of the Government. But it is to be borne in mind at the same time that France is usually a creditor country—that is to say, that she usually exports more than she imports, and consequently that there is a balance due to her. Of late an exceptional succession of bad harvests has altered this state of things. But it is not in the nature of things that bad harvests should continue much longer, and if once the tide turns and a succession of good corn and wine harvests sets in, the balance of trade will again be in her favour, and she will be able to replenish her circulation with the gold she has now lost. We do not, therefore, agree with those writers who are of opinion that France is in desperate case, and has no choice but to fall back upon the single silver standard. Rich countries, like rich individuals, can afford to make many mistakes, because they know that they have the means of repairing them whenever they choose. And France, when all is said, is one of the richest countries in the world. If France really desires to have a gold currency, she has the means of buying gold in any amount she likes, and she, at least, need not fear the competition of Germany and Italy. The French Government, however, is not satisfied to rest in this conviction. It is not willing to pay the price that would be exacted in the replenishing of the gold reserve, and it thinks to evade the obligation by this device of a Monetary Conference.

The difficulty of the United States is entirely different. They have had a succession of good harvests, as exceptional as the bad harvests we have been speaking of in France. They have consequently exported a very large excess over their imports, and they have, therefore, received immense payments in money. In the latter half of 1879 and of 1880 they received from Europe over 30 millions sterling in gold, and during the past four or five years they have retained the whole production of their own gold mines. They must, therefore, have very nearly as much gold as they require. But they have rich silver as well as gold mines, and the proprietors of the silver mines induced Congress a few years ago to pass an act requiring the coinage of 4,800,000*l.* in silver every year. The public, however, in spite of this Act of Congress, will not accept the silver, and consequently it has accumulated in the Treasury vaults. The Treasury thus finds itself in this difficulty. It has to go on adding nearly five millions sterling every year to the mass of silver already upon its hands, and, in spite of all sorts of devices, it cannot force the coins into circulation; though it pays them out to its officials, and in exchange for greenbacks and banknotes, the silver comes back again as soon as it goes out. To a country as rich as the United States it would, of course, be no very great loss to sell off its silver, even at its present depreciated price. But no government wishes voluntarily to incur a loss for no purpose. Besides, the United States Government is wedded to the idea of Protection, and it desires, if it can, to secure for the owners of silver a full price. Its real object, therefore, is not to secure the circulation of silver at home, for that the public will not endure; but to ensure its subjects against the depreciation of a very valuable product. As yet, it is true, the United States have not as much coined silver to dispose of as France; but they have silver mines which are every year adding to the mass, and if the price falls, these mines become less valuable; and, therefore, the wealth of the country is lessened just as much as the wealth of France will be lessened by the depreciation of the silver now held by the Bank of France. The new Government is, therefore, as anxious as that just gone out of office for the success of the Monetary Conference. In his Inaugural Message to Congress President Garfield says:—"Confusion has recently been created by variations in the relative value of the two metals; but I confidently believe that arrangements can be made between the leading commercial nations which will secure the general use of both metals." And, acting upon the belief thus enunciated, Mr. Garfield has appointed as one of the Commissioners to the Paris Conference the late Secretary of State, Mr. Evarts. It is not probable that Mr. Evarts would accept the mission unless he thought it likely that the Conference would lead to some practical result, and, in fact, the appointment of such a man is the strongest evidence that could be afforded of the earnestness of the United States in calling together this Conference.

It may be assumed that Italy will agree to what France and the United States are so earnest in urging; but the conduct of Germany is not so easily forecast. In the Reichstag one day last week Herr Scholz, a commissary of the Government, read a paper in the name of Prince Bismarck which throws some light upon the subject. After stating that the Prince is in favour of the *status quo*, he went on as follows:—"The Imperial Chancellor holds the opinion that there is not enough gold for the single standard policy to prove successful even in those countries where that system already exists. The Chancellor thinks that the scarcity of gold must first be faced, and compares this state of things to a blanket thrown over two persons, which, not being wide enough to cover them both, is drawn first by one and then by the other." It would seem from this homely illustration that Prince Bismarck is strongly desirous of some such solution as is aimed at in the Conference. If there is not enough of gold in the world, even for the countries which have already adopted the single gold standard, it is clearly desirable that the pressure upon the money markets of the world should be lightened. And therefore it seems to follow that Germany will be glad to co-operate with France and the United States. But

the Prince, we are told, is in favour of the *status quo*. Now the *status quo* in Germany is this. Theoretically, gold is the only standard of value; but the one-thaler pieces of the old silver coinage have not yet been all called in, and, until they are called in and demonetized by Imperial proclamation, they retain their legal-tender character. In theory of law, that is, Germany is a gold standard country; but in actual fact she is a country of the double standard. Both silver and gold are not only current, but are legal tender for all debts and to any amount. The change, then, from the existing system to that proposed by France and the United States would clearly not be great. It would only be necessary to adopt the relation of 15*½* to 1, as proposed by France, to make silver not provisionally only, as at present, but permanently legal tender, and to enact that silver, like gold, must be freely coined for all who bring it to the Mint. That, in fact, is the sole change that is needed. Whether the Prince is prepared, however, to make this change remains to be seen. It would clearly be the wisest policy, now that he has incurred the expense of a large gold coinage, though we are still of the opinion we have so often expressed in these columns, that the true course for Germany would have been to have retained the single silver standard which she possessed formerly.

As regards our own country, the care taken by the Government not to commit itself to bimetallism is only honest. It is quite clear that we shall not change our own monetary system. We are perfectly satisfied with it. It gives us, in fact, all the advantages we can expect from any system, and it would be unwise, therefore, to make any alteration in it. Whether the United States and Germany will make the change they deem necessary on other grounds, when they find that we are thus resolved to make no alteration, remains to be seen. As regards the United States, more particularly, we expect much difficulty, for Americans are of opinion that their country is destined to become not only the richest and greatest in the world, but the great banking centre, and they will be very reluctant, therefore, to leave to England the advantage of a monetary system which unquestionably is the best.

REVIEWS.

CARLYLE'S REMINISCENCES.*

MR. FROUDE cannot be accused of any want of despatch in beginning the fulfilment of the duties which have been confided to him as literary executor of the late Mr. Carlyle. Indeed we are not aware of any instance in which the remains of a deceased author have been published at so short an interval after his death. No cogent reason existed for the precipitancy with which these volumes have been produced; and as they will hardly add to the fame of the great man whom we have so lately lost, and will certainly not tend to increase the reputation for judgment and discretion already enjoyed by their editor, there is ground for wishing that more time had been given to the revision of the matter now presented to the world.

It appears from the editor's preface that some years ago Mr. Carlyle placed in his hands a collection of letters written by his wife, then deceased, with the warning that before publication they would require anxious revision. At that time he believed his own end to be approaching, but in fact his life extended over another ten years, and finally he made over to Mr. Froude all his private papers and writings. Among these were discovered the contents of the present volumes. There are the thoughts and recollections he committed to paper, as the outpourings of his sorrow on receiving the news of his father's death; secondly, an account of his friendship and connexions with Edward Irving; another, of his intercourse with Lord Jeffrey; slight memorials of Southey and Wordsworth, and the long wail of grief which is devoted to the memory of his lost wife. Mr. Froude informs us that he advised Carlyle that these should be printed with the requisite omissions immediately after his own death; and it seems to have been at one time intended that he should have revised them himself. This, however, could not be done, and it appears that the *Reminiscences* are now printed as found, with the admission on the part of the editor that most of them were probably not intended for publication; a point which will be sufficiently clear to all who read them. Much of them was written in the terrible time succeeding Mrs. Carlyle's death; and Mr. Froude mentions that Carlyle's condition was so singular at this time that he was afterwards unconscious of what he had done, and did not recollect having written about Irving when Mr. Froude came upon that portion of the MS., and inquired about it from him. A few occasional reservations are mentioned as having been made; and of course it is impossible to guess to what extent matter undesirable for publication has been withheld. What does appear rests on the responsibility of the editor alone, who has allowed the man who has for so long been an object of the highest public honour and the greatest private esteem and regard to exhibit himself in some of his worst and most wayward and whimsical humours, to an extent which will hardly tend to enhance his character for doing justice to others or for possessing any real sympathy with humanity.

* *Reminiscences* by Thomas Carlyle. Edited by James Anthony Froude. 2 vols. London: Longmans & Co. 1881.

Passing on from these preliminary regrets, it is impossible to entertain any doubts as to the curious interest and value of the matter thus thrown open to the public gaze. The various reminiscences taken together, and sometimes overlapping and repeating themselves, as might be expected, form a very near approach to a full autobiography, with the singular feature that the writer does not form the central figure or hero of his story. This circumstance gives an unusual charm and freedom to the narrative. Carlyle is always discoursing of other people as his subject, and not ostensibly of himself; but the triple strand which he has thus spun supplies an almost complete history of his own life. It is sometimes harsh and rough, and often sad and sombre enough; but through it all runs and gleams the golden thread of tender recollections of his wife, from the early anecdote of "Mamma, wine makes cosy," to her latest heroic and self-devoting efforts to screen him from the troubles and annoyances of life. Indeed, to this remarkable woman Carlyle must have owed chiefly whatever amount of happiness was allowed to him in this world, struggling as he always was with ill-health and against a sort of splenetic hatred of almost all the literary work which he undertook. Without her he could hardly have sustained the battle of existence; and no man has ever poured forth more tender and grateful recollections of the partner who had alleviated his lot than Carlyle has done in these memories.

The portion of them which will be read with the most unalloyed pleasure is that which is dedicated to the memory of his father, a sort of rhapsody of affectionate recollections committed to paper during the first few days after his death. From the account of those who were accustomed to hear Carlyle discourse of his own early days, it would seem as if these recollections much resemble his talk about the rural life of Annandale, its old people and ancient ways. The man who, by his own exertions and conduct, raised himself from the position of a working mason to that of a fairly substantial farmer must have had some striking qualities, although similar success has been and still is not uncommon in Scotland. It may be a comfort to Southrons to know that he did this in Burns's own country, but without having ever read three pages of his poems. His bringing up of his children seems to have been stern, earnest, and authoritative, and Carlyle does not look back on his childhood as a time of joy; but he ceased to live habitually with his father after he was ten years old. James Carlyle taught his family that work was the only thing to be done, and that it must be done well. Upon this it is interesting to speculate how far Carlyle's own career and the value of his literary work might have been altered if he had during his own life been compelled to do some regular work, not of his own choice. That, or a family of children of his own, would have been the two things most likely to break him in for a different and more practical sort of exercise of his great powers. His general notion that the world ought to have been altogether altered to suit himself might have been considerably modified; and he might not have continued his barren and perpetual outcries against things as they are; while he might have departed from his apparent resolution to offer no suggestion how they could be possibly improved.

The account of Edward Irving is in all ways valuable, and will add interest to the memory of a man whose influence upon Carlyle was at one time considerable, but with whom intimate intercourse ceased to be possible when the weaknesses and eccentricities of the friend of his youth gained absolute dominion over him. The character of old Adam Hope herein introduced is a capital one; and the remarks on the simplicity and earnestness of the Scots dissenters of the last century are excellent, pointing out that dissent in Scotland is merely a stricter adherence to the National Kirk, and that these old dissenters are definable as "Free Kirk making no noise." Irving was the elder of the two men, and was engaged in teaching, while preparing for the ministry—at one time dominie at Haddington to Carlyle's future wife—and perhaps might himself, as it would seem, have been her husband, but for a previous, and as it turned out not very happy, engagement elsewhere. The acquaintance began therefore by Carlyle in an attitude of reverence for the man who was preceding him in the task of schoolmastering, and afterwards of the ministry, then marked out for himself also; but lapse of time naturally altered this, and a most brotherly and sincere affection came to exist between them. Carlyle calls him later on "noble Irving, the faithful older brother of his life, in those years."

And so the two friends took walking tours together in the intervals of their irksome taskwork, and after two years of it, both went to establish themselves in Edinburgh, where Carlyle describes his position as forlorn enough, and himself as beginning the long curriculum of dyspepsia which was to be his companion through life. Irving's preaching is described as full of thought, but wanting in definite head and backbone; and from the anecdote told of his driving one of his congregation fairly out of church by it, the character of his pulpit eloquence must have been rather denunciatory than inviting. In Tlaton Garden later on it attracted large and fashionable audiences, and was one of the phenomena of the day. In visiting Irving at Glasgow, Carlyle had his first glimpse of wealthy town life, and seems to have liked it. A great turning point in Carlyle's life was his engagement as tutor in the Buller family, Charles Buller having an interval to fill up between Harrow and Cambridge; and this appointment was obtained upon Irving's introduction. A very early piece of literary work done by Carlyle was a translation of Legendre's *Geometry* commissioned by Brewster, for which he was perfectly competent, although he did not hold mathematical distinction, even of the

highest eminence, in more outward respect than any of the other reputations usually looked up to by the majority of mankind. To this succeeded more important and congenial work, the *Schiller* for the *London Magazine*, and the *Wilhelm Meister*; and in 1824 Carlyle came to London on a visit to Irving, by whom he was introduced to the family and to the house of a gentleman well known at the time, from whom he received much kindness, and of whom and his belongings and surroundings Carlyle is allowed by his editor to give his opinions, which are not altogether of an amiable and grateful kind—fit enough to be written for his own satisfaction, but hardly fit for at least present publication. His host is a bore and a humbug, and the account of the circumstances of the domestic life to which Carlyle was familiarly admitted comes ill from one who must have received considerable advantages from his intimacy at the house when a young man and a stranger in London. The existence of even one person still alive to whom all this could not fail to give annoyance should have been a reason for suppressing it. To the lady of this house Carlyle owed an introduction to Coleridge, then living at Highgate. He was to him only "a puffy, anxious, abstracted-looking, fattish old man," talking of matters of no interest. So, in other places, Heine is "blackguard Heine"; Charles Lamb and his sister are "a very sorry pair of phenomena"; Sir William Molesworth is "a poorish, narrow creature"; and Lady Holland is "a kind of hungry ornamented witch, looking over at me with mere carnivorous views," of whom, however, Carlyle learned to think better afterwards. *Darwin on Species* is wonderful to Carlyle as "indicating the capricious stupidity of mankind; never could read a page of it, or waste the least thought upon it." Would it not have been kinder to Carlyle's memory to have omitted all this also?

After the termination of the Buller engagement Carlyle went to France in company with some members of that family. The description of the first view of Paris by night, from the heights of Montmartre, is fine—a sort of pleasure not now to be enjoyed, when all places are entered by the inevitable railway station. He saw Legendre and La Place, heard Ouvrier lecture, and saw Talma in *Edipe* at the Théâtre Française, who elicited some genuine praise; "incomparably the best actor I ever saw." All this time the strange conduct and delusions of Irving were leading to an increasing estrangement between Carlyle and himself, and finally their intercourse dwindled down to almost none at all. The closing sketch of his career is a fine one, and seems to exhaust in short compass all that there is to be said about it. The year passed in solitude at Hoddam Hill seems to have led to the working of a great change in Carlyle's spiritual nature, which he himself terms a "conversion," and this gives occasion for one of the most remarkable passages in the book.

The reminiscences of Jeffrey show him in a very agreeable light as the friend of a young author, to whom indeed at one time he offered a pension of 100*l.* a year from his own income. Yet Carlyle is allowed to exhibit himself as angry with him for not procuring his appointment to a public employment, for which he admits he had no sufficient qualifications, Jeffrey having Government patronage as the Lord Advocate of the day. He wanted to be made Observer at the Observatory in Edinburgh; but, although possessing some acquaintance with mathematics and astronomy, he had never looked through a telescope in his life. There was much pleasant intercourse, as it seems, between Jeffrey and his wife and the Carlyles, husband and wife; but here again an anecdote is printed which, amusing as it is, had better not have been permitted to see the light, telling as it does entirely against the narrator of it.

Carlyle was sitting comfortably in the Lord Advocate's lodgings in Jernyn Street when he was disturbed by the entrance of another visitor. First, he is put out by Mrs. Jeffrey's anxieties to give a cordial reception to an old friend, who, upon his entrance, is described so as to make him appear utterly unworthy and ridiculous, and then Carlyle, evidently smarting under some fancied want of attention to himself, takes the first opportunity of bolting in a huff. The gentleman, now long deceased, was a well-known person, but the misspelling of his name (as given by Carlyle) has not been corrected by the editor. Afterwards Carlyle more completely identifies him, by inquiry of Sterling of the *Times*, who informs him that "He's a damned old humbug; dines at Holland House," where, by the by, Carlyle never did dine, as he himself relates. Finally Carlyle writes "this was all the history I ever had of the poor man; whom I never heard of more, nor saw, except that one time." He is in fact brought in only to be made absurd, and to be knocked down like a super crossing the stage in a pantomime. *A propos* to misspelling, it may be noted that the name of "Ellice," so well known in political and social life, is given as "Ellis" by Carlyle, and this also remains without correction by Mr. Froude.

Carlyle's married life began in 1825, and in 1834 he settled in London, occupying the well-known house in Cheyne Row, Chelsea, until his death. The portion of the Reminiscences which is headed "Jane Welsh Carlyle" is nominally consecrated to her memory, but contains the materials for his own biography for the last fifty years of his life, during which his most important works were written; and he became almost an inspired prophet for some and a grievous stumbling-block of offence for others. The history and belongings of Mrs. Carlyle's family form perhaps the least generally interesting part of what relates to her, but they will no doubt be read with eagerness by those whom they more especially concern.

For three or four years Carlyle's chief source of income was derived from giving lectures—a grim business, to which nothing but dire necessity drove him. To himself it was, although very differently appraised by those who heard and have since read them, a “detestable mixture of prophecy and play-actorism,” as he has chosen to define it. This began in 1838, and soon Carlyle became a notability in London, and was an honoured guest at many well-frequented houses. He had indeed the opportunity of seeing, as much as he pleased, what may be described as the really best society, and he thoroughly enjoyed it, but not without the usual protests and complaints. Here, however, he honestly bears witness to its excellence, saying that “certain of the aristocracy did seem to him very noble . . . and he would vote it (with its perfection of human politeness, its continual grace of bearing and of acting, steadfast honour, light address, and cheery stoicism) actually yet the best of English classes.”

The *Letter Day Pamphlets*, the *French Revolution*, and the *Cromwell* raised Carlyle's literary reputation to its highest point. The terrible tussle with *Frederick II.*, which occupied him for thirteen years and cost so much toil, hardly resulted in any increase of fame. After the death of his wife, he is not known to have written anything but the present *Reminiscences*, of which it must not be supposed that they do not contain much that is altogether worthy of their writer—the man whose well-known works have roused and delighted, and assisted to furnish the minds of two generations, and whose nature, with all its strange whims, was essentially of a fine, manly, generous, and thoroughly independent and conscientious character. His vast intellectual power, his faculty for laborious and minute research into the subjects which interested him, and (apart from exaggeration) his righteous abhorrence of all that is unreal, unwholesome, and untrue can never be forgotten.

It will be for posterity, however, to pass the abiding judgment on Carlyle's place in English literature, to which he has contributed so much that is new and valuable. His originality and fertility of composition, great as were with him the pangs of parturition, have seldom been equalled. The example of his life, and much of what he wrote, cannot have been without its effect upon the temper of the time in which he lived; but, on the whole, he may be not unfairly described even by an admirer, in the words applied by himself to Goethe's *Faust*, as one who quitted the ways of vulgar men, but without light to guide him to a better way; or more truly perhaps, as one who did not follow up the light which he had.

WASHINGTON SQUARE.

WE confess to being less pleased with the story which opens and gives its name to Mr. Henry James's latest volumes than with those which follow it. “Not to keep dinging it dinging into one so,” said Tony Lumpkin in a fit of exasperation with his mother; and the phrase might with some show of justice be applied to the method which Mr. James has chosen to adopt in *Washington Square*—a story, which to put it briefly, is too long both for its materials and for the manner of using them. The events are far less exciting than those which occur in *Northanger Abbey* or *Mansfield Park*, and the way of narrating them is not unlike a diluted and modernized version of the way in which the author of those novels was prompted to describe the scenes which she observed and imagined. Mr. James, “fine,” to use a pet word of his own, as his insight and style are, and great as may be what a contemporary has with characteristic impulsiveness called his “genius,” can hardly yet take rank with the writer to whom we have just referred. The constant insistence upon trivial traits of commonplace character is a dangerous thing to attempt, and the daring in the case of *Washington Square* is hardly excused by the success. Not one of the characters is really interesting, while some are entirely repulsive. The heroine is a kind of washy imitation of Mr. Trollope's charming, if too constant, Lily Dale, and the young man who in the end does not marry her is, if anything, meaner than Crosbie, and has the disadvantage, from an artistic point of view, of escaping poetic justice, so far as one is told, whether in the form of a violent assault or of that more serious and galling misery which overtook Crosbie in his married life. The father of the heroine has some distant kind of relationship with Mr. Bennet in *Pride and Prejudice*, but is a less interesting person; while his sister's elderly love of romance gives but a feeble relief to the not very agreeable, and somewhat dull, tone of the whole story. The resemblances which have suggested themselves to our mind may be purely accidental, and if the work had not been unduly spun out it would have mattered little or nothing whether they were accidental, or even whether they existed, of not. The fact is that the tale or sketch, or whatever it should be called, is about twice as long as it ought to be. The actions, or want of actions, of a flashy, avowed young man, of a cynical, clever father, of his determined and high-hearted, though not brilliant, daughter, and of her sentimental aunt, over a very commonplace case of love-making and jilting do not bear telling, at least as they are told in *Washington Square*, at the length at which Mr. James has chosen to tell them. Such things are tiresome in real life; and though they are less

tiresome when described and dissected by Mr. James, yet his skill in the knowledge of the causes of things which lead to tiresomeness fails to give any real interest to that which is in its essence deeply uninteresting. Nor does the fact that the story is written by an American and deals with American life lend any extraneous or factitious attraction to its course. Everything that Mr. James tells us of might, with certain superficial and unimportant differences, have happened in ordinary English life; and, indeed, the whole notion of Mr. James's story has frequently been employed with success by English novelists. These novelists, however, have generally avoided the cardinal fault, already referred to, of Mr. James's work, that of trying to interest readers in characters who are utterly and hopelessly uninteresting. A few more touches of interest and attraction in Catherine's character might have made a difference in the tone of the whole work; we might have felt that she was a *filles* unjustly and stupidly *incomprise* by her father; and one who might be loved for herself as well as sought after for her expectations. As it is, it becomes difficult to call up any indignation for her father's no doubt superficial estimate of her character, and impossible to believe that Morris Townsend or anybody else could have been attracted by her without any thought of her prospective dollars. It may have been, and it very possibly was, Mr. James's object to depict this side of life exactly as it is; and no doubt he has succeeded in giving a curiously exact and keen representation of the cause and effect of varied emotions, most of them of a very low order, in an everyday kind of life which is common to all civilized communities. But we would submit that to do this is a task decidedly unworthy of Mr. James's undoubtedly remarkable talent. There is, it may be noted, a curious discrepancy between the general method of the story and the style occasionally adopted. For instance, when, after the father's death, things have come back to conditions in which it might yet be advantageous to Morris to marry Catherine, he comes back to make a new proposal which is rejected with a somewhat stolid dignity. In the hall he meets the sentimental aunt, who “appeared to have been hovering there under the irreconcilable promptings of her curiosity and her dignity.”

“That was a precious plan of yours,” said Morris, clapping off his hat.

“Is she so hard?” asked Mrs. Penniman.

“She doesn't care a button for me—with her confounded little dry manner.”

“Was it very dry?” pursued Mrs. Penniman, with solicitude.

Morris took no notice of her question: he stood musing an instant, with his hat on. “But why the deuce, then, would she never marry?”

“Yes; why, indeed?” sighed Mrs. Penniman. And then, as if from a sense of the inadequacy of this explanation, “But you will not despair—you will come back?”

“Come back? Damnation!” And Morris Townsend strode out of the house, leaving Mrs. Penniman staring.

Catherine, meanwhile, in the parlour, picking up her morsel of fancy-work, had seated herself with it again—for life, as it were.

This is the end of the story, in which it will be observed that Mr. James sticks to his *Mérimée*-like plan of leaving the reader to make his own estimate of the probable results of the situation, and which is perhaps neither much better nor much worse than the contents of the eighty-five pages which lead up to it.

The *Pension Beaurepas* with its careful and clever pictures of certain American characters as they appear in their European tour, is far more easy, if not in itself more pleasant, reading than *Washington Square*. The people described are at least more characteristic, and, partly perhaps because the narrative is not stretched to an undue length, the reader's interest is certainly better sustained. Mme. Beaurepas herself is a not unattractive person to meet either in the pages of a *nouvelle* by Mr. James or in real life, and one's sympathies cannot but be enlisted for the sufferings of Mr. Ruck. At the same time it must be said that there is nothing very new either in Mme. Beaurepas or in Mr. Ruck; that there is a kind of affectation of cynicism about the story; and that, like other stories of Mr. James's, it ends with an imitation, which has become irritating by dint of repetition, of earlier, and possibly better, writers' methods. It must, however, be admitted that there is a certain pathos in the final scene.

What saves the two volumes we are now considering from being dismissed altogether as work far from being up to Mr. James's best mark is the *Bundle of Letters* which closes them. Here it becomes a matter of absolutely no consequence whether he has or has not taken a hint from any other writer. The *Bundle of Letters* can stand perfectly well by itself on its very marked and original merits. One clever French writer has given the correspondence of two persons affecting each other with complete success. Mr. James has dared further; and, in this instance at least, his daring is fully justified. Nothing could well be better than his estimate of the curious people assembled together for a time in one house, and of the curious views which they entertain of one another. One of the letters, from Louis Leverett to a Boston friend, is “quite consummate”—

If you repeat my remarks to any of the West Cedar Street circle, be sure you tone them down as your discretion will suggest. For yourself, you will know that I have always had an immense desire to see something of *real French life*. You are acquainted with my great sympathy with the French; with my natural tendency to enter into the French way of looking at life; I sympathize with the artistic temperament; I remember you used sometimes to hint to me that you thought my own temperament too artistic. I don't think that in Boston there is any real sympathy with the artistic temperament; we tend to make everything a matter of right and wrong. And in Boston one can't live—*On ne peut pas vivre*, as they say here. I don't mean one can't reside—for a great many people manage that; but one can't live,

aesthetically—I may also venture to say, sensuously. This is why I have always been so much drawn to the French, who are so æsthetic, so sensuous. I am so sorry that Théophile Gautier has passed away; I should have liked so much to go and see him, and tell him all that I owe him. He was living when I was here before; but, you know, at that time I was travelling with the Johnsons, who are not æsthetic, and who used to make me feel rather ashamed of my artistic temperament. If I had gone to see the great apostle of beauty, I should have had to go clandestinely—*en cachette*, as they say here; and that is not my nature: I like to do everything frankly, freely, *naturement*, *au grand jour*. That is the great thing—to be free, to be frank, to be *satyf*. Doesn't Matthew Arnold say that somewhere—or is it Swinburne, or Pater?

Here Mr. James is, it seems to us, at his best; and we can only hope that he may in future have a keener eye for the limits within which the dissection of more or less commonplace character may or may not be attractive.

VOYAGES OF THE ELIZABETHAN SEAMEN TO AMERICA.*

IT is a happy thing for the general reader when a writer who has for years made a special study of any large subject is willing, as a piece of by-work, as it were, to undertake the unassuming duties of the editor of some book which has formed but a small part of his investigations. We have seen far too much of men who edit a work or publish selections urged on, not by the fulness of their minds, but by the emptiness of their pockets. They first choose a subject—such a one as they hope may catch the public taste—and then they try to learn of it just as much as will serve their turn. If they can make their empty show of knowledge pass with the vulgar, they are indifferent to the contempt of the learned. Their books sell, and that is all they are meant to do. It is a relief to turn from the work of men of this kind to such a volume as the one before us. Mr. E. J. Payne was already known as the careful editor of two volumes of Burke's works in the Clarendon Press Series before he published his *History of European Colonies*. In this latter book he showed an amount of knowledge of a very wide subject which, we venture to say, has been possessed by no other writer. He has since then confined his studies to one branch—by far the most important of this wide-spreading history—the colonization, namely, of America. In writing a full narrative of this great movement, he has, of course, been led to study carefully the collection of Hakluyt's voyages. From them he has selected thirteen narratives, and has edited them with historical notices. In a very interesting introduction he gives a rapid sketch of the course and the effects of modern discovery. He clearly traces the work done by the different nations of Europe in opening up the world. He shows how it was not till science had done its work, and done it through the men of Italy, and the struggle had begun of commercial enterprise and political ambition for a share in the substantial results, that England stepped in to bear her part in the history of maritime exploration. In a few pages he shows how vast an effect was wrought on the future of the New World by the reformation in the Old World. Spain, the spoilt child of the Papacy, had been endowed by its parent with the New World. "Catholic England had acquiesced in the title thus acquired. Protestant England prepared to dispute it." As Mr. Payne says, the incidents of the Spanish conquest of Mexico and Peru are well known, and no less known are the incidents of English colonization in New England, Virginia, and the Windward Islands. But a gulf of half a century, more or less, divides the period of English colonization from the period of Spanish conquest. How, he asks, is this gulf to be bridged over? Where shall we find an explanation of the transition from the old America—an America enslaved, mediæval, Spanish, and Catholic—to the new America, an America free, modern, English, and Protestant?—

Fixing narrower limits to the inquiry, we may ask, How is that in the beginning of its history we find America wholly Spanish and Portuguese, and at the end of a century find that it has become European? How is it that in the sixteenth century we find Europe tranquilly acquiescing in the Spanish occupation of America, and entertaining no suspicion whatever as to its ultimate destiny, while in the seventeenth we find all the powers of Western Europe engaged in a struggle for its possession? And how is it that in this struggle we find England taking the lead from the beginning, in course of time absorbing all foreign elements, and ultimately bringing about the great change which has made America, in all its length and breadth, a continent of free states, framed more or less on an English model, and all having their principal commercial and social connection with England, and that connection an increasing one?

The solution to these questions is to be found, as our author says, in the narratives of the Elizabethan seamen. It was these daring men, and not the Puritan emigrants of New England, or the commercial adventurers who cultivated the tobacco plant in Virginia, who were the real founders of English America. The voyage of the *May Flower*, if in one way it was the first, was in another way the last of a long series of enterprises. It is true that in Elizabeth's reign no colony was permanently settled, but it was then that the path was paved for our vast colonial empire. There were, as Mr. Payne shows, four great causes which soon after she had ascended the throne united to force English enterprise irresistibly on the path of its destiny. There was "an economical cause, dependent on the increase of wealth, a commercial cause, dependent on

the steady widening of the field of navigation, and a political cause, dependent on the impending breach with Spain." The fourth was an intellectual cause. English thought had been widened in one half-century as perhaps it has scarcely been widened in all the centuries that have followed. The old world of classical learning had been thrown open to it, and from it the Bible was no longer kept hidden. Its range was no more to be limited to our island-home, "and, as ever happens, its strength and sagacity increased with the increase in the field of its operations." If the progress of discovery owed much to this intellectual cause, it paid back its debt to the full. There is a fine passage in one of Hazlitt's Lectures on the dramatic literature of the age of Elizabeth, in which he gives a sketch of the three great causes which, according to him, at that time "operated to mould and stamp the poetry of the country." Third among these causes he places "the discovery of the New World and the reading of voyages and travels. Green islands and golden sands seemed to arise, as by enchantment, out of the bosom of the watery waste, and invite the cupidity, or wing the imagination, of the dreaming speculator. Fairyland was realized in new and unknown worlds. . . . The people, the soil, the climate, everything gave unlimited scope to the curiosity of the traveller and reader. Other manners might be said to enlarge the bounds of knowledge, and new mines of wealth were tumbled at our feet. It is from a voyage to the Straits of Magellan that Shakespeare has taken the hint of Prospero's Enchanted Isle." He next quotes those beautiful lines in which Spenser defends himself against the charge that his *Faerie Queene* is but "the abundance of an idle brain" and "painted forgery." If any one maintains that none do know "where is that happy land of faerie," to him the poet answers:—

But let that man with better sense advise,
That of the world least part to us is red;
And daily how through hardy enterprise
Many great regions are discovered,
Which to late age were never mentioned.
Who ever heard of th' Indian Fern?
Or who in venturous vessel measured
The Amazon huge river, now found trew?
Or fruitfulest Virginia who did ever view?

It is not too much to say that no one has much chance of entering into the world of thought in which Spenser, Shakespeare, and even Milton lived who will not take the trouble to read some at least of the voyages of their great countrymen. Like Desdemona they must "seriously incline" to hear the narrator as he speaks

of antres vast and deserts idle,
Rough quarries, rocks and hills whose heads touch heaven,
And of the Cannibals that each other eat,
The Anthropophagi and men whose heads
Do grow beneath their shoulders.

The present is an age of handbooks; if there is no royal road to learning, it is hoped that at least a common one has at last been provided in half-crown manuals. It was only the other day that we read somewhere or other that a work that has been lately published about Pepys would teach the reader far more than all the volumes of the Diary. There may be extracts of beef and essences that in one spoonful contain the nourishment of a whole meal. But great writers are not like great oxen, and those who wish to really know them must take them as they are in all their bulk. We must go even further than this. If we would really know the men of any one time we must read the books which they read, not much less than the books which they wrote. At all events, we must read a selection—a selection, but not an abridgment, still less a manual. It would seem to be the case with many people that their minds are so thoroughly modern, that they find a great difficulty in reading anything which has not been carefully prepared by one whom we may perhaps be allowed to call a literary cook. The great thoughts of old writers have to be first hashed and then highly seasoned before such people as these can manage in any way to swallow them. In this they remind us of a custom among the Esquimaux as told in the account of Frobiisher's voyages. "The women," says the writer, "feed their children with flesh which first they do a little chew in their own mouths." Yet it is not easy to believe that even these lazy readers, if they once made the effort, would find any difficulty in going through the narratives that are contained in the volume before us. Mr. Payne has spared them one trouble. He has skimmed for them the very cream of Hakluyt's collection, and has successfully guarded them against the chance of stumbling on a single dull piece of writing. But, happily, besides these triflers in the field of literature, there are many who only want a guide to lead them into new paths of learning. To them Hakluyt's collection may be known only by name. They will be delighted to read these thirteen narratives, which, to use the editor's words, "reflect, with the closeness and fidelity which only belongs to contemporary records, the aspect presented to English eyes by the great field of new enterprise which was opened beyond the sea to Englishmen of Elizabeth's reign. Those who wrote them," he goes on to say, "were, for the most part, men who had themselves taken an active part in the work, and who were scholarly enough to use the pure and expressive English of Shakespeare's day with ease and effect."

There is yet another class of readers for whom they ought to have a strong attraction. Unless English schoolboys are greatly changed for the worse, there ought to be many a one among them whom they will cheat of his hour of play as much as ever did

* *Voyages of the Elizabethan Seamen to America: Thirteen Original Narratives from the Collection of Hakluyt. Selected and Edited, with Historical Notices, by E. J. Payne, M.A., Author of "A History of European Colonies."* London: Thos. De La Rue & Co. 1880.

Scott's *Marmion* cheat their grandfathers. But at times we fear that *Robinson Crusoe* no longer holds its place as prime favourite among young readers. Their taste, like that of their elders, is too often spoiled by the highly-seasoned dishes which are served up before them. Fidelity to nature seems to have lost much of its charm even with the young amidst the general rage for what is called sensational writing. Yet we must confess that we cannot help looking upon the boy who says that he does not care for *Robinson Crusoe* in much the same way as Johnson looked upon Bishop Percy's daughter, who said she had never read *Pilgrim's Progress*. "No!" replied the Doctor, "then I would not give one farthing for you!" We shall be slow, however, to admit that an English schoolboy can be indifferent to these old tales of daring of the great seamen of his race. He must be moved as he reads how high these sailors held the name of Englishmen, and how they felt, in the extremity of peril, that "they should," to quote one of the writers, "as true Englishmen and faithful friends, supply one another's wants in all fortunes and dangers."

What a happy use might be made of such a collection of voyages as this if out of it geography were taught! Nothing can well be drearier than the common manuals through which children are carried, or rather driven, as they are taught the names of places. Who cares to know the position of a country or a town of which he knows nothing except that it is marked on a map? But the class which should follow Drake, for instance, in his famous voyage round the world, with a good chart before their eyes, would find that geography is indeed a study of high interest. We could certainly have wished that Mr. Payne had been somewhat more liberal in his supply of notes. While his introductions are all that we could desire, we see places where a note, either on the meaning of a word or some point in geography, might with advantage have been added. We must not, however, let our last word be one of censure; but we must thank him for thus placing within the reach of the general reader a book which is, in so high a degree, both interesting and instructive.

ETCHINGS OF AMERICAN FERNS.*

ENGLISH fern collectors rarely trouble themselves much about the range and number of exotic species. The pleasure of the game, as of most of such pastimes, depends upon its exactitude. There are exactly fifty species of ferns known to exist within the British Islands, and the collection becomes a sort of solitaire-board, the object being to fill that half-century of spaces as soon as possible. It has hardly been sufficiently observed how much the precision of attainable aim has to do with the pleasure of sport; the fact must be commended to the notice of the next writer on the natural history of collecting. To come down to the humblest class of acquisition, how many thousands of young persons take pleasure in collecting postage-stamps, the actual number of which is known and catalogued, while how few have the courage to put out upon the trackless and practically limitless ocean of postmarks! If we rise to the healthier pursuit of most schoolboys, how immense a preponderance we find of collections of butterflies, where the number is strictly limited, over those of moths where the range, when we go down to the groups of minuter forms; the *tortices* and *tineade*, is too wide for the ambition of a lifetime! But ferns are the butterflies of botany, and they attract the collector in the same way, by their restricted range and definite number. He will be surprised to find, if he opens the attractive volume before us, that the collection of ferns in North America, notwithstanding the immense and varied range of territory covered, is no less exciting than it is in England. For, while we possess fifty indigenous species, it appears that in a tract of the American continent including all Canada and New England, and extending in the west beyond Kentucky and south to the borders of Georgia, there are only known to science sixty-seven native varieties.

We learn with surprise that Mr. Williamson's is the first popular handbook on American ferns yet published. The author, who scarcely gives us any letterpress, and who depends entirely upon his illustrations, first essayed his work in modest form, as *The Ferns of Kentucky*. His book, however, was felt to "supply a want," and the ferns of that State are so characteristic of the whole of North-Eastern America that he was able, by including a few more species, to give a new edition a more national importance. English fern lovers would perhaps value the volume more if some fuller account were given of the habits and distribution of each species; but the plates alone are of great charm and interest. It will perhaps be of most importance to English readers if we consider first the similarities, and secondly the differences, that exist between the English and American flora in this particular. We are bound to take Mr. Williamson as correct in his statements, and especially in his limitation of existing species. The anarchy that exists in the nomenclature of ferns—an anarchy that can most easily be brought home to the reader by the instance that one single genus is known to botanists, according to the school they have been brought up in, as *Isoetes*, *Polystichum*, *Aspidium*, *Dryopteris*, and *Nephrodium*—this anarchy determines us, in speaking of ferns both English and American, to use the old English name, and not Mr.

Williamson's name. For American species we must use American names.

In the first place, it is a very curious fact that twenty out of our fifty species are found to be indigenous also in America; although we confess that, to obtain this clear number, we have forced ourselves to believe that our British *Cystopteris Dicksonia*, the very doubtful species found only in a cave near Aberdeen, is not distinct from the American *Cystopteris montana*, which it seems to resemble in its lush growth and crowded pinnae. The very common English ferns seem, from Mr. Williamson's brief notes, to be as abundant in the States as with us. The ordinary wood polypody, the long rhizomes of which, rooted in the branches of trees, and covered with a shaggy, golden beard, are so familiar an object in all parts of our islands, is so common in America, "that it gives a character to the vegetation." Its refined relative, the oak-fern, is equally at home on both sides of the Atlantic; but, in the place of our beech-fern, *Phlegopteris*, the Americans have a *polypodioides*, in the etching of which, however, we detect nothing that distinguishes it from the British species. The Transatlantic *heragonyptera*, on the other hand, is easily distinguished from the *robertianum* of our limestone districts, with its clammy touch and strong geranium odour. The common bracken is as characteristic a feature of American landscape as it is of English. We wonder if Mr. Williamson knows the curious West-country superstition that all the bracken in the world has but one root, and that that is the reason why the plant can never be eradicated. The main stock of this single root must lie, it would seem, somewhere close under the still vexed Bermoothes. Among the *aspleniums*, Great Britain and America possess alike *trichomanes* and *viride*—the twins of the fern family, "Brunetto, the dark, and Blancheline, the fair"—*ruta-muraria*, whose rich, round fronds leave on meddling fingers as rich a dust as any butterfly's wing, and *filix-femina*, gentlest of ferns, by European botanists long since separated from the coarse and wiry company of *aspleniums*, and made to sit solitary as a genus, *athyrium*. Of the other American *aspleniums*, some, such as the broadly lanceolate *ebenoides*, and *angustifolium* in its simplicity, are entirely strange to us. Others seem but narrowly divided from our species; *Bradleyi*, which grows on bluffs of sandstone in Kentucky, is very like our familiar *marinum*, although the latter prefers a shady humid locality; *montanum* comes as close to our *lanceolatum* as cousins can venture to do, while *parvulum* seems to be the lost norm from which all known *aspleniums* have diverged. It is to be noticed, however, that the States do not possess any of our more eccentric *aspleniums*, such as the pointed and scarcely fern-like *germanicum* and *septentrionale*, with their dried flicker of fronds, or *Petrarchæ*, the rarest of British species, which looks as though a mischievous child had robbed it of half its pinnules. The commonest fern of English lanes, *Asplenium adiantum-nigrum*, is also unknown in America, and there seems to be no species there which exactly takes its place.

The three extraordinary genera with which botanists close their category of the *filicinae*, the so-called "flowering-ferns," are represented more abundantly, but not more characteristically, than in the British Isles. For instance, we have but one *Osmunda*, the magnificent *regalis*, which makes all swampy places golden in autumn with its vast spikes of seed at the end of its pale fronds; but the Americans, in addition to this their commonest species, have a *Claytoniana* and a *cinnamomiana* not specially distinct in form or structure. The genus *botrychium*, the moon-fern or lunary, to the magical powers of which several of the Elizabethan poets bear testimony, is represented all over both hemispheres by one very beautiful species, which occurs as far away as Kamshatka. This is the only variety known in the British Isles; but the Americans possess no less than seven species, several of which lose the peculiar form which we know in the lunary—that is, the cluster of kidney-shaped pinnae—and approximate the *osmundas* and even the *lastræas* in shape. Last of all the genus *ophioglossum*, or adder's tongues, which are to the races of ferns what the lampreys are to the race of fishes, has two representatives in America as with us, though only one of these, *vulgatum*, is common to both hemispheres. In each case there is besides this a pigmy species, a little withered tongue a couple of inches high, which is called *humaticum* in Europe, and *bulbosum* in America, the only apparent difference being that the former has a fibrous and the latter a tuberous root.

Among striking forms that occur among British ferns, and are not found in America, the delicate and transparent filmy-ferns, *hymenophyllum*, are perhaps the most noticeable by their absence. The English hard-fern, *Blechnum spicant*, one of the commonest adornments of our moorlands and watercourses, has no near relative across the Atlantic. Our parsley-fern, *Allosorus crispus*, is also unknown; but is represented by an American parsley-fern, *Cryptogramme acrostichoides*, which would seem, from Mr. Williamson's etching, to be only distantly allied to the English species. Of the vast genus *adiantum*, the true Maidenhairs, each continent possesses one species in its northern districts; ours, the hope and despair of collectors, is *Capillus Veneris*; that of the Northern States is *pedatum*, one of the commonest inmates of our conservatories, where it is largely cultivated for bouquets.

The American fern-flora possesses a few types unfamiliar to us. Four species of *cheilanthes* present us with a curiously woolly or hirsute fern, divided into innumerable pinnules, and preserving the pubescence from the root to the very tips of the fronds. A delicate genus, *pellaea*, is recommended to gardeners by the deep-purple colour and eccentric shape of its principal species. The wood-

* *Fern Etchings; illustrating all the Species of Ferns indigenous to the North-Eastern United States and Canada.* By John Williamson. Louisville, Kentucky.

wardias, giant ferns that fill the swamps of Virginia, resemble nothing that we know on this side of the ocean. But, on the whole, there are only two ferns which are entirely strange to us in form and habit. One of these is *Schizaea pusilla*, a dainty little plant found in the pine wastes of New Jersey, which throws up threads three or four inches high, at the extreme end of which is fastened a little cluster of pinnae, looking, in Mr. Williamson's etching, like the very point of a beech-leaf. The other is the climbing-fern, *Lygodium palmatum*, a plant stranger still to those who have not seen it in English conservatories, where its eccentricity and beauty are making it a great favourite. This fern throws out slender, flexible stalks many feet in length, with star-like fronds at long intervals, the whole starting from a running root-stock, so that a healthy plant can be trained over trellis-work, and form a little fairy bower for a dormouse or a green frog. It is certainly one of the prettiest and strangest ferns in the world, and seems to be quite abundant in the States.

Mr. Williamson's etchings are careful and faithful in most instances, but the plates seem to be worn and the impressions are rather faint. In some cases, where the fern is a familiar British species, we do not find it characterized so faithfully as we should wish. The illustration of *rutamuraria*, for instance, must have been taken from a weak and straggling specimen, or else the habit of the plant is very different in America. It is a curious fault, too, in a botanist, to omit the one distinction between *trichomanes* and *viride*, the dark stalk in one case and the pale one in the other; Mr. Williamson's etching makes *viride* the darker of the two if anything. But these are exceptions, and, as a rule, the etchings are very pretty in themselves, and exact from a scientific point of view.

NOTES AND SKETCHES FROM THE WILD COASTS OF NIPON.*

JAPAN has been a favourite theme with authors of late. We have had works on beaten and unbeaten tracks through the country and on the arts and language of the people, and now Captain St. John supplements the information we have thus obtained by giving us an account of his shooting tours on the wild coasts of Yesso. Captain St. John tells us in his preface that he was induced to publish the present work by the advice of friends. We always look on this kind of announcement as ominous. If an author has anything of value to say, he is generally well aware of the fact, and does not require the pressure of friends to induce him to appear in print; at the same time Captain St. John's frank admission that he has not the same confidence as his friends in the probable success of his book, and that his sketches are "rough," and have no pretension to being scientific, disarms criticism to a certain extent, and compels us to treat the book on the level he has chosen for it.

This being accepted, the book is not without its merits. The author visited parts of Japan which have scarcely been trodden by any English traveller, except Miss Bird, and he had even more opportunities of mixing with the people than were enjoyed by that adventurous lady. His love of sport led him into out-of-the-way districts, and brought him into communication with the inhabitants of secluded villages, among whom the native manners and customs remain untainted with any foreign influences. But with all these advantages he never peered below the surface of all he saw and heard. He does not appear to have made any effort to learn the language of the people, but to have been content to observe and to pick up scraps of information at secondhand. The island of Yesso, which forms the chief subject of his notes, is the northernmost portion of Japan, now that Saghalien has been absorbed by the Russians, and is interesting on account of its physical features and its inhabitants. The results of volcanic action on the surface of the soil are everywhere apparent, and impart a bold and striking aspect to the scenery, while the vegetation, which, in spite of the rigour of the wintry skies, is luxuriant, adds a wild charm to the landscape. Bears, deer, wild boars, and foxes have almost undisputed possession of the forests, and are disturbed only by the occasional attacks of the native Ainos, who venture inland from the coasts only to seek for food in winter when the shores are deserted by the fish, and for skins and horns for the purposes of trade.

Of the Ainos themselves Captain St. John has not much to tell us, and on the subject of their language his information is vague. "They have," he says, "no written language. In connexion with Japanese a mixture of both is used." Having disburdened himself of this enigmatic sentence, he passes on to the more familiar subjects of their appearance, and their manners and customs. Unlike the Japanese, their physique is square and powerful.

their features are regular and good, and in expression decidedly pleasing; they have neither the high cheek-bone nor oblique upper eyelid peculiar to the Mongolian family. . . . Their temples are flat; forehead broad, square, and high; arch of the head flat; entire head round and well shaped; their lips are full, but not particularly so, eyes very dark, eyebrows straight, and parallel to the axis of the orbits. Their most peculiar characteristic is their hair, which is very coarse, black, long, and straight, and in great profusion in both sexes. The men wear long, flowing beards and moustaches. Their entire body is invariably covered with hair, and very frequently to an extraordinary degree. The children are also hairy little things.

But, though superior to the Japanese in outward bearing and appearance, they are infinitely inferior to them in every other respect. Of all civilizing arts they are completely ignorant—and, indeed, are little removed from savages. Their dwellings are the rudest huts, and their habits are filthy. But, on the other hand, they are peaceable, honest, and hospitable.

No gleam of a higher life breaks the monotonous dreariness of their existence. Religion they have none, and their only objects of worship are posts of peeled wood, "whittled nearly to the top, from which the pendent shavings fall down in white curls." A few birds and beasts have a degree of sanctity attaching to them, and bears enjoy the doubtful privilege of being so highly esteemed for their strength and courage that it is the object of every Aino to kill as many as he can, that he may inherit the characteristics of his victims. Each spring young bears are caught, which, after having been carefully suckled by the wives of the chiefs, and tended until they are full-grown, are ruthlessly murdered at a public festival, amid shouts of "We kill you, O bears! come back soon into Ainos." A feast follows, at which the carcasses are devoured and an inordinate quantity of *sukô*, the national spirit, is drunk. The subjection of these poor savages to their more intellectual neighbours is complete, and the contempt in which they are held by the Japanese is equalled only by the fear they entertain for their masters.

The fisheries of the island furnish employment to a large proportion of the inhabitants. The coasts and rivers abound with salmon and other kinds of fish, which are exported to Japan and China in large quantities. Captain St. John asserts that in the Ishikari River 6,000 tons of salmon are annually taken between the end of August and the beginning of November; and, in partial confirmation of this statement, Miss Bird says that on this river 20,000 salmon are not unfrequently landed in a pair of seines in one day. But, though owners of all this wealth, the Ainos are only allowed a small share of the profits. Breachloading rifles, ironclads, and the new universities of Yedo and Yokohama are expensive institutions; and, though they contribute nothing to the protection or enlightenment of the Ainos, they add mightily to the taxes extracted from these unfortunate people, who are called upon to pay over to the imperial exchequer from ten to twenty-five per cent. of the value of the yields of the fisheries.

But the Ainos interested Captain St. John less than the animals which share the possession of the island with them. He is evidently not only a sportsman, but a keen lover of natural history also. His observations on the habits of the objects of the chase are minute and accurate; and his book, if it had no other value, would be an interesting contribution to the natural history of Japan. Of the Japanese in the other islands of the Japanese group his verdict is in accord with that of all those acquainted with the country, more especially as it was before the late mania for everything European seized upon the Government. Their kindly hospitality, the cheerfulness of their dispositions, and the primitive simplicity of their manners won for them golden opinions from travellers, and especially from those who had previously experienced the chilling indifference of the Chinese people. Instead of a studied coldness, if not direct rudeness, travellers were received in out-of-the-way villages with a frank and genial welcome; and, instead of their arrival being the signal for the disappearance of the women and children, the young girls greeted them with a friendly *Ohayô*, "Good day to you?" and busied themselves in providing a comfortable lodging for them. It is unfortunately true that, as Captain St. John says, "the refined and gentle manners of the natives soon disappear before this Western civilization." The majority of the foreigners who visit Japan is composed of merchant sailors, who have introduced into the ports all the evils belonging to a higher civilization, with but slight traces of its more elevating effects. To such influences a simple-minded, impulsive people, such as the Japanese, are peculiarly susceptible, and, when foreign liquor accompanies these debased foreign manners, drunkenness, coarseness, and vulgarity naturally follow.

A curious illustration of the inferior position occupied by Japanese women was observed by Captain St. John at the harbour of Matoya, where a particular kind of edible seaweed is found in large quantities. The divers employed to collect the weed were, he noticed, all women, and on inquiring the reason he was told that, in consequence of a man having been on one occasion seriously bitten by a large fish when engaged in the work, it was now deemed advisable to employ women only:—

At low water [says the author, in describing the operations of the divers] numbers of boats put out from the villages, having one man and eight or ten women in each. The man manages the boat, while the women strip and drop quietly into the water. Each woman has a tub, which floats on the surface, until filled by the owner's repeatedly diving and bringing a handful of weed up at a time. These women remain under water about thirty seconds, and on coming to the surface float about as much at home as a lot of seals, diving again in a very short time. . . . For two hours or more they will stick to their work, then coming on shore stand or squat round a huge fire, lighted on purpose, in some sheltered nook. Here they chat and bake their olive-coloured bodies to a good brick-dust red.

Having completed his service in Japan, Captain St. John sailed for Hong Kong, where he exchanged his hitherto peaceful occupation of surveying for an active pursuit of pirates. It is an undoubted fact that the southern coasts of China are infested by pirates, who prey, not only on the junks of their countrymen, but on becalmed sailing vessels and small passenger steamers belonging to foreigners, and no doubt Captain St. John did good service in the raids he made upon their haunts. But there is an air of wholesale condemnation in his narrative of his anti-piratical

* Notes and Sketches from the Wild Coasts of Nipon; with Chapters on Cruising after Pirates in Chinese Waters. By Captain H. C. St. John, R.N. Edinburgh: David Douglas. 1880.

cruises which suggests the unpleasant thought that perhaps, after all, he may in some instances have been mistaken. In fact, on one occasion, a party of English friends, who ventured to approach his vessel in a junk, very narrowly escaped being raked by his ever-ready Armstrong before they could give him to understand that they were no pirates. There is nothing in the outward appearance of a piratical junk to distinguish it from an honest trader. They are both fully armed, one for offence and the other for defence. It is only, therefore, on overwhelming evidence that any condemnation can be arrived at. This, judging from what Captain St. John tells, he does not always seem to have had, and yet he had no hesitation in attacking and destroying whole fleets of junks. All this portion of his work is, however, a tale of bygone days; post rank was still to be won, and the author could boast but of a gunboat as his domain. This anachronism illustrates one of the inconveniences of the book. We are never sure of what year the author is speaking. It is true that dates are occasionally mentioned, but when three separate tours of service in Japan are referred to, and events are related which occurred on more than one visit to China, the medley is likely to result in some mental confusion. His description of the scene of the death of St. Francis Xavier on the island of Chang-chuen is an instance in point. The casual reader would naturally imagine that the spot was now the same "God-forsaken sort of place" that Captain St. John describes; whereas for more than a decade a handsome little chapel has covered the spot where the saint died, and where his body awaited its removal to its present resting-place at Goa.

Of Captain St. John's style we cannot say much in praise, and though the work is not without interest, its materials are of so fragmentary and personal a nature that it is likely to enjoy a higher estimation among his friends than among the public at large.

TWO MINOR NOVELS.*

IN spite of all the vices laid by novelists at the door of the higher classes, they have generally been admitted to possess the virtue of self-restraint in language and outward manners. The nobly-born gentlemen and ladies, on the contrary, whose sayings and doings fill the pages of *Divided* present a singular combination of impulse and calculation. They pour out their feelings on the most delicate subjects to utter strangers, they abuse their nearest relations in terms that would not be out of place in Seven Dials, at the same moment that they are laying elaborate plans for the furtherance of their own desires. Their conduct is neither probable nor pleasant. At the opening of the story the heroine, Sylvia Fortiss, daughter of a baronet living in Grosvenor Square, presents herself before an eminent physician to whom she is completely unknown, and tells him that she means to feign illness in order that he may be called in, and despatch her to Brighton for a change of air. At Brighton she will find Mr. Percy Meynell, a penniless young man, to whom she had engaged herself, but whom she resigned, in consequence of the pressure laid on her by her mother, in favour of a rich, stupid, and coarse Mr. Lionel Wyndham, in a few days to become her bridegroom. What is her object in this trip to the seaside does not clearly appear, as she announces in the same breath her intention to fulfil her promise to her fiancé; but sense is not the leading characteristic of any of the people in *Divided*. The doctor declines to further this scheme, and the marriage takes place as arranged. Mr. Meynell, the discarded lover, makes up his mind that the path of duty leads him to take a rich wife, and he expresses this determination with the frankness and good taste common to all the characters:—

"Poor child, poor dear sweet child," he had said [the observation refers to Sylvia], "she loves me, and I love her with all my heart, but nothing save misery can be the consequence. For her sake, no less than for my own, I will put a barrier between us which even love cannot overlap; to-morrow morning I will ask old Faulkner to give me Margaret. She isn't altogether disagreeable, and if I am to be married, I may as well take her and her money. Besides, I have flirted desperately by reason of my wretchedness, and if I retract now, I shall get into bad odour with all wary mothers. Yes! It is better for Sylvia that I make Miss Faulkner my wife as soon as possible."

This delicate-minded young man, who has such limited ideas about love's power of overlapping barriers, does not, however, marry the heiress. She breaks off the engagement at the last moment in favour of a lord, and Percy speaks of the affair in these terms:—

"Heard the news?" he said to every acquaintance he encountered.

"What news do you mean?"

"Oh, about myself; just a little agreeable trifle, you know."

Soon after this Mr. Wyndham is drowned when skating, and his rival plucks up heart, and when the first year has elapsed proposes again, and is rejected. Then Mr. Meynell resolves to work at the Bar, and betakes himself to Bloomsbury, where he boards with a struggling barrister and well-connected wife. It is curious to notice the way in which Bloomsbury is looked on by all the characters—by those who are supposed to be sensible, as well as by those who are not. If Bloomsbury were a little back slum in Bermondsey they could not be in more complete ignorance of its geography. It is no less instructive to notice the manner

in which professional men are regarded, and regard themselves. Lady Fortiss herself, the wife of a baronet, contemplates a lady who marries a barrister, or her own daughter, who ultimately wishes to marry the eminent physician, with much the same feelings that a countess two hundred years ago would have entertained when she heard of a projected alliance between a child of her own and the family chaplain or the village apothecary. Even the more democratic members of her world only admit people engaged in professions on sufferance, and are the subject of many comments for inviting even men of genius to their evening parties. Nor does this point of view seem strange to the physician—we are not thrown so intimately into the company of the barrister. "I know I am not her equal in station," says Dr. Clarke Taylor when he is proposing for Sylvia, and it appears perfectly natural to all parties that he should so consider himself.

The language of *Divided* is such as might be expected from the plot and the characters.

"Mamma, I have something to say to you" [observes the elder daughter of Lady Fortiss]. "Mrs. Meynell told you a horrid lie, a mean lie too, about the people Percy is living with. Do you know who they are? . . . Mrs. Walsingham, the vulgar woman in whose house young Meynell has taken up his abode, is the daughter of your friend Gladys, and of him who would now be Lord Milbury."

We cannot sufficiently admire the naïveté of the assumption that vulgarity was impossible to the daughter of one who might have become a lord; but we are quite willing to allow that Mrs. Walsingham was possessed of very remarkable qualities, for she could contrive to keep her two children spotlessly clean in a small house in Bloomsbury at a late hour in the afternoon. The English tongue is not, however, good enough to express the sentiments of these high-born people, who, like the gods in Homer, have a language different from that of mortals. French and Italian epithets are scattered liberally through the pages, in a manner suggestive of the game in which nouns and adjectives are given at hazard, and it is left to the skill of each person to bring them into the story. "Lady Fortiss was a little surprised by the quiet dignity with which Mrs. Walsingham" (the daughter of the possible lord) "received her overtures of friendship on the occasion of her second call in Taviton Street, but she was forced to acknowledge to herself in *petto* that it was very 'good form.' " "You are no judge of the *commes-à-fait*," observes another lady. "'I knew her very well,' said Percy, trying to be *déjàgé*, but looking a little disturbed"; and again, a few pages on, "She had not exclaimed 'Who can it be from' or 'One of Tompkins's stupid letters, I shan't read it now,' as we all do exclaim when we are perfectly *déjàgé* (*sic*) as to our correspondents."

But perhaps it is hypercritical to quarrel with our author over her choice of foreign words, when the English her characters indulge in leaves so much to be desired—almost as much indeed as their sentiments. "Very so" is a favourite mode of expression with them. However, elegance of language is hardly to be expected from a gentleman who, after his wife's desperate illness, remarks to her doctor, "They tell me she is going on well—where's the proof of it so long as she lies there looking so detestably weedy?" from another gentleman who says of the heiress to whom he had proposed for her money, "I would not marry the woman now if the alternative was penal servitude for life"; or from ladies who speak of their male acquaintances without any handle to their names.

With Mrs. Burnett's name on the title-page it is needless to say that *A Fair Barbarian* is quite another sort of book. The fair barbarian is, in fact, a very rich and pretty girl from Nevada, who drops unexpectedly into the midst of a little town like Cranford in Mrs. Gaskell's novels to pay her aunt a visit. Her calm self-possession and elegant toilettes produce a great sensation among the old maids and young ladies, who are all accustomed to take their fashions from Miss Chickie, the one milliner of the place, and their manners from Lady Theobald, their autocrat. Octavia, however, unlike Miss Daisy Miller, of whom she sometimes reminds us, is merely frank, not fast. She is willing, and even anxious, to learn English ways of behaving, though she admits that it is not as nice to be found fault with as she expected it would be. But, notwithstanding her simplicity, she has a trait which has occasionally surprised us in other American girls of whom we have read—we mean the way they pause and consider any remark made to them before they reply to it. If an English maiden has nothing ready to answer at the moment she changes the subject; but an American weighs the question carefully, and then gives her opinion, a plan which undeniably has its advantages. A very pretty and pathetic contrast to Octavia is provided in Lucia Gaston, the down-trodden granddaughter of Lady Theobald. Lucia is by nature of an open and true disposition as the girl she wishes to take for her friend, but she has been driven into little concealments by the sternness of her grandmother, and thus her love of truth and her desire for peace are perpetually at war. Octavia produces a great effect on her, and she feels impelled at times to speak out her own opinion, because she knows it is her temptation to be silent and cowardly, yet is visited by pangs of remorse afterwards, lest she should have been pert or ungrateful. There is much delicacy in this little portrait, and the reader feels happier when Lucia is allowed to marry in her own way, though it is to be regretted that, in order to produce this desirable end, Mrs. Burnett should have introduced the name of a living English nobleman into the story. We do not feel much anxiety as to Octavia. She is a pleasant, sensible girl; but no one could doubt her ability to take her own way,

* *Divided*. A Novel. By the Author of "Shakespeare Stories Simply Told," &c. &c. 2 vols. London: Remington & Co.

A Fair Barbarian. By Mrs. F. H. Burnett, Author of "That Lass o' Lowrie's." London: Wm. & Co.

and get the better of circumstances. *A Fair Barbarian*, has, on the whole, pleased us better than any of Mrs. Burnett's other books, full of cleverness though those may be. Fortunately there is no dialect in the book, for Mrs. Burnett has hitherto depended too much on her clever use of provincial dialects.

M. VALERIUS MARTIALIS.*

IT is perhaps not wonderful that a terse and appreciative translation of Martial should be to seek—nay, that even prose versions and literal renderings should strike the scholarly reader as inadequate—because his fame depends on his pathos as well as his humour, and he shines in tenderness and beauty as well as in lighter descriptions and *vers de société*. Perhaps therefore it is unfair to expect that the great and unique epigrammatist should be represented in any one version with unvarying success, and certainly we have found it so in some two or three French versions, and more than one or two English translations in prose or metre. We have now before us two volumes, a translation and a compendious edition of the author; the former like Martial in the character he gives of himself, good, bad, and indifferent by turns, but, on the whole, possessed of considerable merit; the latter, the careful and often ingenious work of a ripe scholar and tutor who has, besides giving to young students a careful selection of the best epigrams, also taken considerable pains to correct and reduce the exaggerated estimates of German Professors such as W. S. Teuffel on the average morality of Martial. He reckons him as one of several literary names of excellence imported from Spain into Rome in the latter half of the first century after Christ which laid claim to real genius, and were masters in their particular branch of art. He was born at Bilbilis, a Roman colony on a rock over the river Salo, famed for its gold and its steel manufacture; and his parents, Fronto and Flaxilla, were rich enough to give him education and culture, though probably nothing in the way of money. To Rome he went at twenty-three, about six years before Nero's death, carrying, perhaps, letters to the house of Seneca, from Spain, and so gaining introduction to the house of the Pisos. It does not seem that he ever followed any calling save literature; and our clear information of his life from himself begins about five years after Domitian's accession, A.D. 86. Under him he retained the notice of the palace he had gained under Titus, as well as the distinction of "Jus Trium Liberorum," and the "Tribunatus Semestris," i.e. a military tribuneship resigned after six months, though conveying equestrian privileges for life. Besides getting Roman citizenship from the Court of Domitian for several provincials, he does not seem to have got many more marks of palace favour than an occasional invitation; but, as Mr. Stephenson shows, without Imperial favour Martial got considerable presents for his verses, and the client's *sportula* of more than *centum quadrantes*, as well as the occasional presents of the *Saturnalia*. Mr. Stephenson makes it pretty plain that the poet's poverty must have been exaggerated, and that many a modern literary man would be content with Martial's means. He probably had his Nomentan villa before that on the western slope of the Quirinal. Mr. Stephenson too has cleared Martial of another gratuitous charge—namely, the imputation of gross immorality; "There is no evidence that he participated in the grosser vices of his time. His gravest fault seems to have been to laugh where he should have felt shame, and made literary capital out of other men's vices." He refutes Teuffel's unjust statement that the subjects of Martial's epigrams are mostly from the obscene side of real life. Much that has been said of his fulsome flattery of Domitian is excusable on the score of his necessity of Court patronage and his predisposition to magnify Domitian's merits and overlook his faults. And a great deal is atoned by warm-hearted kindness to inferiors, the scope he affords to incidents of genuine pathos, the indignation he feels at acts of selfish cruelty, and which is exhibited in, for example, i. 88, on the grave of the slave-boy Alcimus, or, ii. 66, the cruel punishment inflicted by a Roman lady on her tirewoman Plocusa. It may be well to quote Mr. Webb's versions of those at this point, adding such light on both as Mr. Stephenson throws in. That on Alcimus alludes to the open space fringing the high roads round the city which formed the Roman cemeteries, "*Alcime quem raptum domino crescentibus annis*," &c.:—

Torn from thy master's home by fate,
Loved youth, in beauty's opening bloom,
No Parian marble's tottering weight
With transient splendour marks thy tomb.

For thee beside Labican way
The box her pliant branches rears,
And there the vine's dark shadows play
O'er grass that's dewy with my tears.

Accept, dear youth, what grief has done;
Thus lasting honour shalt thou crave.
I ask when Fate my life has spun
That such as these may deck my grave.—P. 5 (Webb).

As Mr. Stephenson notes, *Lavicana* is Schneidowin's spelling on

* *Selected Epigrams of Martial*. Edited, with Notes, Introduction, and Appendices, by Rev. H. M. Stephenson, M.A., Head-Master of St. Peter's School, York, &c. London: Macmillan & Co. 1880.

Select Epigrams from Martial for English Readers. Translated by W. T. Webb, M.A., Professor of History and Political Economy, Presidency College, Calcutta. London: Macmillan & Co. 1879.

the faith of the best editions. The road ran past the Labicium, La Colonna fifteen miles from Rome. *Levi*, in v. 2, suggests the sepulchral form, "S.T.T.L. Sit tibi terra levis." Some understand *buros* and *prata* to mean wreaths of box leaves and meadow flowers; others, trees and turf, as is most in keeping with v. 8, "Hinc tibi perpetuo tempore vivet honor." Jeremy Taylor, as Mr. Amos notes in his *Martial and the Moderns*, introduces the two last lines in his funeral sermon on the Countess of Carbery; Pope imitates their burden in his "Elegy on the Memory of an Unfortunate Lady"—"What though no weeping loves thy ashes grace," &c.

The other deals with the cruelty exercised by a Roman dame on her tiring-woman, which the poet says made her deserve her head-shaving. The Romans fancied the touch of a salamander would make the hair drop off. "*Unus de toto peccaverat orbe comarum*":—

Of all the ringlets that within
The head's encircling cluster lie,
Ill-fasten'd by a faltering pin,
A single curl had slipped away.
With the same glass, in which she spies
This fault, the fair her vengeance sped,
Beneath the blow Plocusa lies
Struck down with bruised and bleeding head.

Henceforward each ill-omened tress
Let Lalage disordered wear;
And never more may handmaid dress
The locks of such a maniac's hair.
Let salamander mar their grace,
Or ruthless razor shave them clean;
That so the mirror'd form we trace
May match the glass in which 'tis seen.—P. 17.

In the 118th Epigram of Book I. is a good epigram in witty reply to a stingy friend who asked the loan of Martial's book. He is told he may buy at small cost and trouble, but is hiding his meanness under a pretended compliment. The whole is done in prose by Mr. Amos in *Martial and the Moderns*, p. 62, and from v. 10 to 18 in the *Westminster Review*, p. 444 (see Mart. 118, 1, "*Occurrit quotiens Luperco nobis*") :—

As often as you meet me, Luperus, you immediately say, "May I send my slave boy that you may give him your book of epigrams that I may return as soon as I have read it." I answer, "There is no need to put your boy to such trouble. 'Tis far to come to the pear-tree, and I live up three pair of stairs, and those high ones (*sed alto*). You can get what you want much nearer. You often walk into Argiletum [=Paternoster Row?]; you will find there a shop opposite Caesar's forum; its door-posts from top to bottom are covered with inscriptions, from which you may soon learn the names of all the poets whose works are for sale. Seek for me out of these. You need not ask Atricius (for this is the name of the master of the shop) if he can find me. He will hand my book down from the first or second nest, bound with purple and polished with pumice, for the price of five denarii." "You are not worth so much," quoth Luperus. "You speak wisely," say I.

We have preferred the prose because given in full, whereas the verse is somewhat abridged, both equally indicating the book-shops and their old-fashioned sign-names. Domitian, we find, was born in the sixth or Pomegranate quarter of the city.

In Mart. Ep. i. 43, Martial has a lively epigram on a stingy host, who set before his many guests nothing but a starved boar to eat. It begins

Bis tibi trecenti fainus, Mancine, vocati,

and is rendered thus by James Elphinstone, a fair versifier of 1782 :—

Thine invited were yesterday, Mancin, threescore;
Nor was anything served to thy guests but a boar.
Not the grapes that the last from their parent depend,
Nor the apples that with the sweet pippin contend,
Nor the pears that are bound by the limberly broom,
Or pomegranates most like fleeting roses in bloom.
Not a cone of rich clots, from the country afar,
Not an olive Pic-nun had pent in a jar,
Naked Aper quite harmless the company charmed,
And confessed himself slain by a pigmy unarmed.
But our eyes had the sense, which alone he would feast,
On the sand we have often admired such a beast.
Hence to thee be a tusk presented no more,
But be thou, Charidemus-like, served to a boar.

The use of "*bis triceni*" for an indefinite number of the "*meli-mela*" or pippins, and the rural milk-cheeses of conical shape from Sassina in Umbria, are duly paralleled by Mr. Stephenson, who also points out the play on the meanings of *pomo* to serve at table, exhibit in arena, and simply to set. "May you never sit down to a boar after this, but be set down face to face to the boar that killed Charidemus." Martial is very flush of epigrams on disappointed dinner-hunters of the type of Selius, such as are Lib. ii. xi., xiv., and xxvii. The first is too long to quote, but explains exhaustively why Selius has a clouded brow, and his ugly nose nearly touches the ground; it is no friend's *pote*, or friend, wife, or slave's death; no steward or bailiff has proved defaulter. It is but that he dines at home. Ode xxvii. is shorter and more manageable, and begins

Laudantem Selium cœna cum retia tendit
Accipe sive legas, sive patronus agas;
"Essete," "gravior," et "nequiter," "auge," "beate,"
Hoc volui! facta est jam tibi cœna; tace.

It has been thus translated anonymously :—

Angling for dinner; Charles, at every line
I read him, puts me to the blush!
Delicious! charming! exquisite! Divine!
Hush, Charles! you've earned your victuals! hush!

Here follows a version by Mr. Webb of an epigram on one who painted hair on his bald scalp with black ointment. Martial tells him he will never need a barber—a sponge would at any time shave his head (vi. lvii. p. 69, Webb):—

Mentiris fictis unguenti, Phœbe, capillos.
Your head with unguents you besmear,
And counterfeited locks appear;
And, Phœbus, with this painted hair
You cover all the part that's bare.
No need of scissors for this head;
A sponge will shave it clean instead.

Mr. Stephenson compares this epigram with vi. 74, where the best reading of v. 2 is "*Calvam trifilem semitatus unguento*" (though some have read *semitatus*, half-touched); the poet speaks of one who has "walks (semitæ) of coloured pomade between the wisps of hair on his bald head."

Every one is acquainted with some form of the jest about good water being dearer at Ravenna than wine, and we shall quote Mr. Webb's version as our last sample for brevity, though for variety's sake we should have preferred to find room for the description of Faustinus's Villa at Baia (iii. 58). The former runs in Latin:—

*Callidus imposuit nuper mihi copo Ravennæ;
Cum peterem mixtum, vendidit ille merum.*
I at Ravenna chanced to dine,
And found mine host a cheat:
For when I asked for tempered wine,
The rascal sold me neat.

The reason for the badness of Ravenna's water lies in the epithet "paludosa," and on its having been built on piles in a lagoon.

No reviewer can hope to note even a title of the good epigrams or epigrammatic translations of Martial; indeed, it were well if encouragement could be given to a pensive version of a century or two of the best. Happily when Professor Mayor of Cambridge shall have matured his expected critical and explanatory commentary, we shall be in a better position to get amateur "scrinia reclusa."

GERMAN LITERATURE.

VOLTAIRE has made the history of Charles XII. of Sweden (1) classical, and his biography, with all its superficiality and inaccuracy, will probably survive the more laborious works of better-informed writers. In fact, the history of Charles is not one of those for which a minute accuracy of detail is essential. The broad outlines of the Swedish monarch's career are unmistakable, and unalterable by any amount of scrutiny, and the permanent effects of his meteoric transit across the field of European politics were too insignificant to call the special faculties of the philosophical historian into exercise. There is much more room for a professed military historian like Captain von Sarauw, who, at the same time, while mainly occupied in the study of the romantic paladin and heaven-born strategist, does not by any means neglect the politician, who, if not himself precisely a statesman, exercised for a long time a powerful influence on the deliberations of most European Cabinets. It is solely in these points of view that, apart from the singularity of his character, Charles deserves remark, for he represented no great principle, and at most only a personal and, if strictly analysed, selfish policy. Captain von Sarauw speaks very disparagingly of the Swedish historians, who have, he says, either been more compilers, or else have misunderstood and misrepresented their hero. His own estimate of Charles is much more favourable than usual. He acquits him of the mere appetite of fame and conquest usually laid to his charge, and declares the mainspring of his actions to have been his unwillingness to suffer Sweden to descend from the position among the Great Powers of Europe to which Gustavus Adolphus had raised her. The situation was a radically false one. Favourable circumstances, and the genius of a long succession of monarchs, had given Sweden a place in the councils of Europe altogether out of proportion to her extent, population, or resources. Charles wished to keep that place, and all his actions in the field and in the Cabinet were directed with rigid consistency to that end. Success in the long run was impossible, and the brilliant achievements of the early part of his reign served merely to draw him on into enterprises utterly beyond the strength of his kingdom. The fatal day of Pultowa found the hitherto invincible hero in such desperate circumstances that the situation could hardly have been altered by a victory. Viewed in this light, for which there is unquestionably much to be said, Charles's career acquires a dramatic as well as a romantic interest otherwise wanting to it. He appears as the victim of a fatality as inexorable as that which obtains in Greek tragedy. Captain von Sarauw makes the best case he can for his hero on every point, and certainly seems to show that policy, as well as stubbornness, may have inspired his apparently senseless proceedings at Bender. At the same time he does not seek to deny that Charles was preternaturally obstinate; that, though he may not have warred merely for war's sake, he liked nothing else half so well; and that he laboured throughout his life under miscalculations which accelerated, instead of retarding, the decline of Sweden.

(1) *Die Feldzüge Karls XII. Ein quellenmässiger Beitrag zur Kriegsgeschichte und Kabinetspolitik Europa's im xviii. Jahrhundert.* Von C. von Sarauw. Leipzig: Schlicke. London: Williams & Norgate.

The book is accompanied by an excellent military map and some plans, but is unprovided with the still more necessary index.

The name of Delitzsch as an editor guarantees the worth of Dr. F. Weber's posthumous summary of the code of divinity embedded in the Targum, Midrasch, and Talmud (2). Dr. Weber's treatise is drawn out very systematically, and is apparently a very fair attempt to methodize and condense the Oriental exuberance of the Jewish commentators. It is divided into three parts, the first treating of the general Jewish conception of divine revelation as embodied in the Law; the second, of special doctrines, especially of sin and atonement; the third, of the Messianic idea, and Jewish eschatology in general.

Herr Gelzer (3) has devoted immense pains to the settlement of the minute points involved in the chronology of Julius Africanus. It is difficult to conceive a more thorny undertaking; and it is, moreover, one whose success can only be estimated by those willing to bestow as much trouble upon its examination as the author has taken in its execution.

Bestmann's History of Christian Morality (4) is designed to trace the general perfecting of the moral consciousness in nations and individuals under and by Christianity, but begins with a survey of morality in the pre-Christian period, which occupies nearly two-thirds of the first volume; and the exposition of Christian morality has not advanced much beyond the most general definitions. The second part will be more distinctly historical. The style is more concise than the treatment, and in general very lucid; the author's point of view is that of moderate orthodoxy.

The occurrence of the heathen formula D. M. (Dis Manibus) upon undoubted Christian sepulchres has occasioned much speculation and controversy. Herr Becker has, for the first time, brought all known inscriptions of this kind together (5). His conclusion is that the formula had become, from established use, merely conventional, and was employed by the stonemason merely from the force of habit.

C. Holsten's "Gospel of Paul" (6) is mainly a commentary upon the four great Epistles, with which a complete translation is interwoven. The commentary follows Meyer to some extent, but supplies other elements which the author considers to have been hitherto deficient in Pauline exegesis. It is distinguished by few graces of style, but is acceptable as the work of a commentator of obvious independence and belonging to no traditional school. The first volume contains the Epistle to the Galatians and the First Epistle to the Corinthians. In his treatment of Paul's relations with the original apostles involved in the former Epistle the writer is in substantial agreement with the Tübingen school.

There seems no end to the posthumous publications of Richard Rothe (7), but their abundance is sufficiently accounted for by the circumstance of their being chiefly notes or drafts of academical lectures, which grow fast upon an industrious professor who makes a point of not repeating himself. A history of the pulpit in the shape of a series of academical lectures must necessarily be very incomplete, and the incompleteness is aggravated by the circumstance that the lectures, delivered in 1835, terminate with the death of Schleiermacher, or just at the period when the pulpit was beginning to experience a great revival in England, France, and America. A history of preaching that has nothing to tell of Newman, Lacordaire, and Channing must obviously be most imperfect, and even greater names, in English pulpit history at least, are conspicuous by their absence. It will hardly be believed that, while Tillotson, Secker, and Blair are fully and fairly criticized, obviously from a first-hand acquaintance, Jeremy Taylor and South are not even mentioned. In fact, the lectures are sufficiently elaborated for a divinity class, but hardly for the publicity they have now received, which evidently was not contemplated by the author. Their strong point is the account of the patristic and mediæval preachers, which evinces thorough knowledge and impartial criticism, and, if published separately, would make a very satisfactory manual.

After a long period of comparative neglect, Descartes (8) is attracting more and more attention as a philosopher, perhaps from the extent to which his psychology is leavened with physiology. This substratum of natural science in his system comes very much to view in Dr. Koch's careful exposition of his system. Dr. Koch has the highest opinion of Descartes when regarded in connexion with his successors and as the author of an enormous impulse communicated to philosophy; in himself he is rather the embryo than the creator of a distinct philosophical system. His great merit, Dr. Koch thinks, is to have stimulated research even more power-

fully than his contemporary Bacon; his works have assisted the absolute dissimilarity of extension and thought.

The Norwegian Professor Storm's (9) treatise on the English language is one of remarkable merit and interest, and should excite considerable attention in this country. It is to be divided into two parts, the first treating of the actual condition of the language, the second, which one would rather have expected to have preceded, of its history and development. In its composition the author has enjoyed the advantage of being assisted by many English correspondents, especially Mr. Sweet, and has evidently taken the greatest pains to keep himself abreast of all contemporary advances in English philology. Dealing with the living language, the volume is anything but dry. Very many of the points discussed involve research into popular manners and customs, calling the newspaper and the familiar speech of ordinary life into requisition. In some places, Professor Storm's pages are a mosaic of citations from authors of every degree, from Shakespeare down to *Judy's Sugarplums*. The controversy between Moon and Alford is discussed in a spirit more than usually favourable to the "Dean's English"; letters from correspondents are inserted dealing with the actual difficulties and scruples of the philological conscience, and on the whole the right impression is conveyed that the language of a great nation in a state of continual intellectual and social ferment is not a thing to be regulated by academies, but is itself a natural phenomenon to which laws cannot be prescribed, but from the intelligent observation of which laws may be deduced. One very valuable feature of the work is the copious analysis of the recent literature of the subject, including some important books, such as Sievers's treatise on pronunciation, as yet little known in this country. There is also a useful bibliography of books on the language; including philological editions of Shakespeare and other classics, and literary histories. No notice is taken of recent proposals for disfiguring the language on the plea of simplifying its orthography; we hope it may be inferred that Professor Storm does not consider them worthy of notice.

The progress of the Latin language towards becoming the universal speech of the western half of the Roman Empire (10) has afforded Professor Budinszky matter for a very interesting book. Beginning with Italy, he sketches the gradual disappearance of the idioms with which Latin had originally to contend, whether cognate dialects like the Umbrian and Oscan, allied languages like the Greek, or strange and barbarous tongues like the Etruscan and Messapian. The steady, though in some places partial, intellectual subjugation of Spain, Gaul, Britain, the German and Illyrian provinces, and Africa is next successively sketched, and, depending for its elucidation on the evidence of medals, inscriptions, and the testimony of the classical writers, proves anything but an uninteresting inquiry. Such topics as the persistence of Iberian inscriptions on the local coinage of Spain, the essentially military character of the Roman occupation of Britain, and the impediment thus offered to the diffusion of Latin, the failure of Constantine's endeavours to imprint a Roman character upon his new capital, the peculiarities of African thought and diction, are all fertile in points of the greatest interest and suggestiveness. Another chapter treats of the relations of the Latin and Greek languages, and the singular indifference of the most accomplished and inquisitive Greeks to Latin literature.

Louis Schneider (11) is an actor of some reputation, conductor for many years of the *Soldier's Friend*, a journal popular among the Prussian military, and he is at present attached to the person of the Emperor of Germany. This post brought him into close connexion with the Emperor during the campaigns of 1866 and 1870-71. He has much to tell of considerable interest, and the matter of his narrative is well set off by a genial style. From the rarity, however, of published judgments of foreign actors upon the English stage, the most interesting part of his memoirs to English readers will perhaps be his account of his visit to England in 1842, and his acquaintance with Macready, Charles Mathews, and Mme. Vestris. He considers Macready's *Macbeth* the finest Shakspearian impersonation he ever witnessed.

The late King John of Saxony (12) earned an honourable reputation among literary sovereigns by his translation of Dante. A posthumous volume of miscellanies further attests his amiability and culture, without bringing to light anything that would have attracted especial attention without the prestige of such distinguished authorship. The first part contains a number of addresses on public occasions, sufficiently appropriate, but hardly worth reprinting; the second the narrative of a youthful tour in Italy, to which the same remark is applicable; the third a body of elegant occasional verse; and the fourth some additional observations on the study of his Majesty's life, Dante.

Sacher-Masoch's "New Jewish Stories" (13) are a contrast to

most of his former works, except in their lively and eminently readable character. They are in no respect sensational, touch upon no moral problems, and are in no respect open to the charge of prurience. They are rather anecdotes than fictions, intended to exhibit some particular feature of Jewish life, and are mostly of a humorous cast.

A bibliography of German Shakspearian literature would be a valuable compilation, if accurate; but it is to be feared that Herr Unflad's (14) is disfigured by many imperfections.

Herr Burdach's essay upon the Minnesingers Reinmar and Walther von der Vogelweide (15) is an important contribution to the history of ancient German poetry in general, as well as to that of the poets especially discussed. Reinmar was the Court poet of Vienna; while the erratic Walther represented the dawn of refinement among the affluent classes in general.

"The Parisian Hours" (16) are a series of metrical prayers accommodated to the daily offices of the Church, of more philological than poetical value.

The last number of the *Rundschau* (17) introduces a new Norwegian novelist, Alexander Kjelland, whose "Battle of Waterloo" seems to promise a reputation of the same class as that of Björnson, Boyesen, and other writers of the school of narrative fiction which has of late years arisen in Norway. The current instalment of Gottfried Keller's "Singedicht" is most idyllic, and ranks among the most agreeable passages of his writings. Another excellent literary contribution is the memoir of Annette von Dröste-Hülshoff, the best of German poetesses, and one of the best poetesses of any country. In her correspondence and the recollections of her friends Annette appears as a most delightful person apart from her literary endowments, clever, sensible, and as unaffected as if she had never aspired to intellectual distinction. Dr. Preyer concludes his tribute to our countryman Braid, the first scientific investigator of hypnotism; and Herr von Weber tells Germany much more about English canals than is generally known in England. Karl von Hillebrand's essay upon Guizot in private life exemplifies the difficulty of separating the domestic existence of a statesman from his public career. The same pedantry and stiffness which were fatal to Guizot in the latter capacity prevented his appearing in an amiable light as a private man, except to the few who were thoroughly intimate with him. Among the minor contributions should be noticed a highly sympathetic tribute to Carlyle.

THE TRANSVAAL COMPROMISE.

A SMALL but well-fought skirmish at Potchefstroom, in which Lieutenant DALRYMPLE HAY deserves the credit of showing that defeat is not inevitable in conflicts with the Boers, has concluded the operations of war in the Transvaal. Sir FREDERICK ROBERTS is perhaps rather to be congratulated than to be consoled with under all the circumstances, though he has in a manner been sent up on a fool's errand. Soon after the Potchefstroom affair Lord KIMBERLEY in the House of Lords and Mr. GLADSTONE in the House of Commons were announcing the terms by which the Ministry have carried out the promise of the QUEEN'S Speech. There is no necessity to discuss again the general merits of the conduct which has led to the Convention of Laing's Nek, or the aspect of that Convention viewed from the point of national honour. Silence is the best course open to those who do not care to emulate the conduct of HAM on the one hand, or to invent new meanings for the words courage, magnanimity, and statesmanship on the other. It need only be said that a Government which was really convinced of the justice of the claims which it now allows, and at the same time determined to maintain the honour of the country, would have published the conditions it intended to accord immediately after the reception of the news of the revolt, and would have adhered to them in the face of victory as well as in the face of defeat. But it is too late for any such reflection as this, or perhaps too early. Even in these days the constituencies take some time to imbibe the ideas which influence their conduct, and the platform eloquence which was so powerful in favour of the present Government is likely to be wanting against them. Nor is it desirable that both parties in the State should regard national disasters and humiliations merely as convenient levers for the overthrow of their political opponents.

The same unreality perhaps attends the consideration of the true version—now at last obtained—of the disaster at Bronker's Spruit, the claim for justice against the murderers of Dr. BARNER, and some other things of the same kind. Those who urge these points are likely to be met by the Government with the famous "Vous vous écarter de la question." The question is an apparent settlement at any cost, not the punishment of bygone atrocities, or even, it would seem, the safeguarding of faithful friends from the vengeance of the triumphant Boers. The Royal Commission is to busy itself with the questions of frontier and of the policy to be adopted towards the natives, probably because too many good friends of the Government belong to the various Societies for protecting aborigines and repressing slavery to make it safe to neglect these points. But nothing was at first said of securing the position of the loyal Dutchmen, or of Englishmen resident in the Transvaal. Nor did the question of indemnity to those who, on the faith of the declared immutability of the annexation, have purchased property in the territory, now to be given back to the Boers, appear to have entered into consideration. Inquiries later produced gratifying assurances that the point would be considered, but at first it seemed to Lord KIMBERLEY and Mr. GLADSTONE too unimportant for mention. Of the positive conditions, some are merely concerned with the moment. Such are the withdrawal of the Boers, the maintenance for the present of the English garrisons, and the undertaking not to advance into the Transvaal.

The last appears, on the face of it, an unwise concession; and it makes the withdrawal of the Boers from Laing's Nek comparatively meaningless, while, inasmuch as Laing's Nek itself is in Natal, the QUEEN has bound herself not to occupy her undisputed territory. The garrisons appear to have been well able to hold their own; and therefore, as far as these parts of the Convention go, the advantage is clearly with the Boers. The first four articles are, however, of the greatest importance. These stipulate—first, the suzerainty of the QUEEN; secondly, the complete internal independence of the Boers; thirdly, the control of foreign relations by England; fourthly, the establishment of an English Resident at Pretoria. In substance these conditions seem to grant to the fullest extent the demands with which the Boers took up arms. Looked at in detail, they amount to a settlement which would have been tolerable enough if it had been freely granted, and not extorted from England under the pressure of defeat. Suzerainty means anything or nothing, and Lord RANDOLPH CHURCHILL's gallant reference to Eastern Roumelia, if not wholly well timed, was legitimate, and indeed inevitable. The value of the admission of a Resident depends almost entirely on the powers with which he is furnished, such an officer occupying in different cases positions varying from that of Mayor of the Palace to that of a mere Consul-General. Complete self-government is enjoyed by many English colonies, and there is no reason why it should not be enjoyed by the inhabitants of the Transvaal, provided it is not intended to mean untempered anarchy. One of the original complaints which led to the annexation was that it was impossible to recover a debt in the South African Republic, and there is no reason to believe that the Boers will be more ready to discharge their liabilities, public and private, when they have been victorious over the English than when they were unsuccessful against the Caffres. The control of foreign relations may sound a greater concession to those who do not know that it was partially possessed before than to those who do. It is construed as depriving the Boers of the right to make peace and war, and as transferring that right to the English Government. The latter have certainly shown their ability to make peace, though perhaps not equally their ability to make war. But it must not be forgotten that while the formal right to make peace and war will remain with the English, the right to provoke war and to disturb peace will rest with the Boers as a necessary consequence of their self-government. The division seems, on the whole, to be doubtfully equitable and certainly inconvenient.

Let it be repeated, however, that it is not the tenor so much as the circumstances of this arrangement which make it necessary to regard it with distrust and dislike. In the abstract the establishment of a kind of larger Andorra or San Marino, rendered powerless for harm, and giving its inhabitants the right to enjoy their unsocial license without disturbance, has nothing in it peculiarly open to objection, and might very likely bring the will-o'-the-wisp of confederation somewhat nearer. Arranged a year ago by the present Government, such a settlement would probably have been received with but little grumbling by either political party, and would have had a chance of bearing peaceable fruit. Offered three months ago and unflinchingly adhered to, with the addition in case of resistance of an insistence on the right to march an English army through the country, it would have been

awful but tolerable. As it is, besides the danger of a renewal of the old difficulties, it presents many new and far more formidable ones. It does not need a pessimist to see in it the beginning not the end of troubles. Two entirely distinct springs of danger seem to be unsealed by it. In the first place, there is the certainty of a dangerous ferment in the minds of the native tribes, notably the Zulus and Swazies, both of whom despise the Boers, and with cause, while hitherto they have had a salutary respect for the English. It is to be feared that savage warriors will not understand the refinements of home-keeping Radicals about magnificent courage and sublime superiority to the considerations of military pride. They will not comprehend the niceties of suzerainty and the control of foreign relations, and will either in their innocence think to gratify us by avenging our defeat on the Boers, or imagine that they can with impunity attack those whom the foes they have themselves overcome have defeated so easily. Nothing, it is known, determined the Zulus to submission so much as the completeness with which their country was invaded and traversed, and nothing is so likely to convince them of our failure as the undertaking not to march into the Transvaal. But the natives outside the Boer limits form only one party to the question. Every one who knows anything about the subject knows the antipathy with which the Dutch portion of the population of the Cape States regards the hitherto dominant race. Their superiority in numbers has hitherto been compensated by an inferiority in military prestige and by the fear of England. The present proceedings are not calculated to make this equilibrium stable. The incendiary language of the insurgent leaders might be dismissed as a merely legitimate weapon if it did not correspond to known sentiments and wishes of the Dutch and the Afrikaner population generally, outside as well as inside the territory of the resuscitated Republic. It is possible, of course—almost all things are possible—that things may turn out better than they seem likely to turn out. But South Africa is a perpetually smouldering fire, and it breaks out into actual blaze at the very smallest addition of new fuel or disturbance of the old ashes. It is to be feared that a new and formidable occasion of conflagration has been supplied by the statesmanlike irresolution of an English Ministry and the unfortunate failure of an English general.

RUSSIAN CHANGES.

THE circular despatch and manifesto of ALEXANDER III. is, as befits the occasion, vague and conventional in tone, though perhaps some passages in it may hereafter prove to have had a practical meaning. The EMPEROR recognizes his primary and indispensable duty when he declares that his first care will be the improvement of the internal condition of Russia. Experience will show whether he intends to effect his object by granting any kind of Constitution. Since the time when the death of his elder brother made the Grand Duke ALEXANDER an important personage, he has been supposed to combine with some kind of Liberal sympathies the narrowest prejudices, and perhaps the most dangerous propensities of his countrymen. It has been thought that he blamed his father for maintaining without change the autocratic mode of government; and it was known that his influence was directed to the promotion of a warlike policy in 1876. ALEXANDER II. had neither taste nor aptitude for military pursuits, although he thought it necessary to join the army in Bulgaria after its early reverses. The new EMPEROR seems to have inherited in an altered form the propensities of his grandfather, but he is not supposed to favour despotic principles of civil administration. NICHOLAS I., though he spent his life in drill and parades, discovered in the war of 1827 and 1828 that he had no skill or ability as a general. The CZAREWITCH, during the late Turkish war, commanded a large army with creditable success, and he is believed to have despised and resented the incapacity of his uncle, who was Commander-in-Chief. The possibility of his pursuing hereafter an adventurous and aggressive policy is perhaps increased by his consciousness of military ability. At the beginning of his reign he will be too much occupied with questions of internal policy to engage wantonly in schemes of conquest. The danger will be greater when he may perhaps be tempted to divert attention from domestic complications and trou-

bles. Some indication of the EMPEROR's tendencies will be furnished by his choice of a successor to the aged CHANCELLOR. The employment of General IONATIEFF would raise apprehensions of a policy of turbulence and intrigue. Count SCHOUVALOFF would be disposed to maintain the European peace which is in some degree the result of his prudence and moderation. Count MELIKOFF is not known to have taken any active part in foreign affairs, but his services both as a general and as an administrator may probably recommend him to the confidence of his Sovereign.

No inference can be drawn from the official rebuke inflicted on journalists who in the first hours of the new reign undertook to urge the immediate introduction of constitutional or representative government. Even for the safety of the EMPEROR, it was, as they contended, necessary to divide the responsibility which in popular estimation, as in truth, is now concentrated on the head of the Autocrat. The assassins of the present day draw no nice distinctions between despotism and limited monarchy. Within two years the King of ITALY narrowly escaped the attack of an assassin. An Irish member lately was understood to express in public a hope that an English HARTMANN would be found to murder the QUEEN. The Nihilists would not be for a moment conciliated by the convocation of a Russian Parliament. As long as property, family relations, and civilized society exist, they will continue their detestable machinations. The ruffians who at New York, Chicago, and unhappily also London, met to celebrate the assassination of ALEXANDER II., rejoiced in his death less because he was an absolute ruler than because he held one of the most conspicuous positions in the world. A similar explanation may probably be given of the sympathies of M. ROCHEFORT, which extend alike to the murder of the EMPEROR and to Mr. PARNELL's schemes for plundering Irish landowners. Although it is unlikely that ALEXANDER III. should adopt liberal measures in the hope that they may conduce to his personal security, he may perhaps try the experiment either of a legislative or of a consultative Council. The election of either body would probably be entrusted to the local Assemblies, which already exercise certain municipal and judicial functions. The nobility, though they have never exercised political power, might perhaps be allowed separate representation; but absolute sovereigns, when they part with a fraction of their authority, are, for the most part, jealous of aristocratic influence, and they are anxious to satisfy popular aspirations. It is impossible to foresee the result of any measure of the kind. A Parliament may be a mere form, or it may engross all the powers of Government; but there are circumstances in Russia which would tend to restrain hasty encroachments on the prerogative of the Crown. The peasantry would be slow to understand that their allegiance was due to any authority but the Czar. Some of them may be open to revolutionary incitements, but they would feel no enthusiasm for an Assembly of members belonging to the upper and middle classes. Ambitious reformers would consequently have to deal not only with an Emperor commanding an enormous army, but with a hostile population. It is nevertheless barely possible that a Parliament would do good by exposing the abuses of administration. The Turkish Parliament, which, after a short existence, disappeared during the Russian war, exhibited unexpected patriotism and independence. If any kind of representative Government is possible in Russia, it may be as reasonably established at the beginning of a reign as on any other occasion; and it would be more advantageously introduced by an Emperor who still retained vast powers than by agitators or even by popular leaders.

Administrative improvements would be safer and easier than constitutional innovations, and they are more urgently required. The late EMPEROR did much to purify the tribunals, and he abolished some of the cruel punishments which were habitually inflicted at the discretion of minor officials; but the arbitrary jurisdiction of the police, and especially the exile of untried prisoners to Siberia, involve the perpetration of grievous wrong. The traditional hardships of the penal journey are still inflicted on sufferers who may be innocent, and who are perhaps neither convicted nor accused of any ordinary crime. The outrages committed by the Nihilists have naturally rendered the authorities suspicious; and political malcontents are punished because they might perhaps have conspired against the Government. Many of the exiles are transported by administrative measures,

without the pretence of judicial inquiry. It is not known whether the plots of the Nihilists are in any way connected with the anomalies of political sentences; but VERA SASULICH, who began the late series of assassinations, had suffered heavily through the cruelty and tyranny of the police. More desperate conspirators may probably be instigated by motives with which it is difficult to reckon. The subversion of received morality has produced a race of fanatics who are willing to incur any risk in the cause of crime. The Nihilists in Russia, the Communards of Paris, and the wretches who practise murder and arson in Ireland and in England are beyond the reach of reason. Any measures which may be found necessary for the protection of the EMPEROR and his family and servants against assassins will be approved by Europe. It unfortunately happens that no suggestion can be made of means for the promotion of the object. It had been vainly hoped that conspirators had been baffled or alarmed during the administration of Count MELIKOFF. The late trials were also supposed to have resulted in the discovery and punishment of the principal leaders. Henceforth a period of comparative tranquillity will fail to restore public confidence. No early change is to be expected in the foreign policy of the Empire. The reputed dislike of ALEXANDER III. for Germany will, if it really exists, be suppressed or suspended. It is possible that Russia may intervene more actively than before in the negotiations for the extension of Greek territory; but experience shows that sovereigns on their accession generally follow, at least in the first instance, the policy of their predecessors. The new EMPEROR may perhaps not feel his father's sentimental attachment to his kinsfolk at Berlin; but he will not willingly provoke the hostility of his powerful neighbour. Political assassinations, which two or three centuries ago were sometimes organized by one ruler against another, now form a common ground of danger and of co-operation to all crowned heads. A friendly understanding with Germany implies pacific relations with Austria. The EMPEROR is supposed to regard France with friendly feelings, and he has no personal cause of quarrel with England. Any Parliamentary experiment which he may try will be watched with interest and good-will.

THE NAVY.

IN the Session before last the House of Commons ordered the Admiralty to make out a list of its own broken pledges; that is to say, to give an account of the amount of shipping estimated for, and of the amount actually built, during a period of fourteen years. The Admiralty had perforce to obey, and painful was the story they had to tell. In seven years out of the fourteen the work done at the dockyards had been largely below the amount promised, and the improved method of estimating tonnage adopted in 1874 had not led to any diminution of the deficiencies. It is true that in 1875-76 the Admiralty built 282 tons more than they promised, and that in the succeeding year they very nearly carried out their engagements; but they were 1,918 tons short in 1874-75, 2,775 tons short in 1877-78, and 1,666 tons short in 1878-79. How far the promises made for 1880-81 have been broken cannot yet be ascertained; but, unfortunately, there is no reason for supposing that the vicious habit of undertaking too much in order to please the House of Commons early in the Session has been abandoned. The pleasure, therefore, with which the unusually ambitious programme lately announced had been received should be tempered by the thought that, in all probability, the official imagination which burns so ardently at Whitehall has produced its usual effect, and that the eloquent SECRETARY of the ADMIRALTY has followed the example of the more or less eloquent First Lords who have preceded him, and has promised considerably more than can possibly be achieved.

It must in fairness be said, however, that the amount of work promised is so large that, if only a fair proportion of it is done, the strength of the navy will be greatly increased. The criticism made by Liberal members on the naval administration of the late Government has not been forgotten now that the Liberals are in office. During the latter part of Mr. SMITH's reign it was urged against him, not without justice, that he did not build enough. Lord NORTHBROOK, Mr. BRASSET, and Mr. TREVELYAN are rightly determined that the Admiralty shall no longer be liable to this reproach, and they intend to advance rapidly and

to complete a large number of very powerful vessels of war. In the first place the *Inflexible* is to be completed. In the discussion on the Estimates last week Mr. TREVELYAN was able to assure the House of Commons that she would be ready for commission in June. This ship was begun in February 1874, so that when she is finished her construction will have occupied seven years and a half. It is true that all work on her was suspended for some time owing to the utterly unnecessary inquiry which Sir E. REED forced on the Admiralty; but, when every allowance is made for this delay, the time taken in building her must still appear enormous. We once said of this ship that she would probably be finished about the same time as Cologne Cathedral; but in this we were over-sanguine, for the Cathedral has long received its final, while the *Inflexible* still lingers in the hands of the artificers. She is to be followed by the *Ajax* and *Agamemnon*, vessels which, though smaller than she is, much resemble her, and belong to the first rank of ironclads. Three line-of-battle ships, to use the old expression, will therefore increase the strength of the navy during the present year, if the Admiralty keeps its promises. The *Polphemus*, a vessel of extraordinary design which is generally supposed to have been suggested by that wonderful veteran, Sir GEORGE SARTORIUS, who fought at Trafalgar, is also to be ready to ram antagonists and to discharge torpedoes innumerable before April 1882. In advancing vessels the Admiralty mean to work as hard as in completing them. The *Colossus*, a steel ship of 9,150 tons, now building at Portsmouth, and the *Majestic*, of the same tonnage, now building at Pembroke, are to be more than half completed; and the *Collingwood*, a barbette ship, designed some time ago, but apparently only just begun, is to be rapidly advanced. With second-class ships the present Board of the Admiralty promises to be as active as with the greater ones. Two fast cruisers of a new type, intended to possess very high speed and great offensive power, were projected by the late Board. To these the present Board have seemingly added one, and they intend to add another. None of these vessels will be ready this year, but they are to be pushed on, to use the official expression, and probably two of them will be added to the navy in 1882. At the time when they are launched it may be hoped that considerable progress will have been made with two new vessels which are to equal them in speed, and greatly to surpass them in strength and defensive power. Impressed, and certainly most justly impressed, with the absolute need for fast cruisers to protect our commerce, the present Board have caused a new design to be prepared, on which apparently all the constructive skill of Mr. BARNARD and his staff have been concentrated. The projected vessel is to be of 7,300 tons, and to have engines of 8,000 horse-power, which will be protected by steel-faced armour 10 inches thick. Her speed will be 16 knots, and she will carry *en barbette* four 18-ton breech-loading guns, which at 1,000 yards can pierce 13 inches of steel-faced armour, and other guns, smaller, but of great range. One ship of this type is to be begun at Portsmouth and another at Pembroke, while a third is to be constructed in a private yard. Unfortunately it is not very likely that any one of these will be able to take the sea before 1885 at the earliest.

With regard to smaller vessels the Admiralty does not intend to be idle, though there is not to be the same proportionate activity as with larger ones. Three gunboats are to be finished, and seven more or less advanced. A despatch vessel is to be begun, and two paddle-steamers are to be built. How many torpedo-boats are likely to be set afloat during the year it is impossible to tell. At present there are only nineteen of the larger kind, and this certainly is a miserably small number for our navy; but Mr. TREVELYAN stated that there were thirty in course of construction. As, however, the Estimates give no information respecting these marvellous little vessels, it is impossible to say how many are likely to be added to the effective naval force during the year. It is greatly to be hoped that there has been no niggardliness with respect to these, as their importance in warfare can hardly be overrated, and as large numbers of them have been added to foreign navies. In another and even more important requisite for warfare, offensive and defensive, our navy has been allowed to lag behind, but the present rulers of the Admiralty seem in some slight degree to realize the mistake which has been made. For

a considerable time past foreign Governments have seen that muzzle-loading guns on board ships of war must be replaced by breechloaders, and have taken steps to effect that important change; but our Government has been content to remain idle, and at the present moment there is not, to use the words of the SECRETARY of the ADMIRALTY, a single heavy breechloading gun mounted on board any of our ships. Some measures are now to be taken to supply this very grave deficiency. The *Shah* and *Raleigh* and other vessels are to be armed, at some time not indicated, with breechloaders, and a weapon of enormous power has been designed for the new steel cruisers. Happily there will be plenty of time to perfect it before they are likely to be afloat.

In other and smaller matters great attention has obviously been paid to the needs of the service by those who now govern at Whitehall, and the scheme of the Admiralty for the coming financial year is at once more ambitious and more complete than any that has for a long period been offered to the House of Commons and the country. Unfortunately the disagreeable question we have spoken of above must necessarily arise with regard to it. How far will it be carried out, and what percentage must be allowed for the shortcomings which, when the lapse of twelve months has dimmed the memory of glowing promises, officials pass lightly over? One fact which, patent as it is, appears as yet to have attracted little attention, seems to throw a certain doubt on Mr. TREVELYAN's elaborate programme. The present Board propose very largely to surpass during the coming year the shipbuilding which the late Board projected for the year now expiring. At the Royal Dockyards they intend to build 3,600 tons more than their less aspiring predecessors proposed for 1880-81. Yet, strange to say, they ask for very little more money. The net increase over the sum voted for the expiring year is only 158,984*l.*, and this certainly cannot be considered a large amount when so much is undertaken. Clearly the Admiralty hope to effect considerable economies in some respects, and there is too much reason to fear that one of their economies will be most unwise. The late Board took so much trouble about the repairs of ships that their successors need not for a time go to any great expense on this score; but, nevertheless, some repairs are necessary, and these they seem likely to neglect. Mr. W. H. SMITH, when commenting on Mr. TREVELYAN's speech, pointed out that in the Estimates no provision whatever is made for the repairs required by the *Raleigh*, the *Bellerophon*, the *Rupert*, and another vessel. Either, then, there must be considerable expenditure on work of this kind which has not been allowed for, or else a saving of the most foolish kind is contemplated. Another way of saving, yet more unwise, has also seemingly found favour at Whitehall. While proposing to add largely to the strength of the navy, the Admiralty intend to diminish the number of seamen in the service. The reasons given by Mr. TREVELYAN for this step were not a little curious. He said that the decrease in the number of blue jackets asked for was mainly due to the diminution which it was thought necessary to make a few years back in the number of boys. No doubt a diminution in the number of boys was made, and, as we urged at the time, most unwisely made, by the late Administration. Now this reduction is given as a reason for diminishing the number of sailors, or, in other words, the efficiency of the navy; and, marvellous to say, the policy which has produced this bad result is to be followed, as the number of boys is to be yet further reduced. Our present supply of seamen being insufficient, the future supply is to be lessened. The extent to which this reduction has been carried does not seem to be generally appreciated, and it may, therefore, be worth while to call attention to it. In 1878 the number of boys asked for was 6,300; in 1879 it was 5,300; in 1880, 4,900. Now the Board proposes to reduce yet further this small number, and only asks for 4,700 boys. It is not difficult to foresee that a few years hence we shall have a First Lord complaining of the difficulty of manning the navy, and demonstrating in the most indisputable manner that seamen for war-ships require long training, and that a force of them cannot be improvised. It is scarcely possible to doubt that the present Board is making a grave mistake for the sake of a temporary saving. In another respect they seem blind to the advantages of wise expenditure. They propose, it is true, to authorize the construction of breechloaders; but they do not appear even now fully to

realize the defective nature of the present armament of the navy, or the urgent need that there is for changing it as rapidly as possible. In a brief but pertinent speech, which has scarcely attracted the notice it merited, Mr. RENDEL, the member for Montgomeryshire, pointed out how deficient our war-ships are in offensive power, owing to their having only muzzle-loading guns. He showed that the guns with which the new cruisers are to be armed will have, weight for weight, double the power of the guns now used, and argued, logically enough, that the whole British navy might be considered to be at half power according to the existing state of artillery. To show how conscious the rulers of foreign navies are of the necessity for re-armament, he went on to state that one Company alone was now making 116 guns, every one of which was equal in power to the guns of the new cruisers, and all of which were being made for vessels actually afloat. In answer Mr. TREVELYAN could only say that he and his colleagues were not entirely responsible for the present state of things, and that the War Office had taken money for 12 big guns and 103 smaller ones. In other words, the War Office is authorized to make at some future time not specified, guns for the most part far inferior in power to those which are now being made by one private firm. It seems, then, that, though the present rulers of the Admiralty contemplate the introduction of breechloading guns, they have failed to realize the absolute necessity for prompt and extensive change, or, at all events, have not urged it with sufficient energy on the War Office. This error with regard to a subject which is now thoroughly understood, and the other errors which have been mentioned, are much to be regretted, and greatly detract from the merits of a scheme which is in some respects the best and most complete that has been submitted to Parliament and the country for many years.

THE CANDAHAR DEBATE.

THE debate on the abandonment of Candahar in the House of Commons was in this respect inferior in interest to the earlier debate in the House of Lords, that its conclusion was a foregone one. No one except reckless partisans could say that it was certain, however probable it might be, that the Upper House would affirm Lord LYTTON's motion. No one with the slightest power of political observation could doubt that Mr. GLADSTONE's obedient majority—returned, as Lord DERNY reminded us, especially to undo the Afghan policy of the late Government—would obey the instructions and example of Mr. GLADSTONE's INDIAN SECRETARY, and refuse to listen to argument. It is true that the question of the retention of Candahar is entirely independent of the question of the Indian policy of Lord LYTTON. It is only connected with it in the sense in which the conduct of any affair is dependent on the conduct of affairs previous to it. That we went to Candahar, let it be granted for the sake of argument, was a mistake, or even a crime. It does not follow that our retiring from it is an act necessitated by sound judgment and good conscience. It is necessary to repeat this, wearisome as the iteration may be, because of the steady ignoring of the point by almost every defender of the action of the Government. But that ignoring of itself almost settled the question of the decision of the House of Commons. It is a merely necessary compliment to an assembly of ordinary intelligence to suppose that, so long as it refuses to look at more than one set of premisses, it can only come to one set of conclusions. Yet the House of Commons had some interesting new matter before it. It was, of course, unfortunate that the papers sent for by the Government should have gone astray. But the fact of the transference of Candahar to ABDURRAHMAN was more definitely in evidence than it had previously been, and with it the imminence, if not the certain consequence, of a conflict between ABDURRAHMAN and AYUB. The Russian forces on the northern border of Afghanistan who were loft in *nubibus*, somewhere near Akabad, have been heard of on trustworthy information. They are on the lower course of the river which flows past Herat, and there is nothing to prevent General SKOBLEFF from having himself rowed to the very gates of the famous city. Sir LEWIS PALMER has completed a singularly able, moderate, and, above all, actual plea for the retention of the position. The acceptance of the principle of paying the cost of Indian warfare

has made it more than ever necessary that England should take the utmost care to avoid unnecessary expense in future. So that the Commons had the means of considering the question with not a little fresh light, if they chose to use it, instead of shutting their eyes and echoing Lord HARTINGTON's *non possumus*. The advocates of the abandonment might at the eleventh hour have risen to the level of the occasion, and have addressed themselves seriously to the task of converting reasonable opponents, instead of abusing Lord LYTON, Lord SALISBURY, Sir BARTLE FRERE, Lord NAPEIER of MAGDALA, and every one who has dared to differ with them. For it must be once more asserted that, at any rate, a very large number of those who doubted the wisdom of the Government course did so on grounds which are as compatible with a disapproval of the march into Afghanistan and the Treaty of Gandamak as with an approval of those proceedings.
